CITY OF ONTARIO
PLANNING COMMISSION/
HISTORIC PRESERVATION
MEETING AGENDA

March 22, 2022

Ontario City Hall
303 East "B" Street, Ontario, California 91764

6:30 PM

WELCOME to a meeting of the Ontario Planning/Historic Preservation Commission.

All documents for public review are on file in the Planning Department located at 303 E. B Street, Ontario, CA 91764 and on the City website at www.ontarioca.gov/Agendas/PlanningCommission.

- ***Anyone wishing to speak during public comment or on a particular item should fill out a green slip and submit it to the Secretary.***
- ***Comments will be limited to 5 minutes. Speakers will be alerted when their time is up. Speakers are then to return to their seats and no further comments will be permitted.***
- ***In accordance with State Law, remarks during public comment are to be limited to subjects within the Commission's jurisdiction. Remarks on other agenda items will be limited to those items.***
- ***Remarks from those seated or standing in the back of the chambers will not be permitted. All those wishing to speak including Commissioners and Staff need to be recognized by the Chair before speaking.***
- ***The City of Ontario will gladly accommodate disabled persons wishing to communicate at a public meeting. Should you need any type of special equipment or assistance in order to communicate at a public meeting, please inform the Planning Department at (909) 395-2036, a minimum of 72 hours prior to the scheduled meeting.***
- ***Please turn off all communication devices (phones and beepers) or put them on non-audible mode (vibrate) so as not to cause a disruption in the Commission proceedings.***

Anderson __ Dean __ DeDiemar __ Gage __ Lampkin __ Ricci __ Willoughby __

PLEDGE OF ALLEGIANCE TO THE FLAG

ANNOUNCEMENTS

1) Agenda Items

---

2) Commissioner Items

PUBLIC COMMENTS

Citizens wishing to address the Planning/Historic Preservation Commission on any matter that is not on the agenda may do so at this time. Please state your name and address clearly for the record and limit your remarks to five minutes.

Please note that while the Planning/Historic Preservation Commission values your comments, the Commission cannot respond nor take action until such time as the matter may appear on the forthcoming agenda.

CONSENT CALENDAR ITEMS

All matters listed under CONSENT CALENDAR will be enacted by one summary motion in the order listed below. There will be no separate discussion on these items prior to the time the Commission votes on them, unless a member of the Commission or public requests a specific item be removed from the Consent Calendar for a separate vote. In that case, the balance of the items on the Consent Calendar will be voted on in summary motion and then those items removed for separate vote will be heard.

A-01. MINUTES APPROVAL

Planning/Historic Preservation Commission Minutes of February 22, 2022, approved as written.

A-02. GENERAL PLAN CONSISTENCY FINDING PURSUANT TO GOVERNMENT CODE SECTION 65402: A request for a determination of General Plan consistency pursuant to Government Code Section 65402, for the transfer of real property ownership from the City of Ontario to The University of La Verne, for properties located at 425 E B Street, 208 and 228 West Emporia Street, 200, 211 and 221 South Laurel 3995 and 4040 Inland Empire Boulevard and 320 East D Street; (APNS: Portion of 1048-454-16, 1049-056-05, 1049-056-06, 1049-056-01, 1049-056-02, 1049-056-03, 1049-056-04, 0210-205-03, 0210-211-23 and portion of 1048-541-15). **City Initiated**

PUBLIC HEARING ITEMS

For each of the items listed under PUBLIC HEARING ITEMS, the public will be provided an opportunity to speak. After a staff report is provided, the chairperson will open the public hearing. At that time the applicant will be allowed five (5) minutes to make a presentation on the case. Members of the public will then be allowed five (5) minutes each to speak, unless there are a number of person's wishing to speak and then the Chairperson will allow only three (3) minutes, to accommodate for more persons. The Planning/Historic Preservation Commission may ask the speakers questions relative to the case and the testimony provided. The question period will not count against your time limit. After all persons have spoken, the applicant will be allowed three minutes to summarize or rebut any public testimony. The chairperson will then close the public hearing portion of the hearing and deliberate the matter.

B. ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT AGREEMENT REVIEW FOR FILE NO. PDA22-003: A public hearing to consider a Development Agreement between the City of Ontario and American General Design, Inc (dba Adept Development), to establish the terms and conditions for 11.47 acres of land to develop a future mixed use development consisting of approximately 691 residential units and up to 71,200 square feet of commercial retail uses, on three parcels of land located at the southwest corner of Via Villaggio and Via Piemonte, southeast corner of Via Villaggio and Via Piemonte, and on the southwest corner of

Ontario Center Parkway and Concours Street within the proposed mixed-use Subareas 8, 11, 16 and 17 of the Piemonte Overlay of the Ontario Center Specific. An Addendum to the Ontario Center Specific Plan Environmental Impact Report (State Clearing House No. 89041009) has been prepared. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APNs: 0210-204-38, 0218-204-39 and a Portion of 0210-205-01) **submitted by OTC Owner, LLC. City Council action is required.**

1. **CEQA Determination**

   Motion to recommend Approval/Denial of an Addendum to a previous EIR

2. **File No. PDA22-003** (Development Agreement)

   Motion to recommend Approval/Denial

C. ENVIRONMENTAL ASSESSMENT AND SPECIFIC PLAN AMENDMENT REVIEW FOR FILE NO. PSPA21-001: A public hearing to consider an Amendment to the Piemonte Overlay at Ontario Center Specific Plan, including [1] revising the overlay boundary to add approximately 24.9 acres, comprising of the property located at 4000 Ontario Center Parkway, to the overlay area, [2] changing the land use designation on approximately 4.9 acres of land from Office and Entertainment/Retail to Mixed Use, in an area bounded by Fourth Street to the north, Concours Street and Ontario Center Parkway to the south, Via Alba to the east, and the Camden Landmark Apartment and vacant land to the west, and [3] establishing development standards and design guidelines for the Mixed Use land use area within the Piemonte Overlay at Ontario Center Specific Plan. An Addendum to the Ontario Center Specific Plan Environmental Impact Report (State Clearing House No. 89041009) has been prepared. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport, and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APNs: 0210-204-12, 0210-204-13, 0210-204-14, 0210-204-15, 0210-204-17, 0210-204-18, 0210-204-20, 0210-204-21, 0210-204-22, 0210-204-23, 0210-204-23, 0210-204-24, 0210-204-25, 0210-204-26, 0210-204-28, 0210-204-36, 0210-204-37, 0210-204-37, 0210-204-38, 0210-204-39, 0210-204-40, 0210-204-41, 0210-531-06, 0210-531-07, 0210-531-08, 0210-531-09, 0210-531-10, 0210-231-11, 0210-231-12, 0210-231-13, 0210-231-14, 0210-231-15, 0210-231-16, and 0210-205-01); **City initiated. City Council action is required.**

1. **CEQA Determination**

   Motion to recommend Approval/Denial of an Addendum to a previous EIR

2. **File No. PSPA21-001** (Specific Plan Amendment)

   Motion to recommend Approval/Denial

ADJOURNMENT 8

CITY OF ONTARIO PLANNING COMMISSION/ HISTORIC PRESERVATION MEETING

MINUTES

February 22, 2022

REGULAR MEETING: City Hall, 303 East B Street
Called to order by Chairman Gage at 6:36 PM

COMMISSIONERS Present: Chairman Gage**,** Vice-Chairman Willoughby, Anderson, Dean, DeDiemar, Lampkin, and Ricci

Absent: None

OTHERS PRESENT: Planning Director Zeledon, City Attorney Maldanado, Principal Planner Ruddins, Senior Planner Mejia, Associate Planner Aguilo, Transportation Manager Bautista and Planning Secretary Berendsen

PLEDGE OF ALLEGIANCE TO THE FLAG

The Pledge of Allegiance was led by Commissioner Willoughby.

ANNOUNCEMENTS

Mr. Zeledon stated that there were public comments for Item B, before the Commissioners.

Mr. Gage talked about the first Pro Bowl Game in 1966 and Chaffey High School did half time and it is on You Tube. He also stated he would like to close tonight's meeting in honor of Black History Month.

Lampkin arrived at 6:41 PM.

PUBLIC COMMENTS

No one responded from the audience.

CONSENT CALENDAR ITEMS

A-01. MINUTES APPROVAL

Planning/Historic Preservation Commission Minutes of January 25, 2022, approved as written.

It was moved by DeDiemar, seconded by Willoughby, to approve the Planning Commission Minutes of January 25, 2022, as written. Anderson abstained as she was not at that meeting. The motion was carried 6 to 0.

PUBLIC HEARING ITEMS

B. **ENVIRONMENTAL ASSESSMENT, PLANNED UNIT DEVELOPMENT, TENTATIVE PARCEL MAP, DEVELOPMENT PLAN, AND CERTIFICATE OF APPROPRIATENESS REVIEW FOR FILE NOS. PUD22-001, PMTT21-009, PDEV21-017, AND PHP21-021:** A request for the following entitlements: [1] a Planned Unit Development (File No. PUD22-001) to establish development standards, design guidelines, and infrastructure requirements for the Project site; [2] a Tentative Parcel Map (File No. PMTT21-009 (TPM 20394)) to subdivide a 0.86-acre property into a single lot to establish 22 commercial airspace condominium units; [3] a Development Plan (File No. PDEV21-017) to construct two commercial buildings totaling 33,787 square feet; and [4] a Certificate of Appropriateness (File No. PHP21-021) to allow for the construction of the proposed Project within the Euclid Avenue Overlay Zoning District. The Project Site is located at 125 West Emporia Street, within the MU-1/LUA-2N (Downtown Mixed-Use/Arts District – North) and EA (Euclid Avenue Overlay) zoning districts. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-Fill Development Projects) of the CEQA Guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APN: 1049-059-14) **submitted by RWSS Development LLC. City Council action is required.**

Associate Planner Aguilo, presented the staff report. She stated that staff is recommending the Planning Commission recommend approval for File No. PUD22-001 and approve, File Nos. PHP21-021, PMTT21-009 and PDEV21-017, pursuant to the facts and reasons contained in the staff report and attached resolutions, and subject to the conditions of approval.

Mr. Lampkin wanted to know how often the parking lot is utilized.

Mr. Zeledon stated a couple times a month and sometimes throughout the year for events. He explained the Downtown area parking model.

Mr. Lampkin wanted to know the percentage within the year.

Mr. Zeledon stated about 15% percent.

Mr. Lampkin wanted to know if handicap stalls are required.

Mr. Zeledon stated that 2 handicap stalls are needed for the Tap room and to access the flex space, and that the Building department will regulate the parking.

Mr. Lampkin wanted clarification regarding a public comment about there being art space.

Mr. Zeledon stated the flex space will belong to the City and the Community, Life and Culture agency will run it and the space will be programmed with art interests ranging from retail art, art supply store and art classes being done. He stated the Tap room will be run independently but will bring people to the area to gather.

Mr. Lampkin wanted to know the thought behind the corner tower design.

Mr. Zeledon stated that the historic downtown the fronts have had a focal element and this is a dominant corner, so it was designed as a grain silo that compliments what is already there.

Mr. Lampkin wanted clarification on the architectural design and if they would place murals on the building.

Mr. Zeledon stated opportunities are available and currently we are working on mural program and art program.

Mr. Lampkin wanted clarification on examples of car condo and what would the rules be.

Mr. Zeledon responded.

Mr. Willoughby wanted to know how tall is building A.

Ms. Aguilo stated that 30 feet is the highest point.

Mr. Willoughby wanted clarification on how that compared to other structures in the area.

Mr. Zeledon stated it is close to the scale and massing so they are all consistent.

Mr. Willoughby wanted to know the tap room required parking.

Mr. Zeledon stated 25 spaces are required for the tap room.

Mr. Willoughby wanted clarification regarding surrounding area parking use.

Mr. Zeledon explained the Downtown parking model and what is happening in the surrounding area currently.

Mr. Willoughby wanted to know if the tap room would have food items.

Mr. Zeledon stated it would have brews, but you could bring in your own food.

Mr. Ricci wanted to know if the rock curbs would be repaired.

Mr. Zeledon stated that Emporia does have rock curbs and the City has an inventory of rock curbs and this will be replaced with regular curbing, as it is so dilapidated.

Mr. Ricci wanted to clarify if parking would be allowed on that portion of the street.

Mr. Zeledon stated yes, and it would be limited to 5 spaces.

PUBLIC TESTIMONY

Richard Tipping representing RWS and Ryan Wynes the applicant appeared and spoke in favor of the project.

Mr. Lampkin wanted to know about artwork on the walls.

Mr. Tipping stated he will work with staff on that and is open to that.

Mr. Willoughby wanted to know if taproom would serve appetizers or food.

Mr. Tipping stated it would likely be a Taproom with light appetizers and people bring their own food.

Mr. Gage wanted clarification on the use of the condos, and how do you regulate its use.

Mr. Tipping stated these are for sale buy as an investment, cameras on the site and rule breaking and letters can be sent and notify the city to help enforce.

Mr. Gage wanted to know what type of vehicles can be stored.

Mr. Tipping stated it can be for cars, recreational vehicles, and/or boats.

Mr. Dean wanted to know if this is their first attempt at this sort of project.

Mr. Tipping stated yes and they have done some research on existing ones.

Mr. Lampkin wanted to know if there would be a property manager or company would regulate and do inspections.

Mr. Tipping stated there would be an HOA company and a Board made-up of condo owners.

Catherine Tessier spoke in opposition to the project.

Mr. DeDiemar asked Ms. Tessier of the loft's 40 tenants how many are artists.

Ms. Tessier responded to the answers stating it is a broad area of arts.

Ms. Dediemar talked regarding the art walks and stated that the arts walk on Feb 19, that none of the lofts were open.

Ms. Tessier responded.

Mr. Willoughby wanted to clarify not all the lofts are occupied by artists.

Ms. Tessier stated that is correct and that art is a broad term.

John Basheto a resident and Chaffey College professor, wanted to clarify that there were some businesses open at the loft for the art walk and have been participating for 4 years.

Ms. DeDiemar commended them on their efforts towards the art walks.

Mr. Lampkin wanted Mr. Basheto to describe the broadness of art.

Mr. Basheto responded.

Mr. Tipping wanted to rebut regarding parking in front of the garage and the space for the arts.

Mr. Wynes stated automotive has its place in art history, and the condos would contribute to the art walks.

Mr. Zeledon explained the vision of the Downtown.

As there was no one else wishing to speak, Chairman Gage closed the public testimony

Mr. Lampkin thanked the speakers and described what art is including cars and spoke in favor of the project.

Mr. Willoughby spoke in favor of the project and thanked staff.

Ms. DeDiemar spoke in favor of the project and thanked staff for their efforts to build the arts district.

Mr. Gage sympathized with Ms. Tessier and spoke in favor of the project.

PLANNING COMMISSION ACTION

It was moved by Lampkin, seconded by Willoughby, to recommend adoption of a resolution to approve the Planned Unit Development, File No., PUD22-001, subject to conditions of approval. Roll call vote: AYES, Anderson, Dean, DeDiemar, Gage, Lampkin, Ricci, and Willoughby; NOES, none; RECUSE, none; ABSENT, none. The motion was carried 7 to 0.

It was moved by Lampkin, seconded by Willoughby, to adopt a resolution to approve the Certificate of Appropriateness, File No., PHP21-021, subject to conditions of approval. Roll call vote: AYES, Anderson, Dean, DeDiemar, Gage, Lampkin, Ricci, and Willoughby; NOES, none; RECUSE, none; ABSENT, none. The motion was carried 7 to 0.

It was moved by Lampkin, seconded by Willoughby, to adopt a resolution to approve the Tentative Parcel Map, File No., PMTT21-009, subject to conditions of approval. Roll call vote: AYES, Anderson, Dean, DeDiemar, Gage, Lampkin, Ricci, and Willoughby; NOES, none; RECUSE, none; ABSENT, none. The motion was carried 7 to 0.

It was moved by Lampkin, seconded by Willoughby, to adopt a resolution to approve the Development Plan, File No., PDEV21-017, subject to conditions of approval. Roll call vote: AYES, Anderson, Dean, DeDiemar, Gage, Lampkin, Ricci, and Willoughby; NOES, none; RECUSE, none; ABSENT, none. The motion was carried 7 to 0.

C. **ENVIRONMENTAL ASSESSMENT, DEVELOPMENT PLAN, AND CONDITIONAL USE PERMIT REVIEW FOR FILE NOS. PDEV21-021 AND PCUP21-009:** A Development Plan (File No. PDEV21-021) to construct a 4-story, 128-room Extended Stay/Residence Inn Hotel, in conjunction with a Conditional Use Permit (File No. PCUP21-009) to establish and operate the hotel use on 1.83 acres of land located at 5060 East Fourth Street, within the Freeway Commercial land use district of The Exchange Specific Plan. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-Fill Development Projects) of the CEQA guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APN: 0238-012-30) **submitted by Roger Barbosa. City Council action is required.**

Planning Director Zeledon, presented the staff report. He stated that staff is recommending the Planning Commission recommend approval for File No. PCUP21-009 and approve File No. PDEV21-021, pursuant to the facts and reasons contained in the staff report and attached resolutions, and subject to the conditions of approval.

Mr. Willoughby wanted clarification regarding the material used for the circle on the entryway.

Mr. Zeledon stated that pavers and scored concrete would be used.

Mr. Willoughby wanted to know if this would be an extended stay.

Mr. Zeledon stated it would be an extended stay and referred this to the applicant for clarification.

PUBLIC TESTIMONY

Roger Barbosa appeared and spoke in favor of the project and stated that an extended stay would be the goal.

Mr. Willoughby wanted to know a time frame to move forward.

Mr. Barbosa stated they wanted to move quickly.

Mr. Gage wanted to know if they prepared for strong wind.

Mr. Barbosa stated that they did plan for the high winds.

Mr. Ricci wanted further clarification on extended stay.

Mr. Barbosa stated the ownership is looking at industrial corporate stay for several days.

Mr. Ricci wanted to know the maximum stay.

Mr. Barbosa stated 30 days.

Mr. Gage wanted to know if kitchenettes would be included.

Mr. Barbosa stated yes.

As there was no one else wishing to speak, Chairman Gage closed the public testimony

Mr. Willoughby spoke in favor of the project.

PLANNING COMMISSION ACTION

It was moved by Lampkin, seconded by Ricci, to recommend adoption of a resolution to approve the Conditional Use Permit, File No., PCUP21-009, subject to conditions of approval. Roll call vote: AYES, Anderson, Dean, DeDiemar, Gage, Lampkin, Ricci, and Willoughby; NOES, none; RECUSE, none; ABSENT, none. The motion was carried 7 to 0.

It was moved by Lampkin, seconded by Ricci, to adopt a resolution to approve the Development Plan, File No., PDEV21-021, subject to conditions of approval. Roll call vote: AYES, Anderson, Dean, DeDiemar, Gage, Lampkin, Ricci, and Willoughby; NOES, none; RECUSE, none; ABSENT, none. The motion was carried 7 to 0.

MATTERS FROM THE PLANNING COMMISSION

Old Business Reports From Subcommittees

Historic Preservation (Standing): This subcommittee met on February 10, 2022.

Mr. Willoughby stated they looked over the Certificate of Appropriateness for tonight's project and got an update that the Fallis house is a total loss after the fire.

Development Code Review (Ad-hoc): This subcommittee did not meet.

Zoning General Plan Consistency (Ad-hoc): This subcommittee did not meet.

New Business

NOMINATIONS FOR SPECIAL RECOGNITION

None at this time.

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION STAFF REPORT

March 22, 2022

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

SUBJECT: A request for a determination of General Plan consistency pursuant to Government Code Section 65402, for the transfer of real property ownership from the City of Ontario to The University of La Verne, for properties located at 425 E B Street, 208 and 228 West Emporia Street, 200, 211 and 221 South Laurel, 3995 and 4040 Inland Empire Boulevard and 320 East D Street; (APNS: Portion of 1048-454-16, 1049-056-05, 1049-056-06, 1049-056-01, 1049-056-02, 1049-056-03, 1049-056-04, 0210-205-03, 0210-211-23 and portion of 1048-541-15).

PROPERTY OWNER: City of Ontario and University of La Verne

RECOMMENDED ACTION: That the Planning Commission adopt a resolution finding that the transfer of property between the City of Ontario and University of La Verne located at 425 E B Street, 208 and 228 West Emporia Street, 200, 211 and 221 South Laurel, 3995 and 4040 Inland Empire Boulevard and 320 East D Street is consistent with the Policy Plan (General Plan).

PROJECT SETTING: The subject properties are located at the following locations and depicted in Figures 1, 2 and 3 (Project Location Maps):

1. Approximately 0.52 acres located at the northwest corner of Sultana Avenue and B street, addressed at 425 E. B Street within the MU1 (Downtown Mixed Use) Civic Center zoning district;

2. Approximately 1.4 acres located at the northwest corner of Emporia Street and Laurel Avenue, addressed at 208 and 228 West Emporia, 200, 211 and 221 South Laurel Avenue within the MU1 (Downtown Mixed Use) Arts District North zoning district;

3. Approximately 13 acres located on the north and south side of Inland Empire Boulevard approximately 2,641 feet west of Haven Avenue, addressed at 3995 and 4040 Inland Empire Boulevard within the Open Space land use district of the Ontario Center Specific Plan; and

4. Approximately 2.3 acres located at the southwest corner of Sultana Avenue and D street, addressed at 320 East D Street within the Light Office zoning district.

PROJECT ANALYSIS:

(1) Background — On October 21, 2021, the City of Ontario ("the City") and the University of La Verne ("ULV") executed a Memorandum of Understanding ("MOU") to explore the viability of exchanging properties for the purpose of expanding the City of Ontario's Civic Center campus while enabling ULV to expand its footprint within the City of Ontario.

ULV envisions an innovation and education corridor within the City of Ontario, one that builds upon both the proximity of its main campus in La Verne and the University of La Verne College of Law building in the heart of Downtown Ontario. ULV's future expansion plans in Ontario includes the development of a new College of Health campus as well as the Randall Lewis Center for Innovation, Social Impact and Entrepreneurship.

The City, for its part, envisions a robust Civic Center Campus – one that modernizes facilities for public employees, brings more people to the downtown area, and better utilizes all space in the downtown core. The City expansion project ("Expansion Project") is anticipated to include the Ontario Montclair-School District headquarters, a modern City Annex, which would centralize City Hall services, a 700-space parking structure, a new state-of-the-art fire station, and a College of Health.

(2) Project Analysis —This MOU enabled the City and ULV an opportunity to negotiate terms in good faith. The project as described below is the result of these negotiations. In order to move the project forward, the Planning Commission must find that the proposed uses as described below are consistent with the General Plan.

Government Code Section 65402 provides that a local agency may not acquire real property for a public purpose until the Planning Commission determines that the location, purpose and extent of the acquisition is in conformance with the general plan.

The City is proposing an exchange of properties ("the Exchange") with ULV. The City of Ontario presently is the owner of the following:

- Approximately 0.52 acres at the northwest corner of Sultana Avenue and "B" Street (APN: Portion of 1048-545-16), which is currently developed with the City's Fire Station No. 1. The Ontario Plan (TOP) Policy Plan (General Plan) land use plan designates the property as Public Facilities and is intended for public facilities and educational uses. ULV intends to construct a College of Health campus at this site.

- Approximately 1.4 acres located at the northwest corner of Emporia Street and Laurel Avenue, addressed at 208 and 228 West Emporia, 200, 211 and 221 South Laurel Avenue (APNS: 1049-056-05, 1049-056-06, 1049-056-01, 1049-056-02, 1049-056-03 and 1049-056-04). The Ontario Plan (TOP) Policy Plan (General Plan) land use plan designates the property as Mixed-Use (Downtown Mixed-Use Area) and intended to accommodate a mixture of retail, service, office, restaurant, residential and cultural uses. ULV intends on utilizing this building, parking lot and vacant land as the future Randall Lewis Center for Innovation, Entrepreneurship and Social Impact.

- Approximately 13 acres located on the north and south side of Inland Empire Boulevard approximately 2,641 feet west of Haven Avenue, addressed as 3995 and 4040 Inland Empire Boulevard (APNS: 0210-205-03 and 0210-211-23). The Ontario Plan (TOP) Policy Plan (General Plan) land use plan designates the property as Mixed-Use (Ontario Center Mixed Use Area) and is intended to accommodate the most intensive developments in Ontario. This Mixed-Use Area is characterized by low-rise (3-5 stories) and mid-rise (5-10 stories), mixed-use buildings, iconic architecture, and regionally significant uses, such as the Events Center, and other cultural and entertainment uses. This area accommodates a vertical and horizontal mixture of entertainment, retail, office, and residential uses in an active, pedestrian oriented atmosphere. The proposed project may include future site improvements allowable by the Ontario Center Specific Plan. Any future improvement would require a development entitlement to be reviewed and approved by the appropriate hearing body and must occur within three years of a signed Exchange Agreement.

In exchange for the transfer of the properties, as described above, the University of La Verne will convey its 2.4-acre parking lot, at the southwest corner of Sultana Avenue and D street (APN: east portion of 1048-541-15), to the City. The acquisition of this lot will enable the City to relocate and construct a modernized Fire Station, currently located at the northwest corner Sultana and "B" Street. A portion of this parking lot will also serve as the future location of a 700-space parking structure that will serve all users within the Civic Center Campus. The Ontario Plan (TOP) Policy Plan (General Plan) land use plan designates the property as Office Commercial (OC) and is intended as an intense mixture of regional serving retail, service, tourist-serving, professional office, entertainment, dining, and supporting services uses that capitalize on strategic locations in Ontario. This designation also includes professional offices including financial, legal, insurance, medical, public facilities, and other similar uses in a neighborhood setting and/or as adaptive reuse.

The proposed transfer and acquisition of the properties is in the City's best interest because it achieves the City's goals of attracting workforce population to the downtown area, removing blight, activating underutilized assets in the City, and incentivizing the development of a pipeline of talent that adds more high paying wage jobs to the City. The proposed use of the properties is consistent with TOP Policy Plan goals and polices, and the land use designations for the properties (See Exhibit "A", TOP Policy Plan Land Use Plan).

COMPLIANCE WITH THE ONTARIO PLAN: The proposed project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan (TOP). More specifically, the goals and policies of TOP that are furthered by the proposed project are as follows:

(1) City Council Goals.

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner
- Focus Resources in Ontario's Commercial and Residential Neighborhoods

(2) Vision.

Distinctive Development:

- Commercial and Residential Development

  - Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

  - G1-2 Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision

Land Use Element:

- Goal LU1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

  - LU1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, and foster the development of transit.

  - LU1-6 Complete Community: We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario. (Refer to Complete Community Section of Community Economics Element).

Community Economics Element:

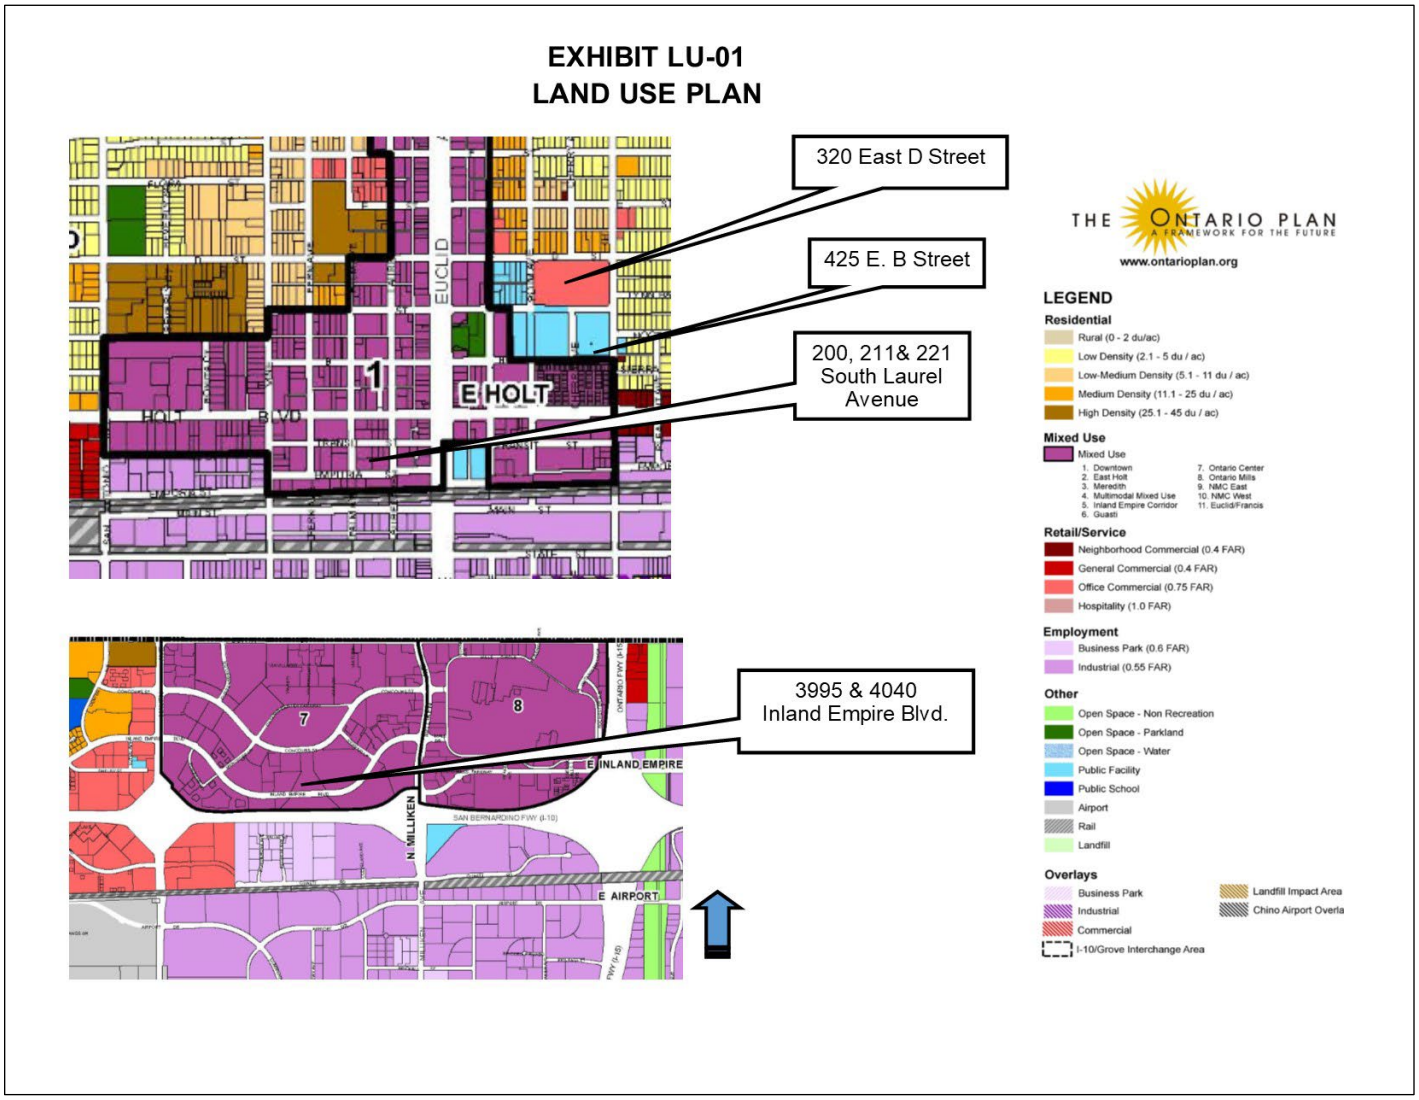
- Goal CE1: A complete community that provides for all incomes and stages of life.

  - CE2-1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

  - CE2-2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional and sustainable places that will compete well with their competition within the region.

ENVIRONMENTAL REVIEW: The proposed acquisition of the project site is exempt from review under the California Environmental Quality Act pursuant to Section 15061(b)(3) of the Guidelines, as there is no possibility that such acquisition and development will have a significant effect on the environment.

Exhibit "A" TOP Policy Plan Land Use Plan



RESOLUTION NO.

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, MAKING A REVIEW OF GENERAL PLAN CONSISTENCY PURSUANT TO GOVERNMENT CODE SECTION 65402, FOR THE TRANSFER OF REAL PROPERTY OWNERSHIP FROM THE CITY OF ONTARIO TO THE UNIVERSITY OF LA VERNE, FOR PROPERTIES LOCATED AT 425 E B STREET, 208 AND 228 WEST EMPORIA STREET, 200, 211 AND 221 SOUTH LAUREL 3995 AND 4040 INLAND EMPIRE BOULEVARD AND 320 EAST D STREET, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: PORTION OF 1048-454-16, 1049-056-05, 1049-056-06, 1049-056-01, 1049-056-02, 1049-056-03, 1049-056-04, 0210-205-03, 0210-211-23 AND PORTION OF 1048-541-15.

WHEREAS, The City of Ontario ("Applicant") has requested a determination of General Plan consistency pursuant Government Code Section 65402, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to approximately 0.52 acres located at the northwest corner of Sultana Avenue and B Street, addressed at 425 E. B Street within the MU1 (Downtown Mixed Use) Civic Center zoning district, and is presently improved with Fire Station1; and

WHEREAS, the Application applies to approximately 1.4 acres located at the northwest corner of Emporia Street and Laurel Avenue, addressed at 208 and 228 West Emporia, 200, 211 and 221 South Laurel Avenue within the MU1 (Downtown Mixed Use) Arts District North zoning district, and is presently improved with a two story building/parking lot/vacant land and occupied by the City of Ontario Community Improvement Department; and

WHEREAS, the Application applies to approximately 13 acres located on the north and south side of Inland Empire Boulevard, approximately 2,641 feet west of Haven Avenue, addressed at 3995 and 4040 Inland Empire Boulevard within the Open Space land use district of the Ontario Center Specific Plan, and is presently improved with open space passive park area; and

WHEREAS, the Application applies to approximately 2.3 acres located at the southwest corner of Sultana Avenue and D street, addressed at 320 East D Street within the Light Office zoning district, and is presently improved with the University of La Verne parking lot; and

WHEREAS, Government Code Section 65402 provides that a local agency may not acquire real property for a public purpose, if such agency has adopted a general plan, until the location, purpose and extent of the acquisition has been submitted to and

reported upon by the planning agency having jurisdiction, as to the conformity of the proposed acquisition with the general plan; and

WHEREAS, on October 21, 2021, the City of Ontario ("the City") and the University of La Verne ("ULV") executed a Memorandum of Understanding ("MOU") to explore the viability of exchanging properties for the purpose of expanding the City of Ontario's Civic Center campus while enabling ULV to expand its footprint within the City of Ontario. The MOU enabled the City and ULV an opportunity to negotiate terms in good faith. The Project is the result of these negotiations; and

WHEREAS, the TOP Policy Plan (General Plan) Land Use Map designates the Project properties as follows:

- Approximately 0.52 acres at the northwest corner of Sultana Avenue and "B" Street (APN: Portion of 1048-545-16), which is currently developed with the City's Fire Station No. 1. The Ontario Plan (TOP) Policy Plan (General Plan) land use plan designates the property as Public Facilities and is intended for public facilities and educational uses. ULV intends to construct a College of Health campus at this site;

- Approximately 1.4 acres located at the northwest corner of Emporia Street and Laurel Avenue, addressed at 208 and 228 West Emporia, 200, 211 and 221 South Laurel Avenue (APNS: 1049-056-05, 1049-056-06, 1049-056-01, 1049-056-02, 1049-056-03 and 1049-056-04). The Ontario Plan (TOP) Policy Plan (General Plan) land use plan designates the property as Mixed-Use (Downtown Mixed-Use Area) and is intended to accommodate a mixture of retail, service, office, restaurant, residential and cultural uses. ULV intends on utilizing this building as the future Randall Lewis Center for Innovation, Entrepreneurship and Social Impact;

- Approximately 13 acres located on the north and south side of Inland Empire Boulevard approximately 2,641 feet west of Haven Avenue, addressed at 3995 and 4040 Inland Empire Boulevard (APNS: 0210-205-03 and 0210-211-23). The Ontario Plan (TOP) Policy Plan (General Plan) land use plan designates the property as Mixed-Use (Ontario Center Mixed Use Area) and is intended to accommodate the most intensive developments in Ontario. This Mixed-Use Area is characterized by low-rise (3-5 stories) and mid-rise (5-10 stories), mixed-use buildings, iconic architecture, and regionally significant uses, such as the Events Center, and other cultural and entertainment uses. This area accommodates a vertical and horizontal mixture of entertainment, retail, office, and residential uses in an active, pedestrian oriented atmosphere. The proposed project may include future site improvements allowable by the Ontario Center Specific Plan. Any future improvement would require a development entitlement to be reviewed and

approved by the appropriate hearing body and must occur within three years of a signed Exchange Agreement; and

WHEREAS, in exchange for the transfer of the properties, the University of La Verne will convey its 2.4-acre parking lot, at the southwest corner of Sultana Avenue and D street (APN: east portion of 1048-541-15), to the City. The acquisition of this lot will enable the City to relocate and construct a modernized Fire Station, currently located at the northwest corner Sultana and “B” Street. A portion of this parking lot will also serve as the future location of a 700-space parking structure that will serve all users within the Civic Center Campus. The Ontario Plan (TOP) Policy Plan (General Plan) land use plan designates the property as Office Commercial (OC) and is intended as an intense mixture of regional serving retail, service, tourist-serving, professional office, entertainment, dining, and supporting services uses that capitalize on strategic locations in Ontario. This designation also includes professional offices including financial, legal, insurance, medical, public facilities, and other similar uses in a neighborhood setting and/or as adaptive reuse; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act, commencing with Public Resources Code Section 21000 (hereinafter referred to as "CEQA"); and

WHEREAS, the Project is exempt from CEQA pursuant to a categorical exemption (listed in CEQA Guidelines Article 19, commencing with Section 15300) and the application of that categorical exemption is not barred by one of the exceptions set forth in CEQA Guidelines Section 15300.2; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and act on the subject Application; and

WHEREAS, on March 22, 2022, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making authority for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral

evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The administrative record has been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(2) The Project is categorically exempt from environmental review pursuant to Section 15061(b)(3) of the CEQA Guidelines; and

(3) The application of the categorical exemption is not barred by one of the exceptions set forth in CEQA Guidelines Section 15300.2; and

(4) The determination of CEQA exemption reflects the independent judgment of the Planning Commission.

SECTION 2: ***Planning Commission Action.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing and upon the specific findings set forth in Section 1 above, the Planning Commission hereby concludes that the proposed property transfer and acquisition is consistent with TOP Policy Plan (General Plan) goals and policies, and the land use designation for the project sites.

SECTION 3: Based upon the findings and conclusions set forth in Sections 1 and 2 above, the Planning Commission hereby approves the Project.

SECTION 4: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East “B” Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 5: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 22nd day of March 2022, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Rick Gage
Planning Commission Chairman

ATTEST:

Rudy Zeledon
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)
CITY OF ONTARIO)

I, Gwen Berendsen, Secretary Pro Tempore of the Planning Commission of the City of Ontario, DO HEREBY CERTIFY that foregoing Resolution No., was duly passed and adopted by the Planning Commission of the City of Ontario at their regular meeting held on March 22, 2022, by the following roll call vote, to wit:

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION STAFF REPORT

March 22, 2022

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

FILE NO: PDA22-003

SUBJECT: A public hearing to consider a Development Agreement between the City of Ontario and OTC Owner, LLC, to establish the terms and conditions for 11.47 acres of land to develop a future mixed use development consisting of approximately 691 residential units and up to 71,200 square feet of commercial retail uses, on three parcels of land located at the southwest corner of Via Villaggio and Via Piemonte, southeast corner of Via Villaggio and Via Piemonte, and on the southwest corner of Ontario Center Parkway and Concours Street within the proposed mixed-use Subareas 8, 11, 16 and 17 of the Piemonte Overlay of the Ontario Center Specific. **Submitted by OTC Owner, LLC. City Council action is required.**

PROPERTY OWNER: City of Ontario

RECOMMENDED ACTION: That the Planning Commission consider and recommend the City Council adopt an ordinance approving the Development Agreement (File No. PDA22-003) between the City of Ontario and OTC Owner, LLC, pursuant to the facts and reasons contained in the staff report and attached resolution.

PROJECT SETTING: The Project site is comprised of 11.47 acres of land, consisting of two vacant parcels located at the southwest corner of Via Villaggio and Via Piemonte and at the Southeast corner of Via Villaggio and Via Piemonte and one additional parcel, developed with the Toyota Arena parking lots, located at the southwest corner of Ontario Center Parkway and Concours Street. The project site within the proposed mixed-use Subareas 8, 11, 16 and 17 of the Piemonte Overlay of the Ontario Center Specific Plan, and is depicted in Figure 1: Project Location, below. The Project site is surrounded by residential, office, and commercial properties on land that is generally topographically flat. In addition to the existing surrounding developments, there are also vacant parcels along the Project boundary. The existing surrounding land uses, zoning, and general plan and specific plan land use designations are summarized in the "Surrounding Zoning & Land Uses" table located in the Technical Appendix of this report.

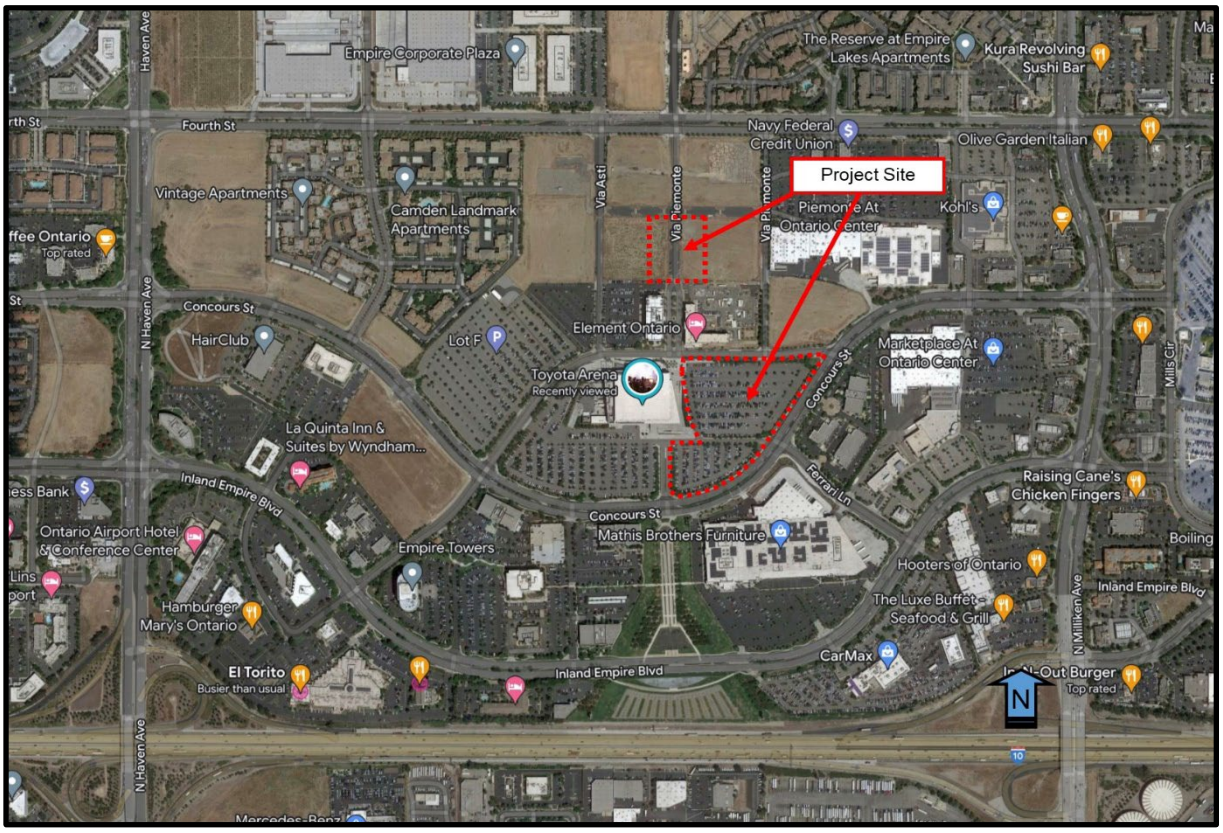

Figure 1: Project Location

(1) Background — In 2006, the City Council approved the creation of the Piemonte Overlay at The Ontario Center Specific Plan ("Piemonte Overlay") within the Urban Commercial land use district of The Ontario Center Specific Plan, establishing a master plan for the development of approximately 1.3 million square feet of retail, office, hotel, and entertainment uses, and more than 800 multiple-family dwelling units on the 84-acre Project site. The Piemonte Overlay was delineated into fifteen subareas, with land use designations of Commercial, Entertainment/Retail, Office, Special Use and Residential (See Exhibit B, Existing Boundary and Land Use Map, attached). The current Overlay area covers approximately 92 acres of land, with at least 48 acres being vacant land.

In 2017, the City Council approved an amendment to the Piemonte Overlay document (File No. PSPA16-003) to reduce the number of residential units, reduce the maximum number of hotel rooms, designate plaza areas to accommodate outdoor events, and expand the design concept from the original Tuscan-influenced architecture to allow more contemporary architectural design concepts.

In 2020, the City Council approved an amendment to the Piemonte Overlay document (File No. PSPA19-009) to allow required residential parking spaces to be provided as tandem parking spaces.

The City of Ontario Economic Development Department and OTC Owner, LLC, are coordinating to bring a mixed-use entertainment development adjacent to the Toyota Arena. The related Amendment to the Piemonte Overlay at Ontario Center Specific Plan (File No. PSPA21-001) will help facilitate the development of underutilized vacant parcels and parking lots into a high intensity mixed -use center.

In accordance with California Government Code Section 65865, which in part states that "[a]ny city… may enter into a Development Agreement with any person having a legal or equitable interest in real property for the development of such property…" and California Government Code Section 65865.52, which in part states that "a Development Agreement shall specify the duration of the Agreement, the permitted uses of the property… and may include conditions, terms, restrictions…," the City of Ontario adopted Resolution No. 2002-100 setting forth the procedures and requirements for consideration of Development Agreements.

(2) Development Agreement — The Agreement proposes to include 11.47 acres of land within the proposed Mixed-Use Subareas 8, 11, 16 and 17 of the Piemonte Overlay at the Ontario Center Specific Plan, as shown on the attached Exhibit A. The Agreement grants the Owner a vested right to develop a future mixed-use project consisting of 691 residential units and up to 71,200 square feet retail uses (as shown on Table 1: Proposed Development Density and Intensity below), provided the Owner complies with the terms and conditions of the Agreement, Piemonte Overlay at the Ontario Center Specific Plan and EIR. The conceptual site plan, as shown on attached Exhibit C, illustrates the proposed future development of the Mixed-Use Subareas 8, 11, 16 and 17 of the Piemonte Overlay of the Ontario Center Specific Plan.

Table 1: Proposed Development Density and Intensity

Lot	Subarea Area	Dwelling Units	Dwelling Units (Square Feet)	Commercial (Square Feet)	Surface Parking Spaces
A	16	359	282,870	25,256	477
B	17	98	77,060	20,802	130
C	8	107	84,170	11,047	142
D	11	127	99,990	14,095	170
Total		**691**	**544,090**	**71,200**	**919**

The term of the Agreement is for 10 years, with a 5-year option to renew. The main points of the Agreement address funding for all new City expenses created by the project, which includes: Submittal of a development entitlement application consistent with the agreed density and intensity of the conceptual site plan (Table 1: Proposed Development Intensity); Payment of all Development Impact Fees ("DIF"); Construction

of all required public infrastructure improvements; Vested right to develop the Project in accordance with existing land use regulations of the Piemonte Overlay and subject to the conditions established with the future entitlement development approval; and that the City agrees that, to the extent permitted by applicable law, not to apply any rent control or other moratoria or interim control ordinance against the Property or the Project due the term of the Ground Lease or for 70 years.

Staff finds that the Agreement is consistent with State law, The Ontario Plan, and the City's Development Agreement policies. As a result, staff is recommending approval of the application to the Planning Commission. If the Planning Commission finds the Agreement is acceptable, a recommendation of approval to the City Council would be appropriate.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan (TOP). More specifically, the goals and policies of TOP that are furthered by the proposed project are as follows:

(1) City Council Goals.
- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner
- Focus Resources in Ontario's Commercial and Residential Neighborhoods

(2) Vision.

Distinctive Development:

- Commercial and Residential Development

➢ Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

➢ G1-2 Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision

(4) Policy Plan (General Plan)

Land Use Element:

- Goal LU1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

  - LU1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, and foster the development of transit.

  - LU1-6 Complete Community: We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario. (Refer to Complete Community Section of Community Economics Element).

- Goal LU2: Compatibility between a wide range of uses.

  - LU2-6: Infrastructure Compatibility: We require infrastructure to be aesthetically pleasing and in context with the community character.

- Goal LU3: Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the vision.

  - LU3-1: Development Standards: We maintain clear development standards which allow flexibility to achieve our Vision.

  - LU3-3: Land Use Flexibility: We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity.

Housing Element:

- Goal H2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

  - H2-3 Ontario Airport Metro Center. We foster a vibrant, urban, intense and highly amenitized community in the Ontario Airport Metro Center Area through a mix of residential, entertainment, retail and office-oriented uses.

  - H2-5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices and other best practices.

- H2-6 Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.

- Goal H3: A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.

- H3-2 Flexible Standards. We allow flexibility in the application of residential and mixed-use development standards in order to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.

- Goal H5: A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age or other status.

- H5-2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation and other amenities.

Community Economics Element:

- Goal CE1: A complete community that provides for all incomes and stages of life.

- CE1-6 Diversity of Housing. We collaborate with residents, housing providers and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to support our workforce, attract business and foster a balanced community.

- Goal CE2: A City of distinctive neighborhoods, districts, and corridors, where people choose to be.

- CE2-1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

- CE2-2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional and sustainable places that will compete well with their competition within the region.

- CE2-4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

➢ CE2-5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Safety Element:

▪ Goal S1: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by earthquake-induced and other geologic hazards.

➢ S1-1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

Community Design Element:

▪ Goal CD1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.

➢ CD1-1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing the diverse character of our existing viable neighborhoods.

➢ CD1-2 Growth Areas. We require development in growth areas to be distinctive and unique places within which there are cohesive design themes.

▪ Goal CD2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and distinct.

➢ CD2-1 Quality Architecture. We encourage all development projects to convey visual interest and character through:

- Building volume, massing, and height to provide appropriate scale and proportion;
- A true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and
- Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.

➢ CD2-2 Neighborhood Design. We create distinct residential neighborhoods that are functional, have a sense of community, emphasize livability and social interaction, and are uniquely identifiable places through such elements as:

- A pattern of smaller, walkable blocks that promote access, activity and

safety;

- Variable setbacks and parcel sizes to accommodate a diversity of housing types;
- Traffic calming measures to slow traffic and promote walkability while maintaining acceptable fire protection and traffic flows;
- Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and
- Landscaped parkways, with sidewalks separated from the curb.

➢ CD2-4 Mixed Use, Urban Office and Transit Service Areas. We require mixed use, urban office and transit service areas to be designed and developed as pedestrian oriented "villages" that promote a vibrant, comfortable and functional environment.

➢ CD2-7 Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.

➢ CD2-8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintenance of visibility and accessibility, and use of lighting.

➢ CD2-9 Landscape Design. We encourage durable landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

➢ CD2-10 Surface Parking Areas. We require parking areas visible to or used by the public to be landscaped in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field.

➢ CD2-11 Entry Statements. We encourage the inclusion of amenities, signage and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

➢ CD2-12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.

- CD2-13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

- Goal CD3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- CD3-1 Design. We require that pedestrian, vehicular, bicycle and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort and aesthetics.

- CD3-2 Connectivity Between Streets, Sidewalks, Walkways and Plazas. We require landscaping and paving be used to optimize visual connectivity between streets, sidewalks, walkways and plazas for pedestrians.

- CD3-3 Building Entrances. We require all building entrances to be accessible and visible from adjacent streets, sidewalks or public open spaces.

- CD3-5 Paving. We require sidewalks and road surfaces to be of a type and quality that contributes to the appearance and utility of streets and public spaces.

- CD3-6 Landscaping. We utilize landscaping to enhance the aesthetics, functionality and sustainability of streetscapes, outdoor spaces and buildings.

- Goal CD5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages additional public and private investments.

- CD5-1 Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

- CD5-2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan. The Project site contains four properties listed in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix. The proposed changes affect two of the four properties listed in the Available Land Inventory (Subareas 8 and 11; Map ID No. 124 and 125). The residential capacity proposed in this Project is consistent with the number of dwelling units (198) and density (48 DU/AC) specified in the Available Land Inventory.

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. The proposed Project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the ALUCP.

ENVIRONMENTAL REVIEW: In 1980, the City Council certified The Ontario Center Specific Plan Environmental Impact Report (State Clearing House No. 80062538), in relation to the adoption of The Ontario Center Specific Plan (File No. 2254-SP) ("OCSP"), which was adopted in 1981. Over the years, several amendments to the OCSP have been approved along with appropriate environmental review. On March 19, 1991, a subsequent EIR (State Clearing House No. 89041009) ("Certified EIR") was certified in association with an amendment to the OCSP (File No. 4059-SPA). In 2016, the City approved a Mitigated Negative Declaration ("MND") in association with an amendment to the Piemonte Overlay (File No. PSPA16-003).

In association with the proposed Overlay Amendment, staff collaborated with consultant Kimley-Horn to prepare an Addendum to the Certified EIR, as amended, and found that all potential adverse direct, indirect, and cumulative environmental impacts were thoroughly analyzed and discussed in the Certified EIR, as amended, including, but not limited to potential aesthetic, air quality, greenhouse gas emissions, noise, transportation and tribal cultural resources impacts, and all feasible mitigation has been identified and will be incorporated into the proposed Project. This Project does not contemplate any actions that would require the preparation of a subsequent or supplemental environmental document under State CEQA Guidelines Section 15162 or 15163, as it is consistent with the development scenario identified within the Certified EIR. Furthermore, this Project introduces no new significant environmental impacts and no further environmental review is required.

TECHNICAL APPENDIX:

Surrounding Zoning and Land Use:

	Existing Land Use	*General Plan Designation*	*Zoning Designation*	*Specific Plan Land Use*
Site	Vacant/Existing Parking Lots	Mixed Use	Piemonte Overlay of the Ontario Center Specific Plan	Mixed-use, Office, Residential, Commercial, Special Use
North	Industrial, Office, Commercial, Residential, Vacant (City of Rancho Cucamonga)	Industrial Park, Mixed Use, Open Space (City of Rancho Cucamonga)	Industrial Park, Mixed-use Retail, IASP Sub-Area 18 Specific Plan (City of Rancho Cucamonga)	Mixed Use, Village Neighborhood
South	Office, Commercial, Vacant	Mixed Use	The Ontario Center Specific Plan	Urban Commercial, Garden Commercial, Open Space
East	Commercial	Mixed Use	The Ontario Center Specific Plan	Urban Commercial
West	Residential, Commercial	High Density Residential, Office Commercial	The Ontario Center Specific Plan	Urban Commercial

RESOLUTION NO.

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE FILE NO. PDA22-003, A DEVELOPMENT AGREEMENT BETWEEN THE CITY OF ONTARIO AND OTC OWNER, LLC, TO ESTABLISH THE TERMS AND CONDITIONS FOR 11.47 ACRES OF LAND TO DEVELOP A FUTURE MIXED USE DEVELOPMENT CONSISTING OF APPROXIMATELY 691 RESIDENTIAL UNITS AND UP TO 71,200 SQUARE FEET OF COMMERCIAL RETAIL USES, ON THREE PARCELS OF LAND LOCATED AT THE SOUTHWEST CORNER OF VIA VILLAGGIO AND VIA PIEMONTE, SOUTHEAST CORNER OF VIA VILLAGGIO AND VIA PIEMONTE, AND ON THE SOUTHWEST CORNER OF ONTARIO CENTER PARKWAY AND CONCOURS STREET WITHIN THE PROPOSED MIXED-USE SUBAREAS 8, 11, 16 AND 17 OF THE PIEMONTE OVERLAY AT THE ONTARIO CENTER SPECIFIC PLAN, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 0210-204-38, 0218-204-39 AND PORTION OF 0210-205-01.

WHEREAS, OTC Owner, LLC, ("Applicant") has filed an Application for the approval of a Development Agreement, File No. PDA22-003, as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 11.47 acres of land, consisting of two vacant parcels located at the southwest corner of Via Villaggio and Via Piemonte and at the southeast corner of Via Villaggio and Via Piemonte and one additional parcel, developed with the Toyota Arena parking lots, located at the southwest corner of Ontario Center Parkway and Concours Street. The project site within the proposed mixed-use Subareas 8, 11, 16 and 17 of the Piemonte Overlay at the Ontario Center Specific Plan, and is presently vacant and improved with the Toyota Area parking lot; and

WHEREAS, the Applicant, in partnership with the City of Ontario, has initiated a Specific Plan Amendment, File No. PSPA21-001, which consists of an Amendment to the Piemonte Overlay at the Ontario Center Specific Plan, which will allow for the future development of a mixed-use project consisting of 691 residential units and up to 71,200 square feet retail uses within the proposed Mixed-Use Subareas 8, 11, 16 and 17 of the Piemonte Overlay at the Ontario Center Specific Plan; and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the EIR Addendum, which concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendations to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as “ALUCP”), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, as the first action on the Project, on March 22, 2022, the Planning Commission issued a Resolution recommending the City Council approve the EIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHERES, as the Development Agreement (File No. PDA22-003) approval is contingent on the City Council approval of the related Amendment to the Piemonte Overlay at the Ontario Center Specific Plan, File PSPA21-001; and

WHEREAS, on March 22, 2022, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to the Ontario Center Specific Plan Environmental Impact Report (State Clearinghouse No. 89041009), certified by the Ontario City Council on March 19, 1991 in conjunction with File No. 4059-SPA, in combination with an Addendum to the Mitigated Negative Declaration, adopted by the Ontario City Council on May 17, 2017 in conjunction with File No. PSPA16-003; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the EIR Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR or MND due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR or MND were prepared, that will require major revisions to the Certified EIR or MND due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and.

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR or MND were certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR or MND; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR or MND; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR or MND would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending body for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan. The project site contains four properties listed in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix. The proposed changes affect two of the four properties listed in the Available Land Inventory

(Subareas 8 and 11; Map ID No. 124 and 125). The residential capacity proposed in this Project is consistent with the number of dwelling units (198) and density (48 DU/AC) specified in the Available Land Inventory.

SECTION 4: ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the ALUCP, establishing the Airport Influence Area for Ontario International Airport (hereinafter referred to as "ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the PLANNING COMMISSION, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 4, above, the Planning Commission hereby concludes as follows:

a. The Development Agreement applies to approximately 11.47 acres of land generally located at the southwest corner of Via Villaggio and Via Piemonte, southeast corner of Via Villaggio and Via Piemonte, and on the southwest corner of Ontario Center Parkway and Concours Street; and

b. The Development Agreement establishes parameters for the development for the future develop a future mixed-use project consisting of 691 residential units and up to 71,200 square feet retail uses, within the proposed Mixed-Use Subareas 8, 11, 16 and 17 of the Piemonte Overlay of the Ontario Center Specific Plan. The Development Agreement also grants the Applicant, the right to develop, the ability to quantify the fees; and establish the terms and conditions that apply to those projects. These terms and conditions are consistent with The Ontario Plan Policy Plan (General

Plan), design guidelines and development standards for the Piemonte Overlay of the Ontario Center Specific Plan; and

c. The Development Agreement grants the Owner a vested right to develop a future mixed-use project consisting of 691 residential units and up to 71,200 square feet retail uses to develop a mixed-use project consisting of 691 residential units and retail uses within the proposed Mixed-Use Subareas 8, 11, 16 and 17 of the Piemonte Overlay of the Ontario Center Specific Plan), as long as the Owner complies with the terms and conditions of the Agreement, Piemonte Overlay of the Ontario Center Specific, EIR and future Development Entitlement conditions of approval; and

d. The Development Agreement has been prepared in conformance with the goals and policies of The Ontario Plan Policy Plan (General Plan); and

e. The Development Agreement does not conflict with the Land Use Policies of The Ontario Plan Policy Plan (General Plan) and will provide for development, within the district, in a manner consistent with the Policy Plan and with related development; and

f. This Development Agreement will promote the goals and objectives of the Land Use Element of the Policy Plan; and

g. This Development Agreement will not be materially injurious or detrimental to the adjacent properties and will have a significant impact on the environment or the surrounding properties. The environmental impacts of this project were reviewed with an Addendum to the Ontario Center Specific Plan Environmental Impact Report (State Clearing House No. 89041009) prepared for the related Amendment to the Piemonte Overlay at the Ontario Center Specific Plan (File No. PSPA21-001). This Application introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of project approval and are incorporated herein by this reference.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVE the herein described Application, subject to each and every condition set forth in the Development Agreement (File No. PDA22-003) attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the

applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 22nd day of March 2022, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Rick Gage

DEVELOPMENT AGREEMENT NO. _____

This Development Agreement (hereinafter "Agreement") is dated as of April _____, 2022, for reference purposes only, and is entered into by and between the City of Ontario, a California municipal corporation (hereinafter "City"), and OTC Owner, LLC, a Delaware limited liability company (together with its successors and assigns (including without limitation partial assignees with respect to an individual Lot, collectively or individually as the context may require, "Owner"):

RECITALS

WHEREAS, City is authorized to enter into binding development agreements with persons having legal or equitable interests in real property for the development of such property, pursuant to Section 65864, et seq. of the Government Code; and

WHEREAS, Owner has a leasehold interest in the Property pursuant to the Ground Leases; and

WHEREAS, Owner has requested City to enter into a development agreement and proceedings have been taken in accordance with the rules and regulations of City; and

WHEREAS, by electing to enter into this Agreement, City shall bind future City Councils of City by the obligations specified herein and limit the future exercise of certain governmental and proprietary powers of City; and

WHEREAS, the terms and conditions of this Agreement have undergone extensive review by City and the City Council and have been found to be fair, just and reasonable; and

WHEREAS, the best interests of the citizens of the City and the public health, safety and welfare will be served by entering into this Agreement; and

WHEREAS, on _____, 2022, the City Council adopted Ordinance No. _____ approving this Agreement, and such ordinance became effective on _____, 2022; and

WHEREAS, all of the procedures of the California Environmental Quality Act have been met with respect to the Project and the Agreement. Pursuant to Resolution No. _____, the City Council reviewed and adopted an Addendum to the Ontario Center Specific Plan Environmental Impact Report (State Clearing House No. 89041009) dated _____ (the "EIR Addendum"); and

WHEREAS, this Agreement and the Project are consistent with the City's Comprehensive General Plan and any specific plan applicable thereto; and

WHEREAS, all actions taken and approvals given by City have been duly taken or approved in accordance with all applicable legal requirements for notice, public hearings, findings, votes, and other procedural matters; and

WHEREAS, this Agreement will eliminate uncertainty in planning and provide for the orderly development of the Property and generally serve the purposes for which development agreements under Sections 65864 et seq. of the Government Code are intended.

COVENANTS

NOW, THEREFORE, in consideration of the above recitals and of the mutual covenants hereinafter contained and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. DEFINITIONS AND EXHIBITS.

1.1 Definitions. The following terms when used in this Agreement shall be defined as follows:

1.1.1 "Agreement" means this Development Agreement.

1.1.2 "City" means the City of Ontario, California, a California municipal corporation.

1.1.3 "City Council" means the City Council of the City of Ontario.

1.1.4 "City Manager" means City's City Manager or his or her designee.

1.1.5 "Development Approval" or "Development Approvals" means all permits and other entitlements for use subject to approval or issuance by City in connection with development of the Property whether Existing Development Approvals or Subsequent Development Approvals, including, but not limited to, the following:

(a) Piemonte Overlay at the Ontario Center Specific Plan Amendment - File No. PSP-A21-001 (the "Specific Plan Amendment");

(b) Development Plan Review – File No. _____;

(c) EIR Addendum;

(d) Ground Leases;

(e) Development Agreement - File No. _____; and

(f) Master Sign Program - File No. _____.

1.1.6 "Development Impact Fee" means a monetary exaction, other than a tax or special assessment, whether characterized as a fee, exaction, charge, assessment or a tax and whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in

connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project. For purposes of this Agreement only, "Development Impact Fee" shall not include processing fees and charges imposed by City to cover the estimated actual costs to City of processing applications for Development Approvals or for monitoring compliance with any Development Approvals granted or issued, including, without limitation, fees for zoning variances; zoning changes; use permits; building inspections; building permits; filing and processing applications and petitions filed with the local agency formation commission or conducting preliminary proceedings or proceedings under the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000, Division 3 (commencing with Section 56000) of Title 5 of the Government Code; the processing of maps under the provisions of the Subdivision Map Act, Division 2 (commencing with Section 66410) of Title 7 of the Government Code; or planning services under the authority of Chapter 3 (commencing with Section 65100) of Division 1 of Title 7 of the Government Code, fees and charges as described in Sections 51287, 56383, 57004, 65104, 65456, 65863.7, 65909.5, 66013, 66014, and 66451.2 of the Government Code, Sections 17951, 19132.3, and 19852 of the Health and Safety Code, Section 41901 of the Public Resources Code, and Section 21671.5 of the Public Utilities Code, as such codes may be amended or superceded, including by amendment or replacement.

1.1.7 "Effective Date" means _____, 2022 the date on which both of the following are true: (a) the ordinance approving this Agreement goes into effect; and (b) the Effective Dates of the Ground Leases have occurred.

1.1.8 "Existing Development Approvals" means all Development Approvals approved or issued on or prior to the Effective Date. Existing Development Approvals are listed in Section 1.1.6 above and all other Development Approvals which are a matter of public record on the Effective Date.

1.1.9 "Existing Land Use Regulations" means all Land Use Regulations in effect on the Effective Date, as modified by the Development Approvals.

1.1.10 "General Plan" means the City's Comprehensive General Plan adopted on January 27, 2010, by Resolution No.2010-006, as may be amended as of the Effective Date.

1.1.11 "Ground Lease" or "Ground Leases" mean as applicable that certain Ground Lease by and between City and an affiliate of Owner dated substantially concurrent herewith pertaining to Lot A, as the same may be amended, modified, or supplemented from time to time; that certain Ground Lease by and between City and an affiliate of Owner dated substantially concurrent herewith pertaining to Lot B, as the same may be amended, modified, or supplemented from time to time; that certain Ground Lease by and between City and an affiliate of Owner dated substantially concurrent herewith pertaining to Lot C, as the same may be amended, modified, or supplemented from time to time; and that certain Ground Lease by and between City and an affiliate of Owner dated substantially concurrent herewith pertaining to Lot D, as the same may be amended, modified, or supplemented from time to time. On _____, 2022, the City Council adopted Ordinance No. _____ approving the Ground Leases, and such ordinance became effective on _____, 2022.

1.1.12 "Land Use Regulations" means all ordinances, resolutions, codes, rules, regulations, and official policies of City governing the development and use of land, including, without limitation, the permitted use of land, the density or intensity of use, subdivision requirements, timing and phasing of development, the maximum height and size of buildings, the provisions for reservation or dedication of land for public purposes, and the design, improvement and construction standards and specifications applicable to the development of the Property. "Land Use Regulations" does not include any City ordinance, resolution, code, rule, regulation or official policy, governing:

(a) the conduct of businesses, professions, and occupations;

(b) taxes and assessments;

(c) the control and abatement of nuisances;

(d) the granting of encroachment permits and the conveyance of similar rights and interests that provide for the use of or the entry upon public property; or

(e) the exercise of the power of eminent domain.

1.1.13 "Lot" or "Lots" shall mean Lot A, B, C, or D, as the context may require, as described on Exhibit "A" and shown on Exhibit "B" to this Agreement.

1.1.14 "Mortgagee" means any lender under any mortgage, deed of trust, or other security device securing financing with respect to the Owner's leasehold interest in the Property, and their successors and assigns.

1.1.15 "Owner" means the person or entity defined as such in the introductory paragraph of this Agreement and their permitted successors in interest to all or any part of the Property.

1.1.16 "Project" means the development, construction, and operation on the Property of approximately 71,200 square feet of commercial and 691 multi-family residential dwelling units. More specifically, the Project to be developed on the Property consists of the following components:

Lot	Subarea Area	Dwelling Units	Dwelling Units (Square Feet)	Commercial (Square Feet)	Surface Parking Spaces
A	16	359	282,870	25,256	477
B	17	98	77,060	20,802	130
C	8	107	84,170	11,047	142
D	11	127	99,990	14,095	170
Total		**691**	**544,090**	**71,200**	**919**

1.1.17 "Property" means the real property described on Exhibit "A" and shown on Exhibit "B" to this Agreement. The Property is comprised of four parcels, referred to herein as Lots A, B, C, and D.

1.1.18 "Reservations of Authority" means the rights and authority excepted from the assurances and rights provided to Owner under this Agreement and reserved to City under Section 3.6 of this Agreement.

1.1.19 "Specific Plan" means that certain specific plan adopted by the City Council, and entitled, "Piemonte Overlay at the Ontario Center Specific Plan," as amended by the Specific Plan Amendment.

1.1.20 "Subsequent Development Approvals" means all Development Approvals obtained subsequent to the Effective Date in connection with development of the Property.

1.1.21 "Subsequent Land Use Regulations" means any Land Use Regulations adopted and effective after the Effective Date of this Agreement.

1.2 Exhibits. The following documents are attached to, and by this reference made a part of, this Agreement:

Exhibit "A" Legal Description of the Property

Exhibit "B" Map showing Property and its location

2. GENERAL PROVISIONS.

2.1 Binding Effect of Agreement. The Property is hereby made subject to this Agreement. Development of the Property is hereby authorized and if and to the extent commenced shall be carried out in accordance with the terms of this Agreement.

2.2 Ownership of Property. Owner represents and covenants that it is the owner of a leasehold interest in the Property or a portion thereof.

2.3 Term. The term of this Agreement shall commence on the Effective Date and shall continue for an initial term of ten (10) years thereafter unless this term is modified or

extended pursuant to the provisions of this Agreement. The term of this Agreement may be extended for an additional five (5) years following expiration of the initial ten (10) year term, provided the following have occurred:

(a) Owner provides at least 180 days written notice to City prior to expiration of the initial term;

(b) Owner is not then in uncured default of this Agreement (after notice and the expiration of any applicable cure periods); and

(c) Such extension is approved by the City Manager is his or her reasonable discretion.

For the avoidance of doubt, any time limits that may otherwise apply to the Development Approvals listed in this Development Agreement (including without limitation, any of the time limits imposed on approvals pursuant to Section 2.02.025A of the Ontario Development Code or any other the Land Use Regulations) shall not govern the Development Approvals or this Agreement and the term set forth in this Section 2.3 shall control.

2.4 Assignment.

2.4.1 Right to Assign. Owner shall have the right to sell, transfer, or assign its interest in the Property in whole or in part (provided that no such partial transfer shall violate the Subdivision Map Act, Government Code Section 66410, et seq.), to any person, partnership, limited liability company, joint venture, firm, or corporation at any time during the term of this Agreement; provided, however, that any such sale, transfer, or assignment shall include the assignment and assumption of the rights, duties and obligations arising under or from this Agreement and be made in strict compliance with the following:

(a) As to each Lot, any such sale, transfer, or assignment is done in compliance with the Ground Lease applicable to such Lot if such Ground Lease is then in effect;

(b) No sale, transfer, or assignment of any right or interest under this Agreement shall be made unless made together with the sale, transfer, or assignment of all of Owner's interest in the applicable Lot;

(c) Prior to any such sale, transfer, or assignment, Owner shall notify City's City Manager, in writing, of such sale, transfer, or assignment and shall provide City with: (1) an executed agreement, in a form reasonably acceptable to City, by the purchaser, transferee, or assignee and providing therein that the purchaser, transferee, or assignee expressly and unconditionally assumes all the duties and obligations of Owner under this Agreement with respect to the portion of the Property so sold, transferred, or assigned; and (2) the payment of the applicable processing charge to cover the City's review and consideration of such sale, transfer, or assignment; and

(d) Any sale, transfer, or assignment not made in strict compliance with the foregoing conditions shall constitute a default by Owner under this Agreement.

Notwithstanding the failure of any purchaser, transferee, or assignee to execute the agreement required by Paragraph (c) of this Subsection 2.4.1, the burdens of this Agreement shall be binding upon such purchaser, transferee, or assignee, but the benefits of this Agreement shall not inure to such purchaser, transferee, or assignee until and unless such agreement is executed. The City Manager shall have the authority to review, consider and either approve, conditionally approve, or deny any proposed sale, transfer, or assignment that is not made in compliance with this Subsection 2.4.1. Notwithstanding any contrary provision of this Agreement, the Owner of an individual Lot shall not have any liability hereunder with respect to any other Lot and a default by the Owner of one Lot shall not impact the rights and obligations of the Owner of any other Lot.

2.4.2 Release of Transferring Owner. Notwithstanding any sale, transfer, or assignment, a transferring Owner shall continue to be obligated under this Agreement unless such transferring owner is given a release in writing by City, which release shall be provided by City upon the full satisfaction by such transferring owner of all of the following conditions:

(a) such transferring owner no longer has a legal or equitable interest in the portion of the Property sold, transferred, or assigned;

(b) such transferring owner is not then in default under this Agreement (after notice and the expiration of any applicable cure periods), in which case such transferring owner shall remain liable for such default but not any future defaults by the assignee after the date of the transfer; and

(c) such transferring owner has provided City with the notice and executed agreement required under Paragraph (c) of Subsection 2.4.1 above.

2.4.3 Subsequent Assignment. Any subsequent sale, transfer, or assignment after an initial sale, transfer, or assignment shall be made only in accordance with and subject to the terms and conditions of this Section 2.4.

2.4.4 For the avoidance of doubt, this Section 2.4 does not apply to assignments or transfers of this Agreement to Mortgagees or their initial transferees after a foreclosure, deed in lieu, or similar action permitted under the mortgage, deed of trust, or other security device securing financing with respect to the Owner's leasehold interest in the Property.

2.5 Amendment or Cancellation of Agreement; Operating Memoranda.

2.5.1 Amendment or Cancellation. This Agreement may be amended or cancelled in whole or in part only in the manner provided for in Government Code Section 65868. Any amendment of this Agreement, which amendment has been requested by Owner, shall be considered by the City only upon the payment of the applicable processing charge. This provision shall not limit any remedy of City or Owner as provided by this Agreement. Either party or successor in interest, may propose an amendment to or cancellation, in whole or in part, of this Agreement. Any amendment or cancellation shall be by mutual consent of the parties or their successors in interest except as provided otherwise in this Agreement or in Government

Code Section 65865.1. For purposes of this section, the term "successor in interest" shall mean any person having a legal or equitable interest in the whole of the Property, or any portion thereof as to which such person wishes to amend or cancel this Agreement. The procedure for proposing and adopting an amendment to, or cancellation of, in whole or in part, this Agreement shall be the same as the procedure for adopting and entering into this Agreement in the first instance. Notwithstanding the foregoing sentence, if the City initiates the proposed amendment to, or cancellation of, in whole or in part, this Agreement, City shall first give notice to the Owner of its intention to initiate such proceedings at least sixty (60) days in advance of the giving the public notice of intention to consider the amendment or cancellation.

2.5.2 Operating Memoranda.

The provisions of this Agreement require a close degree of cooperation between the City and Owner and development of the Project hereunder may demonstrate that refinements and clarifications are appropriate with respect to the details of performance of the City and Owner. If and when, from time to time, during the term of this Agreement, the City and Owner agree that such clarifications are necessary or appropriate, the City and Owner shall effectuate such clarifications through operating memoranda approved by the City and Owner, which, after execution, shall be attached hereto as addenda and become a part hereof, and may be further clarified from time to time as necessary with future approval by the City and Owner. No such operating memoranda shall constitute an amendment to this Agreement requiring public notice or hearing. The City Manager shall be authorized to make the determination on behalf of the City whether a requested clarification may be effectuated pursuant to this Section 2.5.2 or whether the requested clarification is of such a character to constitute an amendment hereof. The City Manager shall be authorized to execute any operating memoranda hereunder on behalf of the City without further Planning Commission or City Council action.

2.5.3 Certificate of Performance.

Upon "Completion" (as defined in the Ground Lease) of the portion of the Project located on a particular Lot, the City shall provide Owner, upon Owner's request, with a statement ("**Certificate of Performance**") evidencing such completion, termination of this Agreement as to that particular Lot, and the release of Owner from further obligations hereunder with respect to the applicable Lot except with respect to any obligations which survive such termination. The Certificate of Performance shall be signed by the appropriate agents of Owner and the City and shall be recorded with the County Recorder. Such Certificate of Performance is not a notice of completion as referred to in California Civil Code Section 8182.

2.6 Termination. This Agreement shall be deemed terminated and of no further effect upon the occurrence of any of the following events:

(a) Expiration of the stated term of this Agreement as set forth in Section 2.3;or

(b) As to each Lot, completion of the portion of the Project to be developed and constructed on such Lot in accordance with the terms of this Agreement including issuance

of all required occupancy permits and acceptance by City or applicable public agency of all required dedications, if any.

Termination of this Agreement shall not constitute termination of any other land use entitlements approved for the Property. Upon the termination of this Agreement, no party shall have any further right or obligation hereunder except with respect to any obligation to have been performed prior to such termination or with respect to any default in the performance of the provisions of this Agreement which has occurred prior to such termination or with respect to any right and/or obligations which are specifically set forth as surviving this Agreement. Upon such termination, any public facilities and services mitigation fees paid pursuant to Section 4.2 of this Agreement by Owner to City for residential units on which construction has not yet begun shall be refunded to Owner by City to the extent payment has been received.

2.7 Notices.

(a) As used in this Agreement, "notice" includes, but is not limited to, the communication of notice, request, demand, approval, statement, report, acceptance, consent, waiver, appointment, or other communication required or permitted hereunder.

(b) All notices shall be in writing and shall be considered given either: (i) when delivered in person, including, without limitation, by courier, to the recipient named below; or (ii) on the date of delivery shown on the return receipt, after deposit in the United States mail in a sealed envelope as either registered or certified mail with return receipt requested, and postage and postal charges prepaid, and addressed to the recipient named below. All notices shall be addressed as follows:

If to City:
Scott Ochoa, City Manager
City of Ontario
303 East "B" Street
Ontario, CA 91764

If to Owner:
OTC Owner, LLC
c/o Adept Urban
388 Cordova Street, #280
Pasadena, CA 91101
Attention: Patrick Chraghchian; Robert Montano

(c) Either party may, by notice given at any time, require subsequent notices to be given to another person or entity, whether a party or an officer or representative of a party, or to

a different address, or both. Notices given before actual receipt of notice of change shall not be invalidated by the change.

3. DEVELOPMENT OF THE PROPERTY.

3.1 Development of the Project; Rights to Develop.

3.1.1 Development of the Project. In consideration of the premises, purposes, and intentions set forth in this Agreement, and in consideration of the assurances for development of the Project pursuant to this Agreement, Owner agrees to develop the Project in accordance with: (i) the terms and conditions of this Agreement and the Ground Leases; (ii) the terms and conditions established in the Development Approvals; and (iii) the Existing Land Use Regulations. Developer agrees that, notwithstanding any provision of law or this Agreement to the contrary, the use and development of the Property shall conform to all of the requirements, terms and conditions of the Ground Leases. Owner further agrees that the use, density and intensity, maximum height and size of structures and provisions for the Property reservation and dedication of land for public purposes related to the Property shall be limited to those uses permitted by the Ground Leases and Existing Land Use Regulations. The Project shall be developed in accordance with the Ground Leases and Development Approvals. The Project shall be constructed in compliance with all applicable building codes and standards, as such may be modified from time to time.

3.1.2 Rights to Develop. Subject to the terms of this Agreement including the Reservations of Authority, Owner shall have a vested right to develop the Project in accordance with the Existing Land Use Regulations, subject to the terms and conditions of this Agreement and the Ground Leases and the conditions established in the Development Approvals. The Project shall remain subject to all Development Approvals required to complete the Project. Except as otherwise provided in this Agreement, the permitted uses of the Property, the density and intensity of use, the maximum height and size of proposed buildings, and provisions for reservation and dedication of land for public purposes shall be those set forth in the Existing Land Use Regulations.

3.2 Effect of Agreement on Land Use Regulations. Except as otherwise provided under the terms of this Agreement including the Reservations of Authority, the rules, regulations, and official policies governing permitted uses of the Property, the density and intensity of use of the Property, the maximum height and size of proposed buildings, and the design, improvement and construction standards and specifications applicable to development of the Property shall be the Existing Land Use Regulations. In connection with any Subsequent Development Approval, City shall exercise discretion in accordance with the same manner as it exercises its discretion under its police powers, including the Reservations of Authority set forth herein; provided however, that such discretion shall not prevent development of the Property for the uses and to the density or intensity of development set forth in this Agreement.

3.3 Timing of Development. The parties acknowledge that Owner cannot at this time predict when or the rate at which phases of the Property will be developed. Such decisions

depend upon numerous factors which are not within the control of Owner, such as market orientation and demand, interest rates, absorption, completion, and other similar factors. Since the California Supreme Court held in Pardee Construction Co. v. City of Camarillo (1984) 37 Ca1. 3d 465, that the failure of the parties therein to provide for the timing of development resulted in a later adopted initiative restricting the timing of development to prevail over such parties' agreement, it is the parties' intent to cure that deficiency by acknowledging and providing that Owner shall have the right to develop (without the obligation) the Property in such order and at such rate and at such times as set forth in the Ground Lease if then in effect or if the Ground Lease is not then effect, when Owner deems appropriate within the exercise of its sole and subjective business judgment during the term of this Agreement.

3.4 Requirement for Public Infrastructure Improvements. Owner shall comply with any conditions of the Development Approvals with respect to providing public infrastructure improvements or facilities, if any.

3.5 Changes and Amendments. The parties acknowledge that refinement and further development of the Project will require Subsequent Development Approvals and may demonstrate that changes are appropriate and mutually desirable in the Existing Development Approvals. In the event Owner finds that a change in the Existing Development Approvals is necessary or appropriate, Owner shall apply for a Subsequent Development Approval to effectuate such change and City shall process and act on such application in accordance with the Existing Land Use Regulations, except as otherwise provided by this Agreement including the Reservations of Authority. Unless otherwise required by law, as determined in City's reasonable discretion, a change to the Existing Development Approvals shall be deemed "minor" and not require an amendment to this Agreement provided such change does not:

(a) Alter the permitted uses of the Property as a whole; or,

(b) Increase the density or intensity of use of the Property as a whole; (other than in de minimis amounts); or,

(c) Increase the maximum height and size of permitted buildings (other than in de minimis amounts); or,

(d) Delete a requirement for the reservation or dedication of land for public purposes within the Property as a whole; or,

(e) Constitute a project requiring a subsequent or supplemental environmental impact report pursuant to Section 21166 of the Public Resources Code.

3.6 Reservations of Authority.

3.6.1 Limitations, Reservations and Exceptions. Notwithstanding any other provision of this Agreement, the City shall not be prevented from applying new rules, regulations, and policies upon the Owner, nor shall a development agreement prevent the City from denying or conditionally approving any subsequent development project application on the

basis of such new rules, regulations, and policies where the new rules, regulations and policies consist of the following:

(a) Processing fees by City to cover its actual costs of processing applications for, or monitoring compliance with, any development approvals granted for the performance of any conditions imposed on the Project, unless otherwise waived by the City in writing;

(b) Procedural regulations relating to hearing bodies, petitions, applications, notices, findings, records, and any other matter of procedure;

(c) Regulations, policies, and rules governing engineering and construction standards and specifications applicable to public and private improvements, including all uniform codes adopted by the City and any local amendments to those codes adopted by the City; provided however that, Owner shall have a vested right to develop the Property in accordance with, and to the extent of, the standards and specifications that are expressly identified in the Specific Plan;

(d) Regulations that may conflict with this Agreement or Existing Land Use Regulations but that are reasonably necessary to protect the residents of the project and/or of the immediate community from a condition perilous to their health or safety; and are generally applicable on a citywide basis (except in the event of natural disasters as found by the City Council such as floods, earthquakes, pandemics and similar acts of God);

(e) Reserved;

(f) Regulations to which the Owner consents in writing.

3.6.2 Subsequent Development Approvals. This Agreement shall not prevent City, in acting on Subsequent Development Approvals, from applying Subsequent Land Use Regulations that do not conflict with the Development Approvals and the Existing Land Use Regulations, nor shall this Agreement prevent City from denying or conditionally approving any Subsequent Development Approval on the basis of the Existing Land Use Regulations or any Subsequent Land Use Regulation not in conflict with the Development Approvals and the Existing Land Use Regulations.

3.6.3 Modification or Suspension by State or Federal Law. In the event that State or Federal laws or regulations, enacted after the Effective Date of this Agreement, prevent or preclude compliance with one or more of the provisions of this Agreement, such provisions of this Agreement shall be modified or suspended as may be necessary to comply with such State or Federal laws or regulations, provided, however, that this Agreement shall remain in full force and effect to the extent it is not inconsistent with such laws or regulations and to the extent such laws or regulations do not render such remaining provisions impractical to enforce or comply with as determined by Owner. In the event Owner alleges that such State or Federal laws or

regulations preclude or prevent compliance with one or more provisions of this Agreement, and the City does not agree, the Owner may, at its sole cost and expense, seek declaratory relief (or other similar non-monetary remedies); provided however, that nothing contained in this Section 3.6.3 shall impose on City any monetary liability for contesting such declaratory relief (or other similar non-monetary relief).

3.6.4 Intent. The parties acknowledge and agree that City is restricted in its authority to limit its police power by contract and that the foregoing limitations, reservations, and exceptions are intended to reserve to City all of its police power which cannot be so limited. This Agreement shall be construed, contrary to its stated terms if necessary, to reserve to City all such power and authority which cannot be restricted by contract.

3.7 Public Works; Utilities. If Owner is required by any Development Approval to construct any public works facilities which will be dedicated to City or any other public agency upon completion, and if required by applicable laws to do so, Owner shall perform such work in the same manner and subject to the same requirements as would be applicable to City or such other public agency should it have undertaken such construction. As a condition of development approval, Owner shall connect the Project to all utilities necessary to provide adequate water, recycled water, sewer, gas, electric, and other utility service to the Project. As a further condition of development approval, Owner shall contract with the City for City-owned or operated utilities for this purpose, for such price and on such terms as may be available to similarly situated customers in the City.

3.8 Regulation by Other Public Agencies. It is acknowledged by the parties that other public agencies not within the control of City possess authority to regulate aspects of the development of the Property separately from or jointly with City and this Agreement does not limit the authority of such other public agencies. City agrees to cooperate fully, at no out-of-pocket cost to City, with Owner in obtaining any required permits or compliance with the regulations of other public agencies provided such cooperation is not in conflict with any laws, regulations, or policies of the City.

3.10 Rent Control. Notwithstanding anything to the contrary in this Agreement, City agrees that, to the extent permitted by applicable law, City shall not apply any rent control or other moratoria or interim control ordinance against the Property or the Project. The foregoing covenant shall survive the expiration of this Agreement and shall be in effect as to each Lot until the earliest of (a) any early termination of this Agreement other than a termination due to the completion of the portion of the Project on such Lot; (b) a termination of the Ground Lease for such Lot; or (c) seventy (70) years from the date of this Agreement.

4. PUBLIC BENEFITS.

4.1 Intent. The parties acknowledge and agree that development of the Property will result in substantial public needs that will not be fully met by the Development Approvals and the Existing Land Use Regulations and further acknowledge and agree that this Agreement confers substantial private benefits on Owner that should be balanced by commensurate public benefits. Accordingly, the parties intend to provide consideration to the public to balance the

private benefits conferred on Owner by providing more fully for the satisfaction of the public needs resulting from the Project.

4.2 Development Impact Fees.

4.2.1 Amount of Development Impact Fee. Development Impact Fees (DIF) shall be paid by Owner. The amounts for Development Impact Fees established or imposed by the City to be paid by Owner shall be the amounts that are in effect as of the Effective Date and Development Impact Fees established or imposed by other public agencies to be paid by Owner shall be the amounts that are in effect at the time such fees are due and payable during the development process. Nothing contained in this Agreement shall affect the ability of other public agencies that are not controlled by City to impose and amend, from time to time, Development Impact Fees established or imposed by such other public agencies, even though such Development Impact Fees may be collected by City.

4.2.2 Time of Payment.

(a) The following Development Impact Fees for the development of Lot A shall be paid pursuant to the amortization schedule provided in this Subsection 4.2.2(a) (collectively, the "Lot A Deferred DIFs):

[o be determined]

The current estimated projected total amount of the Lot A Deferred DIFs is $4,500,000. The actual total amount of the Lot A Deferred DIFs may vary. The City agrees that Owner may amortize payment to the City of the Lot A Deferred DIFs over thirty (30) years at a 3 percent (3%) annual interest rate. Owner agrees that, commencing upon the earlier of (i) issuance of a temporary or other certificate of occupancy for the residential component of the portion of the Project on Lot A or (ii) the fiftieth (50^{th}) month following the date of this Agreement, Owner shall pay to the City, on the 1^{st} day of the next following month and each and every successive month for three hundred sixty (360) consecutive months, an amount equal to the amortized principal and interest of the actual amount of the Lot A Deferred DIFs amortized over thirty (30) years at a 3 percent (3%) annual interest rate. By way of example only, if the Lot A Deferred DIFs equal $4,5000,000, the monthly payment to be made to the City would be $18,972. The entire unpaid principal balance of the amortized Lot A Deferred DIFs and any accrued but unpaid interest shall be immediately due and payable to the City upon any of the following events: (1) the termination of this Agreement; (2) any sale, transfer, assignment, or refinancing other than a termination due to the completion of the portion of the Project on such Lot; or) any uncured default by Owner with regard to repayment of the amortized Lot A Deferred DIFs to the City (if such amounts have not been paid to the City within five (5) business days of Owner's receipt of written notice from the City). Any monthly payment or portion thereof not paid to the City as and when due under the terms of this Agreement shall accrue interest from the date on which such payment was due at the rate of one percent (1%) over the prime rate announced by Bank of America. All payments under this Subsection will be applied first to penalties and late fees, then to interest, then to reduce the principal amount owed.

(b) Any Development Impact Fee not listed in Subsection (a) above, including without limitation all Development Impact Fees applicable to the development of Lots, B, C, and D, shall be paid when and as required in their standard course and schedule.

4.3 Responsibility for Construction of Public Improvements.

4.3.1 Timely Construction of Public Infrastructure. Owner shall be responsible for the timely construction and completion of all public infrastructure required for the Project by any Development Approval.

4.3.2 Construction of DIF Program Infrastructure. To the extent Owner is required to construct and completes construction of public improvements that are included in City's Development Impact Fee Program, City agrees that City shall issue DIF Credit and DIF Reimbursement in accordance with the provisions of a separate Fee Credit Agreement between City and Owner. Limitation on the use of DIF Credit issued to Owner to offset Owner's DIF payment obligations shall also be subject to the provisions of a separate Fee Credit Agreement. City and Owner agree that the Fee Credit Agreement between City and Owner shall comply with City's adopted policies applicable to such agreements.

4.4 Reserved.

4.5 Schools Obligations. Owner shall satisfy its school obligations with the applicable school district by paying school impact fees. Written evidence of approval by the applicable school district that Owner has met its school obligations may be required by the City as the condition to the issuance by the City of any building permits for the Project.

4.6 Reserved.

4.7 Reserved.

4.8 Reserved.

4.9 Maintenance of Open Space. Owner shall provide for ongoing maintenance of all park, common areas, and open space areas within the Project as may be set forth in the Development Approvals.

4.10 Intentionally Omitted.

4.11 Compliance with Public Benefits Requirements. In the event Owner fails or refuses to comply with any condition referenced in Section 4.1 through 4.9, or challenges (whether administratively or through legal proceedings) the imposition of such conditions, Owner shall be deemed in default of this Agreement pursuant to Section 8.4 hereof, thereby entitling the City to any and all remedies permitted under this Agreement, including, without limitation, the right of the City to withhold Owner's Project-related building permits, certificates of occupancy, or discretionary approvals, without liability.

5. [RESERVED]

6. REVIEW FOR COMPLIANCE.

6.1 Periodic and Special Reviews.

6.1.1 Time for and Initiation of Periodic Review. The City shall review this Agreement every twelve (12) months from the Effective Date in order to ascertain the good faith compliance by the Owner with the terms of this Agreement in accordance with Section 65865.1 of the California Government Code. Upon completion of the City's review, City shall either issue a notice of continuing compliance or a notice of non-compliance and a notice of City's intent to conduct a Special Review pursuant to Sections 6.1.2 through 6.1.6. Issuance of a notice of continuing compliance may be issued by the City Manager or his/her designee. Owner shall be responsible for paying any processing charge in connection with each such annual review, if any, provided that such charge shall be generally consistent with the cost charged for annual reviews for other development agreements to which the City is a party.

6.1.2 Initiation of Special Review. A special review may be called either by agreement between the parties or by initiation in one or more of the following ways:

(1) Recommendation of the Planning staff;

(2) Affirmative vote of at least four (4) members of the Planning Commission; or

(3) Affirmative vote of at least three (3) members of the City Council.

6.1.3 Notice of Special Review. The City Manager shall begin the special review proceeding by giving notice that the City intends to undertake a special review of this Agreement to the Owner. Such notice shall be given at least ten (10) days in advance of the time at which the matter will be considered by the Planning Commission.

6.1.4 Public Hearing. The Planning Commission shall conduct a hearing at which the Owner must demonstrate good faith compliance with the terms of this Agreement. The burden of proof on this issue is upon the Owner.

6.1.5 Findings Upon Public Hearing. The Planning Commission shall determine upon the basis of substantial evidence whether or not the Owner has, for the period under review, complied in good faith with the terms and conditions of this Agreement.

6.1.6 Procedure Upon Findings.

(a) If the Planning Commission finds and determines on the basis of substantial evidence that the Owner has complied in good faith with the terms and conditions of this Agreement during the period under review, the review for that period is concluded.

(b) If the Planning Commission finds and determines on the basis of substantial evidence that the Owner has not complied in good faith with the terms and conditions

of this Agreement during the period under review, the Planning Commission may recommend modification or termination of this Agreement and shall specify in writing the respects in which Owner has failed to so comply. The City shall provide Owner with written notice of such noncompliance, together with a written specification of the reasons therefor. Such written notice shall also specify a reasonable time for Owner to cure such non-compliance, which time shall be not less than thirty (30) days after Owner's receipt of such notice.

(c) The Owner may appeal a determination pursuant to paragraph (b) in accordance with the City's rule for consideration of appeals in zoning matters generally.

6.2 Proceedings Upon Modification or Termination. If, upon a finding under Section 6.1.6(b), the City determines to proceed with modification or termination of this Agreement, the City shall give notice to the property Owner of its intention so to do. The notice shall contain:

(a) The time and place of the hearing;

(b) A statement as to whether or not the City proposes to terminate or to modify this Agreement; and

(c) Other information that the City considers necessary to inform the Owner of the nature of the proceeding.

6.3 Hearing on Modification or Termination. At the time and place set for the hearing on modification or termination, the Owner shall be given an opportunity to be heard. The Owner shall be required to demonstrate good faith compliance with the terms and conditions of this Agreement. The burden of proof on this issue shall be on the Owner. If the City Council finds, based upon substantial evidence in the administrative record, that the Owner has not complied in good faith with the terms and conditions of the agreement, the City Council may terminate or modify this Agreement and impose those conditions to the action it takes as it considers necessary to protect the interests of the City. The decision of the City Council shall be final, subject only to judicial review pursuant to Section 1094.5 of the Code of Civil Procedure.

6.4 Certificate of Agreement Compliance. If, at the conclusion of a Periodic or Special Review, Owner is found to be in compliance with this Agreement, City shall, upon written request by Owner, issue a Certificate of Agreement Compliance ("Certificate") to Owner stating that after the most recent Periodic or Special Review and based upon the information known or made known to the Planning Director and City Council that (1) this Agreement remains in effect and (2) Owner is not in default. The Certificate shall be in recordable form, shall contain information necessary to communicate constructive record notice of the finding of compliance, shall state whether the Certificate is issued after a Periodic or Special Review and shall state the anticipated date of commencement of the next Periodic Review. Owner may record the Certificate with the County Recorder. Whether or not the Certificate is relied upon by assignees or other transferees or Owner, City shall not be bound by a Certificate if a default existed at the time of the Periodic or Special Review, but was concealed from or otherwise not known to the Planning Director or City Council.

7. [RESERVED]

8. ENFORCEABILITY.

8.1 Default.

Subject to Section 8.2, failure by any party to perform any term or provision of this Agreement required to be performed by such party shall constitute an event of default ("Event of Default"). For purposes of this Agreement, a party claiming another party is in default shall be referred to as the "Complaining Party," and the party alleged to be in default shall be referred to as the "Party in Default." Provided, a Complaining Party shall not exercise any of its remedies as the result of such Event of Default unless such Complaining Party first gives notice to the Party in Default as provided in Section 8.2, and the Party in Default fails to cure such Event of Default within the applicable cure period.

8.2 Procedure Regarding Defaults.

8.2.1 Notice Required. The Complaining Party shall give written notice of default to the Party in Default, specifying the default complained of by the Complaining Party. Delay in giving such notice shall not constitute a waiver of any default nor shall it change the time of default.

8.2.2 Right to Cure. The Party in Default shall diligently endeavor to cure, correct or remedy the matter complained of, provided such cure, correction or remedy shall be completed within the applicable time period set forth herein after receipt of written notice (or such additional time as may be deemed by the Complaining Party to be reasonably necessary to correct the matter).

8.2.3 Delay not a Waiver. Any failures or delays by a Complaining Party in asserting any of its rights and remedies as to any default shall not operate as a waiver of any default or of any such rights or remedies. Delays by a Complaining Party in asserting any of its rights and remedies shall not deprive the Complaining Party of its right to institute and maintain any actions or proceedings which it may deem necessary to protect, assert, or enforce any such rights or remedies.

8.2.4 Time to Cure. If an Event of Default occurs, prior to exercising any remedies, the Complaining Party shall give the Party in Default written notice of such default. If the default is reasonably capable of being cured within thirty (30) days, the Party in Default shall have such period to effect a cure prior to exercise of remedies by the Complaining Party. If the nature of the alleged default is such that it cannot practicably be cured within such 30 day period, the cure shall be deemed to have occurred within such 30 day period if (a) the cure is commenced at the earliest practicable date following receipt of the notice; (b) the cure is diligently prosecuted to completion at all times thereafter; (c) at the earliest practicable date (in no event later than 30 days after the curing party's receipt of the notice), the curing party provides written notice to the other party that the cure cannot practicably be completed within such 30 day period; and (d) the cure is completed at the earliest practicable date. In no event

shall the Complaining Party be precluded from exercising remedies if a default is not cured within ninety (90) days after the first notice of default is given.

8.2.5 Termination of Agreement. Subject to the foregoing, if a Party in Default fails to cure a default in accordance with the foregoing, the Complaining Party, at its option, may terminate this Agreement, and/or institute legal proceedings pursuant to this Agreement.

8.2.6 Default during Annual Review. Without limitation, evidence of default may arise in the course of the regularly scheduled annual review described in Section 8.3. below.

8.3 Institution of Legal Action.

8.3.1 Institution of Action. Subject to notice of default and opportunity to cure under Sections 8.1 and 8.2, and subject further to the limitation on remedies set forth in Section 8.4 and Section 6, in addition to any other rights or remedies, any party to this Agreement may institute legal action to cure, correct or remedy any default, to enforce any covenants or agreements herein, to enjoin any threatened or attempted violation hereof, or to obtain any other remedies consistent with this Agreement.

8.3.2 Attorneys' Fees. If a legal action or proceeding is brought by any party to this Agreement because of an Event of Default under this Agreement, or to enforce a provision hereof, the prevailing party in such action shall be entitled to reasonable attorneys' fees, expert witness fees, court costs, and such other costs as may be fixed by the court. This provision is separate and several and shall survive the merger of this Agreement into any judgment on this Agreement.

8.4 Remedies

The parties would not have entered into this Agreement without the limits on damages under this Agreement set forth herein. Accordingly, the parties agree that each of the parties hereto may pursue any remedy at law or equity available for the breach of any provision of this Agreement, subject to the following:

(a) The City and all persons acting on behalf of the City shall not be liable in damages to Owner, or to any successor in interest, or to any other person. Owner covenants not to sue for monetary damages or claim any monetary damages:

(i) For any breach of this Agreement or for any cause of action which arises out of this Agreement; or

(ii) For the taking, impairment or restriction of any property right or interest as the result of or arising under or pursuant to this Agreement, but excluding claims based upon applicable obligations of the City acting in its governmental capacity and not as a party to this Agreement;

(iii) Arising out of or connected with any dispute, controversy or issue regarding the application or interpretation or effect of the provisions of this Agreement;

(iv) Provided, however, that Owner reserves the right to sue for any monetary sums payable by City to Owner pursuant to Section 9.3.2 of this Agreement which City fails to pay.

(b) Owner shall not be liable in monetary damages to City, or to any person acting on behalf of City, and City covenants not to sue for damages or claim any monetary damages:

(i) Arising out of or connected with any dispute, controversy or issue regarding the application or interpretation or effect of the provisions of this Agreement;

(ii) Provided, however, that City reserves the right to sue for any monetary sums due City for any Development Impact Fees and any other sums payable by Owner to City under this Agreement including without limitation pursuant to any indemnities under this Agreement which Owner fails to pay.

(c) Notwithstanding provisions to the contrary contained in this Section, both parties reserve the right, by separate action, if necessary, to recover all costs and fees pursuant to Section 8.3.2 herein.

(d) The parties acknowledge that, except as provided in Sections 8.4(a)(iv), (b)(ii), and (c) above, money damages and remedies at law generally are inadequate and, specific performance or writ of mandate are available for the enforcement of this Agreement.

(e) Nothing in this Agreement shall be deemed to waive or limit any rights and remedies that the parties would otherwise have against the other in the absence of this Agreement with respect to personal injury or death or property damage caused by the negligence or willful misconduct of a party.

8.6 Release. Subject to and without limiting the indemnities in this Agreement, except as set forth in and subject to this Section 8, each party, for itself, its successors and assignees, hereby releases the other party, its officers, agents and employees from any and all claims, demands, actions, or suits of any kind or nature arising out of any liability, known or unknown, present or future, including, but not limited to, any claim or liability, based or asserted, pursuant to Article I, Section 19 of the California Constitution, the Fifth Amendment of the United States Constitution, or any other law or ordinance which seeks to impose any other liability or damage, whatsoever, upon the City because it entered into this Agreement or because of the terms of this Agreement.

8.7 Ground Leases and Other Agreements Not Affected. This Section 8 shall not be deemed to implicate, modify, or affect in any way any provisions in the Ground Leases or any other agreement entered into by the parties with respect to the Property and the Project.

9. THIRD PARTY LITIGATION.

9.1 General Plan Litigation. City has determined that this Agreement is consistent with its General Plan, as such General Plan exists as of the Effective Date, and that the General Plan meets all requirements of law. City shall have no liability in damages under this Agreement for any failure of City to perform under this Agreement or the inability of Owner to develop the Project as the result of a judicial determination that on the Effective Date, or at any time thereafter, the General Plan, or portions thereof, are invalid or inadequate or not in compliance with law.

9.2 Third Party Litigation Concerning Agreement. Subject to and without limiting the indemnity in Section 9.3.2 below, Owner shall defend, (with counsel chosen by Owner), at its expense, including attorneys' fees, indemnify, and hold harmless City and its officers and employees from any claim, action or proceeding against City, its officers, or employees to attack, set aside, void, or annul the approval of this Agreement or the approval of any permit granted pursuant to this Agreement. City shall promptly notify Owner of any such claim, action or proceeding, and City shall cooperate in the defense. If City fails to promptly notify Owner of any such claim, action or proceeding, or if City fails to cooperate in the defense, Owner shall not thereafter be responsible to defend, indemnify, or hold harmless City. City may in its discretion participate in the defense of any such claim, action or proceeding.

9.3 Indemnity.

9.3.1 Owner. In addition to the provisions of 9.2 above, subject to and without limiting the indemnity in Section 9.3.2 below, Owner shall defend,(with counsel chosen by Owner), at its expense, including attorneys' fees, indemnify, and hold harmless City and its City, and its officers, agents, attorneys, employees, and representatives (collectively, the "City Parties") from any liability whatsoever, based or asserted upon any act or omission of Owner, its officers, agents, employees, subcontractors, and/or independent contractors, for property damage, bodily injury, or death (Owner's employees included) relating to or in any way connected with or arising from the activities contemplated hereunder, including, but not limited to, the study, design, engineering, construction, completion, and operation the Project, save and except to the extent such claims for damages arises through the negligence or willful misconduct of City Parties. City may in its discretion participate in the defense of any such legal action. The City shall promptly notify Owner of any such claim, action or proceeding.

9.3.2 City. City agrees to indemnify, defend (with counsel chosen by City), and hold harmless American General Design, Inc. (dba Adept Development), a California corporation ("Adept"), and _____ ("Tenant" under the Ground Lease) ("Tenant") with respect to any notice of violation or action taken by the State of California directly against Adept or Tenant pursuant to California Government Code Sections 54220 through 54234 in connection with the City's disposition of the Property by ground lease to Tenant. Adept and Tenant shall each promptly notify the City (but in no event later than five (5) business days) following its receipt or knowledge of any notice of violation, claim, action, or proceeding initiated by the State of California, and Adept and Tenant shall reasonably and in good faith cooperate in the City's defense. The foregoing indemnity specifically excludes, and the City shall not be liable to Adept or Tenant for, and neither Adept nor Tenant shall have no right or be entitled to, any special, incidental, indirect, consequential, or punitive costs, liabilities,

loss, expenses, or damages, including without limitation economic loss, commercial loss, lost business, lost profits, lost revenues, interruptions of service, or any delay, error or loss, whether foreseeable or unforeseeable, and the City shall not be liable to Adept or Tenant, or any party claiming through Adept or Tenant, for any such costs, liabilities, loss, expenses, or damages, under this provision, or arising out of, or in connection with, any notice of violation or action taken by the State of California against Adept or Tenant in connection with the City's disposition of the Property by ground lease to Tenant, and Adept and Tenant each hereby waives on behalf of itself and any party claiming through Adept or Tenant the right to claim the same against the City.

9.4 Environment Assurances. Owner shall defend, (with counsel chosen by Owner), at its expense, including attorneys' fees, indemnify, and hold harmless the City Parties from any liability, based or asserted, upon any act or omission of Owner, its officers, agents, employees, subcontractors, and/or independent contractors for any violation of any federal, state, or local law, ordinance, or regulation relating to industrial hygiene or to environmental conditions on, under, or about the Property that were not present prior to the date that the Tenants under the Ground Leases take possession of the Property, including, but not limited to, soil and groundwater conditions, and Owner shall defend, at its expense, including reasonable attorneys' fees, the City Parties in any action based or asserted upon any such alleged act or omission. City may in its discretion participate in the defense of any such action.

9.5 Reservation of Rights. With respect to Sections 9.2, 9.3.1, and 9.4 herein, City reserves the right to either (1) approve the attorney(s) which Owner selects, hires or otherwise engages to defend City hereunder, which approval shall not be unreasonably withheld, or (2) conduct its own defense, provided, however, that Owner shall reimburse City forthwith for any and all reasonable expenses incurred for such defense, including attorneys' fees, upon billing and accounting therefor.

9.6 Survival. The provisions of this Sections 9.1 through 9.6, inclusive, shall survive the termination of this Agreement.

10. MORTGAGEE PROTECTION.

The parties hereto agree that this Agreement shall not prevent or limit Owner, in any manner, at Owner's sole discretion, from encumbering the Property or any portion thereof or any improvement thereon by any mortgage, deed of trust, or other security device securing financing with respect to the Property ("Security Instrument"). City acknowledges that the lenders providing such financing may require certain Agreement interpretations and modifications and agrees upon request, from time to time, to meet with Owner and representatives of such lenders to negotiate in good faith any such request for interpretation or modification. City will not unreasonably withhold its consent to any such requested interpretation or modification provided such interpretation or modification is consistent with the intent and purposes of this Agreement. Any Mortgagee of the Property shall be entitled to the following rights and privileges:

(a) Neither entering into this Agreement nor a breach of this Agreement shall defeat, render invalid, diminish or impair the lien of any Security Instrument on the Property made in good faith and for value, unless otherwise required by law.

(b) The Mortgagee of any Security Instrument, or any part thereof, which Mortgagee, has submitted a request in writing to the City in the manner specified herein for giving notices, shall be entitled to receive written notification from City of any default by Owner in the performance of Owner's obligations under this Agreement.

(c) If City timely receives a request from a Mortgagee requesting a copy of any notice of default given to Owner under the terms of this Agreement, City shall provide a copy of that notice to the Mortgagee within ten (10) days of sending the notice of default to Owner. The Mortgagee shall have the right, but not the obligation, to cure the default during the remaining cure period allowed such party under this Agreement.

(d) Any Mortgagee who takes title of the Property, or any part thereof, pursuant to foreclosure trustee's sale, deed in lieu of foreclosure, lease or sublease termination or otherwise, shall take the Property, or part thereof, subject to the terms of this Agreement, provided that any such Mortgagee, including its affiliate, that takes title to the Property shall be entitled to all of the benefits arising under this Agreement. Notwithstanding any other provision of this Agreement to the contrary, no Mortgagee shall have an obligation or duty under this Agreement to perform any of Owner's obligations or other affirmative covenants of Owner hereunder, or to guarantee such performance; provided, however, that to the extent that any covenant to be performed by Owner is a condition precedent to the performance of a covenant by City, the performance thereof shall continue to be a condition precedent to City's performance hereunder, and further provided that any sale, transfer, or assignment after the initial sale, transfer, or assignment by any Mortgagee shall be subject to the provisions of Section 2.4 of this Agreement.

11. MISCELLANEOUS PROVISIONS.

11.1 Recordation of Agreement. This Agreement and any amendment or cancellation thereof shall be recorded with the San Bernardino County Recorder by the City Clerk within the ten (10) days after the City executes this Agreement, as required by Section 65868.5 of the Government Code. If the parties to this Agreement or their successors in interest amend or cancel this Agreement as provided for herein and in Government Code Section 65868, or if the City terminates or modifies this Agreement as provided for herein and in Government Code Section 65865.1 for failure of the applicant to comply in good faith with the terms or conditions of this Agreement, the City Clerk shall have notice of such action recorded with the San Bernardino County Recorder. A failure to record the Agreement in a timely fashion shall not impact its effectiveness to the extent permitted by applicable law.

11.2 Entire Agreement. This Agreement sets forth and contains the entire understanding and agreement of the parties, and there are no oral or written representations, understandings or ancillary covenants, undertakings or agreements which are not contained or

expressly referred to herein. No testimony or evidence of any such representations, understandings or covenants shall be admissible in any proceeding of any kind or nature to interpret or determine the terms or conditions of this Agreement.

11.3 Severability. If any term, provision, covenant or condition of this Agreement shall be determined invalid, void or unenforceable, the remainder of this Agreement shall not be affected thereby to the extent such remaining provisions are not rendered impractical to perform taking into consideration the purposes of this Agreement. Notwithstanding the foregoing, the provision of the Public Benefits set forth in Section 4 of this Agreement, including the payment of the fees set forth therein, are essential elements of this Agreement and City would not have entered into this Agreement but for such provisions, and therefore in the event such provisions are determined to be invalid, void or unenforceable, this entire Agreement shall be null and void and of no force and effect whatsoever.

11.4 Interpretation and Governing Law. This Agreement and any dispute arising hereunder shall be governed and interpreted in accordance with the laws of the State of California. This Agreement shall be construed as a whole according to its fair language and common meaning to achieve the objectives and purposes of the parties hereto, and the rule of construction to the effect that ambiguities are to be resolved against the drafting party shall not be employed in interpreting this Agreement, all parties having been represented by counsel in the negotiation and preparation hereof.

11.5 Section Headings. All section headings and subheadings are inserted for convenience only and shall not affect any construction or interpretation of this Agreement.

11.6 Singular and Plural. As used herein, the singular of any word includes the plural.

11.7 Joint and Several Obligations. If at any time during the term of this Agreement any Lot is owned, in whole or in part, by more than one owner, all obligations of such owners under this Agreement shall be joint and several, and the default of any such owner shall be the default of all such owners.

11.8 Time of Essence. Time is of the essence in the performance of the provisions of this Agreement as to which time is an element.

11.9 Waiver. Failure by a party to insist upon the strict performance of any of the provisions of this Agreement by the other party, or the failure by a party to exercise its rights upon the default of the other party, shall not constitute a waiver of such party's right to insist and demand strict compliance by the other party with the terms of this Agreement thereafter.

11.10 No Third Party Beneficiaries. This Agreement is made and entered into for the sole protection and benefit of the parties and their successors and assigns, except that Adept and Tenant are third party beneficiaries of Section 9.3.2. No other person shall have any right of action based upon any provision of this Agreement.

11.11 Force Majeure. Neither party shall be deemed to be in default where failure or delay in performance of any of its obligations under this Agreement is caused by floods,

earthquakes, other Acts of God, fires, wars, riots or similar hostilities, strikes and other labor difficulties beyond the party's control, (including the party's employment force), government regulations, third party litigation, or other causes beyond the party's control. If any such events shall occur, the term of this Agreement and the time for performance by either party of any of its obligations hereunder may be extended by the written agreement of the parties for the period of time that such events prevented such performance, provided that the term of this Agreement shall not be extended under any circumstances for more than five (5) years.

11.12 Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the party benefited thereby of the covenants to be performed hereunder by such benefited party.

11.13 Successors in Interest; Covenants Running with the Land. The burdens of this Agreement shall be binding upon, and the benefits of this Agreement shall inure to, all successors in interest to the parties to this Agreement. All provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land. Each covenant to do or refrain from doing some act hereunder with regard to development of the Property: (a) is for the benefit of and is a burden upon every portion of the Property; (b) runs with the Property and each portion thereof; and, (c) is binding upon each party and each successor in interest during ownership of the Property or any portion thereof. In any event, no owner or tenant of an individual completed residential unit within the Project shall have any rights under this Agreement.

11.14 Counterparts. This Agreement may be executed by the parties in counterparts, which counterparts shall be construed together and have the same effect as if all of the parties had executed the same instrument.

11.15 Jurisdiction and Venue. Any action at law or in equity arising under this Agreement or brought by a party hereto for the purpose of enforcing, construing or determining the validity of any provision of this Agreement shall be filed and tried in the Superior Court of the County of San Bernardino, State of California, and the parties hereto waive all provisions of law providing for the filing, removal or change of venue to any other court.

11.16 Project as a Private Undertaking. It is specifically understood and agreed by and between the parties hereto that the development of the Project is a private development, that neither party is acting as the agent of the other in any respect hereunder, and that each party is an independent contracting entity with respect to the terms, covenants and conditions contained in this Agreement. No partnership, joint venture or other association of any kind is formed by this Agreement. The only relationship between City and Owner is that of a government entity regulating the development of private property and the owner of such property.

11.17 Further Actions and Instruments. Each of the parties shall cooperate with and provide reasonable assistance to the other to the extent contemplated hereunder in the performance of all obligations under this Agreement and the satisfaction of the conditions of this Agreement. Upon the request of either party at any time, the other party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required

instruments and writings and take any actions as may be reasonably necessary under the terms of this Agreement to carry out the intent and to fulfill the provisions of this Agreement or to evidence or consummate the transactions contemplated by this Agreement. The City Manager may delegate his powers and duties under this Agreement to an Assistant City Manager or other management level employee of the City.

11.18 Eminent Domain. No provision of this Agreement shall be construed to limit or restrict the exercise by City of its power of eminent domain.

11.19 Agent for Service of Process. In the event Owner is not a resident of the State of California or it is an association, partnership or joint venture without a member, partner or joint venturer resident of the State of California, or it is a foreign corporation, then in any such event, Owner shall file with the Planning Director, upon its execution of this Agreement, a designation of a natural person residing in the State of California, giving his or her name, residence and business addresses, as its agent for the purpose of service of process in any court action arising out of or based upon this Agreement, and the delivery to such agent of a copy of any process in any such action shall constitute valid service upon Owner. If for any reason service of such process upon such agent is not feasible, then in such event Owner may be personally served with such process out of this County and such service shall constitute valid service upon Owner. Owner is amenable to the process so served, submits to the jurisdiction of the Court so obtained and waives any and all objections and protests thereto. Owner for itself, assigns and successors hereby waives the provisions of the Hague Convention (Convention on the Service Abroad of Judicial and Extra Judicial Documents in Civil or Commercial Matters, 20 U.S.T. 361, T.I.A.S. No. 6638).

11.20 Estoppel Certificate. Within thirty (30) days following a written request by any of the parties, the other party shall execute and deliver to the requesting party a statement certifying that (i) either this Agreement is unmodified and in full force and effect or there have been specified (date and nature) modifications to the Agreement, but it remains in full force and effect as modified; and (ii) either there are no known current uncured defaults under this Agreement or that the responding party alleges that specified (date and nature) defaults exist. The statement shall also provide any other reasonable information requested. The failure to timely deliver this statement shall constitute a conclusive presumption that this Agreement is in full force and effect without modification except as may be represented by the requesting party and that there are no uncured defaults in the performance of the requesting party, except as may be represented by the requesting party. Owner shall pay to City all reasonable costs incurred by City in connection with the issuance of estoppel certificates under this Section 11.20 prior to City's issuance of such certificates.

11.21 Authority to Execute. Each party represents and warrants that the person or persons executing this Agreement on behalf of such party has the authority to execute this Agreement on behalf of such party and has the authority to bind such party to the performance of its obligations hereunder.

11.22 Attorneys' Fees. In the event of any action between the City and Owner for enforcement or interpretation of any of the terms or conditions of this Agreement, the prevailing

party in such action shall be entitled to recover its reasonable costs and expenses, including without limitation court costs and attorneys' fees actually and reasonably incurred, as awarded by a court of competent jurisdiction. This Section shall survive the termination of this Agreement.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement on the day and year set forth below.

---

RECOMMENDED ACTION: That the Planning Commission consider and recommend that the City Council approve the use of an Addendum to The Ontario Center Environmental Impact Report (State Clearing House No. 89041009) and approve the amendment to the Piemonte Overlay at The Ontario Center Specific Plan (File No. PSPA21-001), pursuant to the facts and reasons contained in the staff report and attached resolutions.

PROJECT SETTING: The Project site is comprised of 119.8 acres of land located at the northerly boundary of the City of Ontario, south of Fourth Street, east of Haven Avenue, west of Milliken Avenue, and north of Concours Street, within the Piemonte Overlay at The Ontario Center Specific Plan and The Ontario Center Specific Plan zoning districts, and is depicted in Figure 1: Project Location, below. The Project site is surrounded by residential, office, and commercial properties on land that is generally topographically flat. In addition to the existing surrounding developments, there are also vacant parcels along the Project boundary. The existing surrounding land uses, zoning, and general plan

and specific plan land use designations are summarized in the "Surrounding Zoning & Land Uses" table located in the Technical Appendix of this report.

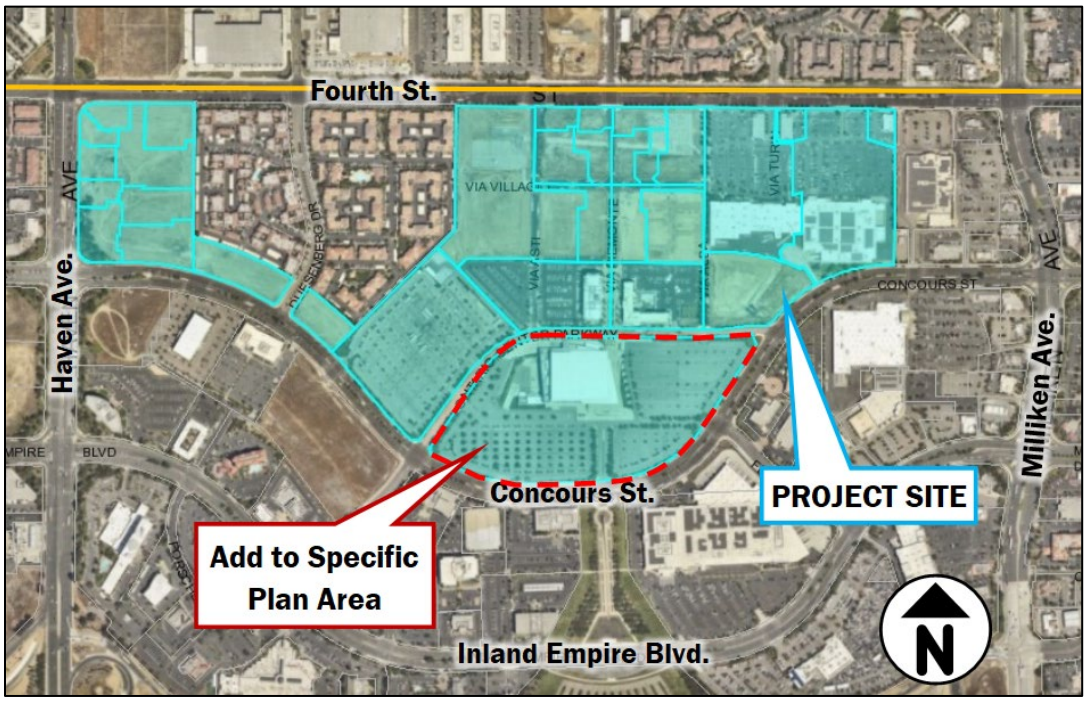

Figure 1: Project Location

PROJECT ANALYSIS:

(1) Background — In 2006, the City Council approved the creation of the Piemonte Overlay at The Ontario Center Specific Plan ("Piemonte Overlay") within the Urban Commercial land use district of The Ontario Center Specific Plan, establishing a master plan for the development of approximately 1.3 million square feet of retail, office, hotel, and entertainment uses, and more than 800 multiple-family dwelling units on the 84-acre Project site. The Piemonte Overlay was delineated into fifteen subareas, with land use designations of Commercial, Entertainment/Retail, Office, Special Use and Residential (See Exhibit B, Existing Boundary and Land Use Map, attached). The current Overlay area covers approximately 92 acres of land, with at least 48 acres being vacant land.

In 2017, the City Council approved an amendment to the Piemonte Overlay document (File No. PSPA16-003) to reduce the number of residential units, reduce the maximum number of hotel rooms, designate plaza areas to accommodate outdoor events, and expand the design concept from the original Tuscan-influenced architecture to allow more contemporary architectural design concepts.

In 2020, the City Council approved an amendment to the Piemonte Overlay document (File No. PSPA19-009) to allow required residential parking spaces to be provided as tandem parking spaces.

The City of Ontario Economic Development Department and a land developer are coordinating to bring a mixed-use development adjacent to the Toyota Arena. The proposed Amendment to the Piemonte Overlay of the Ontario Center Specific Plan would help facilitate the development of underutilized and vacant parcels.

(2) Specific Plan Amendment — The proposed Amendment to the Piemonte Overlay at the Ontario Center Specific Plan ("Overlay Amendment") is focused on incorporating more opportunities for vibrant, mixed-use developments that allow for entertainment, dining and housing. The Overlay Amendment would expand the Project boundary, revise the Entertainment/Retail land use designation to Mixed-Use, establish new development standards and guidelines for mixed-use developments, and implement associated minor text amendments. The proposed boundary and land use plan are provided in Exhibit C, Proposed Boundary and Land Use Map, attached. A "track-changes" document has been prepared that shows the proposed changes in the Piemonte Overlay at The Ontario Center Specific Plan, which is attached to the Specific Plan Amendment action resolution provided with this report.

(a) *Overlay Boundary Expansion* – The Piemonte Overlay boundary would be expanded to include the property located at 4000 Ontario Center Parkway, which is developed with the Toyota Arena sports and entertainment venue and surrounding parking lots. This additional land area is comprised of 24.9 acres of land, which would be delineated into four new subareas and designated with the Mixed-Use land use. The new proposed Subareas ("SA") include SA16, SA17, SA18, and SA19 (See Exhibit D, Existing and Proposed Subareas, attached). SA18 is developed with the Toyota Arena building and the other three areas are developed with parking lots. The Overlay Amendment anticipates that SA16 and SA17 will be developed with service commercial uses on the ground floor and multiple-family residential complexes on the upper floors.

(b) *Land Use Plan / Mixed-use Land Use* – In addition to expanding the Piemonte Overlay boundary, the areas currently designated as Entertainment/Retail would be recategorized as Mixed-Use, which would allow for residential uses in addition to commercial uses. It is anticipated that SA8 and SA11 (See Exhibit D, Existing and Proposed Subareas, attached) will be developed with ground floor retail and residential units above. The incorporation of residential uses into these areas introduces a use not previously anticipated and requires analysis of potential impacts to infrastructure and services. Therefore, an Addendum to The Ontario Center Specific Plan Environmental Impact Report (State Clearinghouse No. 89041009) was prepared and will be discussed further in this report. In summary, the Addendum analyses the future development of 691 residential units and approximately 71,000 square feet of retail space. The development plan review for the residential and retail uses will be processed in future Development Plan applications.

Land use revisions proposed in the Overlay Amendment involve changing areas currently designated as Entertainment/Retail, to Mixed-Use. The revision affects Subareas 8 and 11,

as well as new Subareas 16, 17, 18, and 19. The Mixed-Use land use designation allows for residential, entertainment, retail, dining, and other commercial uses.

(c) *Development Standards and Guidelines* – The Overlay Amendment will establish development standards and guidelines for the Mixed-Use areas, which address site and building designs that can successfully blend residential and commercial uses with pedestrian oriented spaces, providing opportunities for service commercial uses within proximity to residential uses and a large entertainment venue.

The Overlay Amendment incorporates various standards and guidelines that address elements such as site plan design, building design, building materials, parking structures, plaza areas, signage, residential open spaces, and parking requirements.

The development standards for Mixed-Use areas require 15-foot building setbacks along the private streets, as measured from the curb face, to allow for pedestrian oriented corridors. The setback requirements, however, do allow flexibility along Via Piemonte in that the building setbacks can be as little as 5 feet from curb face if an average 15-foot setback is provided along the building frontage. The setback flexibility along Via Piemonte will allow variations in building façades and footprint in order to create pedestrian spaces that are ideal for outdoor activities such as dining, people watching, and shopping.

Development standards for Mixed-Use areas include requirements for private and common open space for residential developments, mandating a minimum 50 square feet of private open space per dwelling unit and a minimum 150 square feet per dwelling unit for common open space.

The design guidelines address design goals for mixed-use developments. The Contemporary architectural style, for instance, can give architects and designers flexibility and creative leeway to design a truly unique and successful mixed-use project that can accommodate residential living, entertainment and dining experiences, and opportunities for retail businesses.

The Overlay Amendment includes the addition of design guidelines for parking structures in anticipation of future parking structures to support higher levels of residential and commercial activities than what currently exists. The design guidelines encourage parking structure designs that are compatible with surrounding buildings, aesthetically pleasing, safe for pedestrians, and visually unobtrusive.

(3) Circulation Concept — The overall circulation concept in the Piemonte Overlay remains largely unchanged. The Piemonte Overlay area is accessed from the surrounding public streets: Haven Avenue, Fourth Street, Milliken Avenue, Concours Street and Ontario Center Parkway. Internal circulation is provided through the existing private streets: Via Piemonte, Via Villagio, Via Asti and Via Alba.

The Overlay Amendment envisions that the main retail and mixed-use corridor will be oriented in a north-south direction, along Via Piemonte, instead of the east-west Via Villagio, as shown in the current Piemonte Overlay concept. The north-south orientation will make Via Piemonte, a private street, as the primary north access point from Fourth Street and will terminate at Ontario Center Parkway to the south. A pedestrian corridor along Via Piemonte will continue south of Ontario Center Parkway as a pedestrian-only area that connects to the Toyota Arena, future service commercial uses, and residential uses.

The Circulation Concept, including the street plans and sections shown as Figures in the Overlay Amendment, are considered conceptual in nature and final street designs may have minor variations from these Figures as development plan applications and designs are refined.

(4) Landscaping — The landscape and streetscape design guidelines have been revised to reflect new streetscape requirements along the internal private streets. Primarily, the Via Piemonte streetscape design was revised to be the main pedestrian and passenger vehicle corridor for the mixed-use development, with curb-adjacent parkway landscape areas and wider pedestrian walkways.

Streetscape designs along Fourth Street, Concours Street, and Ontario Center Parkway remain largely the same, with the exception of a new drop-off and pick-up zone on the south side of Ontario Center Parkway, at the Via Piemonte intersection and just north of the Toyota Arena building. This new zone would allow for taxi or car-service drop-off and pick-up, providing a convenient arrival/departure point for visitors to the mixed-use areas and the Arena.

(5) Infrastructure and Services — The proposed Overlay Amendment does not propose specific changes in the infrastructure and services in relation to the Mixed-use land use designation. As part of the development plan review process, infrastructure demand and capacity of future projects will be analyzed during the planning entitlement process. Specific requirements in infrastructure sizing, location, etc. will be addressed in the development plan design and conditions of approval.

(6) Signage — The Piemonte Overlay requires that development projects prepare a Master Sign Program for the development prior to installing any identification or business signage. In addition to the current sign requirements and guidelines in the Piemonte Overlay, the proposed Overlay Amendment includes a section on Digital Advertising Signs and would limit such signs to the pedestrian corridor area east of the Arena building.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan (TOP). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals.

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner
- Focus Resources in Ontario's Commercial and Residential Neighborhoods

(2) Vision.

Distinctive Development:

- Commercial and Residential Development

➢ Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

➢ G1-2 Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision

(4) Policy Plan (General Plan)

Land Use Element:

- Goal LU1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

➢ LU1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, and foster the development of transit.

➢ LU1-6 Complete Community: We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario. (Refer to Complete Community Section of Community Economics Element).

- Goal LU2: Compatibility between a wide range of uses.

- LU2-6: Infrastructure Compatibility: We require infrastructure to be aesthetically pleasing and in context with the community character.

- Goal LU3: Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the vision.

- LU3-1: Development Standards: We maintain clear development standards which allow flexibility to achieve our Vision.

- LU3-3: Land Use Flexibility: We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity.

Housing Element:

- Goal H2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

- H2-3 Ontario Airport Metro Center. We foster a vibrant, urban, intense and highly amenitized community in the Ontario Airport Metro Center Area through a mix of residential, entertainment, retail and office-oriented uses.

- H2-5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices and other best practices.

- H2-6 Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.

- Goal H3: A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.

- H3-2 Flexible Standards. We allow flexibility in the application of residential and mixed-use development standards in order to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.

- Goal H5: A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age or other status.

- H5-2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation and other amenities.

Community Economics Element:

- Goal CE1: A complete community that provides for all incomes and stages of life.

- CE1-6 Diversity of Housing. We collaborate with residents, housing providers and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to support our workforce, attract business and foster a balanced community.

- Goal CE2: A City of distinctive neighborhoods, districts, and corridors, where people choose to be.

- CE2-1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

- CE2-2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional and sustainable places that will compete well with their competition within the region.

- CE2-4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

- CE2-5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Safety Element:

- Goal S1: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by earthquake-induced and other geologic hazards.

- S1-1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

Community Design Element:

- Goal CD1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.

  - CD1-1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing the diverse character of our existing viable neighborhoods.

  - CD1-2 Growth Areas. We require development in growth areas to be distinctive and unique places within which there are cohesive design themes.

- Goal CD2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and distinct.

  - CD2-1 Quality Architecture. We encourage all development projects to convey visual interest and character through:

    - Building volume, massing, and height to provide appropriate scale and proportion;
    - A true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and
    - Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.

  - CD2-2 Neighborhood Design. We create distinct residential neighborhoods that are functional, have a sense of community, emphasize livability and social interaction, and are uniquely identifiable places through such elements as:

    - A pattern of smaller, walkable blocks that promote access, activity and safety;
    - Variable setbacks and parcel sizes to accommodate a diversity of housing types;
    - Traffic calming measures to slow traffic and promote walkability while maintaining acceptable fire protection and traffic flows;
    - Floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"), as appropriate; and
    - Landscaped parkways, with sidewalks separated from the curb.

  - CD2-4 Mixed Use, Urban Office and Transit Service Areas. We require mixed use, urban office and transit service areas to be designed and developed as pedestrian oriented "villages" that promote a vibrant, comfortable and functional environment.

- CD2-7 Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.

- CD2-8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintenance of visibility and accessibility, and use of lighting.

- CD2-9 Landscape Design. We encourage durable landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

- CD2-10 Surface Parking Areas. We require parking areas visible to or used by the public to be landscaped in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field.

- CD2-11 Entry Statements. We encourage the inclusion of amenities, signage and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.

- CD2-12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.

- CD2-13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

▪ Goal CD3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.

- CD3-1 Design. We require that pedestrian, vehicular, bicycle and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort and aesthetics.

- CD3-2 Connectivity Between Streets, Sidewalks, Walkways and Plazas. We require landscaping and paving be used to optimize visual connectivity between streets, sidewalks, walkways and plazas for pedestrians.

- CD3-3 Building Entrances. We require all building entrances to be accessible and visible from adjacent streets, sidewalks or public open spaces.

- CD3-5 Paving. We require sidewalks and road surfaces to be of a type and quality that contributes to the appearance and utility of streets and public spaces.

- CD3-6 Landscaping. We utilize landscaping to enhance the aesthetics, functionality and sustainability of streetscapes, outdoor spaces and buildings.

- Goal CD5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages additional public and private investments.

- CD5-1 Maintenance of Buildings and Property. We require all public and privately owned buildings and property (including trails and easements) to be properly and consistently maintained.

- CD5-2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan. The Project site contains four properties listed in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix. The proposed changes affect two of the four properties listed in the Available Land Inventory (Subareas 8 and 11; Map ID No. 124 and 125). The residential capacity proposed in this Project is consistent with the number of dwelling units (198) and density (48 DU/AC) specified in the Available Land Inventory.

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan ("ALUCP"), establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. The proposed Project is located

within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the ALUCP.

ENVIRONMENTAL REVIEW: In 1980, the City Council certified The Ontario Center Specific Plan Environmental Impact Report (State Clearing House No. 80062538), in relation to the adoption of The Ontario Center Specific Plan (File No. 2254-SP) ("OCSP"), which was adopted in 1981. Over the years, several amendments to the OCSP have been approved along with appropriate environmental review. On March 19, 1991, a subsequent EIR (State Clearing House No. 89041009) ("Certified EIR") was certified in association with an amendment to the OCSP (File No. 4059-SPA). In 2016, the City approved a Mitigated Negative Declaration ("MND") in association with an amendment to the Piemonte Overlay (File No. PSPA16-003).

In association with the proposed Overlay Amendment, staff collaborated with consultant Kimley-Horn to prepare an Addendum to the Certified EIR, as amended, and found that all potential adverse direct, indirect, and cumulative environmental impacts were thoroughly analyzed and discussed in the Certified EIR, as amended, including, but not limited to potential aesthetic, air quality, greenhouse gas emissions, noise, transportation and tribal cultural resources impacts, and all feasible mitigation has been identified and will be incorporated into the proposed Project. This Project does not contemplate any actions that would require the preparation of a subsequent or supplemental environmental document under State CEQA Guidelines Section 15162 or 15163, as it is consistent with the development scenario identified within the Certified EIR. Furthermore, this Project introduces no new significant environmental impacts and no further environmental review is required. A copy of the Addendum and previous MND Mitigation Measures table are included as attachments to the environmental action resolution provided with this report.

CONDITIONS OF APPROVAL: The Overlay Amendment is City-initiated and no conditions of approval are associated with this Project.

TECHNICAL APPENDIX:

Surrounding Zoning and Land Use:

	Existing Land Use	*General Plan Designation*	*Zoning Designation*	*Specific Plan Land Use*
Site	Office, Commercial, Arena, Hotel, Vacant	Mixed Use	Piemonte Overlay of the Ontario Center Specific Plan	Mixed-use, Office, Residential, Commercial, Special Use
North	Industrial, Office, Commercial, Residential, Vacant (City of Rancho Cucamonga)	Industrial Park, Mixed Use, Open Space (City of Rancho Cucamonga)	Industrial Park, Mixed-use Retail, IASP Sub-Area 18 Specific Plan (City of Rancho Cucamonga)	Mixed Use, Village Neighborhood
South	Office, Commercial, Vacant	Mixed Use	The Ontario Center Specific Plan	Urban Commercial, Garden Commercial, Open Space
East	Commercial	Mixed Use	The Ontario Center Specific Plan	Urban Commercial
West	Residential, Commercial	High Density Residential, Office Commercial	The Ontario Center Specific Plan	Urban Commercial

RESOLUTION NO.

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO APPROVING AN ADDENDUM TO THE ONTARIO CENTER SPECIFIC PLAN ENVIRONMENTAL IMPACT REPORT, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NO. PSPA21-001.

WHEREAS, the City of Ontario (hereinafter referred to as "City") has initiated a Specific Plan Amendment, File No. PSPA21-001, which consists of an Amendment to the Piemonte Overlay of the Ontario Center Specific Plan, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Ontario Center Specific Plan Environmental Impact Report (State Clearinghouse No. 89041009) was certified on March 19, 1991, (hereinafter referred to as “Certified EIR”), in which development and use of the Project site was discussed in the Amendment to the Ontario Center Specific Plan (File No. 4059-SPA); and

WHEREAS, a Mitigated Negative Declaration was subsequently adopted on May 16, 2017, (hereinafter referred to as “MND”), in which development and use of the Project site was discussed in association with an Amendment to the Ontario Center Specific Plan (File No. PSPA16-003); and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified EIR and adopted MND, an Addendum to the Certified EIR and MND (hereinafter collectively referred to as “EIR Addendum”) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as “CEQA”); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR and MND, and that the Certified EIR and MND identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(b), an addendum to an adopted MND may be prepared if only minor technical changes or additions are necessary but the preparation of a subsequent EIR or MND is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR or MND would occur from the Project, and that preparation of an Addendum to the Certified EIR and MND was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Planning Commission is the recommending authority for the requested approval to undertake the Project; and

WHEREAS, the Planning Commission has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent of supplemental EIR or MND have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project is on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, is available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to the Ontario Center Specific Plan Environmental Impact Report (State Clearinghouse No. 89041009), certified by the Ontario City Council on March 19, 1991, in conjunction with File No. 4059-SPA; and

(2) The environmental impacts of this project were reviewed in conjunction with a Mitigated Negative Declaration, adopted by the Ontario City Council on May 17, 2017, in conjunction with File No. PSPA16-003; and

(3) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(4) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts.

(5) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference.

(6) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(7) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental EIR or MND is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR or MND that will require major revisions to the Certified EIR or MND due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR or MND were prepared, that will require major revisions to the Certified EIR or MND due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and.

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR or MND were certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Certified EIR or MND; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR or MND; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR or MND would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the Planning Commission hereby recommends the City Council finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR or MND, and does hereby recommend the City Council approve the use of the EIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 6: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 22nd day of March 2022, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

1.0 Introduction

1.0 INTRODUCTION

This Addendum to the Certified Ontario Center Specific Plan Environmental Impact Report No. 88-2 (Certified EIR) has been prepared in response to an application for the construction and operation of approximately 71,200 square feet (SF) of retail and 694 Multi-Family Residential Dwelling Units (DU) (540,373 SF) and approximately 998 parking spaces in the City of Ontario; refer to **Figure 1**, ***Regional Vicinity Location*****.**

1.1 PROJECT BACKGROUND

The City of Ontario approved the Ontario Center Specific Plan (OCSP) in August 1981. As adopted in 1981, the OCSP provided for up to 1,530 residential units, close to seven million square feet of commercial development, and nearly two million square feet of industrial uses on approximately 600 acres. Several amendments to the 1981 OCSP, along with appropriate environmental review, have been approved by the City since its adoption. Specifically, EIR 80-3 (State Clearinghouse No. 80062538), which evaluated the original OCSP along with development proposals for adjacent areas totaling more than 1,500 acres (the "Ontario International Center" project), was certified by the City in 1980. EIR 88-2 (the Certified EIR considered by this Addendum, State Clearinghouse (No. 89041009) was certified in 1990 as a "Subsequent EIR" to EIR 80-3. The analysis presented in the Certified EIR was limited to those undeveloped portions of the OCSP remaining as of 1990, comprising approximately 495 acres located between Fourth Street and Interstate 10, and between Turner Avenue and Interstate 15.

The Project Description from the Certified EIR includes the following:

Certified Ontario Center Specific Plan Environmental Impact Report 88-2 (Certified EIR)

EIR 88-2 was prepared to review and update, where necessary, existing environmental conditions, to address the proposed redistribution of allowable building density within The Ontario Center, and to address expected impacts of a proposed regional shopping center within the Center. (EIR 88-2, page II-1).

The regional shopping center referenced above was developed in the mid-1990s as the "Ontario Mills," revising the OCSP's original concept to implement industrial uses between Milliken and the I-15. The remaining portions of the OCSP, designated for commercial and residential uses, have largely been developed. In recent years, multi-family residential development to the north of Fourth Street has occurred rapidly and has been accompanied by multiple commercial infill projects along the Milliken Avenue and Fourth Street corridors. Two multi-family residential projects totaling approximately 800 units on 32 acres, known as the Fairfield and Sares-Regis projects, are currently under construction south of Fourth Street and east of Haven Avenue. The Project described within this Addendum will account for the majority of the remaining undeveloped areas of the original OCSP; refer to **Figure 2**, ***The Ontario Center Specific Plan (OCSP)***.

As noted above, since the Certification of the Certified EIR, several addenda to the original EIR have been adopted. The following three amendments to the original Certified EIR have been certified by the City:

1) The Community Events Center Addendum (CECA), 2006, which consisted of a request for approval to construct a 9,000-seat Community Events Center, a multi-purpose stadium totaling 214,420 square feet (SF) on approximately 24.5 acres, located at the northeast corner of Concours Street and Mercedes Lane, within the Urban Commercial land use district and within the OCSP in the southernmost portion of Statistical Area "E."

2) The Piemonte at Ontario Center Addendum to the Certified EIR (POCA), 2006, was permitted to realize approximately 1,292,068 SF of mixed retail, commercial, office, and hotel uses; and up to 806 condominium/apartment units. Excluding the Project's proposed residential uses.

3) The 2017 Piemonte Overlay at Ontario Center (POOC) Mitigated Negative Declaration (MND) (PSPA 16-003) proposed approximately 1.3 million SF of retail, office, hotel, and entertainment uses; however, 791 multiple-family DU were proposed. These are summarized in Section 3.4 below and are incorporated by reference.

1.2 PROJECT SUMMARY

The proposed Project consists of a request for approval to construct 694 Multi-family DUs (540,373 SF), 71,20071,200 SF of commercial and approximately 998 parking spaces, all within Statistical Area "E"; refer to **Figure 2**. Because the proposed Project Statistical Area "E" footprint was separately amended by the previously identified CECA, POCA and the POOC MND, the proposed Project will cite to these various documents where appropriate to adequately note how the proposed Project's footprint was previously amended. The Project consists of construction and operation of a mixed-use town center development with residential and commercial/retail land use within six development areas/lots (A, B, C, D, F, and G). More specifically, the proposed Project Lots A and B will be developed in the portion of the STATISTICAL AREA "E" originally amended by the CECA. Lots C, D, F and G of the proposed Project will occur just north of Lots A and B within the portion of STATISTICAL AREA "E" previously amended by the POCA and later amended by the POOC. Refer to Section 2.0, Project Description, of this addendum. Refer to **Table 2-1**, ***Detailed Proposed Project Summary***, and **Table 2-2**, ***Land Use Comparison Summary***.

1.3 PURPOSE

The purpose of this EIR Addendum is to define, describe, compare, and contrast potential environmental impacts of the proposed Project in the context of the environmental impacts associated with the OCSP (March 1990), as assessed in the Certified EIR. In so doing, this Addendum will provide environmental documentation for the Adept-Piemonte Overlay Project at the Ontario Center consistent with the requirements of the California Environmental Quality Act (CEQA).

Section 15164 of the *CEQA* Guidelines states that an Addendum to an EIR shall be prepared "if some changes or additions [to a Certified EIR] are necessary, but none of the conditions described in [*CEQA Guidelines*] Section 15162 calling for preparation of a subsequent EIR have occurred." Section 15162 of the *CEQA Guidelines* identifies the conditions that require preparation of a subsequent EIR as follows:

No subsequent EIR shall be prepared for a project unless the lead agency determines, on the basis of substantial evidence, that one or more of the following conditions are met:

- Substantial changes are proposed in the project that require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects;
- Substantial changes have occurred with respect to the circumstances under which the project is undertaken that will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; or New information of substantial importance, which was not known and could not have been known with exercise of reasonable diligence at the time the previous EIR was certified, shows any of the following:
- The project will have one or more significant effects not discussed in the previous EIR;
- Significant effects previously examined will be substantially more severe than identified in the previous EIR;
- Mitigation measures or alternatives previously found not to be feasible would, in fact, be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives;
- Mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives.

This Addendum to the Certified EIR describes the Project and substantiates how the potential environmental effects of the proposed Project are appropriately and adequately addressed in the Certified EIR and the aforementioned certified addenda and MND. The focus of the analysis is the adequacy of the previously Certified EIR, addenda and MND, relative to the Project in its current environmental context.

1.4 DOCUMENT ORGANIZATION

This Addendum is presented in four (4) sections, as follows:

- **Section 1.0**, "Introduction," provides an overview of the Project, its context, and environmental documentation applicable to the proposed development. A table summarizing impacts and mitigation from the Ontario Center Certified EIR is included in this section, and mitigation measures applicable to the Project are identified. No new or substantially modified mitigation measures are required.
- **Section 2.0**, "Project Description," presents the Project in greater detail, and describes its relationship to existing and anticipated vicinity development.
- **Section 3.0,** "Environmental Analysis," assesses potential environmental impacts of the Project. The analysis considers potential effects of the Project for all environmental topics addressed in the Certified EIR.
- **Section 4.0,** "Determination," presents the determination regarding the appropriate environmental document for the Project.

1.5 CONCLUSIONS

The analysis presented in this document substantiates that the Certified EIR for the Ontario Center is sufficient to satisfy CEQA requirements for the approval of the proposed Project at the OCSP. That is, implementation and operation of the proposed Project described herein would not result in any new or substantially more severe environmental impacts than were previously considered and addressed in the Certified EIR, or in the previously noted CECA, POCA, and POOC. Further, the Project would implement all applicable mitigation measures presented in the Certified EIR. As such, potential environmental impacts of the Project are considered to be adequately and appropriately addressed by analysis presented in the Certified EIR. The Project does not require any major revision of the Certified EIR, nor would the Project result in conditions that would require preparation of a Subsequent or Supplemental EIR as described in Sections 15162 and 15163 of the *CEQA Guidelines*.

1.6 SUMMARY OF IMPACTS AND MITIGATION MEASURES FROM THE ONTARIO CENTER CERTIFIED EIR

The following **Table 1-1**, ***The Ontario Center EIR Mitigation Measures***, is excerpted from the Certified EIR (SCH No. 89041009) and includes a summary of impacts and mitigation measures associated with *that* project. To the satisfaction of the City, the proposed Project will implement all applicable mitigation measures. As substantiated within Section 3.0 of this Addendum, no new or modified or modified mitigation measures are required.

Table 1-1: The Ontario Center EIR Mitigation Measures Monitoring and Reporting Program

Timing	Responsible Entity/Agency	Mitigation Measures	Draft EIR Page
FIRE PROTECTION			
1. Prior to issuance of a building permit	Developer	The developer will pay a fair share of "in-lieu" fees to subsidize additional facilities and equipment as mutually agreed upon by both the developer and the City of Ontario.	III-20
2. At the time of Water Master Plan Update	Developers within TOC	All new development will participate in updating the City of Ontario Water Master Plan and will contribute on a "fair share" basis toward implementation of Master Plan programs.	III-20
3. Prior to issuance of a building permit	Ontario Fire Department/Developers within TOC	Ontario Fire Department and project developer will provide, in writing, assurance of water supply adequacy from local water purveyor.	III-20
4. During site plan review	Ontario Fire Department	Design features at the site plan level will reduce risk of fire hazard. Site plan proposals will be reviewed during site plan review by Ontario Fire Department (OFD). Protection measures recommended by the OFD will be implemented by project proponent.	III-20
LAW ENFORCEMENT			
1. At the issuance of a building permit	Developer	If a proposed ordinance is adopted, the regional center builder/developer may be required to pay a one-time developer assessment fee to the Police Department at the time of issuance of a building permit. This developer fee will mitigate the fiscal impact incurred by the Police Department. Due to the projected increase in police calls for service to be generated by the development. The amount of this fee will be established by the Ontario Police Department based on land use and projected calls-for-service from that use.	III-23
2. During site plan review for individual projects	Developers within TOC	Each individual project within The Ontario Center will incorporate on-site security measures. These measures will be reviewed by the Ontario Police Department. They will include, but not be limited to, limited-height landscaping, exterior lighting, security hardware.	III-23
3. During site plan review for individual projects	Developers within TOC	In addition to these physical security and lighting requirements, the Police Department requests that the developer submit a plan delineating which functions are to be addressed by on-site private security and what functions are to be served by the Police Department. This plan may include	III-23

Timing	Responsible Entity/Agency	Mitigation Measures	Draft EIR Page
		personnel selection and training and physical security measures, i.e., video surveillance, emergency call boxes, communication and alarms. This plan shall be approved by the Police Department prior to implementation.	
SCHOOLS			
1. Prior to the issuance of a building permit	Residential Developers within TOC	Developers of residential projects within The Ontario Center will pay required school impact mitigation fees of $29,000 per gross acre to Cucamonga School District per agreement reached between the District and the developer dated December 31, 1986.	III-26
2. Prior to the issuance of a building permit	Residential Developers within TOC	Developers of projects within The Ontario Center will pay fees, as noted below, to the Chaffey Joint Unified School District: Residential $.48/square foot Commercial/Industrial/Office $.08/square foot	III-26
PARKS AND RECREATION			
1. Prior to the issuance of a building permit if a County ordinance is adopted	Developers within TOC	*Regional Parks:* The responsibility for rehabilitating existing regional parks and/or building new facilities, rests with the County of San Bernardino Parks Department. A Draft Ordinance has been prepared by the County Parks Department which will require developers to pay fees for future parks and open space. Developers within The Ontario Center shall comply with the City of Ontario's implementation of the County's fee ordinance for the collection of development fees for regional parks, trails, and open space if and when it is enacted.	III-30
2. At the time of issuance of building permit	Developers within TOC	*Local Parks:* A Park Development Fund Fee of $802/single family detached unit and $700/multiple family unit will be paid at the time of issuance of building perm its.	III-30
3. During site plan review for individual projects	Developers within TOC	Private recreational opportunities shall be encouraged for the commercial retail/industrial use areas.	III-30
WATER SUPPLY			
1. During site plan review	Developer and Ontario Municipal Utilities Company	All existing and future users will share in costs of supplemental city-wide water supply system	III-34
2. During site plan review for individual projects when water is available	Developers within TOC	Reclaimed water, as it is available from CBMWD Regional Plan No. 4, will be used for open space irrigation when economically feasible.	III-34

Timing	Responsible Entity/Agency	Mitigation Measures	Draft EIR Page
3. Ongoing	Developers within TOC	Cooperation between CBMWD, the City of Ontario, developers of The Ontario Center and other landowners will be necessary to ensure adequate capacity.	III-34
WASTEWATER			
1. During site plan review of individual project	Developer and Ontario Municipal Utilities Company	Design and construction of wastewater collection facilities within the Ontario Center will be completed under the jurisdiction of the City of Ontario.	III-38
2. Ongoing and during site plan review of individual projects	Developer and Ontario Municipal Utilities Company	Any plans for use of the non-reclaimable waste line (NRW) system will be made known to the City and CBMWD.	III-39
3. Prior to issuance of construction permits	Developer	Wastewater collection facilities will be designed so that all parcels can be served by gravity mains without pumping.	III-39
4. Ongoing	Developer and Ontario Municipal Utilities Company	The Ontario Center project development will coordinate construction activities with the City of Ontario and CBMWD to assure adequate interceptor, trunk sewer and treatment plant capacity is available as development proceeds.	III-39
5. Ongoing	Developer and Ontario Municipal Utilities Company	Continued coordination between CBMWD, the City, the developers of The Ontario Center, and other property owners/developers will occur to assure adequate capacity is available in the Cucamonga Interceptor as development occurs within the tributary area.	III-39
SOLID WASTE			
1. 2-3 Years	City of Ontario Community Facilities Department, Integrated Waste Department	Solid waste will be disposed of in Milliken Landfill. Upon closing of the Milliken Landfill, waste will be disposed of at the San Timoteo Landfill. A transfer station for the City will be constructed by the City in the next 2 to 3 years to transport waste from Ontario to the San Timoteo Landfill.	III-44, III-45
2. Ongoing	Developers within TOC/City of Ontario Community Facilities Department, Integrated Waste Department	Reusable materials will be recycled. Trash compactors will be used.	III-45

Timing	Responsible Entity/Agency	Mitigation Measures	Draft EIR Page
3. During site plan review of individual projects	Developers within TOC	Site plans shall address the use of trash bins (dumpsters) provided for office, commercial, industrial, residential other land uses.	III-45
4. Prior to ultimate build-out	City of Ontario Community Facilities Department, Integrated Waste Department	One (1) additional commercial trash vehicle will be required to serve The Ontario Center at ultimate development.	III-45
5. Ongoing	Developers within TOC	A recycling program will be undertaken within The Ontario Center to encourage the economic re-use of such items as paper, glass, metal and other salvageable material.	III-45
TELEPHONE			
1. When needed	Developer	New facilities are proposed, including a switching station and a remote switching station. Supporting Structure expenses will be shared by GTE (the telephone services provider) and the developer.	III-46
2. Ongoing	Developers within TOC	Ultimate phasing of telephone improvements shall be consistent with the development of land uses in the Center.	III-47
3. Prior to installation	City of Ontario Engineering Department	All substructure and supporting structures shall be subject to approval by the City Engineer.	III-47
4. Prior to building occupancy	GTE	GTE (telephone services provided) will place cable and wire to each unit at its own expense and there will be no charges by GTE to individual subscribers other than normal connection charges. New connections will be provided by GTE under contract to any new clients will-serve basis.	III-47
TRAFFIC			
1. As warranted by traffic volume	TOC and Developers within TOC	Buildout in the project vicinity of the proposed circulation system defined in the Specific Plan Amendment will occur.	III-60
2. When peak hour traffic reaches LOS C as determined by City Engineer	TOCOA/City of Ontario Engineering Department	Development and implementation of a Transportation Systems Management (TSM) program with a goal of a ten percent reduction in peak hour trips will occur as defined in the Specific Plan Amendment.	III-63
3. Prior to issuance of building permits	Developer(s) within and adjacent to The Ontario Center	Applicants for all future specific plans and specific plan amendments in the vicinity of The Ontario Center project will be required to complete traffic impact and mitigation studies to ensure that the forty (40) intersections studied this EIR will not exceed an intersection capacity utilization greater than Level of Service E.	III-63

Timing	Responsible Entity/Agency	Mitigation Measures	Draft EIR Page
AIR QUALITY			
1. During construction	Ontario Building Department, TOC, Developers within TOC and contractor(s)	Regular watering, paving construction roads, or other dust control measures defined in SCAQM D Rule 403 will occur during construction.	III-86
2. During construction	Developer and contractor(s)	Construction equipment will be maintained in proper tune to minimize the volume of equipment exhaust emissions.	III-86
3. When peak hour traffic reaches LOS C as determined by City Engineer	TOC, TOCOA, Developers within TOC/City of Ontario Engineering Department	Comprehensive ridesharing incentive program will be developed as part of a Transportation System Management.	III-87
4. During site review of individual projects	Developers within TOC/City of Ontario Engineering Department	Orientation of project for transit convenience and accessibility will occur in design phase; provision of easy pedestrian access will occur in design phase; provision of bus shelters, benches and bus pockets on streets.	III-87
5. During site review of individual projects	Developers within TOC/City of Ontario Engineering Department	Provision of traffic flow improvements will occur as buildout of project occurs.	III-87
6. During design phase	Developers within TOC	Inclusion of solar and other energy-saving devices in residences and businesses including: • Delamping • increased building insulation • heating/ventilation/air conditioning Improvements • solar heaters • utilization of landscape features to shade buildings	III-87
7. During construction	Developers within TOC and contractor(s)	Construction activities should avoid high ozone days and discontinue construction during second stage alerts. After grading, seed and water until vegetation cover is established.	III-87
8. During construction	TOC, Developers and contractor(s)	Wet area down, sufficient enough to form a crust on the surface with repeated soakings, as necessary, to maintain the crust and prevent dust pickup by the wind.	III-87
9. During construction	Contractor(s) within TOC	Use water trucks or sprinkler systems to keep all areas where vehicles move damp enough to prevent dust from being raised beyond site operations. W et construction areas down in the late morning and after work is completed in the day.	III-87

Timing	Responsible Entity/Agency	Mitigation Measures	Draft EIR Page
10. During construction	TOC, Developers and contractor(s)	Use low sulfur fuel for construction equipment (0.5 percent by w eight).	III-87
NOISE			
1. During construction	City of Ontario Building Department	The City of Ontario will enforce the City's noise ordinance during all phases of construction which limits the hours construction to normal weekday working hours.	III-98
2. Prior to issuance of building permit	Developers with TOC, City of Ontario Building Department	Project applicants will design private offices to 40 50 Leq (l 2), general offices and retail uses to 45 55 Leq (l 2), and industrial buildings to 55-65 Leq (l). Interior noise levels will be in accordance with the City's interior noise requirement for commercial uses.	III-98
3. Prior to issuance of building permit	Developers with TOC, City of Ontario Building Department	The project applicant will specify measures to comply with the 45 CNEL interior noise standards for residences at the time of building permit application.	III-98
4. During site plan review	Developers within TOC/City of Ontario Building Department	Locate truck access routes and loading areas away sensitive land uses such as residential areas.	III-98
5. During site plan review	Developers within TOC/City of Ontario Building Department	Locate mechanical equipment such as ventilation and air conditioning units away from sensitive receptors and install equipment with proper acoustical shielding.	III-98
6. During site plan review	Developer within TOC, City of Ontario Building Department	Minimize noise impacts through proper selection of such ventilation and air conditioning equipment.	III-98
7. Prior to issuance of building permit	Developers within TOC, City of Ontario Building Department	The project applicants will design all structures in accordance with the most recent revision of the Uniform Building Code and will implement measures to reduce noise to acceptable levels where residential buildings are proposed within the 65 CNEL contours.	III-99
8. Prior to issuance of building permit	Developers within TOC, City of Ontario Building Department	The City will review the design of proposed structures to ensure that adequate noise mitigation measures have been incorporated.	III-99
AESTHETICS			
1. During site plan review and prior to issuance of building permit	Developers within TOC/City of Ontario Planning Department	Design and construction standards as defined in the Specific Plan shall be adhered to.	III-104

Timing	Responsible Entity/Agency	Mitigation Measures	Draft EIR Page
SEISMICITY			
1. Prior to issuance of building permit	Developers within TOC/City of Ontario Building Department	The potential for groundshaking, associated with seismic activity in the region exists and is unavoidable. All requirements of the Uniform Building Code shall be met in the design and engineering of buildings on site in order to minimize the effects of seismic activity.	III-104
HYDROLOGY			
1. Prior to issuance of grading permit	Developers within TOC/City of Ontario Engineering Department	On-site drainage plans will be designed, submitted to, and approved by the City of Ontario prior to the issuance of a grading permit.	III-110
2. Prior to construction	Developers with TOC, City of Ontario Engineering Department	Proposed storm drainage facilities to be installed as The Ontario Center develops, will be placed in public streets. W here storm drains must be placed in areas other than public streets, a drainage easement will be dedicated as needed.	III-111
3. Prior to issuance of occupancy permit	Developers with TOC, City of Ontario Engineering Department	Some modification will be necessary to existing drainage facilities. No existing facility will be removed without replacement by another structure to serve the particular condition.	III-111
4. During construction	Developers within TOC/City of Ontario Engineering Department	As development proceeds, there will be a need for temporary siltation basins to reduce sedimentation from construction activities. These will be located in specific areas of construction and sized in accordance with City of Ontario criteria.	III-111
WATER QUALITY			
1. During construction	Developers within TOC and contractors, City of Ontario Engineering Department	During construction, a variety of temporary structural measures such as velocity dissipators, siltation fences or basins and. vegetative buffer zones will be used to reduce siltation and sedimentation runoff from construction sites.	III-115
2. Prior construction	Developers with TOC, contractors/City of Ontario Public Works Agency.	Periodic cleaning of storm drains and inlets, construction of pervious pavement surfaces in areas designated by the City, periodic street sweeping.	III-115
3. Ongoing	City of Ontario Public Works Agency/Developers within TOC/TOCOA	Periodic street sweeping will be conducted by the City of Ontario for streets dedicated to the City. Periodic vacuum sweeping will be conducted by the owners of individual sites.	III-115

2.0 Project Description

2.0 PROJECT DESCRIPTION

2.1 SETTING

The Project site consists of approximately 19 acres of fully developed and previously graded land located at the northerly boundary of the City of Ontario, south of Fourth Street, north of Concours Street, between Haven Avenue and Milliken Avenue, and less than one-quarter mile north of Interstate 10 (I-10); refer to **Figure 1**.

Regional access to the Project site and vicinity is provided by the I-10 and Interstate 15 (I-15) freeways, which converge approximately one mile southeasterly of the Project site. Local access to I-10 is provided at Milliken and Haven Avenues, and access to I-15 is available from Fourth Street. Supplementing freeway and surface street access, a Metrolink transit station is located approximately 1.5 miles northerly of the Project site, west of Milliken Avenue at Eighth Street.

2.1.1 Surrounding Land Uses

Figure 3, ***Local Vicinity***, provides an aerial view of the Project site and surrounding land uses. Local context of the Project is described below.

Fourth Street, which forms the site's northerly boundary, is also the corporate boundary dividing the cities of Ontario and Rancho Cucamonga. Multi-family residential uses (apartments) and a small retail/restaurant development are located northerly of the Project site across Fourth Street, in Rancho Cucamonga.

To the east, across Milliken Avenue, is the Ontario Mills Shopping Center, comprised of a central mall surrounded by free-standing commercial, entertainment, and restaurant uses. The Kohl's department store is located between the Project site and Milliken Avenue, at the southwest corner of Milliken and Fourth Street.

To the southeast, across Concours, additional existing retail uses are located adjacent to Milliken Avenue. Directly within the Project area is the existing multi-purpose Toyota Arena along with its supporting facilities. To the west, on both sides of Duesenberg Drive between Fourth Street and Concours, is the 800-unit Fairfield/Sares-Regis multi-family residential complex.

2.2 PROJECT CHARACTERISTICS

The proposed Project is the Adept-Piemonte Overlay Project, which is composed of the following six Lots: A, B, C, D, F and G, see Figure 2. Lots A and B are currently developed as vehicle parking areas serving the Toyota Arena (formerly the Citizens Business Bank Arena) and developed under the CECA. Lots C, D, F and G are vacant, but have been previously graded and are located north of Lots A and B. Lots C, D, F and G do not contain native habitat, they are fenced and are bounded by a fully developed internal roadway system. To this day, other development has occurred mostly within the western portion of Statistical Area E, see Figure 2.

The proposed Project includes a total of 694 multi-family residential DUs, 71,200 square feet of retail uses and approximately 998 parking spaces on the approximately 19-acre site. The site plan used for this analysis is provided in **Figures 9 and 10** Also refer to **Table 2-1*, Proposed Project Summary,*** and **Table 2-2, *Previous Projects vs. Proposed Project Comparison Summary***.

Table 2-1: Proposed Project Summary

Lot	Commercial (SF)	DU (SF)	Parking Area (SF)	Dwelling Units	Parking Stalls
A	25,870	268,181	153,284	384	504
B	20,802	111,021	47,526	112	194
C	11,047	75,866	37,192	94	138

Construction of the proposed Project is estimated to occur in one phase and is anticipated to begin in the last quarter of 2022 and last approximately 21 months. Construction activities are expected to consist of demolition, site preparation, grading, building construction, paving, and architectural coating. The proposed Project is anticipated to demolish an existing asphalt surface parking lot of approximately 7.5 acres within Lots A and B. The proposed Project is not expected to require the import or export of earthwork materials; preliminary grading estimates show a balanced site. The Project is expected to be operational in the year 2023.

2.2.1 Development Concept

The proposed Project development concept is illustrated in **Figure 4**, ***Development Concept – Lot A*** through **Figure 7**, ***Development Concept – Lot D***. The overall design concept for the proposed Project depicts a contemporary, pedestrian-oriented development, with an emphasis on wide sidewalks, outdoor seating, retail, dining areas, and landscape.

The central corridor or spine of the Project development concept is established by the north-south Via Piemonte roadway which traverses the Project site and Fourth street on the north, and terminates at Ontario Center Parkway, just north of Lots A and B. Via Piemonte is currently anchored by offices to the south and the Toyota Area and other uses further south and commercial to the east.

The proposed Project will incorporate varied landscape/hardscape features and pedestrian-oriented activity areas. Building mass and placement along Via Piemonte will be used to create interesting spaces, to include courtyards and outdoor seating areas. In so doing, the Via Piemonte development concept (Lots C and D) will provide a visually and spatially varied streetscape. Similarly, the development of Lots A and B will provide visually and spatially varied street scape visible from Concours Street and Ontario Center Parkway; refer to Figures 4 – 9.

Lots A and B are designed to emphasize dining and entertainment opportunities and will be delineated by decorative pavement and other defining landscape/hardscape treatments. This central core area is also designed to encourage visitors to move in a north/south direction, thereby fostering interaction with the hotel use and office uses located in the south and central portion of the Project site. Via Piemonte will allow for direct connectivity between all of the proposed developments. The various land use components within the Project will be connected by a series of defined pedestrian walkways. Pedestrian links have also been designed to allow workers, residents, and visitors to move through the site.

The Project will provide ample parking located in Lots E and F, abutting Fourth Street. As indicated in **Figures 4** through **9**, the proposed Project will integrate residential and commercial uses seamlessly to provide an active area that is utilized to its potential.

2.3 LAND USE AND DEVELOPMENT

2.3.1 Adept-Piemonte Land Uses and Development Components

At completion, the Project will realize more than six-hundred thousand square feet of development, as summarized in **Table 2-1**.

2.3.2 Development Intensity

The proposed Project is proposed within Statistical Area “E” of the OCSP. Statistical Area “E” is made up of Planning Areas (PAs) 8-10, totals 153.25 acres, and was originally approved for 2,200,000 square feet (SF) of urban commercial; refer to **Figure 2**.

Table 2-1 shows a breakdown of the proposed Project features. Also refer to **Table 2-2** for a comparison between the proposed Project and previous Projects approved on the site. Additionally, refer to **Table 2-3**,

Detailed Project Land Use Summary, for a specific breakdown of the proposed Project uses. As shown in **Table 2-2**, the Project is anticipated to develop the Project site with much less intensity compared than the previously analyzed and approved uses in the Certified EIR/OCSP, CECA, POCA, and POOC.

Table 2-3: Detailed Project Land Use Summary

Lot	Land Use	Units	Residential Square Feet (SF)	Commercial (SF)	Parking Spaces
A	Residential 2 Bedroom 1 Bedroom Studio	 120 180 84	268,181	-	504
	Retail	-	-	25,256	-
B	Residential 3 Bedroom 2 Bedroom 1 Bedroom	 19 63 30	111,021	-	194
	Retail	-	-	20,802	-
C	Residential 2 Bedroom 1 Bedroom Studio	 44 32 18	75,866	-	138
	Retail	-	-	11,047	-
D	Residential 2 Bedroom 1 Bedroom Studio	 58 42 4	85,305	-	162
	Retail	-	-	14,095	-
Project Total		**694**	**540,373**	**71,200**	**998**
Source: Adept-Piemonte Overlay at Ontario Center Project Site Plan Concept, March 2022.					

As noted above in **Table 2-3**, the proposed Project would realize approximately 71,200 SF of mixed retail, 694 multi-family DUs (540,373 SF) and would include approximately 998 vehicle parking spaces. The proposed commercial/retail/residential uses that would be realized under the proposed Project are consistent with uses envisioned under the Certified EIR and OCSP and would comprise 611,573 of combined SF or 1,588,427 SF less than the originally approved 2.2 million SF of allowable maximum development intensity for Statistical Area "E" which was anticipated to be a composition of urban commercial under the original OCSP and the Certified EIR, and later amended by the CECA, POCA, and POOC addendums to allow residential/ commercial/entertainment/retail, urban commercial, and office.

The subsequent addendums to the OCSP and the Certified EIR introduced a multi-family residential component which allowed up to 806 apartments within the POCA and 791 apartments within the POOC, but these amendments also included Statistical Area "D" in their analysis which is a smaller portion of the OCSP. Statistical Area "D" was also originally planned for urban commercial uses. Statistical Area "D" and

will occasionally be referenced throughout this addendum for reference purposes only in order to accurately reference the POCA and POOC projects.

Because the 694 multi-family DUs proposed by the Project would be less intense than that previously approved for the site and based on the 1,548,710 SF balance of development SF referenced above, it can be reasonably anticipated that the proposed Project in total would not exceed the remaining allowable maximum development intensity for Statistical Area E, as noted in the Certified EIR.

Additionally, an approximation of relative development intensity can be discerned by comparing defining characteristics of land uses, such as traffic generation, water demand, and wastewater generation rates. These factors are particularly appropriate when assessing the Project's relative development intensity, in that the upper limit of development intensity defined for the OCSP is founded largely on estimated roadway and water/sewer carrying capacities. In short, the forecast trip generation from the proposed Project is anticipated to be well-below the trips available for future use within Statistical Area "D and E" of the OCSP. The proposed Project is anticipated to generate approximately 94 percent less weekday trips, approximately 86 percent less weekday AM Peak Hour trips and approximately 84 percent less weekday PM Peak Hour trips than the total trips available for future uses within Statistical Areas D and E, as noted in **Table 3-3**.

As noted above, traffic generation rates would be reduced because of the Project's lower overall proposed development intensity compared to the approved development under the POOC. Similarly, water demands, and wastewater generation rates would be much lower when compared to the maximum allowable development from the OCSP on the same acreage. More specifically, it is anticipated that 694 apartment units would result in mean annual water demands of approximately 298,420 gallons per day (GPD) and 71,200 SF of commercial is anticipated to demand approximately 34,309 GPD, for a total combination of 332,729 GPD for the proposed Project. In contrast, if the same acreage was developed with commercial uses at the maximum allowable development intensity of the remaining 1,772,000 SF of urban commercial as permitted under the OCSP, water demands would be approximately 855,876 GPD[1].

Under the POCA, the site was proposed to include approximately 1.3 million square feet of mixed commercial, hotel, and office uses, as well as up to 806 condominium/apartment units would have been implemented. Total water demands of these uses were forecast at 727,888 GPD. Compared to the previously approved POCA, the proposed Project would reduce water consumption by approximately 55 percent. Total water demands of the proposed Project land uses are summarized in **Table 2-4*, Estimated Water Demand***.

Table 2-4: Estimated Water Demand

Land Use [1]	Units	Demand Factor [2]	Total Dem and
Commercial	71,200 TSF	483 GPD/TSF	34,389 GPD
Residential	694 DU	430 GPD/DU	298,420 GPD
Total Water Demand			**332,729 GPD**

[1] Ontario Center Specific Plan. Page 122

Sources:
[1]Land uses from: Piemonte at Ontario Center Development Concept, February 2006.
[2]Water demand rates from *Preliminary Sewer and Water Demand Study for Rancho Piemonte* (SB&O, Inc.) January 2006.
[3]Commercial water demand rate of 483 GPD/thousand square feet (TSF) derived from *Final Environmental Impact Report #88-2 for the Ontario Center* (P&D Technologies) October 1990, SCH #890410009, Table III-6, "Domestic Water Consumption Ultimate Development," Page III, and the POCA, Table 2-2, Estimated Water Demand Piemonte at Ontario Center Project

Additionally, maximum allowable building coverage for the Project site under the adopted OCSP is 60 percent, as averaged over the net area of each urban commercial PA. Based on the Project proposed 71,200SF of combined commercial development as shown in **Table 2-3**, and compared to the maximum allowable commercial development intensity of the remaining 1,772,000 SF of urban commercial as permitted under the OCSP, the Project proposed a building coverage for the Project site of 4.0 percent, or 56 percent less commercial building coverage than permitted under the OCSP.

Based on the preceding discussions, development intensities realized under the proposed Project would be no greater than those anticipated under the adopted OCSP. Further, related environmental effects of the proposed Project would be no greater than, and would be reduced, when compared to anticipated environmental effects that would result under commercial development of the site envisioned under the adopted OCSP, and also the POCA and POOC as these last two originally proposed greater development intensity of the site than the proposed Project.

2.3.3 Circulation Plan Concept

The Project would utilize the existing private and public circulation system (namely Ontario Center Parkway, Via Piemonte, Via Asti, Concours Street, and Fourth Street) and would follow the established design standards for vehicular and pedestrian movement. Following are summary descriptions of both the vehicular and pedestrian circulation systems.

2.3.4 Vehicular Circulation

Primary access to the Project would be provided via public roadways that border the Project site, including Haven Avenue to the west, Concours Street to the south, and Fourth Street to the north. Within the Project site, access to individual uses would be provided by privately owned and maintained streets, as well as the public Ontario Center Parkway. Private streets within the Project site would provide for and incorporate necessary access/public utilities easements.

Pedestrian Circulation

The proposed Project will make use of the existing pedestrian network which provides connections, to and supports interaction, between the various Project land uses. The Project pedestrian network largely parallels the serving roadway network, with additional internal pedestrian linkages providing connections between the Project land uses. Defined connections are also provided where the Project pedestrian network connects to other existing pedestrian paths.

The pedestrian network will be enhanced with landscaping and would typically include ornamental grasses, groundcover, and shrubs, all of which are thematically employed throughout the Project site.

2.4 LANDSCAPE CONCEPT

Figures 9 and 10 provide a sense of landscaping features and their locations within the proposed Project. The proposed landscape would be consistent with the design guidelines of the Specific Plan, specifically as noted as Operational Design Features E-DF-4, and those design elements as noted in **Table 1-1**.

2.5 PROJECT PHASING AND CONSTRUCTION SEQUENCE

2.5.1 Buildings and Facilities

Construction of the proposed Project may occur in more than one phase. Construction is anticipated to begin during year 2022.

2.5.2 Utilities and Infrastructure

The Project site and its vicinity is fully developed, and utilities infrastructure have been previously installed and fitted to accommodate the maximum planned development under the CECA, POCA, and POOC. According to the OCSP and the Certified EIR, maximum allowed development intensity within Statistical Area "E" was 2,200,000 SF, while Statistical Area "D" maximum allowed intensity was 640,000 SF. As previously noted, the proposed Project would introduce a mixed-use development with a lower development intensity of 71,200 SF of commercial and 694 multi-family apartment units. All roadway improvements (public and private) have been previously developed with the implementation of the existing uses.

2.5.3 Parks and Open Space

Public and private urban open/common space areas within the Project would be completed concurrent with, and largely as a consequence of, completion of adjacent building and facilities within the Project area. In this sense, open/common space areas would support and complement other aspects of the Project in a manner and fashion consistent with likely demands for, and use of, these facilities. In addition, the Project would comply with applicable City/OCSP park dedication/in-lieu fee payment requirements.

2.6 INTENDED USE OF THIS ADDENDUM, PROJECT DISCRETIONARY ACTIONS

2.6.1 Use of this Addendum

This EIR Addendum will serve as the City of Ontario's environmental review of the Project as required under CEQA. The City may also employ this Addendum EIR in any subsequent review or consideration of the individual development proposals within the Project area.

2.6.2 Project Discretionary Actions, Permits, Consultation

Discretionary actions, permit and related consultation(s) necessary to approve and implement the Project include, but are not limited to, the following.

2.6.2.1 Discretionary Actions

CEQA Section 15124 states in pertinent part that if "a public agency must make more than one decision on a project, all its decisions subject to CEQA should be listed." Requested decisions, or discretionary actions, necessary to realize the Adept-Piemonte Overlay Project at The Ontario Center include the following:

- Certification of this Addendum to the Ontario Center EIR;
- Adoption of the -Piemonte Overlay at Ontario Center Specific Plan Amendment (File no. PSPA21-001);
- Approval of Parcel Maps;
- Approval of Tract Map(s) for condominium purposes;
- Development Plan Approvals for various development parcels;
- Approval of the Project Development Agreement;
- Approval of Infrastructure Improvement Plan, including but not limited to: roads, sewer, water, and stormwater management systems;
- Approval of Conditional Use Permit(s).

2.6.2.2 Consultation and Permits

CEQA Section 15124 also states that environmental documentation should, to the extent known, list other permits or approvals required to implement the Project. Based on the current Project design concept, in addition to City permits and approvals, anticipated permits necessary to realize the proposal will likely include, but are not limited to the following:

- Permitting may be required by/through the Regional Water Quality Control Board (RWQCB) pursuant to requirements of the City's National Pollutant Discharge Elimination System (NPDES) Permit;
- Permitting may be required by/through the South Coast Air Quality Management District (SCAQMD) for certain equipment or land uses that may be implemented within the Project area.
- Various construction, grading, and encroachment permits allowing implementation of the Project facilities.

3.0 Environmental Analysis

3.0 ENVIRONMENTAL ANALYSIS

3.1 INTRODUCTION

Land uses and development characteristics of the proposed Project are similar in scope but lower in intensity to development of the subject site anticipated under the OCSP, the CECA, POCA, and POOC. Potential environmental impacts of the OCSP were comprehensively assessed in the Certified EIR for the Ontario Center, State Clearinghouse No. 89041009 (Certified EIR). The following discussions summarize potential environmental impacts of the proposed Project within the context of the environmental analysis presented in the Certified EIR. As demonstrated by the subsequent environmental analysis, the Project would not result in any new, different, or substantially increased impacts than those that were considered and addressed in the Certified EIR, CECA, POCA, or the POOC.

3.2 ALLOWED AND PROPOSED MAXIMUM DEVELOPMENT INTENSITY

The proposed Project will occupy a portion of Statistical Area "E" of the OCSP. The Certified EIR addressed potential impacts that would result from implementation of a calculated maximum allowable development intensity of the Statistical Area "E," as provided for under the OCSP. The referenced maximum allowable development intensity considered in the Certified EIR included up to 2,200,000 SF of regional retail center.

The proposed Project would realize a different mix of urban commercial uses than those originally envisioned under the OCSP as well as the proposed Project would incorporate multi-family residential units which is a consistent use for the site based on the previously approved CECA, POCA, and POOC. However, as demonstrated within this Addendum, development intensity of the proposed Project will not exceed the maximum allowable development intensity considered under the Certified EIR, the CECA, POCA, and POOC for both the multi-family and commercial components.

3.3 ALLOWED AND PROPOSED LAND USES

The Project site was originally designated as "Urban Commercial" by the OCSP. Permitted uses within the Urban Commercial land use designation include retail and service-oriented businesses; administrative, professional and medical offices; institutional, financial and governmental facilities; indoor and outdoor restaurants and cocktail lounges; theaters and entertainment complexes; parking lots and parking facilities; outdoor vendors; automobile services and service stations; hotels, motels and motor inns; conference and convention facilities; medical and hospital facilities; residential dwellings (above the ground floor); trade schools; and community facilities, such as libraries, police or fire stations.

As presented in Addendum Section 2.0, Project Description, the CECA, POCA, and later the POOC amended the original OCSP which proposed uses that were consistent with the Urban Commercial land use designation and intent of the OCSP to provide for an integrated mixed-use urban commercial center within the City while also adding multi-family residential uses. As such, in order to realize the Project as proposed in the POCA, certain development standards of the OCSP were amended to allow for specific facilities configurations and design elements proposed by the POCA. As discussed subsequently in this Addendum, land uses realized under the proposed Project would not generate any new or additional

environmental impacts that were not previously considered and addressed in the Certified EIR, the CECA, POCA, or the POOC.

3.4 PREVIOUS ENVIRONMENTAL DOCUMENTATION, DOCUMENTS INCORPORATED BY REFERENCE

Section 15150 of the State CEQA Guidelines permits and encourages that an environmental document incorporate by reference other documents that provide relevant data. The documents outlined in this section are hereby incorporated by reference, and the pertinent material from each is summarized throughout this Addendum. All documents incorporated by reference are available from the Planning Department at the City of Ontario, located at 303 East "B" Street, Ontario, CA 91764.

- **Ontario General Plan Final EIR/Master Environmental Assessment.** The Ontario General Plan Final EIR/Master Environmental Assessment provides an overall description of City's environmental setting; addresses potential environmental impacts associated with implementation of the City General Plan under buildout conditions; and identifies applicable policies and implementation programs which act to reduce potentially significant environmental effects resulting from General Plan implementation/buildout. Background information and areawide analyses presented in the Ontario General Plan Final EIR/Master Environmental Assessment provide context for the Piemonte at Ontario Center Project and its potential environmental effects.

- **Final Environmental Impact Report (FEIR) No. 88-2 (Certified EIR) for The Ontario Center Specific Plan (OCSP), 1990.** The Final Environmental Impact Report for the OCSP identifies anticipated environmental impacts resulting from the Specific Plan and presents a responsive Mitigation Monitoring Plan (MMP) or Mitigation Monitoring and Reporting Program (MMRP). The MMP/MMRP was developed to avoid or minimize the extent and severity of anticipated impacts of the Specific Plan.

  Information and analysis presented in the Final EIR including the MMP provide the basis and context for evaluation of the Adept-Piemonte at Ontario Center Project's (proposed Project) potential environmental impacts. As discussed in this Addendum, the proposed Project will not result in any new or substantially different environmental impacts than were previously considered and addressed in the Final EIR for the OCSP. As also presented in this Addendum, the proposed Project would comply with, and implement all applicable mitigation measures presented in the OCSP Final EIR MMP/MMRP.

- **Community Event Center Addendum to the Certified EIR.** The Community Events Center Addendum (CECA) to the Certified EIR was certified February 1, 2006, and is relevant to the proposed Project in that it was prepared in response to an application for the development of the City of Ontario Community Events Center. This project proposed the development of a 214,420 square foot multi-purpose indoor stadium and events center, with fixed seating for approximately 9,000 persons, associated pedestrian plazas, landscaping, off-street parking facilities for approximately 2,100 automobiles and a truck loading/unloading area, with related truck parking and outdoor storage areas and provides an updated description of the encompassing OCSP and establishes a general framework for comparative analysis resulting from recent and previous

amendment(s) to the Specific Plan; refer to **Figure 8, *Community Events Center Specific Plan (CECA)***. The CECA area is currently developed with the Toyota Arena and vehicle parking areas. The CECA eastern vehicle parking areas are anticipated to host the proposed Project portions identified as Lots "A and B"; refer to **Figure 9, *Project Site Plan (Lots A and B)*** and **Figure 10, *Project Site Plan (Lots C and D)***.

- **Piemonte at Ontario Center Addendum to the Certified EIR.** The Piemonte at Ontario Center Addendum (POCA) to the Certified EIR project was certified in February 2006 and is relevant to the proposed Project in that it amended Statistical Areas "D and E." In 2004, an application was made by Panattoni Development to the City of Ontario for an urban character mixed-use project, to be constructed on an approximately 88-acre site located between Fourth Street and I-10, exclusive of the then approved Fairfield/Sares-Regis residential project, and west of the existing Kohl's retail center. The POCA provides an updated description of the encompassing OCSP and establishes a general framework for comparative analysis resulting from recent and previous amendment(s) to the Specific Plan; refer to **Figure 11**, ***Piemonte at Ontario Center Addendum Specific Plan (POCA)***. The POCA encompassed a large northeast portion of the OCSP Statistical Area "E." This area is anticipated to host Lots C, D, F, and G of the proposed Project; refer to Figure 5.
- **Piemonte Overlay at OCSP (PSPA 16-003).** More recently, the Piemonte Overlay at Ontario Center (POOC) Mitigated Negative Declaration (MND) (PSPA 16-003) was certified on May 16, 2017, and is relevant to the proposed Project in that it also amended Statistical Areas "D and E." The project proponent submitted a request for approval of an amendment to the OCSP, which revised the land use map and development concept of the POCA area to facilitate the development of the balance of the 84-acre site. Like the POCA, this amendment proposed approximately 1.3 million square feet of retail, office, hotel, and entertainment uses and 791 multi-family DUs. The 791 multi-family DUs were slightly fewer DU than the quantity allowed by the POCA. The POOC amended the land use configuration of the same footprint considered in the POCA. The POCA provides an updated description of the encompassing OCSP and establishes a general framework for comparative analysis resulting from recent and previous amendment(s) to the OCSP; refer to **Figure 12, *Piemonte Overlay at Ontario Center Specific Plan (POOC)***. Identical to the POCA project area, the POOC MND encompassed the same large portion of the OCSP Statistical Areas "D and E." The portion of the OCSP that is within Statistical Area "E" is anticipated to host Lots C, D, F, and G of the proposed Project, as shown in Figure 2.

3.5 ENVIRONMENTAL TOPICS

The Certified EIR addressed the following major environmental topics: land use and planning, socioeconomics, public services, public utilities, traffic and circulation, biology, air quality, noise, aesthetics, seismicity, hydrology, and water quality. As presented in **Table 1-1** of this Addendum, the Certified EIR proposed mitigation measures for all potentially significant impacts. All applicable mitigation measures identified in **Table 1-1** will be implemented by the Adept-Piemonte at Ontario Center Project. For each environmental topic presented in the Certified EIR, the following analyses substantiate the proposed Project's consistency with development envisioned under the OCSP Project and analyzed in the Certified EIR.

3.5.1 Land Use and Planning

The Certified EIR considered potential land use/planning impacts of the OCSP. The current General Plan Land Use designation is "Mixed Use Ontario Center" and the subject site has a specific plan land use of "OCSP, Urban Commercial Land Use – Piemonte Overlay." As previously noted, under this General Plan Land Use designation, a maximum of 2,840,000 square-feet (SF) of Urban Commercial uses are permitted within Statistical Areas D and E combined or 2,200,000 SF of Urban Commercial within Statistical Area E only, of the encompassing OCSP. As discussed in the Certified EIR for the OCSP, this upper limit of development intensity is based primarily on the carrying capacities of the Specific Plan roadways and utilities systems.

The OCSP Urban Commercial land use designation provides for development of tourist-related commercial uses, high and medium-rise office buildings, entertainment/recreation clusters, and high-density residential uses integrated with adjacent uses. The Project proposes land uses and development concepts that are consistent with development envisioned under and encouraged by the Urban Commercial land use designation but would amend the OCSP to establish the definitive mix of uses in the proposed Adept-Piemonte at Ontario Center Addendum EIR Project.

3.5.1.1 Development Intensity

According to the POCA, under the adopted OCSP, the Statistical Areas D and E could accommodate up to 2,840,000 SF of development intensity.[2] Of the maximum 2,840,000 SF of development intensity allowed within Statistical Areas "D and E," an estimated 1,068,000 SF existed at the time the POCA was certified, or was anticipated under other development proposals.[3] The remaining approximately 1,772,000 SF of allowable development intensity provides a baseline for comparison of development intensities that could be realized under the current OCSP, vis-a-vis development that is proposed under the Project.

As currently envisioned, the proposed Project would realize approximately 71,200 SF of commercial and 540,373 SF of multi-family residential (694 units). Excluding the Project's proposed residential uses, the approximately 71,200 SF of commercial uses that would be realized under the Project are consistent with uses envisioned under the OCSP, and would comprise 1,700,800 SF less than the calculated 1,772,000 SF of remaining allowable maximum development intensity for Statistical Areas D and E. Therefore, because of the 694 multi-family DUs proposed, the Project is determined to be no more intense than the 1,700,800 SF balance referenced above, it can be reasonably inferred that the Project in total would not exceed the remaining allowable maximum development intensity for Statistical Areas D and E, refer to **Table 2-3**.

An approximation of relative development intensity was typically discerned by comparing defining characteristics of land uses, such as traffic generation, water demand, and wastewater generation rates. These factors were particularly appropriate when assessing the Project's relative development intensity, in that the upper limit of development intensity defined for the OCSP is founded largely on estimated

[2] Ontario Center Specific Plan, Page 15, Table 3-A "Development Intensity."

[3] Approximately 108,000 s.f. is developed as "Khol's"; an estimated 530,000 s.f. in development intensity is allocated for the 32-acre Fairfield/Sares-Regis residential project; and an estimated 430,000 s.f. is allocated for the 28.85-acre future OCEC project. Assumes an average 0.38 FAR over aggregated Statistical Areas D and E, based on maximum allowable development intensity of 2.86 million square feet on approximately 153.25 acres.

roadway and water/sewer carrying capacities. Water/sewer demands of the Project, as compared to water/sewer demands resulting from correlating maximum buildout of urban commercial uses per the adopted OCSP are summarized below.

Regarding traffic/trip generation, in response to Senate Bill (SB) 743, the California Natural Resource Agency (CNRA) certified and adopted new CEQA Guidelines in December 2018 which now identify Vehicle Miles Traveled (VMT) as the most appropriate metric to evaluate any give project's transportation impact under CEQA (Section 15064.3). Effective July 1, 2020, the previous CEQA metric of Level of Service (LOS), typically measured in terms of automobile delay, roadway capacity and congestion, generally will no longer constitute a significant environmental impact. The City of Ontario has adopted guidelines to provide recommendations in the form of and methodology and thresholds of significance for identifying VMT related impacts. The proposed Project is subject to a VMT analysis and will adhere to the recommendations and practices described in the *City of Ontario Planning Commission Resolution No. PC20-021 (May 26, 2020).*

As discussed in greater detail at Section 3.5.5, *Traffic and Circulation*, total average daily traffic that would be generated by the Project is approximately 95 percent less than would otherwise result under buildout of the subject site per the maximum development intensities allowed under the OCSP. Development intensity of the Project, as characterized by traffic generation, is therefore substantially reduced when compared to maximum allowable development intensities identified under the OCSP. This reduction in traffic generation rates is due largely to the fact that the Project will implement an integrated residential component, which would result in substantially reduced daily trips, and p.m. peak-hour trip generation rates compared to trip generation rates that would result from maximum allowable commercial intensities on the same acreage. Relative traffic generation rates would be substantially reduced because of the Project's residential component.

Similarly, because of the large difference in development intensities between the maximum allowed under the OCSP and the Certified EIR and the proposed Project, it is anticipated that water demands and wastewater generation rates when compared to maximum allowable commercial intensities on the same acreage would also be reduced. More specifically, it is anticipated that 694 multi-family units and 71,200 SF of commercial uses would result in mean annual water demands of approximately 332,729 GPD; refer to Table 2-4. In contrast, if the same acreage was developed with Urban Commercial uses at the maximum allowable development intensity of 1,772,000 SF (2,200,000 SF – 428,000 SF of existing development = 1,772,000 SF of remaining buildable SF), water demands would be approximately 855,876 GPD.

As wastewater generation is a direct function of water consumption, it can be anticipated that the Project's residential component would also result in lower wastewater generation than would result under maximum development of the same acreage with commercial uses, or under the previously approved CECA, POCA, or POOC which all assumed a higher development intensity than the proposed Project, as shown in **Table 2-2**.

If considered independently then, the Project's residential uses would result in decreased water/sewer demands compared to maximum development of the same acreage with commercial uses. When

considered in the context of the total Project, the calculated water and sewer demands resulting from the Project residential land uses are minimal relatively to the permitted development under the approved OCSP. Total water demands of the Project land uses are summarized in **Table 2-4**.

Based on the preceding discussions, development intensities realized under the proposed Project would be no greater than those anticipated under the adopted OCSP. Further, related environmental effects of the proposed Project would be no greater than, and would likely be reduced, when compared to anticipated environmental effects that would result under commercial development of the site envisioned under the adopted OCSP.

3.5.1.2 Development Standards and Land Use Compatibility

The Project proposes commercial and residential uses similar to those allowed for and envisioned under the OCSP Urban Commercial land use designation and under the POCA and POOC. Further, development concepts and plans articulated for the proposed Project are considered to be substantially consistent with the themes and standards of the approved OCSP, the General Plan, and the Zoning Ordinance. The Project does, however, propose to amend the OCSP to allow for facilities, configurations and design elements specific to the proposed Project.

As discussed previously in this Section, Statistical Areas "D and E" of the OCSP are designated as Urban Commercial land uses. Within the Urban Commercial land use designation, permitted uses include "high density residential uses integrated with adjacent uses." [*Ontario Center Specific Plan*, Page 10] The Urban Commercial land use designation does not specify an upper limit to residential development densities, other than such development may not exceed the maximum allowable development intensity for the encompassing Statistical Area.

Further, all proposed residential units will be designed and constructed to achieve noise standards contained in the Ontario Municipal Code, as required under 4.2.1.13 (B). As presented above in Addendum Section 3.5.1.1, "Development Intensity," the Project in total will not exceed the maximum allowable development intensity for Statistical Areas D and E, including water and sewer demands. Design and construction of water and sewer services available to the Project land uses will be reviewed and approved by the City Engineer prior to issuance of development permits, consistent with the requirements of 4.2.1.13 (C).

Multi-story, high-density residential development as proposed by the Project supports the intent of the OCSP to provide:

- A balance of employment, shopping, and housing opportunities, reducing the need for long commutes.

  and

- A higher density housing orientation, recognizing trends toward smaller household size.

  [*Ontario Center Specific Plan*, Page 8]

More specifically, the considered residential units will be located immediately adjacent to the commercial/retail types of uses, and in this sense, the Project provides for an integrated balance of

employment, shopping, and housing opportunities, and establishes a sense of community through collocation of residential uses and supporting retail/commercial/entertainment uses.

Association of the Project's urban residential densities with commercial uses also promotes, and makes feasible pedestrian access throughout the Project area, acting to reduce reliance on private automobiles. This is consistent with the intent of the OCSP to reduce dependence on private automobiles, with correlating reductions in VMT.

Residential development will reflect architectural themes and hardscape/landscape elements evidenced throughout the Project area, acting to visually tie these residential uses to other Project land uses. A direct visual/architectural tie is made between abutting residential areas. Multi-story residential uses will also reflect urban themes, building heights, and building masses evidenced elsewhere within the Project; refer to **Figure 13, *Elevations (Lots A and B)*** and **Figure 14**, ***Elevation (Lots C and D)***.

Lastly, it is noted that residential densities proposed by the Project (at least 40 units per acre) provide for efficient use of available land and recognize local and regional demographic trends towards smaller household sizes. As noted previously in this Section, proposed residential densities as described are achieved within the maximum allowable development intensities for Statistical Areas "D and E."

Summary

Development intensities proposed by the proposed Project are less than the maximum allowable development intensities considered in the Certified EIR. It will not be necessary for the proposed Project to modify the OCSP as the POCA was previously amended it in February 2006 and the POOC further amended it in May 2017 to allow for specific Project facilities configurations and design elements, to include certain allowances for construction of multi-story residential DUs, with ground floor units at a greater intensity than the currently proposed Project.

Land uses proposed by the proposed Project are considered to be consistent with the mix of land uses and development intent of the OCSP, POCA, and POOC, and would not result in land use impacts not already considered and addressed in the Certified EIR. On the basis of the preceding discussions, the Project will not create new, additional, or substantially different land use impacts than those identified within the Certified EIR. Therefore, no changes or additions to the Certified EIR analysis are necessary.

3.5.2 Socioeconomics

The Certified EIR considered potential socioeconomics impacts of the OCSP. As a general note, it is recognized that the *2004 CEQA Guidelines* no longer reflect "socioeconomics" as an environmental topic. The relevant areas of discussion addressed previously under the heading of socioeconomics are now reflected in consideration of potential population, housing, and jobs/housing balance impacts, and related transportation and air quality impacts. Economic effects of the proposed Project would be considered only to the extent that they may result in adverse physical impacts.

Of the above considerations, localized effects of the Project will include increased housing availability, combined with supporting commercial, office, recreation, and entertainment uses. Localized effects will

also include new employment potentials accruing from the Project's non-residential land uses. Increased employment and housing availability resulting from the Project reflect areawide projections for continuing population and jobs growth within the City and region.

By integrating residential and business/commercial land uses, the Project supports City and areawide goals and policies providing for a balance of jobs and housing. One of the primary benefits of a balanced jobs/housing ratio within the region is a potential reduction in commute distances, as places of employment will be located closer to residential areas.

As the Project proposes land uses consistent with those allowed by the OCSP and would not result in development intensities greater than those considered in the Certified EIR, the Project will not result in any new or substantially different socioeconomic considerations than were addressed in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary, nor is there a need for any additional mitigation measures. Please also refer to Section 3.5.1, "Land Use."

3.5.3 Public Services

The Certified EIR considered potential public services impacts of the OCSP. As discussed under Addendum Section 3.5.1, "Land Use," the Project proposes land use categories and development intensities contemplated under the adopted OCSP and Certified EIR. As land use categories and development intensities largely define demands for public services, it is anticipated that public services demand from the proposed Project would not exceed, nor be substantially different than, those considered and addressed in the Certified EIR. On this basis, the Project will not result in any new or substantially different public services impacts than were addressed in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary, nor is there a need for any additional mitigation measures. Please refer also to Addendum Section 3.5.1, "Land Use and Planning."

3.5.4 Utilities

The Certified EIR considered potential utilities impacts of the OCSP. Defining examples of utilities demands of the Project, as compared to demands anticipated under the Certified EIR are presented in Addendum Section 3.5.1, "Land Use and Planning." Under the cited topical areas of traffic generation, water demand, and wastewater generation, it is anticipated that impacts of the proposed Project would be less than those addressed under the maximum development intensities considered in the Certified EIR. It is anticipated that impacts to all other utilities would be similarly reduced under the proposed Project when compared to utilities demands resulting from maximum allowable development intensities for the subject site.

3.5.4.1 Infrastructure

Extensive utility infrastructure surrounds, and is available to, the Project site. In general, the existing infrastructure serving the Project site and vicinity has been sized to accommodate anticipated future development of the area and is adequately sized to serve the Project. Because the Project site has been previously developed with various uses, infrastructure is already in place. This section describes the existing backbone infrastructure system available to the Project site. Infrastructure systems described

within this section include wastewater collection/ treatment, potable water distribution, recycled water distribution, and stormwater management/treatment.

3.5.4.2 Wastewater

Wastewater treatment services for the City of Ontario and other nearby communities are provided by Inland Empire Utilities Agency (IEUA). This Agency is responsible for treatment of wastewater generated by the Project. Wastewater will be transported to IEUA Regional Plant No. 1 (RP-1) via the City of Ontario wastewater collection and conveyance system. IEUA Regional Plant No. 1 is located south of the Pomona Freeway (SR-60) and west of Archibald Avenue. The backbone sanitary sewer system for the Project site and vicinity is made up of private and public sewer system components. Along the Project perimeter, public streets would accommodate sewer system improvements to be implemented by the Project.

A 24-inch IEUA sewer interceptor exists in Fourth Street along the northerly boundary of the Project site. This interceptor captures all wastewater from north of Fourth Street within Rancho Cucamonga and transfers it west along Fourth Street. Therefore, the Project area does not accept any off-site wastewater from the north. All wastewater flows generated by the Project would be transported via 8-to-10- inch sewer lines to Concours Street. At Concours Street, these lines would connect to the existing 8-to-12- inch sewer mains. These mains currently connect to an 18-inch main, that in turn connects to the Inland Empire Boulevard sewer main to the south.[4]

The collection sewer main to the south of the Project site, originally called the Ontario Motor Speedway Outfall, was sized to handle flows from the site. This outfall line ultimately flows west along Inland Empire Boulevard then proceeds south beneath I-10. Sanitary sewer facilities constructed south of I-10 have previously been upgraded and sized to adequately handle development of the Project site and surrounding area.

With regard to Project-related wastewater system requirements, based on information presented in the POCA, the existing receiving wastewater transmission facilities within Concours Street have enough overall capacity to adequately convey wastewater generated by the POCA project as proposed. More specifically, as concluded in the POCA, the depth to diameter (d/D) design standard of 0.50 for these transmission facilities was maintained even with the addition of wastewater generated by the POCA project. The POCA further noted that it conservatively assumed 2.7 persons per dwelling unit, with a calculated wastewater generation rate of 100 gpd/person, or 270 gpd/DU which would have resulted in approximately 217,620 GPD of wastewater. However, approximately one-half of the Project dwelling units where originally anticipated to be of single bedroom configuration(s), and as such would have likely resulted in reduced overall resident populations with correlating reductions in wastewater generation. The Project proposes to construct 694 multi-family DU (111 DU less than the previously approved by the POCA) and at the 270 gpd/DU would equate to approximately 186,570 GPD of wastewater. Based on the previous data, the proposed Project is anticipated to generate approximately nine percent less GPD of wastewater compared to the POCA. As wastewater generation is a direct function of water consumption, it can be anticipated that the Project would similarly result in less wastewater generation than would the

[4] Final Environmental Impact Report (FEIR) No. 88-2 (Certified EIR) for The Ontario Center Specific, 1990.

maximum development of the same acreage with commercial-office uses or compared to the OCSP, POCA, and POOC since these all proposed a greater development intensity than the Project site.

3.5.4.3 Water Service

Water service to the Project site is provided by the City of Ontario. Existing water facilities include mains located in both Fourth Street and Concours Street. A 12-inch main in Fourth Street serves properties north of the Project site, in Rancho Cucamonga. An existing City of Ontario 18-inch main located in Fourth Street serves the Project site. Fourth Street also contains a 36-inch City of Ontario transmission main. Additionally, Concours Street contains a 16-inch water main that is used to serve the Project site. The POCA concludes that the existing water system infrastructure surrounding the general site is adequate to serve the Project area. Existing water infrastructure will be utilized to provide water to the proposed Project buildings.[5]

3.5.4.4 Recycled/Reclaimed Water System

Overview

The use of recycled water is regulated through the California Code of Regulations (CCR). Pertinent excerpts from Titles 17 and 22 of the CCR statutes are compiled in the California Health Laws related to Recycled Water, also referred to as "The Purple Book," which was updated in June 2001. The California Water Code (Section13550) states that use of potable water in instances where non-potable water applications are appropriate and feasible is “a waste of water if recycled water is of adequate quality and is available for these (non- potable) uses and can be furnished at a reasonable cost to the user.”

Use of recycled water is also feasible and recommended if it “is not detrimental to public health and will not adversely affect downstream water rights, degrade water quality, and is not injurious to plant life, fish, and wildlife.” In this regard, regulations and guidelines for recycled water and recycled water purveyors have been established by the California Department of Health Services (DHS) and are published in the CCR. These regulations and guidelines establish recycled water treatment requirements, quality standards, and source reliability criteria, thereby ensuring protection and preservation of the public health and welfare. The IEUA provides reclaimed water to the City of Ontario.

Water demands (potable and non-potable) are expected to increase in the City of Ontario concurrent with ongoing and increasing development pressures. Accordingly, and to release potable water supplies for applications where it is required, reclaimed water should increasingly replace use of potable water where use of non-potable water is determined to be feasible and appropriate. Non-potable water applications typically include irrigation, recreation lakes and ponds, cooling towers, air conditioners, evaporative condensers, flushing toilets, decorative fountains, commercial laundries, commercial car washes, washing down roads or sidewalks, and firefighting. The IEUA treats its wastewater to tertiary treatment standards including disinfections at four treatment plants.

[5] Final Environmental Impact Report (FEIR) No. 88-2 (Certified EIR) for The Ontario Center Specific, 1990.

Existing Reclaimed Water System

Nearest to the Project are the IUEA reclaimed water main which is installed in Sixth Street, a short segment of reclaimed water line in Haven Avenue between Sixth and Fourth Streets, with another segment located within Fourth Street west of Haven Avenue. More specifically, a 30-inch reclaimed water main exists in Haven Avenue, turning west in Fourth Street. A 12-inch reclaimed water lateral exists in Milliken that terminates near Fourth Street. An 8-inch dry reclaimed water line has been installed in the east portion of Concours, from station 65+09.72 near Founder's Park extending to Milliken Avenue. This dry reclaimed water line was installed as part of the Concours street improvements in 2002.

Reclaimed Water System Improvements

The POCA project constructed new reclaimed water facilities within the Project site, as well as construction of the remaining planned connecting segment(s) in Milliken, Concours and Haven. Reclaimed water system improvements realized under the POCA include the following:

- An extension of the reclaimed water lateral from Milliken Avenue and Fourth Street, connecting to the dry reclaimed water line in Concours Street.
- Construction of the remaining portion of the reclaimed water main in Concours Street from Haven Avenue, extending to station 65+09.72 near Founder's Fountain.
- Completed the reclaimed water loop by constructing a segment from Haven Avenue and Fourth Street extending to Concours Street.
- Construct a reclaimed water loop in Public Street "A" to each intersection of Concours Street.
- Reclaimed water distribution lines will be extended northerly from Concours Street into the Project site and will be located within Street "A" and Street "C."

Reclaimed water lines within public streets are maintained by the City of Ontario. According to the POCA, the ownership and maintenance of common reclaimed water system components and lines within the Project site will be the responsibility of the Piemonte at Ontario Center Property Owners Association, established pursuant to the Piemonte Covenants, Conditions & Restrictions (CC&R's).

3.5.4.5 Stormwater Management

The following discussions describe existing stormwater management facilities serving the Project area and identify stormwater conveyance facilities and stormwater quality treatment systems and management practices required of the Project. As a general note, Project-related improvements and connections located within public streets are maintained by the City. However, the ownership and maintenance of common stormwater system components and lines, as well as water quality treatment facilities within the Project site, are the responsibility of the Project.

3.5.4.6 Stormwater Collection and Conveyance Facilities

The proposed Project comprises the central portion of the OCSP. Drainage in the area flows in a generally north to south direction. North of the Project site, an existing storm drain is located in Fourth Street. This storm drain collects and transports all drainage flows from the north and west to Guasti Park. As such, the Project would not have to accommodate stormwater flows from the north. Stormwater runoff from the

Project site would drain southerly to Concours Street. Receiving reinforced concrete pipe(rcp) drainage facilities are located within Concours Street, and range in size from 48-inches in diameter to 72-inches in diameter. Flows from these Concours facilities empty into a 9-foot by 6-foot reinforced concrete box (rcb). Flows then continue southerly toward Inland Empire Boulevard, then westerly to Mercedes Lane, and then southerly beneath I-10 in a 12-foot by 7-foot rcb to Lower Deer Creek Channel. Lower Deer Creek Channel confluences with Cucamonga Creek Channel and flows to the Prado Basin.[6]

The POCA concluded that the existing storm drainage facilities serving the Project site and vicinity have been previously sized to accommodate the proposed development. The POCA noted that as part of the site development, there would be construction of additional internal drainage system improvements, which connect to the existing area-wide drainage system. Connection points to the existing system would have been located so as to take full advantage of available carrying capacities. Because the POCA proposed a higher intensity than the proposed Project, it is anticipated that stormwater collection and conveyance facilities would be adequate to accommodate the proposed Project.

3.5.4.7 Stormwater Treatment/Water Quality Management Plan (WQMP)

In addition to construction of required stormwater conveyance facilities described above, the City of Ontario and the governing Regional Water Quality Control Board (RWQCB) require that the Project incorporate certain stormwater quality treatment facilities and water quality management practices, as discussed below.

Overview

The Santa Ana RWQCB, under Order Number R8- 2002-0012, NPDES Permit No. CAS618036, requires post-construction Best Management Practices (BMPs) to be implemented for new development and significant redevelopment, for both private and public agency projects. The purpose of a Water Quality Management Plan (WQMP) is to develop and implement a program, including application of BMPs, which minimizes the potential detrimental effects of urban stormwater runoff on the beneficial uses of receiving waters, including potential effects of increased pollutant loads and changes in hydrology.

Potentially adverse effects on receiving waters may be minimized through the implementation of site designs which minimize impervious surface areas and maximize onsite infiltration, resulting in corollary reductions in total stormwater runoff discharge volumes and rates and associated pollutant transport. Potential impacts to receiving waters are further reduced through implementation of source control BMPs, on-site structural treatment control BMPS, and participation in regional or watershed based structural treatment control BMPs.

Previous development of the site realized under the POCA met applicable RWQCB criteria for preparation and implementation of a WQMP. In this regard, the proposed Project will also incorporate any combination of site designs, source controls, and/or treatment control BMPs. Stormwater quality and

[6] Final Environmental Impact Report (FEIR) No. 88-2 (Certified EIR) for The Ontario Center Specific, 1990.

treatment requirements may also be realized through Project participation in a regionally-based treatment program which addresses all identified pollutants and hydrologic conditions of concerns.

Project-related Stormwater Treatment Requirements

The proposed Project is located within the Santa Ana Basin, designated as Region 8 by the RWQCB, and is tributary to Lower Deer Creek, the Chris Basin, Cucamonga Creek Flood Control Channel, Mill Creek, the Prado Flood Control Basin, and finally the Santa Ana River. In accordance with the Clean Water Act, the State of California maintains a list of impaired water bodies and the pollutant causing the impairment. The Cucamonga Creek Flood Control Channel is included on the State's list of impaired water bodies because of high coliform content. Mill Creek is also included on the impaired water body's list for nutrients, suspended solids, and pathogens. Because these receiving waters (which are tributary to the Project) are impaired, the Project must incorporate BMPs that are rated high to medium in effectiveness for reducing the impairments. This assures a no net loading on the affected tributaries and ensures that there are no additional pollutants added to the already impaired water bodies. Additionally, this Project is subject to the latest trash capture requirements from the State and RWQCB.

Project-Related Stormwater Treatment Improvements

The proposed Project would accomplish mandated stormwater quality standards and mitigate pollutants of concern through the use of stormwater clarifiers and underground infiltration systems on each individual parcel. All proposed treatment facilities would be designed and implemented consistent with City and RWQCB requirements. Additionally, this Project shall implement the appropriate trash capture devices in order to comply with the latest trash capture requirements.

Based on the preceding discussion, the proposed Project would not result in any new, increased or substantially different impacts to utilities than those considered and addressed in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary, nor is there a need for any additional mitigation measures. Please refer also to Addendum Section 3.5.1, Land Use and Planning**.**

3.5.5 Traffic and Circulation

The Certified EIR considered potential traffic/circulation impacts of the OCSP. To determine relative traffic impacts resulting from the Project vis-a-vis traffic/circulation impacts identified in the Certified EIR, a detailed analysis was conducted to determine the number of vehicular trips that will be generated by the proposed Project (please refer to the Traffic Impact Analysis prepared by RK Engineering Group, Inc., dated September 17, 2021, included in this Addendum as Appendix A). This trip generation was then compared to the potential trip generation of correlating maximum development intensities considered in the Certified EIR.

Specifically, Statistical Area "E" is listed in the OCSP as having an allowable maximum development intensity of 2,200,000 SF, while Statistical Area "D" is listed as having an allowable maximum development intensity of 640,000 SF. Land uses in both Statistical Areas are defined as "Urban Commercial." For the purposes of developing correlating trip generation rates, Project-related trip generation calculations

exclude areas within Statistical Areas E and D that are currently developed. As noted in the Statistical Areas included below:

- A 32-acre site between Fourth Street and Concours Street, on either side of Duesenberg Drive (known as the Fairfield/Sares-Regis development which includes 800 multi-family DUs located within Statistical Area D).
- An approximately 26-acre parcel (Parcel 7) north of Concours Street that has been developed by the City of Ontario with an arena within Statistical Area E.
- A site in the south-west quadrant of the intersection of Milliken Avenue and Fourth Street, which has been developed with just under 108,000 square feet of retail/restaurant uses anchored by a Kohl's' department store located within Statistical Area E.

Traffic generation for the OCSP is shown in **Table 3-1**, *Summary of OCSP Trip Generation,* below:

Table 3-1: Summary of OCSP Trip Generation

Development	Land Use (ITE Code)	Quantity	Units 2	AM			PM			Daily

2 TSF = Thousand Square Feet
DU = Dwelling Units
3 Source: 2017 ITE Trip Generation Manual (10th Edition)

As shown in **Table 3-2**, above, trip generation rate available for future uses include 98,837 Weekday Daily Trips, including 1,961 Weekday AM Peak Hour Trips and 7,556 PM Peak Hour Trips.

As discussed within this Addendum Section 3.0, "Environmental Analysis," total average daily traffic that would be generated by the proposed Project is forecast at 6,447 Weekday Daily Trips which include approximately 315 AM Peak Hour Trips and approximately 575 PM Peak Hour Trips. Additionally, the proposed Project is forecast to generate approximately 6,677 Saturday daily trips which include approximately 624 Saturday Peak Hour Trips.

After accounting for internal trip capture and applicable Institute of Transportation Engineers (ITE) pass-by trip rates, the proposed Project is forecast to generate approximately 5,691 Weekday Daily Trips with 300 Weekday AM Peak Hour Trips, and approximately 458 Weekday PM Peak Hour Trips. An internal trip capture reduction is applicable when a project site has more than one destination (such as the proposed Project), in which a person visits more than one destination onsite during the same visit.

Additionally, the proposed Project is forecast to generate approximately 5,813 Saturday daily trips which include approximately 490 Saturday Peak Hour trips. Compared to the originally anticipated and approved trip generation forecast for the Certified EIR/OCSP, the proposed Project would generate approximately 4.6 percent of the overall weekday daily trips and only 4.7 percent of Saturday trips compared to the Certified EIR/OCSP approved project.

Regarding the overall development intensity, the proposed Project is anticipated to be approximately 72 percent less intense than the OCSP, or only about 28 percent of the intensity would otherwise result under buildout of the Project site under the proposed Project per the maximum development intensities allowed under the OCSP for Statistical Areas "D and E."

Development intensity of the Project site, as characterized by traffic generation and intensity, is therefore substantially reduced when compared to maximum allowable development intensities identified under the OCSP. This reduction in traffic generation rates is due largely to the fact that the Project will implement an integrated lower residential component than the originally allowed under the OCSP, the POCA and the POOC, which would result in substantially reduced Daily and, AM and PM Peak Hour Trip generation rates compared to trip generation rates that would result from maximum allowable commercial intensities on the same acreage under the Certified EIR and the subsequently approved addendums.

In accordance with the Project site plan and land use concepts, the proposed Project will realize a mixed-use development of approximately 71,200 SF of commercial and up to 694 multi-family units. Detailed trip generation calculations for the Project land uses are included in the Traffic Impact Analysis, provided as Appendix A to this Addendum, and the relevant trip generation information is summarized in **Table 3-3,** *Comparison of Weekday Peak Hour Trip Generation.*

Table 3-3: Comparison of Weekday Peak Hour Trip Generation

Trip Generation Comparison	Daily	A.M. Peak Hour	P.M. Peak Hour
Allowable trips per Ontario Center Specific Plan (OCSP) [1]	98,837	1,961	7,556
Total Net Adept-Piemonte Trips [2]	5,691	300	458
Trip Generation Difference Between OCSP and Adept-Piemonte	93,146	1,661	7,098
Percent of Trips Used by Adept-Piemonte Project	6.1%	18%	6.4%
Source: Piemonte at Ontario Center Addendum. 2006. Table 3-2, Comparison of Weekday Trip Generation. Page 3-16.			

As presented in **Table 3-3**, above, total average daily trips generated by the Project is approximately 95 percent less than would otherwise result under buildout of the subject site per the maximum development intensities allowed under the OCSP and considered in the Certified EIR. Project related AM Peak Hour Trip generation is forecast to be only 18 percent of the allowable trips or 82 percent less than the maximum allowed under the OCSP. Similarly, the PM Peak Hour Trip generation forecast for the Project is 6.4 percent of the allowable trips or 93.6 percent less than the maximum development allowed under the OCSP.

The trip generation data summarized in Table 3-3 indicates that the Project would not exceed the total daily, nor peak-hour trip generation estimates resulting from maximum allowable development intensities considered and addressed in the Certified EIR. On this basis, the Project will not generate new or additional traffic or transportation impacts that were not previously identified in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary, nor is there a need for any additional mitigation measures.

3.5.5.1 CEQA VEHICLE MILES TRAVELED ANALYSIS

In response to SB 743, the CNRA certified and adopted new CEQA Guidelines in December 2018 which now identify VMT as the most appropriate metric to evaluate a project's transportation impact under CEQA (Section 15064.3).

Effective July 1, 2020, the previous CEQA metric of LOS, typically measured in terms of automobile delay, roadway capacity and congestion, generally will no longer constitute a significant environmental impact. The City of Ontario has adopted guidelines to provide recommendations and methodology and thresholds of significance for identifying VMT related impacts. The proposed Project is subject to a VMT analysis and will adhere to the recommendations and practices described in the City of Ontario Planning Commission Resolution No. PC20-021 (May 26, 2020).

Based on the analysis methodology described in the City of Ontario's adopted Planning Commission Resolution regarding VMT, project screening procedures have been implemented to identify projects that may be presumed to have a less than significant impact absent substantial evidence to the contrary and

will be exempted from further project-level VMT assessment. According to the City's guidelines, land use projects located within a Transit Priority Area (TPA) and that have the following characteristics are presumed to have a less than significant impact absent substantial evidence to the contrary:

- Has a Floor Area Ratio of 0.75 or higher;
- Includes no more parking for residents, customers, or employees than the City Development Code mandates;
- Is consistent with the Sustainable Communities Strategy (SCS) as determined by the City with input from the Southern California Association of Governments (SCAG) or San Bernardino County Transportation Authority (SBCTA); and
- If there are existing affordable residential units, replaces those residential units with at least as many similarly affordable units and not with a smaller number of moderate or high-income residential units.

Based on the Project site plan, the proposed Project encompasses the following Assessor Parcel Numbers shown in **Table 3-4***, Parcel Numbers*.

Table 3-4: Parcel Numbers

Lot	Assessor Parcel Number (APN)
A & B	021-020-501
C	021-020-438
D	021-020-438
F	021-020-412-15
G	021-020-420-25

Hence, the VMT analysis examined in this study focuses on the land use components from Lot A, Lot B, Lot C, and Lot D. After utilizing the SBCTA VMT Screening Tool, all Project parcels, with the exception of a portion of Parcel F of the proposed Project, are located within a TPA and therefore do not require a VMT analysis.

The portion of Parcel F which is not within the TPA is not planned to consist of any trip-generating land uses as those portions of the site will only be used to relocate some of the existing parking capacity on the Project site. Hence, those non-TPA areas are not subject to VMT analysis. Additionally, the proposed Project is expected to implement the following design features identified in the Toyota Arena Mixed-Use Development Air Quality and Greenhouse Gas Impact Study, City of Ontario, California, June 4, 2021. The following Project design features are trip reduction measures to reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking:

1 Improve the walkability and design of the Project by including pedestrian and bicycling connections within the Project site and to adjacent off-site facilities (i.e., sidewalks, crosswalks, footpaths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.).

2 Provide traffic calming measures (i.e., marked crosswalks, raised crosswalks, raised intersections, count-own signal timers, curb extensions, speed tables, median islands, tight

corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.).

3 Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

In addition, the PA VMT Per Population and PA VMT Per Worker is lower than the jurisdiction average VMT. Therefore, the proposed Project is found to have a *less than significant VMT impact.*

3.5.6 Biological Resources

The Certified EIR addressed potential biological resources impacts of the OCSP, including potential impacts to native plants and wildlife species. Due to the site's previous uses (including operation of the Ontario Motor Speedway, along with agricultural and industrial uses) the site was found to be extremely disturbed. The Certified EIR notes that "Due to the lack of native vegetation and the disturbed nature of the site, no unique (listed or candidate) species of plants or animals were observed or are anticipated." (EIR 88-2, Page III-65). No impacts were identified, and no mitigation measures were proposed.

The scope and character of the proposed Project development are consistent with the type and scope of development considered in the Certified EIR, and as such would not result in new, additional, or different impacts to biological resources than were considered and addressed in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary.

3.5.7 Air Quality

A Project specific Air Quality and Greenhouse Gas Impact Study was prepared by RK Engineering Group, Inc. Findings are summarized herein, and the technical study is available as Appendix B of this Addendum.

The Certified EIR considered potential air quality impacts resulting from the OCSP. Temporary air quality impacts were anticipated to result from Project construction activities, which include preparation of the Project site, and construction of the proposed commercial, residential, and supporting facilities. During construction, air pollutants would be emitted by construction equipment. Dust (PM_{10} emissions) would also be generated by grading and site preparation activities.

The Certified EIR addresses construction-related air quality impacts as follows:

> "Construction emissions will be short-term. Pollutants from construction-related activities are from final site development on 560 acres over an undefined time period. The Ontario Center will ultimately be a mixed-use development on 700 acres. The generally referenced full buildout date is 2010. Presently, portions of the site are in varying stages of development including constructed buildings and roadways. Additionally, the entire site has already been "rough" graded, meaning approximately 75 percent of construction-related activities have been conducted (i.e., excavations, the removal and transport of material and the construction of building pads). (*The Ontario Center EIR*, page III-13)."

As noted in the discussion of traffic and circulation presented in Addendum Section 3.5.5, a reduction in traffic is projected to occur when comparing the proposed Project operations to maximum development intensities considered in the Certified EIR; thus, no increase in mobile air emissions is expected to occur.

Operational emissions resulting from the consumption of natural gas and electricity by new project-related land uses (area sources) were also estimated within the Certified EIR. As the proposed Project would realize an overall reduction in development intensity when compared to the maximum allowable intensities considered in the Certified EIR, area source emissions would be no greater than, and would likely be reduced when compared to emissions estimates presented in the Certified EIR. It is also noted that on a project-by-project basis, area source emissions are incrementally insignificant when compared to mobile source emissions, and typically account for less than one percent of a given project's total operational emissions. Therefore, any potential increase in area source emissions resulting from the proposed Project would be more than offset by the projected reduction in mobile source emissions. It is further noted, that in providing an integrated mix of residential and commercial products, the proposed Project establishes and supports land use plans that act to reduce commute distances, with correlating reductions in vehicle source emissions. The Project specific Air Quality and Greenhouse Gas Impact Study concluded the following regarding Mobile Source Emissions:

Mobile Source Emissions

Mobile source emissions are the largest source of long-term air pollutants from the operation of the Project. Mobile sources are direct sources of Project emissions that are primarily attributed to tailpipe exhaust and road dust (tire, brake, clutch, and road surface wear) from motor vehicles traveling to and from the site. Estimates of mobile source emissions require information on four parameters: trip generation, trip length, vehicle/fleet mix, and emission factors (quantity of emission for each mile traveled or time spent idling by each vehicle). The trip generation rates, trip length and trip percentages for the Project are based on the latest version of the Toyota Arena Mixed Use Development Traffic Impact Study Scoping Agreement, by RK, May 2021 and SBCTA VMT Tool7.[7]

The Emission Factors (EMFAC2017) 2017 model and off-model adjustments factors to account for the Statistical AreaFE Vehicle Rule is used to estimate the mobile source emissions that are embedded in the CalEEMod emissions model. No adjustments have been made to default emission factors. The Project's total VMT estimated by CalEEMod is shown in the **Table 3-5***, Operational Vehicle Miles Traveled,* for this project.

Table 3-5: Operational Vehicle Miles Traveled

Land Use	Annual VMT
Multi-family Mid-Rise[1]	5,682,657
Commercial/Retail Center	4,539,098
Total	**10,221,755**

Source: RK Engineering. Air Quality and GHG Analysis. *Table 10, Operational Vehicle Miles Traveled*.
[1] The VMT estimates for residential home-based trips are based on estimates from the SBCTA VMT Tool, which shows daily home-based VMT per capita for TAZ 53690101 of 7.9 VMT per population for model year 2023.

[7] SBCTA VMT Screening Tool. https://devapps.fehrandpeers.com/sbctavmt/

The operational vehicle fleet mix has been adjusted to reflect vehicle types used for typical residential home-based trips and the commercial/retail and office trips generated by the Project. The SCAG regional travel demand model does not include heavy-duty trucks, buses or other large vehicles that would require passenger car equivalent (PCE) adjustments for residential home-based trips.

The proposed Project does not consist of land uses that would typically require PCE adjustments to account for large trucks, such as warehousing. To be conservative, the Air Quality/GHG analysis has assumed that two percent of the total residential home-based trips and commercial/retail and office trips will include trucks with a gross vehicle weight rating (GVWR) of 10,000 pound or greater. This includes LHD2, MHD, HHD, OBUS, UBUS, and SBUS vehicles. The 2% mix is also consistent with the default Highway Capacity Manual (HCM) assumptions. The adjusted vehicle mix is proportioned according to the default CalEEMod vehicle mix.

Air Quality Regional Significance Thresholds

The SCAQMD has established air quality emissions thresholds for criteria air pollutants for the purposes of determining whether a project may have a significant effect on the environment per Section 15002(g) of the Guidelines for implementing CEQA. By complying with the thresholds of significance, the Project would be in compliance with the SCAQMD Air Quality Management Plan (AQMP) and the federal and state air quality standards. **Table 3-6*, SCAQMD Regional Significance Air Quality Thresholds***, lists the air quality significance thresholds for the six air pollutants analyzed in this report. Lead is not included as part of this analysis as the Project is not expected to emit lead in any significant measurable quantity.

Table 3-6: SCAQMD Regional Significance Air Quality Thresholds

Pollutant	Construction (lbs/day)	Operation (lbs/day)
NOx	100	55
VOC	75	55
PM_{10}	150	150
$PM_{2.5}$	55	55
SOx	150	150
CO	550	550
Source: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significancethresholds.pdf		

Short Term Air Quality Impacts – Construction

Daily Emissions - Construction

Daily air quality emissions include both on-site and off-site emissions associated with construction of the Project. Regional daily emissions of criteria pollutants are compared to the SCAQMD thresholds of significance.

As shown in **Table 3-7*, Daily Construction Emissions,*** daily emissions of criteria pollutants are expected to be below the allowable thresholds of significance. CalEEMod daily emissions outputs are provided in Appendix A of the Air Quality and Greenhouse Gas Emissions Impact Study, provided as Appendix B to this Addendum.

Table 3-7: Daily Construction Emissions

Maximum Daily Emissions (lbs/day)[1,2]						
Activity	**VOC**	**NOx**	**CO**	**SO_2**	**MP_{10}**	**$PM_{2.5}$**
Demolition	0.91	14.16	26.89	0.09	7.84	1.56
Site Preparation	0.55	2.08	21.68	0.04	7.78	3.98
Grading	0.85	3.36	33.90	0.06	3.85	1.56
Building Construction	4.86	17.12	60.88	0.16	11.46	3.28
Paving	1.29	1.25	17.86	0.02	0.21	0.08
Architectural Coating	70.26	0.56	8.39	0.02	1.96	0.53
Maximum[1]	**70.26**	**17.12**	**60.88**	**0.16**	**11.46**	**3.98**
SCAQMD Threshold	75	100	550	150	150	55
Exceeds Threshold?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

Source: RK Engineering. Air Quality and GHG Analysis. *Table 13, Daily Construction Emissions.*
Notes:
DU: Dwelling Unit(s)
SF: Square Feet

The Project must follow mandatory SCAQMD rules and requirements with regards to fugitive dust control, as described in Section 6.1.3 of the SCAQMD rules. Compliance with the standard dust control measures is considered to be part of the conditions of approval for the Project and built into the design features. Table 3-7, above, shows that, the Project's daily construction emissions would be below the applicable SCAQMD air quality standards and thresholds of significance. As a result, the Project would not contribute substantially to an existing or projected air quality violation.

Furthermore, by complying with the SCAQMD standards, the Project would not contribute to a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable Federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors). The Project's short-term construction impact on regional air resources would be less than significant.

On the basis of the preceding discussions, the proposed Project does not create new, additional, or substantially different air quality impacts than were considered and addressed in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary.

3.5.8 Noise

A Project specific Noise Impact Study was prepared by RK Engineering Group, Inc. Findings are summarized herein, and the technical study is available as **Appendix C** to this Addendum.

The Certified EIR considered potential noise impacts resulting from implementation and operations of the OCSP and identified two characteristic noise sources typically identified with land use intensification. These include construction activities, especially heavy equipment, which will create short-term noise increases, and operational noise, including noise generated by traffic (mobile sources) and on-site facilities (area sources). In addition, sources of existing noise affecting the Project area are assessed, including vehicular noise from surrounding roadways.

3.5.8.1 Potential Off-site Noise Impacts

Since the Certified EIR was adopted, numerous development projects have been approved and constructed in the Project vicinity, including residential uses, which are considered to be noise-sensitive receptors. Residential uses that may be affected by Project-related noise include the adjacent Fairfield/Sares-Regis residential project, and to lesser extent, residential uses located northerly of Fourth Street within the neighboring City of Rancho Cucamonga.

Potential Construction Noise and Vibration Impacts

Construction equipment, activities, and techniques required to construct the Project are consistent with the character and extent of construction methodologies considered in the Certified EIR. That is, the Project would not require, nor employ extraordinary construction techniques nor unusual construction equipment that would generate noise not previously considered in the Certified EIR. Nor would the Project result in construction beyond the physical limits of construction considered in the Certified EIR. As such, construction-related noise sources and noise levels would not be substantially greater, nor different than, those previously considered and addressed in the Certified EIR.

It is also important to note that noise-intensive construction activities are limited in duration to the construction period; and, except in unusual circumstances, noise-producing construction activities typically end by 4:00 p.m. The Project is also required to comply with construction time limitations established by the City Noise Ordinance, which limitations act to reduce the extent, intensity, and duration of construction noise during noise-sensitive morning and evening hours, as well as on weekends and holidays. On the basis of the preceding discussions, the proposed Project would not result in new, additional, or substantially different off-site construction-related noise impacts than were considered and addressed in the Certified EIR.

Construction and Vibration Impacts

Temporary construction noise and vibration impacts have been assessed from the Project site to the nearest sensitive residential use to the north of Lot F and Lot G. The degree of construction noise would vary depending on the type of construction activity taking place and the location of the activity relative to the surrounding properties. Chapter 29: Noise, Section 5-29.06 of the City's municipal code states that the following activities shall be exempted from the provisions of the noise code.

- Noise sources associated with construction, repair, remodeling, demolition or grading of any real property. Such activities shall instead be subject to the following provisions of § 5-29.09;
    - No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

- No landowner, construction company owner, contractor, subcontractor, or employer shall permit or allow any person or persons working under their direction and control to operate any tool, equipment, or machine in violation of the provisions of this section.

To help further assess potential construction noise level impacts under CEQA, the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment (2006) criteria is used as a referenced threshold of significance in this report. The FTA provides reasonable criteria for assessing construction noise impacts based on the potential for adverse community reaction. For residential uses, the daytime noise threshold is 80 dBA Leq for an 8-hour period. In compliance with the City's Municipal Code, it is assumed construction would not occur during the noise-sensitive nighttime hours.

Typical Construction Noise Levels

Table 3-8*, Typical Construction Noise Levels*, shows typical construction noise levels compiled by the Environmental Protection Agency (EPA) for common type construction equipment. Typical construction noise levels are used to estimate potential project construction noise levels at the adjacent sensitive receptors.

Table 3-8: Typical Construction Noise Levels

Type	Noise Levels (dBA) at 50 Feet
Earth Moving	
Compactors (Rollers)	73 – 76
Front Loaders	73 – 84
Backhoes	73 – 92
Tractors	75 - 95
Scrapers, Graders	78 – 92
Pavers	85 – 87
Trucks	81 – 94
Materials Handling	
Concrete Mixers	72 – 87
Concrete Pumps	81 – 83
Cranes (Movable)	72 – 83
Cranes (Derrick)	85 – 87
Stationary

Referenced Noise Levels from the Environmental Protection Agency (EPA)

Construction Noise Impact Analysis

The assessment analyzed potential noise impacts during all expected phases of construction, including: demolition, site preparation, grading, building construction, paving, and architectural coating. Construction phasing and equipment usage assumptions are referenced from the Air Quality and Greenhouse Gas Impact Study provided as Appendix B to this Addendum.

The Project's estimated construction noise levels have been calculated using the Federal Highway Administration (FHA) Roadway Construction Noise Model Version 1.1. **Table 3-9*, Project Construction Noise Levels – Residential Uses to the North,*** shows the noise level impacts to the nearest residential property lines to the north at 160 feet.

Table 3-9: Project Construction Noise Levels – Residential Uses to the North

Phase	Equipment	Quantity	Equipment Noise Level at 160 ft (dBA Leq)	Combined Noise Level (dBA Leq)
Demolition	Concrete/Industrial Saw	1	72.5	76.3
	Excavator	3	66.6	
	Rubber Tired Dozer	2	67.6	
Site Preparation	Rubber Tired Dozers	3	67.6	77.5
	Tractors/Loaders/Backhoes	4	69.9	
Grading	Excavators	2	66.6	78.1
	Graders	1	70.9	
	Rubber Tired Dozers	1	67.6	
	Scrappers	2	69.5	
	Tractors/Loaders/Backhoes	2	69.9	
Building Construction	Cranes	1	62.5	78.1
	Forklifts	3	60.9	
	Generator Sets	1	67.5	
	Tractors/Loaders/Backhoes	3	69.9	
	Welders	1	59.9	
Paving	Cement and Mortar Mixer	2	64.7	71.8
	Pavers	2	64.1	
	Paving Equipment	2	62.9	
Architectural Coating	Air Compressor	1	63.6	63.6
Worst Case Construction Phase Noise Level – Leq (dBA)				78.1
FTA Construction Noise Criteria (Detailed Assessment: 8 Hour Leq)				80.0
Noise Level Exceeds FTA Criteria?				**No**
Source: RK Engineering. Noise Analysis. *Table 18, Project Construction Noise Levels – Residential Uses to the North.*				

As shown in **Table 3-9**, above, Project construction noise levels are expected to be below the recommended 8-hour construction noise threshold provided by the FTA for adverse community reaction at the adjacent residential uses.

Construction Vibration

To determine the vibratory impacts during construction, reference construction equipment vibration levels were utilized and then extrapolated to the façade of the nearest adjacent structures. The nearest sensitive receptors are the commercial/retail structures located adjacent to the Project site. All structures surrounding the Project site are "new structures." No historical or fragile buildings are known to be located within the vicinity of the site.

The construction of the proposed Project is not expected to require the use of substantial vibration inducing equipment or activities, such as pile drivers or blasting. The main sources of vibration impacts during construction of the Project would be the operation of equipment such as bulldozer activity during demolition, loading trucks during grading and excavation, and vibratory rollers during paving. The construction vibration assessment utilizes the referenced vibration levels and methodology set forth within the Transit Noise and Vibration Impact Assessment Manual, FTA, September 2018. **Table 3-10***,* ***Typical Construction Vibration Levels,*** shows the referenced vibration levels.

Table 3-10: Typical Construction Vibration Levels

Equipment	Peak Particle Velocity (PPV) (inches/seconds) at 25 feet	Approximate Vibration Level (LV) at 25 feet
Piledriver (impact)	1.518 (upper range)	112
	0.664 (typical)	104
Piledriver (sonic)	0.734 upper range	105
	0.170 typical	93
Clam shovel drop	0.202	94
Hydromill	0.008 in soil	66
(slurry wall)	0.017 in rock	75
Vibratory roller	0.210	94
Hoe ram	0.089	87
Large bulldozer	0.089	87
Caisson drill	0.089	87
Loaded trucks	0.076	86
Jackhammer	0.035	79
Small bulldozer	0.003	58

Source: RK Engineering. Noise Analysis. *Table 19, Typical Construction Vibration Levels.*
[1] Transit Noise and Vibration Impact Assessment Manual, Federal Transit Administration, September 2018

Table 3-11*, Construction Vibration Impact Analysis,* shows the Project's construction-related vibration analysis at the nearest structures to the Project construction area. Construction impacts are assessed from the closest area on the Project site to the nearest adjacent structure at approximately 50 feet. The worst-case vibratory impact from the site is estimated to be 0.098 PPV (in/sec) at the structures to the west. No damage potential is expected.

Table 3-11: Construction Vibration Impact Analysis

Construction Activity	Distance Nearest Structure (ft)	Duration	Calculated Vibration Level - PPV (in/sec)	Damage Potential Level	Annoyance Criteria Level
Large Bulldozer	50	Continuous/Frequent	0.042	No Impacts	Distinctly Perceptible
Vibratory Roller	50	Continuous/Frequent	0.035	No Impacts	Barely Perceptible
Loaded Trucks	50	Continuous/Frequent	0.098	Extremely Fragile Buildings, Ruins, Ancient Mountains	Distinctly Perceptible
Caisson Drilling	50	Continuous/Frequent	0.042	No Impacts	Distinctly Perceptible

Source: RK Engineering. Noise Analysis. *Table 20, Construction Vibration Impact Analysis.*

As shown in **Table 3-11**, above, Project related construction activity is not expected to cause any potential damage to the nearest structures. The annoyance potential of vibration from construction activities would range from "distinctly perceptible" to "barely perceptible." Construction vibration calculation worksheets are shown in Appendix D of the Noise Study, provided as Appendix C of this Addendum.

Operational Noise

With regard to operational noise, land uses proposed by the Project are consistent with development envisioned under the OCSP, and overall development intensities resulting from the Project are less than the maximum allowable development intensities for Statistical Areas D and E, as assessed in the Certified EIR. As such, the traffic and attendant vehicular noise from both passenger vehicles and delivery operational noise can be expected to be similar, but not greater than that presented in the Certified EIR.

Stationary Source Noise Impacts

The Project is not expected to consist of significant sources of stationary noise. The main sources of potential stationary noise impacts from the Project would mainly include on-site circulation and parking lot noise, Heating, Ventilation and Air Conditioning (HVAC) units and outdoor conversational noise.

The types of on-site noise from the Project are typically considered compatible with other adjacent commercial/mixed use and would not typically be categorized as loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness. In particular, social activities and vehicular related noise are generally substantially less during the noise sensitive nighttime hours. Although, mechanical HVAC equipment does have the potential to operate 24-hours a day.

Rooftop mechanical HVAC equipment are expected to be located at the center of each building. The nearest noise sensitive residential receptors are located approximately 750 feet away to the west of the proposed Lot C HVAC units and the noise impacts from the operation of mechanical HVAC equipment is expected to not be significant at this distance. Therefore, a preliminary evaluation of noise impacts at the adjacent commercial uses has been provided.

Parking lot noise would occur from vehicle engine idling and exhaust, doors slamming, tires screeching, people talking, and the occasional horn honking. Parking lot noise is expected to occur on Lot F and Lot G and is conservatively assessed from the first parking space to northern residential properties; approximately 160 feet away. The site plan shows commercial/retail uses would face Via Piemonte and would be mostly shielded from the line of sight from the adjacent receptor property lines. Therefore, the outdoor conversational noise from the commercial/retail uses would not substantially contribute noise impacts to adjacent properties and was not included as a part of this analysis. Refer to **Table 3-12**, ***Stationary Noise Impact Analysis***.

Table 3-12: Stationary Noise Impact Analysis[1]

Receptor			Stationary Noise Source				Combined Exterior Noise Level (Leq) dBA	
Number[2]	LU	Location	Source	Location	Distance[3]	Noise Level (Leq) dBA	Daytime[4]	Nighttime[4]
1	R	North of Lot F & G	Parking Lot	Lot F & G	160	34.8	34.8	34.8
2	R	West of Lot C	HVAC	Lot C	510	32.2	32.6	32.6
			Parking Lot	Lot F	735	21.9

Source: RK Engineering. Noise Analysis. *Table 14, Stationary Noise Impact Analysis.*
[1] Stationary noise calculation worksheets are shown in Appendix C.
[2] Refer Exhibit A for Receptor Location.
[3] Distance from the receptor to the nearest noise source.
[4] Daytime: (7:00 A.M. to 10:00 P.M.); Nighttime: (10:00 P.M. to 7:00 A.M.

As shown in **Table 3-12**, above, operational noise levels generated by the proposed Project are not expected to exceed the City's daytime standards and nighttime noise standards at the nearest receptor property line for both commercial and residential uses. Stationary noise calculation worksheets are shown in Appendix C of the Noise Impact Study provided as Appendix C of this Addendum.

Preliminary Interior Noise Analysis

Traffic noise along the adjacent roadways is expected to be the primary source of ambient noise impacting future residents at the Project site. Traffic noise is analyzed to determine the Project's noise/land use compatibility setting and to determine future noise levels to habitable exterior and interior areas on the

Project site. This section of the analysis does not necessarily apply to CEQA, as recent court rulings have indicated that CEQA is primarily concerned with the project's impact of the environment, not the environment's impact on a Project.

Future traffic noise along the roadways is obtained from The Ontario Plan Figure S-3a, Future Roadway Noise Contours and represents the noise levels at the Project site. **Table 3-13** shows the estimated future traffic noise levels at the Project site and the noise/land use compatibly rating based on the City of Ontario General Plan Table LU-7 standards; refer to **Table 3-13, *Future Traffic Noise Levels***. The Ontario Plan Noise Level Exposure and Land Use Compatibility Guidelines is provided in Appendix A of the Noise Analysis Study, provided as **Appendix C** of this Addendum.

Table 3-13: Future Traffic Noise Levels[1]

Receptor	Exterior Noise Level (Ldn) (dBA CNEL)	Noise/Land Use Compatibility
Multifamily Residential	65-70	Normally Unacceptable
Retail	65-70	Normally Acceptable
[1] Source: The City of Ontario General Plan Table LU-7		

The Project may experience noise levels that fall within the normally unacceptable range (65-75 CNEL) for the residential part of the Project and clearly acceptable (65-70 CNEL) for the retail part of the Project. Hence, upgraded building construction techniques are expected to be required to achieve interior noise level standards for the residential uses. Based on the existing noise levels (CNEL) nearest the Project site range from 60.6 CNEL to 62.5 CNEL. It should be noted that the existing noise levels were taken during typical weekday conditions and do not include noise levels during an event at the Toyota Arena event center, which may further increase noise levels (i.e., traffic) in the area. Therefore, in order to be conservative, the higher limit of the future traffic noise levels at the Project site (70 dBA CNEL) has been utilized to conduct preliminary interior noise analysis.

A preliminary interior noise analysis has been prepared for the sensitive receptor locations using a typical "windows open" and "windows closed" condition. A "windows open" condition assumes 12 dBA of noise attenuation from the exterior noise level. A "windows closed" condition" assumes 20 dBA of noise attenuation from the exterior noise level. **Table 3-14**, ***Preliminary Interior Noise Impact Analysis***, indicates the interior noise levels for the residential uses on the Project site.

Table 3-14: Preliminary Interior Noise Impact Analysis

Receptor Location	Exterior Noise Level at Building Façade	Interior Noise Standard	Required Building Shell Noise Reduction	Interior Noise Level with Standard California Construction Windows (STC > 25)		STC Rating for Windows Facing Subject Roadway
				"Windows Open"1	"Windows Closed"2	
Multifamily Residential	70	45.0	25	58	50	28
Source: RK Engineering. Noise Analysis. *Table 16, Preliminary Interior Noise Impact Analysis.* [1] A minimum of 12 dBA noise reduction is assumed with the "windows open" condition. [2] A minimum of 20 dBA noise reduction is assumed with the "windows closed" condition.						

The Project is expected to require a "windows closed" condition and upgraded STC rated windows to meet the City/State interior noise standard of 45 dBA. To accommodate a “windows closed” conditions, all units shall be equipped with adequate fresh air ventilation, per the requirements of the California Uniform Building Code (UBC). Prior to issuance of building permits, the Project proponent should demonstrate to the City building department that the proposed building shell and window assemblies would achieve exterior to interior noise reduction necessary to meet the State of California and City of Ontario requirements. Furthermore, the Project shall comply with California Title 24 insulation building requirements for multi-family dwelling units for common separating assemblies (e.g., floor/ceiling assemblies and demising walls).

Los Angeles Ontario International Airport (LAONT)

The Los Angeles Ontario International Airport (LAONT) is centrally located in the City of Ontario. The airport is a medium-hub, full-service airport. Traffic at the airport includes general aviation, commercial passenger aviation, and air cargo freight movement. LAONT is a member of the Los Angeles World Airport (LAWA) system. LAWA is currently developing a Master Land Use Plan for LAONT that will provide a framework for the airport’s development and use through the year 2030.

The LAONT is located approximately 1.25 miles to the southwest of the Project site. A noise/land use compatibility assessment has been performed based on the Project’s location to the LAONT Airport. The noise contour maps for the LAONT Airport are provided in Exhibit D of the Noise Impact Study, provided as Appendix C of this Addendum. The Project is located outside of the 60 dB Ldn noise contour limit; therefore, the exterior noise impact from the airport would be within the allowable limits for residential land uses and the Project is considered compatible with the surrounding land use and noise environment. Noise from airport operations is expected to generate a *less than significant* on the proposed Project.

Design Features

The following recommended Project design features include standard rules and requirements, best practices and recognized design guidelines for reducing noise levels.

Design features are assumed to be part of the conditions of the proposed Project and integrated into its design. Design features are *not* typically considered mitigations under CEQA.

Operational Design Features

NOI-DF-1 Prior to the issuance of building permits, the Project shall prepare a final acoustical study that demonstrates building construction will achieve the minimum interior noise standard of 45 dBA CNEL for all residential units located along arterial roadways and/or adjacent to industrial uses, per the California Building Standards Code. The following noise control measures may be required for dwelling units located near adjacent roadways and industrial uses:

- Install sound barriers between residences and noise sources.
- Install double-paned or similar sound rated windows.
- Provide sound insulating exterior walls and roofing systems.

- Locate and/or design attic vents to minimize sound propagation into each home.
- Place dwelling as far as practical from the noise source.

NOI-DF-2 The Project shall comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g., floor/ceiling assemblies and demising walls).

NOI-DF-3 For proper acoustical performance, all exterior windows, doors, and sliding glass doors should have a positive seal and leaks/cracks must be kept to a minimum.

NOI-DF-4 The final building plans shall ensure that HVAC units are not located within an area of the project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Ontario Municipal Code requirements. To meet the City's noise standards the following measures should be followed:

- All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses.

Construction Design Features

NOI-DF-5 Prepare a construction management plan and obtain a construction work permit from the City of Ontario prior to starting construction. The construction management plan shall ensure all contractors implement construction best management practices to reduce construction noise levels. Best management practices shall include the following:

- All construction equipment shall be equipped with mufflers and other suitable noise attenuation devices (e.g., engine shields).
- Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible.
- If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load).
- Use electric air compressors and similar power tools rather than diesel equipment, where feasible.
- Locate staging area, generators and stationary construction equipment as far from the adjacent residential homes as feasible.
- Construction-related equipment, including heavy-duty equipment, motor vehicles, and portable equipment, shall be turned off when not in use for more than five minutes.
- Provide notifications and signage in readily visible locations along the perimeter of construction sites that indicate the dates and duration of construction activities, as well as provide a telephone number where neighbors can inquire about the construction process and register complaints to a designated construction noise disturbance coordinator.

- Construction activities shall not take place between the hours of 6:00 p.m. and 7:00 a.m. on weekdays and Saturday or Sunday between the hours of 6:00 p.m and 9:00 a.m.

NOI-DF-6 No impact pile driving or blasting activities shall be permitted on the Project site during construction. If impact pile driving or blasting is required, a follow-up noise and vibration impact assessment shall be conducted prior to start of any activity.

3.5.9 Aesthetics

The proposed Project reflects development and design standards envisioned under the OCSP. (Please refer to the SPA document for a comprehensive listing of proposed design standards.) Prior to issuance of building permits, the City would review Project facilities' designs for consistency with the OCSP. On this basis, the Project would not result in new, additional, or different impacts than were considered and addressed in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary.

3.5.10 Seismicity

In terms of seismicity, the Certified EIR indicates that although active earthquake faults are known to exist within the general Project vicinity, no known faults traverse the site. The uses proposed by the Project would result in localized increased exposure of persons and structures to potential seismic hazards. However, the risk at the Project site is considered no greater than that experienced throughout other areas of southern California.

Application of the latest applicable established uniform building code (UBC) seismic design, engineering, and construction standards would ensure that, short of a catastrophic event, Project structures and infrastructure systems would withstand anticipated seismic activity. As such, the Project would not result in new, additional, or different impacts than were considered and addressed in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary.

3.5.11 Hydrology

The Certified EIR indicates that extensive regional drainage improvements had been constructed since the original approval of the OCSP. These improvements included the Day Creek Channel, Deer Creek Channel, Turner Basins, and the Fourth Street Interceptor. The Certified EIR stated that, "with the exception of Day Creek, all downstream drainage systems have been upgraded to accept the predicted fully developed runoff from The Ontario Center. Day Creek improvements were funded and scheduled to be constructed in the near future, as of the approval of the Certified EIR, which would have updated the mainline systems below The Ontario Center."

The Project developer was required to install new storm drainage facilities pursuant to adopted drainage plans if necessary, and, if modifying existing drainage facilities, must have ensured that no facility was removed without replacement by another functionally equivalent facility. Easements are required for drainage facilities placed outside of public streets. As required under adopted BMPs, temporary siltation basins and/or similar facilities would be implemented as a means of reducing siltation during construction activities.

Application of the above-noted and similar measures as required by the City and RWQCB, would ensure that storm drainage flows do not adversely affect land uses on-site, or "downstream" properties or watercourses, either through potential flooding, erosion, or water quality impacts.

Additionally, the Certified EIR addressed groundwater recharge, stating, "The proposed development will not significantly change groundwater recharge conditions. Recharge is currently limited on the site due to runoff rates and soil conditions. Overland flows across the pervious sections of the site are not expected to infiltrate to a depth where an effect on groundwater storage is significant." The Project does not propose elements or aspects that would materially affect these conclusions.

On the basis of the preceding discussions, the Project would not result in new, additional, or different hydrology impacts than were considered and addressed in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary.

3.5.12 Water Quality

The Certified EIR addresses the potential for impacts to regional groundwater resulting from urbanization of the OCSP site. As noted previously, adopted BMPs require provision of temporary structural measures, (such as velocity dissipators, siltation fences or basins, and vegetative buffer zones), along with periodic cleaning of storm drains and street sweeping, thereby reducing siltation and sedimentation runoff during construction. Further, the Project would implement all long-term and operational requirements of the RWQCB, including those that may have been developed subsequent to adoption of the OCSP and Certification of the EIR. On this basis, the proposed Project would not result in new, additional, or different impacts than were considered and addressed in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary.

3.5.13 Alternatives

The proposed Project is consistent with the development concepts and land uses for the Project site as presented within the Certified EIR and would result in overall reduced development intensities when compared to the maximum allowable development intensities considered in the Certified EIR.

On this basis, potential impacts of the proposed Project would constitute a "Reduced Intensity Alternative," and would be considered within the scope and range of impacts that would result from the Alternatives considered in the Certified EIR. As such, implementation of the proposed Project would have no discernible effect on analyses or conclusions regarding development alternatives considered in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary.

3.5.14 Cumulative Impacts

As demonstrated in the preceding discussions, the proposed Project would result in comparable impacts, but in no case would exceed the scope or intensity of environmental impacts considered and addressed in the Certified EIR, the CECA, POCA, or POOC. Similarly, potential cumulative impacts of the Project would be comparable to, but no greater in scope or intensity than, cumulative impacts as presented in the Certified EIR. On this basis, the Project would have no discernible effect on analyses or conclusions

regarding cumulative impacts considered in the Certified EIR. No changes or additions to the Certified EIR analysis are necessary.

4.0 Determination

4.0 DETERMINATION

As supported by the analysis presented in this Addendum, the potential environmental effects of the Adept-Piemonte Overlay Project at the Ontario Center Specific Plan, and associated required discretionary actions, have been adequately addressed in the Certified EIR for the OCSP (EIR 88-2, SCH No. 89041009). Additionally, this Addendum to the Certified EIR provides minor changes to the Certified EIR analysis which reflect certain facilities configurations and development standards presented in the CECA, POCA, and POOC. As such, preparation of any further information and analysis (e.g., preparation of a Subsequent or Supplemental EIR) is not warranted.

Pursuant to the requirements of CEQA Section 15162 and 15164, the following determinations have been made:

Major EIR Revisions Not Required

Based on the preceding analysis and information, there is no evidence that major changes to the Certified EIR are required. Comparison of the previous project with the Project described in this Addendum indicates that there is no new significant or more severe environmental impact, and that the approval of the Project described herein would have the same or reduced impacts as those described in the Certified EIR prepared for the OCSP.

No Substantial Change in Circumstances Requiring Major EIR Revisions

There is no information in the record or otherwise available that indicates that there are substantial changes in circumstances that would require major changes to the Certified EIR.

No New Information Showing Greater Significant Effects than Identified in the EIR

This Addendum has considered all available relevant information to determine whether there is new information, that was not available at the time the OCSP EIR was certified, that may indicate that a new significant effect may occur that was not reported in the Certified EIR. As supported by the analysis presented in this Addendum, there is no substantial new information, that was not available at the time the OCSP was certified, indicating that there will be a new, significant impact requiring major revisions of the EIR.

No New Information Showing Ability to Reduce Significant Effects Identified in the EIR

The Addendum analysis substantiates that there are no significant impacts requiring identification of new or additional alternatives to the Project, or consideration of new or additional mitigation measures, in order to reduce one or more of the significant effects identified in the EIR.

OTHER CEQA TOPICS/ENVIRONMENTAL ANALYSIS CHECKLIST

UPDATES TO THE CEQA GUIDELINES

The State of California adopted revisions to the CEQA Guidelines which became effective on January 1, 2019. Pursuant to CEQA Guidelines Sections 15007(d), the City of Ontario must comply with the new Guidelines 120 days after they become effective, which in this case is May 1, 2019. City staff have provided the following supplemental discussion of CEQA Guidelines Appendix G topics where appropriate. Additionally, this section includes a discussion of the CEQA Environmental Checklist.

ENVIRONMENTAL ANALYSIS CHECKLIST

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
1. AESTHETICS. Would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	☐	☐	☐	☒
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☐	☒
2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	☐	☒	☐	☐
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	☐	☐	☒	☐
d) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
e) Create objectionable odors affecting a substantial number of people?	☐	☐	☐	☒
4. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
5. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☐	☐	☐	☒
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	☒
d) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☐	☒
6. GEOLOGY AND SOILS. Would the project:				
a) Result in potentially significant environmental impact due to the wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation:	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficient:	☐	☐	☒	☐
7. GEOLOGY AND SOILS. Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii. Strong seismic ground shaking?	☐	☐	☐	☒
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv. Landslides?	☐	☐	☒	☐
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☐	☐	☒
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
8. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☒	☐
9. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e) For a project located within the safety zone of the airport land use compatibility plan for ONT or Chino Airports, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	☐	☐	☐	☒
10. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any other water quality standards or waste discharge requirements or potential for discharge of storm water pollutants from areas of material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?	☐	☒	☐	☐
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	☐	☐	☐	☒

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site or volume of storm water runoff to cause environmental harm or potential for significant increase in erosion of the project site or surrounding areas?	☐	☐	☐	☒
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site or potential for significant changes in the flow velocity or volume of storm water runoff to cause environmental harm?	☐	☐	☐	☒
e) Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff during construction and/or post- construction activity?	☐	☐	☐	☒
f) Otherwise substantially degrade water quality or potential for discharge of storm water to affect the beneficial uses of receiving water?	☐	☒	☐	☐
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	☐	☐	☐	☒
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	☐	☐	☐	☒
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☐	☒
j) Expose people or structures to inundation by seiche, tsunami, or mudflow?	☐	☐	☐	☒
11. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, airport land use compatibility plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	☐	☐	☐	☒
12. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally- important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
13. NOISE. Would the project result in:				
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☐	☒
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☐	☒
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☐	☒
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☒	☐
e) For a project located within the noise impact zones of the airport land use compatibility plan for ONT and Chino Airports, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
14. POPULATION AND HOUSING. Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☐	☐	☐	☒
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
15. PUBLIC SERVICES. Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i. Fire protection?	☐	☒	☐	☐
ii. Police protection?	☐	☒	☐	☐
iii. Schools?	☐	☒	☐	☐
iv. Parks?	☐	☒	☐	☐
v. Other public facilities?	☐	☐	☐	☒

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
16. RECREATION. Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☐	☐	☐	☒
17. TRANSPORTATION/TRAFFIC. Would the project:				
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	☐	☐	☒	☐
b) Conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	☐	☐	☐	☒
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☐	☒
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☒
e) Result in inadequate emergency access?	☐	☐	☐	☒
18. TRIBAL CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a Tribal Cultural Resource as defined in Public Resources Code Section 21074?	☐	☐	☐	☒
19. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	☐	☐	☐	☒
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☐	☒
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☐	☒
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed? In making this determination, the City shall consider whether the project is	☐	☒	☐	☐

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
subject to the water supply assessment requirements of Water Code Section 10910, et seq. (SB 610), and the requirements of Government Code Section 664737 (SB 221).				
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☒	☐	☐
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	☐	☒	☐	☐
g) Comply with federal, state, and local statutes and regulations related to solid waste?	☐	☐	☐	☒
20. WILDFIRE. Would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope, or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒
21. MANDATORY FINDINGS OF SIGNIFICANCE.				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?	☐	☐	☐	☒
c) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)	☐	☐	☒	☐
d) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

EXPLANATION OF THRESHOLDS

1. AESTHETICS

Would the project:

a) Have a substantial adverse effect on a scenic vista?

Discussion of Effects: The Policy Plan (General Plan) does not identify scenic vistas within the City. However, the Policy Plan (Policy CD1-5) requires all major north-south streets to be designed and redeveloped to feature views of the San Gabriel Mountains located to the east. The Project site is located south of Fourth Street, north of Concours Street, between Haven Avenue and Milliken Avenue, and less than one-quarter mile north of Interstate 10 (I-10); refer to Figure 1. The Project site is not located in a major north-south arterial street as identified in the Functional Roadway Classification Plan (Figure M-2) of the Mobility Element within the General Plan.

Additionally, implementation of the proposed Project would result in development of commercial/retail and residential uses that are similar in scale, character, and intensity to those envisioned under the adopted OCSP and assessed in the Certified EIR. On this basis, the Project is not anticipated to result in different or greater aesthetic impacts than those identified in the Certified EIR. Therefore, no adverse impacts are anticipated in relation to the Project.

Mitigation: None required.

b) Substantially damage scenic resources, including, but not limited to, tress, rock outcroppings and historic buildings within a state scenic highway?

Discussion of Effects: The City of Ontario is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east–west direction. I-15 traverses the northeastern portion of the City in a north–south direction. These segments of I-10, I-15, and SR-60 have not been officially designated as scenic highways by the California Department of Transportation. In addition, there are no historic buildings, or any scenic resources identified on or in the vicinity of the Project site. Therefore, it would not result in adverse environmental impacts.

Mitigation: None required.

c) Substantially degrade the existing visual character or quality of the site and its surroundings?

Discussion of Effects: The proposed Project would not degrade the existing visual character or quality of the site or its surroundings. The Project site is located in an area that is characterized by a mix of commercial, entertainment retail, office, and high-density residential land uses, and is surrounded by commercial and office land uses.

The proposed Project would substantially improve the visual quality of the area through development of the site with a mix of commercial, entertainment retail, office, and high-density residential land uses, which would be consistent with the policies of the Community Design Element of the Policy Plan (General Plan) and zoning designations on the property, as well as with the commercial and office development in the surrounding area. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

d) Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

Discussion of Effects: New lighting would be introduced to the site with the development of the proposed Project. Pursuant to the requirements of the City's Development Code, Project on-site lighting would be shielded, diffused or indirect, to avoid glare to pedestrians or motorists. In addition, lighting fixtures would be selected and located to confine the area of illumination to within the Project site and minimize light spillage.

Site lighting plans would be subject to review by the Planning Department and Police Department prior to issuance of building permits (pursuant to the City's Building Security Ordinance). Therefore, no adverse impacts are anticipated.

Mitigation: None required.

2. AGRICULTURE AND FOREST RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Discussion of Effects: The site is presently vacant and does not contain any agricultural uses. Further, the site is identified as "Other Land" and "Urban and Built-Up Land" on the map prepared by the California Resources Agency, pursuant to the Farmland Mapping and Monitoring Program. The "Other Land" consists of vacant and nonagricultural land that is greater than 40 acres in area and is surrounded on all sides by urban development. As a result, no adverse environmental impacts are anticipated.

Mitigation: None required.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Discussion of Effects: The Project site is not zoned for agricultural use. The project site is zoned SP (Specific Plan) and is located within the Urban Commercial land use district and the Piemonte Overlay district of the OCSP, which is intended for development with a mix of commercial, entertainment retail, office, and high density residential land uses. The proposed Project is consistent with the development standards and allowed land uses of the proposed land use district. Furthermore, there is no Williamson Act contract in effect on the subject site. Therefore, no impacts to agricultural uses are anticipated, nor would there be any conflict with existing or Williamson Act contracts.

Mitigation: None required.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?

Discussion of Effects: The proposed Project is intended for development with a mix of commercial, entertainment retail, office, and high-density residential land uses. The proposed Project is consistent with the Land Use Element (Figure LU-6) of the Policy Plan (General Plan) and the development standards and allowed land uses of the Urban Commercial land use district and the Piemonte Overlay district of the OCSP. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

Discussion of Effects: There is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code section 12220(g). Neither The Ontario Plan nor the City's Zoning Code provide designations for forest land. Consequently, the proposed Project would not result in the loss or conversion of forest land.

Mitigation: None required.

e) Involve other changes in the existing environment, which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use or conversion of forest land to non-forest use?

Discussion of Effects: The proposed Project site is not designated as Farmland is currently zoned Specific Plan, and is located within the Urban Commercial land use district and the Piemonte Overlay district of the OCSP, which is intended for development with a mix of commercial, entertainment retail, office, and high-density residential land uses. The proposed Project site is currently partly vacant, but previously graded, on the northern portion of the site and fully developed with parking areas currently utilized for the Toyota Arena. There are no agricultural uses occurring onsite. As a result, to the extent that the Project would result in changes to the existing environment those changes would not result in loss of Farmland to non-agricultural use.

Additionally, there is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code Section 12220(g). Neither The Ontario Plan nor the City's Zoning Code provide designations for forest land. Consequently, to the extent that the proposed Project would result in changes to the existing environment, those changes would not impact forest land.

Mitigation Required: None required.

3. AIR QUALITY

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

a) Conflict with or obstruct implementation of the applicable air quality plan?

Discussion of Effects: The Project would not conflict with or obstruct implementation of any air quality plan. As noted in The Ontario Plan FEIR (Section 5.3), pollutant levels in the Ontario area already exceed Federal and State standards. To reduce pollutant levels, the City of Ontario is actively participating in

efforts to enhance air quality by implementing Control Measures in the Air Quality Management Plan for local jurisdictions within the South Coast Air Basin.

The proposed Project is consistent with The Ontario Plan, for which the EIR was prepared and impacts evaluated. Furthermore, the Project is consistent with the City's participation in the Air Quality Management Plan (AQMP).

Additionally, implementation of the Project would result in the construction of commercial/retail and residential uses in a much lower scope and character to those assessed in the Certified EIR. As such, construction-related air pollutant emissions would be lower to than those considered in the Certified EIR. Further, shown in Table 3-7, the proposed Project would not exceed any construction emission thresholds. Additionally, as discussed in the Addendum, a reduction in total average daily traffic generation is anticipated under the Project. As a result, reductions in vehicle pollutant emissions are anticipated. Based on the preceding discussion, the proposed Project would not result in different or greater air quality impacts than those identified in the Certified EIR. Please refer also to Addendum Section 3.5.3, “Air Quality.” A less than significant impact would occur.

Mitigation: None required.

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Discussion of Effects: Short term air quality impacts will result from construction related activities associated with construction activity, such as excavation and grading, machinery and equipment emissions, vehicle emissions from construction employees, etc. The daily emissions of nitrogen oxides and particulates from resulting grading and vehicular emissions may exceed threshold levels of the South SCAQMD.

The Project must follow mandatory SCAQMD rules and requirements with regards to fugitive dust control, as described in Section 6.1.3 of the SCAQMD rules. Compliance with the standard dust control measures is considered to be part of the conditions of approval for the Project and built into the design features. Table 3-7, shows that, the Project’s daily construction emissions would be below the applicable SCAQMD air quality standards and thresholds of significance. As a result, the Project would not contribute substantially to an existing or projected air quality violation. As noted in Table 1-1, the Certified EIR include a set of mitigation measures that are applicable to the proposed Project.

Mitigation: Air Quality

MM-AQ-1 Regular watering, paving construction roads, or other dust control measures defined in SCAQMD Rule 403 will occur during construction.

MM-AQ-2 Construction equipment will be maintained in proper tune to minimize the volume of equipment exhaust emissions.

MM-AQ-3 Comprehensive ridesharing incentive program will be developed as part of a Transportation System Management.

MM-AQ-4 Orientation of Project for transit convenience and accessibility will occur in design phase; provision of easy pedestrian access will occur in design phase; provision of bus shelters, benches and bus pockets on streets.

MM-AQ-5 Provision of traffic flow improvements will occur as buildout of project occurs.

MM-AQ-6 Inclusion of solar and other energy-saving devices in residences and businesses including:

- delamping
- increased building insulation
- heating/ventilation/air conditioning improvements
- solar heaters
- utilization of landscape features to shade buildings

MM-AQ-7 Construction activities should avoid high ozone days and discontinue construction during second stage alerts. After grading, seed and water until vegetation cover is established.

MM-AQ-8 Wet area down, sufficient enough to form a crust on the surface with repeated soakings, as necessary, to maintain the crust and prevent dust pickup by the wind.

MM-AQ-9 Use water trucks or sprinkler systems to keep all areas where vehicles move damp enough to prevent dust from being raised beyond site operations. Wet construction areas down in the late morning and after work is completed in the day.

MM-AQ-10 Use low sulfur fuel for construction equipment (0.5 percent by weight).

As noted in the Certified EIR, a less than significant impact will occur with implementation of the applicable mitigation measures.

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions that exceed quantitative thresholds for ozone precursors)?

Discussion of Effects: The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment under an applicable federal or state ambient air quality because of the limited size and scope of the project. Although no impacts are anticipated, the Project would still comply with the air quality standards of the TOP FEIR and the SCAQMD resulting in impacts that are less than significant [please refer also to Addendum Section 3.5.3, “Air Quality.”] A less than significant impact would occur.

Mitigation: None required.

d) Expose sensitive receptors to substantial pollutant concentrations?

Discussion of Effects: Sensitive receptors are defined as populations that are more susceptible to the effects of pollution than the population at large. The SCAQMD identifies the following as sensitive receptors: long-term health care facilities, rehabilitation centers, convalescent centers, retirement homes, residences, schools, playgrounds, childcare centers, and athletic facilities. According to the SCAQMD, projects have the potential to create significant impacts if they are located within one-quarter mile of sensitive receptors and would emit toxic air contaminants identified in SCAQMD Rule 1401.

Given the close proximity of the project to nearest sensitive receptors (residential homes to the north), several measures are provided to help ensure the potential health risk associated with Diesel Particulate Matter (DPM) during construction is reduced to the maximum extent feasible. This includes a requirement for Tier 4 engines on all diesel-powered construction equipment. Tier 4 engines, along with the latest

national fuel standards, have been shown to yield PM reductions of over 95 percent from the typical Tier 2 and Tier 3 engines[8].

It is presumed that with the recommended design features and Tier 4 engines in place that the potential short term construction health risks would be adequately reduced to be less than significant. Design features DF-3 through DF-9 are recommended to help ensure the Project does not expose receptors to substantial pollution concentrations during construction. However, these are not considered mitigation measures. A less than significant impact would occur.

Mitigation: None required.

e) Create objectionable odors affecting a substantial number of people?

Discussion of Effects: The uses proposed on the subject site, as well as those permitted within the Urban Commercial land use district and the OCSP, do not create objectionable odors. Further, the Project shall comply with the policies of the Ontario Municipal Code and the General Plan. Additionally, as noted in the Air Quality and Greenhouse Gas Analysis, the Project's operations would result in less than significant odor impacts. Therefore, no adverse impacts are anticipated.

4. BIOLOGICAL RESOURCES

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Discussion of Effects: The site is located within an area that has historically been found to contain Delhi Soils, which is potential habitat for the Delhi Sand Flower-loving Fly (DSF), a federally listed endangered species. However, as a result of previous development, grading, and land uses on the Project site, including construction and operation of the Ontario Motor Speedway (razed in 1981), and more recently, construction activity associated with the phased development of approximately 1.3 million square feet of retail, office, hotel, and entertainment uses, and 800 multiple-family dwelling units, including mass grading of the entire Project area, the installation of public utilities, and the construction of street improvements, have left the Project site in an extremely disturbed state. This determination is supported by previous environmental reports addressing the Project site, including Ontario International Centre EIR 80-3 (SCH No. 80062538), Certified EIR 88-2 (SCH No. 89041009), and the POCA, all of which have found the Project site to be in an extremely disturbed state, with no native soils or native vegetation on the site. The Project site has not been designated as a planned recovery zone for the DSF, and in its current condition, does not provide suitable habitat. No impact would occur.

Mitigation: None required.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife, or U.S. Fish and Wildlife Service?

[8] EPA. Control of Emissions of Air Pollution from Nonroad Diesel Engines and Fuel; Final Rule. (40 CFR Parts 9, 69, et al.)

Discussion of Effects: The Project site does not contain any riparian habitat or other sensitive natural community identified by the California Department of Fish & Wildlife, or U.S. Fish & Wildlife Service. Therefore, no adverse environmental impacts are anticipated.

Mitigation: None required.

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Discussion of Effects: No wetland habitat is present on site. Therefore, Project implementation would have no impact on these resources.

Mitigation: None required.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Discussion of Effects: The Project site is a mixed vacant and fully developed property that is bounded on all four sides by development. As a result, there are no wildlife corridors connecting this site to other areas. Therefore, no adverse environmental impacts are anticipated.

Mitigation: None required.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Discussion of Effects: The City of Ontario does not have any ordinances protecting biological resources. Further, the site does not contain any mature trees necessitating the need for preservation. As a result, no adverse environmental impacts are anticipated.

Mitigation: None required.

f) Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?

Discussion of Effects: The site is not part of an adopted HCP, NCCP or other approved habitat conservation plan. As a result, no adverse environmental impacts are anticipated.

Mitigation: None required.

5. CULTURAL RESOURCES

Would the project:

a) Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?

Discussion of Effects: The Project site does not contain any buildings, structures, or objects. Additionally, as part of the Project site development during the OCSP, CECA, POCA, POOSCP, the Project site has been previously disturbed and fully graded. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Discussion of Effects: The Ontario Plan FEIR (Section 5.5) indicates no archeological sites or resources have been recorded in the City with the Archeological Information Center at San Bernardino. As noted above, because the site has been previously fully disturbed and graded and no historical structures existing on-site, no adverse change in significance or an archaeological resource is anticipated.

Mitigation: None required.

c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Discussion of Effects: As described in the Certified EIR, cultural resources were not anticipated to be affected by the OCSP. As previously noted, the Project site has been previously graded. As such, the proposed Project would not affect areas or resources not previously considered in the Certified EIR. No additional or different impacts have been identified based on the Project

Mitigation: None required.

d) Disturb any human remains, including those interred outside of formal cemeteries?

Discussion of Effects: The proposed Project is in an area that has been previously disturbed by development. No known religious or sacred sites exist within the Project area. Thus, human remains are not expected to be encountered during any construction activities. However, in the unlikely event that human remains are discovered, existing regulations, including the California Public Resources Code Section 5097.98, would afford protection for human remains discovered during development activities. Furthermore, standard conditions have been imposed on the Project that in the event of unanticipated discoveries of human remains are identified during excavation, construction activities, the area shall not be disturbed until any required investigation is completed by the County Coroner and/or Native American consultation has been completed, if deemed applicable.

Mitigation: None required.

6. Energy

Would the project:

a) Result in potentially significant environmental impact due to the wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation:

A Project specific Energy Study was prepared by RK Engineering Group, Inc. Findings are summarized herein, and the technical study is available as Appendix D of this Addendum.

Discussion of Effects: As described in the Certified EIR, the Project's impact is considered less than significant with the inclusion of the mandatory requirements of California's Building Energy Efficiency Standards (Title 24, Part 6) and Green Building Standards (CALGreen, Title 24, Part 11). California's building energy efficiency standards are some of the strictest in the nation and the Project's compliance with California's building code would ensure that wasteful, inefficient or unnecessary consumption of energy

is minimized. The building standards code is designed to reduce the amount of energy needed to heat or cool a building and reduce energy usage for lighting and appliances.

The proposed Project is anticipated to have a less than significant impact on energy. The following recommended energy design features (DF) are provided to further reduce wasteful, inefficient and unnecessary consumption of energy. Design features are consistent with the recommended design features provided with Air/GHG study. These DF are not considered mitigation measures.

Construction Energy Design Features

E-DF-1 Establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

Operational Design Features

E-DF-2 Implement the GHG Reduction Measures from the Ontario County Climate Action Plan (CAP) Screening Tables to achieve at least 100 points, per the requirements for Mixed Use Projects.

E-DF-3 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

E-DF-4 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod, per CAL Green and City of Ontario requirements.

E-DF-5 Implement zero waste strategies, recycling and composting programs for residential and non-residential uses.

E-DF-6 Encourage residents and landscape maintenance crews to use electric landscaping equipment, such as lawnmowers and leaf blowers, wherever feasible.

E-DF-7 No natural gas or wood burning fireplaces shall be installed in any residential dwelling.

E-DF-8 Implement trip reduction measures that reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking. Such as;

1. Improve the walkability and design of the project by including pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e., sidewalks, crosswalks, foot paths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.).
2. Provide traffic calming measures (i.e., marked crosswalks, raised crosswalks, raised intersections, count-down signal timers, curb extensions, speed tables, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.)
3. Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

E-DF-9 Provide electric vehicle charging stations per the requirements of CALGreen.

A less than significant impact would occur.

Mitigation: None required.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficient:

Discussion of Effects: The proposed Project's impact is considered less than significant as the Project would purchase electricity through Southern California Edison which is subject to the requirements of California Senate Bill 100 (SB 100). SB 100 is the most stringent and current energy legislation in California; requiring that renewable energy resources and zero-carbon resources supply 100 percent of retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all state agencies by December 31, 2045.1 The Project would further comply with the mandatory requirements of California's Green Building and Building Energy Efficiency standards that promote renewable energy and energy efficiency. A less than significant impact would occur.

Mitigation: None required.

7. GEOLOGY & SOILS

Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Discussion of Effects: There are no active faults known on the site and the Project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Ontario Plan FEIR (Section 5.7/ Figure 5.7-2) identifies eight active or potentially active fault zones near the City. Given that the closest fault zone is located more than ten miles from the Project site, fault rupture within the Project area is not likely. All development would comply with the UBC seismic design standards to reduce geologic hazard susceptibility. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

ii) Strong seismic ground shaking?

Discussion of Effects: There are no active faults known on the site and the Project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Land Use Plan (Figure LU-6) of the Policy Plan (General Plan) FEIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. The closest fault zone is located more than ten miles from the Project site. The proximity of the site to the active faults would result in ground shaking during moderate to severe seismic events. All construction would be in compliance with the California Building Code (CBC), the Ontario Municipal Code, The Ontario Plan and all other ordinances adopted by the City related to construction and safety. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

iii) Seismic-related ground failure, including liquefaction?

Discussion of Effects: As identified in the TOP FEIR (Section 5.7), groundwater saturation of sediments is required for earthquake induced liquefaction. In general, groundwater depths shallower than 10 feet to the surface can cause the highest liquefaction susceptibility. According to the POOC MND, depth to ground water at the Project site during the winter months is estimated to be between 250 to 450 feet below ground surface. Therefore, the liquefaction potential within the Project area is minimal.

Implementation of The Ontario Plan strategies, UBC and Ontario Municipal Code would reduce impacts to a less than significant level.

Mitigation: None required.

iv) Landslides?

Discussion of Effects: The proposed Project would not expose people or structures to potential adverse effects, including the risk of loss, injury, or death involving landslides because the relatively flat topography of the Project site (less than two percent slope across the City) makes the chance of landslides remote. Implementation of The Ontario Plan strategies, UBC and OMC would reduce impacts to a less than significant level.

Mitigation: None required.

b) Result in substantial soil erosion or the loss of topsoil?

Discussion of Effects: The proposed Project would not result in significant soil erosion or loss of topsoil because of the previously disturbed and developed nature of the Project site and the limited size and scope of the Project. Grading increases the potential for erosion by removing protective vegetation, changing natural drainage patterns, and constructing slopes. However, compliance with the CBC and review of grading plans by the City Engineer would ensure no significant impacts would occur. In addition, the City requires an erosion/dust control plan for projects located within this area. Implementation of a NPDES program, the Environmental Resource Element of the General Plan strategies, UBC, and OMC would reduce impacts to a less than significant level.

Mitigation: None required.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Discussion of Effects: The Project site would not result in the location of development on a geologic unit or soil that is unstable, or that would become unstable because as previously discussed, the potential for liquefaction and landslides associated with the Project site is less than significant. The Ontario Plan FEIR (Section 5.7) indicates that subsidence is generally associated with large decreases or withdrawals of water from the aquifer. The Project would not withdraw water from the existing aquifer. Further, implementation of The Ontario Plan strategies, UBC and OMC would reduce impacts to a less than significant level.

Mitigation: None required.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Discussion of Effects: The majority of Ontario, including the Project site, is located on alluvial soil deposits. These types of soils are not considered to be expansive. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Discussion of Effects: The area is served by the local sewer system and the use of alternative systems is not necessary. There would be no impact to the sewage system.

Mitigation: None required.

8. GREENHOUSE GAS EMISSIONS

Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Discussion of Effects: The impact of buildout of The Ontario Plan on the environment due to the emission of greenhouse gases ("GHGs") was analyzed in the Environmental Impact Report ("EIR") for the Policy Plan (General Plan). According to the EIR, this impact would be significant and unavoidable. (Recirculated Portions of the Ontario Plan Draft Environmental Impact Report, p. 2-118). This EIR was certified by the City on January 27, 2010, at which time a statement of overriding considerations was also adopted for The Ontario Plan's significant and unavoidable impacts, including that concerning the emission of GHGs.

Pursuant to Public Resources Code section 21083.3, this impact need not be analyzed further, because (1) the proposed project would result in an impact that was previously analyzed in The Ontario Plan EIR, which was certified by the City; (2) the proposed project would not result in any greenhouse gas impacts that were not addressed in The Ontario Plan EIR; (3) the proposed project is consistent with The Ontario Plan.

A Project-specific Air Quality and Greenhouse Gas Impact Study was prepared. The results are provided herein, and the technical study is included as Appendix B of this Addendum. For purposes of this Project, the City of Ontario, Ontario County Climate Action Plan (CCAP) establishes the requirements for determining whether a project would have a significant impact to GHG emissions under CEQA.

The CCAP uses Screening Tables, which are setup similar to a checklist, with points allocated to certain elements of the Project to reduce GHG emissions. If a project garners 100 points (by including enough GHG reducing elements), then the project is consistent with CCAP and the impact may be considered less than significant for purposes of CEQA.

The proposed Project is expected to comply with the CCAP by implementing the Screening Table requirements into the Project design. To help ensure the Project adheres to the CCAP requirements, the following GHG Project DFs GHG-DF-10 through GHG-DF-17 are provided:

Design Features

GHG-DF-10 Implement the GHG Reduction Measures from the CCAP Screening Tables to achieve at least 100 points, per the requirements for Mixed Use Projects.

As described in Appendix B of the CCAP, for mixed use projects, both the residential and non-residential screening tables shall be completed. Mixed use Projects that garner at least 100 points will be consistent with the reduction quantities in the City's CAP and are considered less than significant for GHG emissions.

Therefore, with the implementation of the CCAP Screening Tables, the Project is not expected to generate GHG emissions, either directly or indirectly, that would cause a significant impact on the environment.

Also, by complying with the CCAP, the Project will not conflict with an applicable plan, policy or regulation for the purpose of reducing the emissions of greenhouse gases and the impact is considered less than significant.

Furthermore, since the purpose of the City's CCAP is to ensure compliance with the state's climate initiatives for reducing GHG emissions, by complying with the CCAP, the Project will also be in compliant with the broader statewide goals for combating climate change; such as those required in the CARB Scoping Plan and AB 32.

The mixed-use Project is also located within close proximity to high quality transit, located in a low VMT zone, and offers high-density residential development near commercial uses. The Project will include pedestrian friendly and walkable design that will encourage fewer auto-based trips. The following Project design features will be provided to further help reduce GHG emissions:

GHG-DF-11 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

GHG-DF-12 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod, per CAL Green and City of Ontario requirements.

GHG-DF-13 Implement zero waste strategies, recycling and composting programs for residential and non-residential uses.

GHG-DF-14 Encourage residents and landscape maintenance crews to use electric landscaping equipment, such as lawn mowers and leaf blowers, wherever feasible.

GHG-DF-15 No natural gas or wood burning fireplaces shall be installed in any residential dwelling.

GHG-DF-16 Implement trip reduction measures that reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking. Such as;

1. Improve the walkability and design of the project by including pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e., sidewalks, crosswalks, foot paths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.).
2. Provide traffic calming measures (i.e., marked crosswalks, raised crosswalks, raised intersections, count-down signal timers, curb extensions, speed tables, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.)
3. Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

GHG-DF-17 Provide electric vehicle charging stations per the requirements of CALGreen.

The Project is anticipated to have a less than significant impact. Additionally, with implementation of the Project DF, the Project would continue to have a less than significant impact on GHG.

9. HAZARDS & HAZARDOUS MATERIALS

Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?

Discussion of Effects: The Project is not anticipated to involve the transport, use or disposal of hazardous materials during either construction or Project implementation. Typical construction activities involve the use and handling of solvents, paints, and other chemicals. However, none of the proposed uses involve the use or handling of dangerous chemicals that could create a significant hazard to the public or the environment. Additionally, the Project site have been previously graded, and no hazardous materials exist onsite. Therefore, no adverse impacts are anticipated. However, in the unlikely event of an accident, implementation of the strategies included in The Ontario Plan would decrease the potential for health and safety risks from hazardous materials to a less than significant impact.

Mitigation: None required.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Discussion of Effects: The proposed Project does not include the use of hazardous materials or volatile fuels. In addition, there are no known stationary commercial or industrial land uses within close proximity to the subject site, which use/store hazardous materials to the extent that they would pose a significant hazard to visitors/occupants to the subject site, in the event of an upset condition resulting in the release of a hazardous material. No impacts are anticipated.

Mitigation: None required

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?

Discussion of Effects: The proposed Project does not include the use, emissions or handling of hazardous or acutely hazardous materials, substances or waste. Therefore, no impacts are anticipated.

Mitigation: None required.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Discussion of Effects: The proposed Project site is not listed on the hazardous materials site compiled pursuant to Government Code Section 65962.5. Therefore, the Project would not create a hazard to the public or the environment and no impact is anticipated.

Mitigation: None required.

e) For a project located within the safety zone of the airport land use compatibility plan for ONT or Chino Airports, would the project result in a safety hazard for people residing or working in the project area?

Discussion of Effects: According to Land Use Element (Exhibit LU-06 Airport Environs) of the General Plan, the Project site is located within the airport land use plan. However, the Project would not result in a safety hazard for people working or residing in the Project area because it would not obstruct aircraft maneuvering because of the Project's low elevation and the architectural style of the Project. Additionally, the Land Use Compatibility Guidelines for Noise Impacts (Table LU-08) shows the proposed use as normally accepted in the 65 CNEL. The proposed use would comply with standards for mitigating noise. Therefore, no impacts are anticipated.

Mitigation: None required.

f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

Discussion of Effects: The Project site is not located within the vicinity of a private airstrip. Therefore, no impacts are anticipated.

Mitigation: None required.

g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Discussion of Effects: The City's Safety Element, as contained within The Ontario Plan, includes policies and procedures to be administered in the event of a disaster. The Ontario Plan seeks interdepartmental and inter-jurisdictional coordination and collaboration to be prepared for, respond to, and recover from everyday and disaster emergencies. In addition, the Project would comply with the requirements of the Ontario Fire Department and all City requirements for fire and other emergency access. Because the Project is required to comply with all applicable City codes, any impacts would be reduced to a less than significant level.

Mitigation: None required.

h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Discussion of Effects: The Project site is not located in or near wildlands. Therefore, no impacts are anticipated.

Mitigation: None required.

10. HYDROLOGY & WATER QUALITY

Would the project:

a) Violate any other water quality standards or waste discharge requirements or potential for discharge of storm water pollutants from areas of material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?

Discussion of Effects: The Project site is served by City water and sewer service and would not affect water quality standards or waste discharge requirements. Discharge of storm water pollutants from areas of

materials storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing, waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work) areas could result in a temporary increase in the amount of suspended solids, trash and debris, oil and grease, organic compounds, pesticides, nutrients, heavy metals and bacteria pathogens in surface flows during a concurrent storm event, thus resulting in surface water quality impacts. The site is required to comply with the statewide National Pollutant Discharge Elimination System (NPDES) General Industrial Activities Stormwater Permit, the San Bernardino County Area-Wide Urban Runoff Permit (MS4 permit) and the City of Ontario's Municipal Code (Title 6, Chapter 6 (Stormwater Drainage System)). In addition to the NPDES, MS4, and other permits listed in this section, this site is required to comply with the latest trash capture requirements from the State and RWQCB. This would reduce any impacts to below a level of significance. However, as part of the Certified EIR, the following Mitigation Measures (MMs) were imposed as part of the development of the OCSP:

Mitigation: Hydrology

MM-HYD-1 On-site drainage plans will be designed, submitted to, and approved by the City of Ontario prior to the issuance of a grading permit.

MM-HYD-2 Proposed storm drainage facilities to be installed as The Ontario Center develops, will be placed in public streets. W here storm drains must be placed in areas other than public streets, a drainage easement will be dedicated as needed.

MM-HYD-3 Some modification will be necessary to existing drainage facilities. No existing facility will be removed without replacement by another structure to serve the particular condition.

MM-HYD-4 As development proceeds, there will be a need for temporary siltation basins to reduce sedimentation from construction activities. These will be located in specific areas of construction and sized in accordance with City of Ontario criteria.

With implementation of the applicable Certified EIR MMs, the Project would have a less than significant impact.

b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

Discussion of Effects: No increases in the current amount of water flow to the Project site are anticipated, and the proposed Project would not deplete groundwater supplies, nor will it interfere with recharge. The water use associated with the proposed use of the property would be negligible. The development of the site would require the grading of the site and excavation is expected to be less than three feet and would not affect the existing aquifer, estimated to be about 230 to 250 feet below the ground surface. No adverse impacts are anticipated.

Mitigation: None required.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site or volume of storm water runoff to cause environmental

harm or potential for significant increases in erosion of the project site or surrounding areas?

Discussion of Effects: It is not anticipated that the Project would alter the drainage pattern of the site or area, in a manner that would result in erosion, siltation or flooding on-or-off site nor would the proposed Project increase the erosion of the subject site or surrounding areas. The existing drainage pattern of the Project site would not be altered, and it would have no significant impact on downstream hydrology. Stormwater generated by the Project would be discharged in compliance with the statewide NPDES General Construction Activities Stormwater Permit and San Bernardino County MS4 permit requirements. With the full implementation of a Storm Water Pollution Prevention Plan (SWPPP) developed in compliance with the General Construction Activities Permit requirements, the BMPs included in the SWPPP, and a stormwater monitoring program would reduce any impacts to below a level of significance. No streams or streambeds are present on the site. No changes in erosion off-site are anticipated.

Mitigation: None required.

d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site or potential for significant changes in the flow velocity or volume of storm water runoff to cause environmental harm?

Discussion of Effects: The proposed Project is not anticipated to increase the flow velocity or volume of storm water runoff to cause environmental harm from the site and would not create a burden on existing infrastructure. Furthermore, with the implementation of an approved Water Quality Management Plan (WQMP) developed for the site, in compliance with the San Bernardino County MS4 Permit requirements, stormwater runoff volume shall be reduced to below a level of significance.

Mitigation: None required.

e) Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff (a&b) during construction and/or post-construction activity?

Discussion of Effects: It is not anticipated that the Project would create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or create or contribute stormwater runoff pollutants during construction and/or post-construction activity. Pursuant to the requirements of The Ontario Plan, the City's Development Code, and the San Bernardino County MS4 Permit's WQMP, individual developments must provide site drainage and WQMP plans according to guidelines established by the City's Engineering Department. If master drainage facilities are not in place at the time of Project development, then standard engineering practices for controlling post-development runoff may be required, which could include the construction of on-site storm water detention and/or retention/infiltration facilities. Therefore, no impacts are anticipated.

Mitigation: None required.

f) Otherwise substantially degrade water quality or potential for discharge of storm water to affect the beneficial uses of receiving water?

Discussion of Effects: Activities associated with the construction period, could result in a temporary increase in the amount of suspended solids in surface flows during a concurrent storm event, thus resulting in surface water quality impacts. The site is required to comply with the statewide NPDES General Construction Permit and the City of Ontario's Municipal Code (Title 6, Chapter 6 (Stormwater Drainage System)) to minimize water pollution. Thus, it is anticipated that there is no potential for discharges of stormwater during construction that would affect the beneficial uses of the receiving waters. However, with the General Construction Permit requirement and implementation of the policies in The Ontario Plan, any impacts associated with the Project would be less than significant. However, as part of the Certified EIR, the following MMs were imposed as part of the development of the OCSP:

Mitigation: Water Quality

MM-WQ-1 During construction, a variety of temporary structural measures such as velocity dissipators, siltation fences or basins and. vegetative buffer zones will be used to reduce siltation and sedimentation runoff from construction sites.

MM-WQ-2 Periodic cleaning of storm drains and inlets, construction of pervious pavement surfaces in areas designated by the City, periodic street sweeping.

MM-WQ-3 Periodic street sweeping will be conducted by the City of Ontario for streets dedicated to the City. Periodic vacuum sweeping will be conducted by the owners of individual sites.

g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

Discussion of Effects: The project site is not located within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map. Therefore, no impacts are anticipated.

Mitigation: None required.

h) Place within a 100-year flood hazard area, structures that would impede or redirect flood flows?

Discussion of Effects: As identified in the Safety Element (Exhibit S-2) of the Policy Plan (General Plan), the site lies outside of the 100-year flood hazard area. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

Discussion of Effects: As identified in the Safety Element (Exhibit S-2) of The Ontario Plan, the site lies outside of the 100-year flood hazard area. No levees or dams are located near the Project site. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

j) Expose people or structures to inundation by seiche, tsunami or mudflow?

Discussion of Effects: There are no lakes or substantial reservoirs near the project site; therefore, impacts from seiche are not anticipated. The City of Ontario has relatively flat topography, less than two percent across the City, and the chance of mudflow is remote. Therefore, no impacts are anticipated.

Mitigation: None required.

11. LAND USE & PLANNING

Would the project:

a) Physically divide an established community?

Discussion of Effects: The Project site is located in an area that is currently developed with urban land uses. This Project would be of similar design and size to surrounding development. The Project would become a part of the larger commercial, entertainment retail, office, and high-density residential communities, which surround the Project site. No adverse impacts are anticipated.

Mitigation: None required.

b) Conflict with applicable land use plan, policy or regulation of agencies with jurisdiction over the project (including, but not limited to general plan, airport land use compatibility plan, specific plan, or development code) adopted for the purpose of avoiding or mitigation an environmental effect?

Discussion of Effects: The proposed Project is consistent with The Ontario Plan and does not interfere with any policies for environmental protection. As such, no impacts are anticipated.

Mitigation: None required.

c) Conflict with any applicable habitat conservation plan or natural community conservation plan?

Discussion of Effects: There are no adopted habitat conservation plans in the Project area. As such no conflicts or impacts are anticipated.

Mitigation: None required.

12. MINERAL RESOURCES

Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Discussion of Effects: The Project site is located within a mostly developed area surrounded by urban land uses. There are no known mineral resources in the area. Therefore, no impacts are anticipated.

Mitigation: None required.

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Discussion of Effects: There are no known mineral resources in the area. No impacts are anticipated.

Mitigation: None required.

13. NOISE

Would the project result in:

a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Discussion of Effects: As noted in Section 3.5.8, Noise, and as shown in Tables 3-8 and 3-9, the Project would not expose people to or generate noise levels in excess of standards as established in The Ontario Plan FEIR (Section 5.12). No additional analysis would be required at the time of site development review.

Mitigation: None required.

b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

Discussion of Effects: The uses associated with this Project normally do not induce groundborne vibrations. As such, no impacts are anticipated. Typical construction vibration is shown on Tables 3-10 and 3-11 which conclude that Project vibration would not expose persons or generate excessive groundborne vibration or noise levels.

Mitigation: None required.

c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Discussion of Effects: The Project would not be a significant permanent noise generator and would not cause a substantial permanent increase in ambient noise levels because of the limited size and scope of the Project. Moreover, the proposed use would be required to operate within the noise levels permitted for commercial development, pursuant to City of Ontario Development Code. The Project would create typical construction noise as shown in Tables 3-8 and 3-9. Therefore, no increases in noise levels within the vicinity of the project are anticipated.

Mitigation: None required.

d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

Discussion of Effects: Temporary construction activities would minimally impact ambient noise levels. All construction machinery would be maintained according to industry standards to help minimize the impacts. Normal activities associated with the Project are unlikely to increase ambient noise levels. As shown in Tables 3-12, 3-13, and 3-14 show that the Project would not create substantial temporary or periodic increase in ambient noise. A less than significant impact is anticipated.

Mitigation: None required.

e) For a project located within the noise impact zones of the airport land use compatibility plan for ONT and Chino Airports, would the project expose people residing or working in the project area to excessive noise levels?

Discussion of Effects: According to the Safety Element in The Ontario Plan and the Noise Impact Analysis, the proposed site is located within the airport land use plan. However, the Project is located outside of

the 60 CNEL noise contour. Therefore, the exterior noise impact from the airport would be within the allowable limits for residential land uses and the Project is considered compatible with the surrounding land use and noise environment. Noise from airport operations is expected to generate a less than significant on the proposed Project.

Mitigation: None required.

f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

Discussion of Effects: The Project site is not located within the vicinity of a private airstrip. Therefore, no impacts are anticipated.

Mitigation: None required.

14. POPULATION & HOUSING

Would the project:

a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?

Discussion of Effects: The Project is located in a developed area and would not induce population growth as the proposed multi-family DUs have been previously analyzed as part of the OCSP development in the Certified EIR and population growth as part of the OCSP has already been assumed and accounted for in the General Plan and regionally. Therefore, no impacts are anticipated

Mitigation: None required.

b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

Discussion of Effects: The Project site is currently undeveloped. Therefore, no impacts are anticipated.

Mitigation: None required.

c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

Discussion of Effects: The Project site is currently undeveloped. Therefore, no impacts are anticipated.

Mitigation: None required.

15. PUBLIC SERVICES

Would the project:

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i) Fire protection?

Discussion of Effects: The site is in a developed area currently served by the Ontario Fire Department. As previously noted, the site has already been accounted for in the General Plan that it will be developed to include a greater amount of commercial SF and a larger amount of multi-family DUs. The Project would not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated. However, as part of the development of the OCSP, the Certified EIR noted that the following MMs would be applicable to the development of the OCSP:

Mitigation: Fire Protection

MM-PS-1 The developer will pay a fair share of "in-lieu" fees to subsidize additional facilities and equipment as mutually agreed upon by both the developer and the City of Ontario.

MM-PS-2 All new development will participate in updating the City of Ontario Water Master Plan and will contribute on a "fair share" basis toward implementation of Master Plan programs.

MM-PS-3 Ontario Fire Department and project developer Will provide, in writing, assurance of water supply adequacy from local water purveyor.

MM-PS-4 Design features at the site plan level will reduce risk of fire hazard. Site plan proposals will be reviewed during site plan review by Ontario Fire Department (OFD). Protection measures recommended by the OFD will be implemented by project proponent.

With implementation of MMs PS-1 through PS-4, a less than significant impact on fire services would occur.

ii) Police protection?

Discussion of Effects: The site is in a developed area, currently served by the Ontario Police Department. The Project would not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities and no impact are anticipated on police protection services. However, as part of the development of the OCSP, the Certified EIR noted that the following MMs would be applicable to the development of the OCSP:

Mitigation: Law Enforcement

MM-PS-5 If a proposed ordinance is adopted, the regional center builder/developer may be required to pay a one-time developer assessment fee to the Police Department at the time of issuance of a building permit. This developer fee will mitigate the fiscal impact incurred by the Police Department.

Due to the projected increase in police calls for service to be generated by the development. The amount of this fee will be established by the Ontario Police Department based on land use and projected calls-for-service from that use.

MM-PS-6 Each individual project within The Ontario Center will incorporate on-site security measures. These measures will be reviewed by the Ontario Police Department. They will include, but not be limited to, limited-height landscaping, exterior lighting, security hardware.

MM-PS-7 In addition to these physical security and lighting requirements, the Police Department requests that the developer submit a plan delineating which functions are to be addressed by on-site private security and what functions are to be served by the Police Department. This

plan may include personnel selection and training and physical security measures, i.e., video surveillance, emergency call boxes, communication and alarms. This plan shall be approved by the Police Department prior to implementation.

With implementation of MMs PS-5 through PS-7, a less than significant impact on police services would occur.

iii) Schools?

Discussion of Effects: The Project would be required to pay school fees as prescribed by state law prior to the issuance of building permits. However, as part of the development of the OCSP, the Certified EIR noted that the following MMs would be applicable to the development of the OCSP:

Mitigation: School

MM-PS-8 Developers of residential projects within The Ontario Center will pay required school impact mitigation fees of $29,000 gross acre to Cucamonga School District per agreement reached between the District and the developer dated December 31, 1986.

MM-PS-9 Developers of projects within The Ontario Center will pay fees, as noted below, to the Chaffey Joint Unified School District:

Residential $.48/square foot

Commercial/Industrial/Office $.08/square foot

iv) Parks?

Discussion of Effects: The site is in a developed area, currently served by the City of Ontario. The Project would not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. However, as part of the development of the OCSP, the Certified EIR noted that the following MMs would be applicable to the development of the OCSP:

Mitigation: Parks and Recreation

MM-PS-10 Regional Parks: The responsibility for rehabilitating existing regional parks and/or building new facilities, rests with the County of San Bernardino Parks Department. A Draft Ordinance has been prepared by the County Parks Department which will require developers to pay fees for future parks and open space. Developers within The Ontario Center shall comply with the City of Ontario's implementation of the County's fee ordinance for the collection of development fees for regional parks, trails, and open space if and when it is enacted.

MM-PS-11 Local Parks: A Park Development Fund Fee of $802/single family detached unit and $700/multiple family unit will be paid at the time of issuance of building permits.

MM-PS-12 Private recreational opportunities shall be encouraged for the commercial retail/industrial use areas.

v) Other public facilities?

Discussion of Effects: The site is in a developed area, currently served by the City of Ontario. The Project would not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

Mitigation: None required.

16. RECREATION

Would the project:

a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?

Discussion of Effects: This Project is not proposing any significant new housing or large employment generator that would cause an increase in the use of neighborhood parks or other recreational facilities that have not already been analyzed as part of the OCSP or the Certified EIR and/or considered in the General Plan. Implementation of the proposed Project would not require the construction of neighborhood parks or other recreational facilities. No impacts are anticipated.

Mitigation: None required.

17. TRANSPORTATION/TRAFFIC

Would the project:

A Project-specific Traffic Impact Analysis was prepared by RK Engineering Group. The results are provided herein, and the technical study is included as Appendix A of this Addendum.

a) Conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Discussion of Effects: The Project is in an area that is mostly developed with all street improvements existing. As noted in Table 3-3, the number of vehicle trips per day is forecast at 5,691 daily trips or 5.4 percent compared to the allowable 105,332 daily trips allowable per the OCSP for the site. Therefore, as noted in Section 3.5.5, Traffic and Circulation, the Project would not create a substantial increase in the number of vehicle trips, traffic volume or congestion at intersections and would not conflict with an applicable plan, ordinance, or policy addressing the circulation system, transit, roadway, bicycle, or pedestrian facilities. Less than significant impacts are anticipated. However, as part of the Certified EIR, the following MMs were imposed as part of the development of the OCSP:

Mitigation: Traffic and Transportation

MM-TRF-1 Buildout in the project vicinity of the proposed circulation system defined in the Specific Plan Amendment will occur.

MM-TRF-2 Development and implementation of a Transportation Systems Management (TSM) program with a goal of a ten percent reduction in peak hour trips will occur as defined the Specific Plan Amendment.

MM-TRF-3 Applicants for all future specific plans and specific plan amendments in the vicinity of The Ontario Center project will be required to complete traffic impact and mitigation studies to ensure that the forty (40) intersections studied this EIR will not exceed an intersection capacity utilization greater than Level of Service E.

With implementation of the applicable Certified EIR MMs, the Project would have a less than significant impact.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Discussion of Effects: As noted in Section 3.5.5.1, CEQA Vehicle Miles Traveled, the Project is found to have a less than significant impact regarding VMT.

Mitigation: None required.

c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

Discussion of Effects: The Project would not create a substantial safety risk or interfere with air traffic patterns at Ontario International Airport as it either is outside of areas with FAA-imposed height restrictions or is under such height restrictions. No impacts are anticipated.

Mitigation: None required.

d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Discussion of Effects: The Project is in an area that is mostly developed. All street improvements are complete, and no alterations are proposed for adjacent intersections or arterials. The Project would, therefore, not create a substantial increase in hazards due to a design feature. No impacts are anticipated.

Mitigation: None required.

e) Result in inadequate emergency access?

Discussion of Effects: The Project would be designed to provide access for all emergency vehicles and would therefore not create an inadequate emergency access. No impacts are anticipated.

Mitigation: None required.

18. TRIBAL CULTURAL RESOURCES

Would the project:

a) Cause a substantial adverse change in the significance of a Tribal Cultural Resource as defined in Public Resources Code Section 21074?

Discussion of Effects: The proposed Project is in an area that has been previously disturbed by development. No known Tribal Cultural Resource sites exist within the Project area. Thus, tribal artifacts are not expected to be encountered during any excavation, grading, or construction activities.

Mitigation: None required.

19. UTILITIES AND SERVICE SYSTEMS

Would the project:

a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

Discussion of Effects: The proposed Project is served by the City of Ontario sewer system, which has waste treated by the Inland Empire Utilities Agency at the RP-1 and/or RP-5 treatment plant. The Project is required to meet the requirements of the Ontario Engineering Department regarding wastewater. Additionally, as noted in Section 2.3, Land Use and Development, the proposed Project would implement a Project at a much lower development intensity than the originally approved project under the OCSP and the Certified EIR. As such, no impacts are anticipated.

Mitigation: None required.

b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Discussion of Effects: The proposed Project is served by the City of Ontario sewer system and which has waste treated by the Inland Empire Utilities Agency at the RP-1 and/or RP-5 treatment plant. RP-1 and/or RP-5 is not at capacity and this Project would not cause RP-1 and/or RP-5 to exceed capacity. The Project would, therefore, not require the construction of new wastewater treatment facilities, or the expansion of existing facilities. No impacts are anticipated.

Mitigation: None required.

c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Discussion of Effects: The proposed Project is served by the City of Ontario. The Project is required to meet the requirements of the Ontario Engineering Department regarding storm drain facilities. Because the Project is much less intense than the previously approved project on the same footprint, no impacts are anticipated.

Mitigation: None required.

d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed? In making this determination, the City shall consider whether the project is subject to the water supply assessment requirements of Water Code Section 10910, et seq. (SB 610), and the requirements of Government Code Section 664737 (SB 221).

Discussion of Effects: The Project is served by the City of Ontario water system. There is currently a sufficient water supply available to the City of Ontario to serve this project. Additionally, as noted in Table 2-4, the Project is anticipated to require 316,027 GPD compared to the 727,888 GPD of the originally approved project and analyzed under Certified EIR. The proposed Project would require approximately 54 percent of the originally accounted for water demand. Although a less than significant impact is anticipated in this regard, the Certified EIR included the following MMs as part of the original OCSP analysis.

Mitigation: Water Supply

MM-UTL-1 All existing and future users will share in costs of supplemental city-wide water supply system.

MM-UTL-2 Reclaimed water, as it is available from CBMWD Regional Plant No. 4, will be used for open space irrigation when economically feasible.

MM-UTL-3 Cooperation between CBMWD, the City of Ontario, developers of The Ontario Center and other landowners will be necessary to ensure adequate capacity.

A less than significant impact would occur with implementation of MMs UTL-1 through UTL-3.

e) Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Discussion of Effects: The proposed Project is served by the City of Ontario sewer system, which has waste treated by the Inland Empire Utilities Agency at the RP-1 and/or RP-5 treatment plant. RP-1 and/or RP-5 is not at capacity and this project would not cause RP-1 and/or RP-5 to exceed capacity. Although no impact is anticipated in this regard, the Certified EIR included the following MMs as part of the original OCSP analysis.

Mitigation: Wastewater

MM-UTL-4 Design and construction of wastewater collection facilities within the Ontario Center will be completed under the jurisdiction of the City of Ontario.

MM-UTL-5 Any plans for use of the non-reclaim able waste line (NRW) system will be made known to the City and CBMWD.

MM-UTL-6 Wastewater collection facilities will be designed so that all parcels can be served by gravity mains without pumping.

MM-UTL-7 The Ontario Center project development will coordinate construction activities with the City of Ontario and CBMWD to assure adequate interceptor, trunk sewer and treatment plant capacity is available as development proceeds.

MM-UTL-8 Continued coordination between CBMWD, the City, developers of The Ontario Center, and other property owners/developers will occur to assure adequate capacity is available in the Cucamonga Interceptor as development occurs within the tributary area.

A less than significant impact would occur with implementation of MMs UTL-4 through UTL-8.

f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

Discussion of Effects: City of Ontario serves the proposed Project. Currently, the City of Ontario contracts with a waste disposal company that transports trash to a landfill with sufficient capacity to handle the City's solid waste disposal needs. No impacts are anticipated. Although no impact is anticipated in this regard, the Certified EIR included the following MM as part of the original OCSP analysis.

Mitigation: Solid Waste

MM-UTL-9 Solid waste will be disposed of in Milliken Landfill. Upon closing of the Milliken Landfill, waste will be disposed of at the San Timoteo Landfill. A transfer station for the City will be constructed by the City in the next 2 to 3 years to transport waste from Ontario to the San Timoteo Landfill.

A less than significant impact would occur with implementation of MM UTL-9.

g) Comply with federal, state, and local statutes and regulations related to solid waste?

Discussion of Effects: This Project would comply with federal, state, and local statutes and regulations regarding solid waste. Therefore, no impacts are anticipated.

Mitigation: None required.

20. Wildfire

Would the project:

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Discussion of Effects: According to the General Plan and CAL FIRE, the Project site is not located within a Very High, High, or Medium Fire Hazard area. The Project would not interfere with the City's Emergency Management Plan because it does not contain any features that would prohibit the execution of such plans. The Project would maintain the existing ingress and egress which were designed to accommodate existing and future growth of the site. No impacts are anticipated.

Mitigation: None required.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Discussion of Effects: Like most of southern California, the City of Ontario faces a diverse array of potential natural hazards. The General Plan notes that severe windstorms can pose a significant risk to property and life in the region by creating conditions that disrupt essential systems such as public utilities, telecommunications, and transportation routes. High winds, including Santa Ana winds, can cause damage to homes, businesses, landscaping, public property, and utilities, and pose threats to public safety, including accelerating a fire. The alluvial sand that underlies the majority of Ontario is generally granular, poorly consolidated, and very susceptible to erosion. In strong winds this sand can impact property, air quality and visibility. However, no special circumstances occur on the Project that do not occur in the rest of the City of region. No impact from wind hazards is anticipated to occur.

Mitigation: None required.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Discussion of Effects: All proposed Project components would be within the Project site property lines, and impacts associated with the development of the Project within this footprint area analyzed throughout this document and has been previously analyzed in the Certified EIR. No impacts are anticipated to occur.

Mitigation: None required.

d) Expose people or structures to significant risks, including downslope, or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Discussion of Effects: As previously analyzed in the Certified EIR, the Project site is not located in a landslide hazard area or a floodplain. No changes in findings in this regard would occur compared to those findings in the Certified EIR for the Project site. As such, no impact in this regard would occur.

Mitigation: None required.

21. MANDATORY FINDINGS OF SIGNIFICANCE

a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Discussion of Effects: The site is located within an area that has been previously heavily disturbed, mass graded, and partially developed with various uses including multi-family residential DUs and commercial. The Project is not anticipated to have the potential to degrade the quality of the environment or reduce the overall habitat as there is no native habitat.

b) Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?

Discussion of Effects: The Project does not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals. As shown throughout this addendum, the Project would not cause any more intense impacts than those already previously considered in the Certified EIR, CEA, POCA, and POOC environmental documents.

Mitigation: None required.

c) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)

Discussion of Effects: The Project does not have impacts that are cumulatively considerable that have not already been considered in the Certified EIR, CEA, POCA, and POOC environmental documents.

Mitigation: None required.

d) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

Discussion of Effects: The Project does not have environmental effects that would cause substantial adverse effects on human beings, either directly or indirectly.

Mitigation: None required.

1.0 Introduction

1.1 Purpose of Report and Study Objectives

The purpose of this traffic study is to assess the impacts of the proposed Toyota Arena Mixed-Use Development (hereinafter referred to as project) from a traffic and circulation stand point.

This study has been conducted in accordance with the guidelines detailed in *The Ontario General Plan Update Transportation Technical Report (March 19, 2009)* and recommendations and practices described in the *City of Ontario Planning Commission Resolution No. PC20-021 (May 26, 2020).*

The study has been prepared in accordance with the scope of work discussed and approved by City staff prior to initiating the analysis.

1.2 Site Location & Project Description

The proposed project is located adjacent to the Toyota Arena, north of Concours Street and south of 4th Street, in the City of Ontario.

The land uses surrounding the site include residential uses to the north, commercial uses to the south and west, and commercial and retail uses to the east at the Ontario Mills Shopping Center. The proposed project consists of the construction and operation of a mixed-use town center development with residential and commercial/retail land uses. The following is a breakdown of the project's development plan:

Proposed Development Plan

Lot	Dwelling Units (DU)	Retail (SF)	Parking Spaces
A	359	25,256	477*
B	98	20,802	130*
C	107	11,047	142*
D	127	14,095	170*
F & G	- -	- -	1,170
Total	**691**	**71,200**	**2,089**

* Parking structure

Main access for the project is planned via the following:

- One (1) signalized intersection at Cleveland Avenue – Via Asti / 4th Street;
- One (1) signalized intersection at Resort Parkway – Via Piemonte / 4th Street;
- One (1) right-in/right-out access driveway along 4th Street; and

The project is planned to open in 2023 and will be evaluated in one single phase.

The project site's location map is shown in Exhibit 1-1. The project site plan is shown in Exhibit 1-2.

Exhibit 1-1

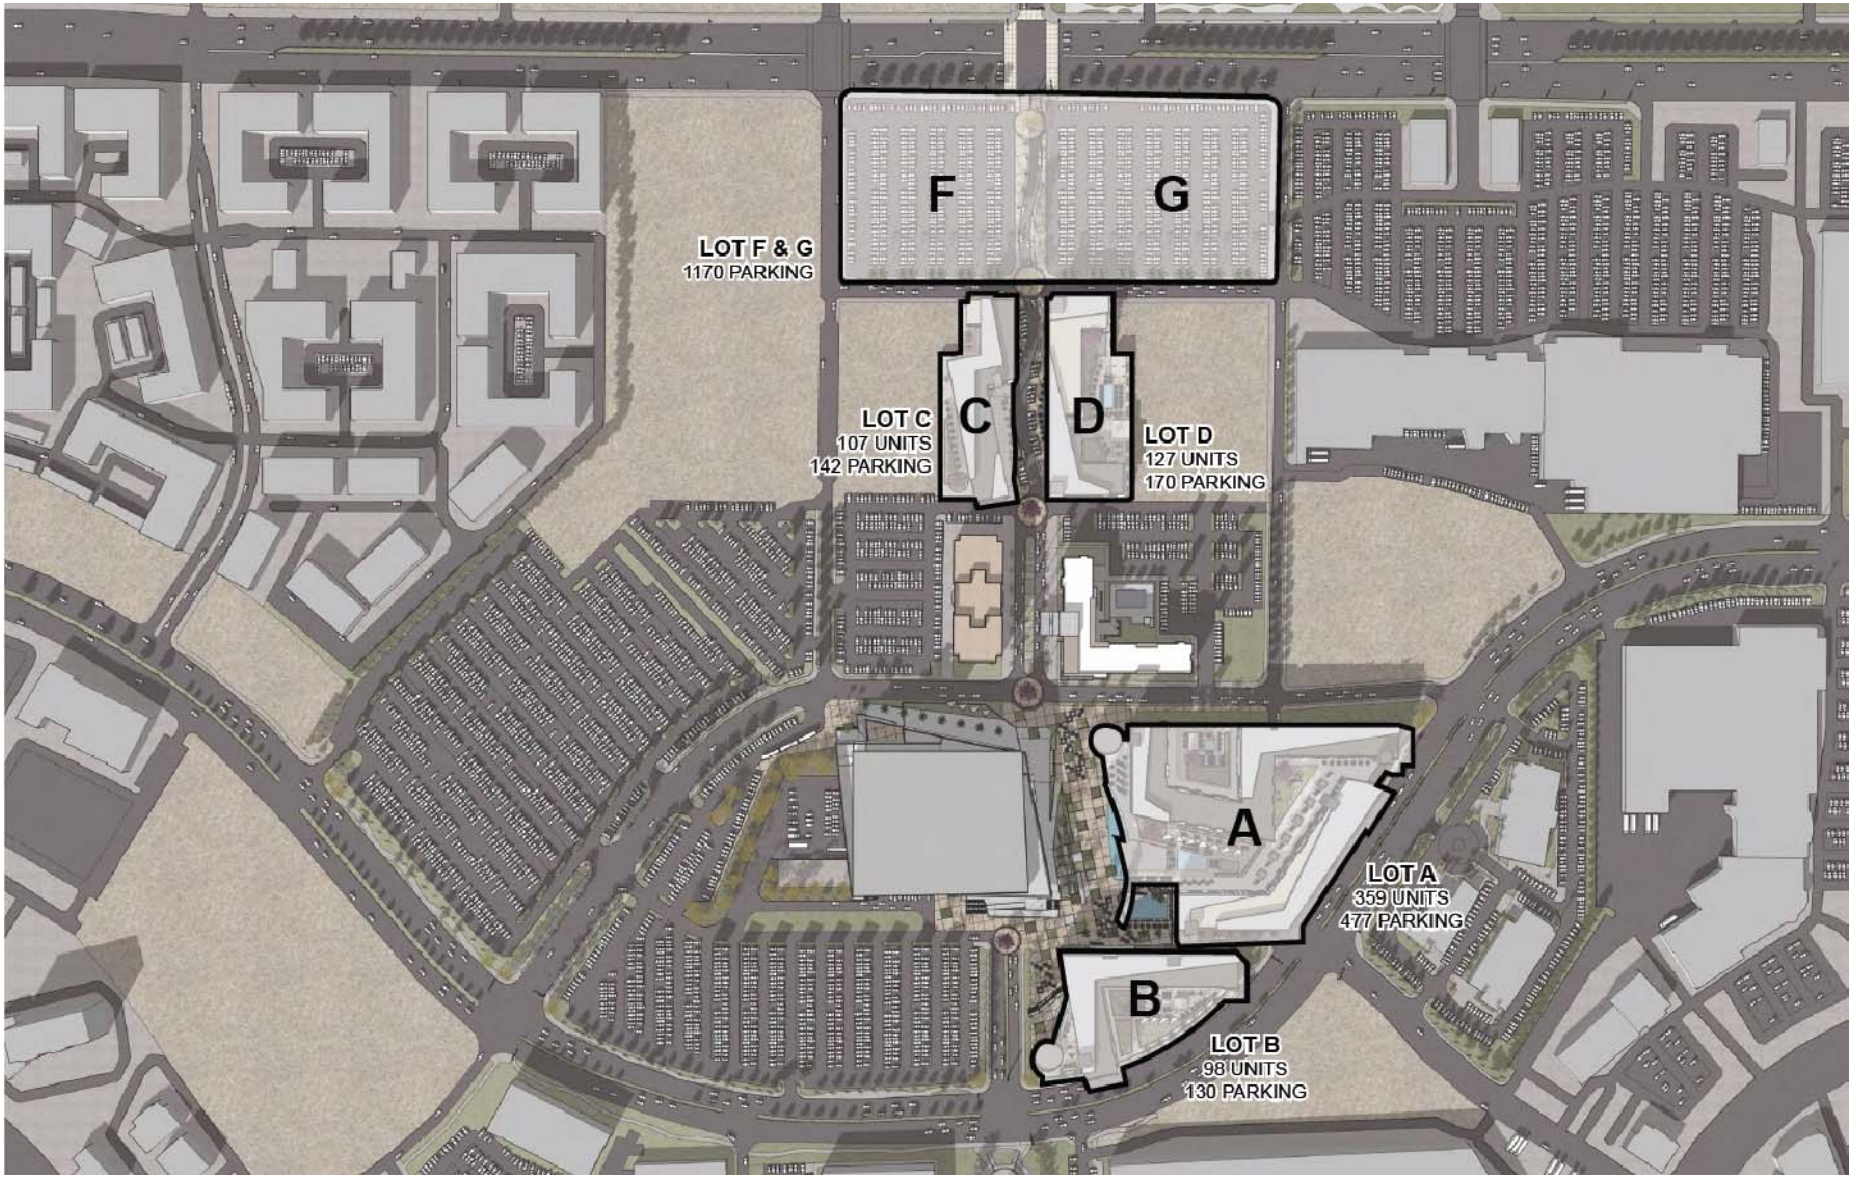
Site Plan



2.0 Study Area & Analysis Methodologies

This section of the report presents the analysis study area and the methodologies used to perform the traffic analyses summarized in this report in accordance with the City of Ontario requirements.

Furthermore, this section of the report also discusses the agency-established performance criteria and thresholds of significance for the study facilities.

2.1 Study Area

The traffic analysis study area includes intersections where the proposed project may potentially create traffic impacts to traffic operations and conditions.

The traffic impact analysis evaluates the following study area intersections:

1. Haven Avenue (NS) / 4TH Street (EW);
2. Cleveland Avenue – Via Asti (NS) / 4th Street (EW);
3. Resort Parkway – Via Piemonte (NS) / 4th Street (EW);
4. Project Access 3 (NS) / 4th Street (EW);
5. Milliken Avenue (NS) / 4th Street (EW);
6. I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW);
7. I-15 NB Ramps (NS) / 4th Street (EW);
8. Haven Avenue (NS) / Concours Street (EW);
9. Concours Street (NS) / Ontario Center Parkway (EW);
10. Milliken Avenue (NS) / Concours Street (EW);
11. Haven Avenue (NS) / Inland Empire Boulevard (EW);

12. Milliken Avenue (NS) / Inland Empire Boulevard (EW);

13. Haven Avenue (NS) / I-10 WB Ramps (EW);

14. Milliken Avenue (NS) / Ontario Mills Parkway – I-10 WB Ramps (EW);

15. Haven Avenue (NS) / I-10 EB Ramps (EW); and

16. Milliken Avenue (NS) / I-10 EB Ramps (EW).

The study evaluates the following study scenarios for AM, PM, and Saturday peak hour conditions:

- Existing Conditions;
- Existing Plus Project Conditions;
- Project Opening Year Without Related Projects Without Project Conditions;
- Project Opening Year Without Related Projects With Project Conditions;
- Project Opening Year With Related Projects Without Project Conditions;
- Project Opening Year With Related Projects With Project Conditions;
- Horizon Year (2040) Without Project Conditions; and
- Horizon Year (2040) With Project Conditions.

The analysis evaluates the following time frames:

- Weekday AM peak period of 7:00 AM to 9:00 AM
- Weekday PM peak period of 4:00 PM to 6:00 PM
- Saturday mid-day peak period of 12:45 PM to 2:45 PM (Saturday peak period of traffic was determined by review of existing 24-hour volumes in the project site vicinity)

2.2 Study Intersection Peak Hour Level of Service Analysis Methodology

In accordance with *The Ontario General Plan Update Transportation Technical Report (March 19, 2009)*, the Highway Capacity Manual Sixth Edition (HCM 6) is utilized as the technical guide in the evaluation of traffic operations.

The HCM defines level of service as a qualitative measure which describes operational conditions within a traffic stream, generally in terms of factors such as speed and travel time, freedom to maneuver, traffic interruptions, comfort and convenience, and safety. The criteria used to evaluate LOS (Level of Service) conditions vary based on the type of roadway and whether the traffic flow is considered interrupted or uninterrupted.

The definitions of level of service for uninterrupted flow (flow unrestrained by the existence of traffic control devices) are:

- **LOS A** represents free flow. Individual users are virtually unaffected by the presence of others in the traffic stream.

- **LOS B** is in the range of stable flow, but the presence of other users in the traffic stream begins to be noticeable. Freedom to select desired speeds is relatively unaffected, but there is a slight decline in the freedom to maneuver.

- **LOS C** is in the range of stable flow, but marks the beginning of the range of flow in which the operation of individual users becomes significantly affected by interactions with others in the traffic stream.

- **LOS D** represents high-density but stable flow. Speed and freedom to maneuver are severely restricted, and the driver experiences a generally poor level of comfort and convenience.

- **LOS E** represents operating conditions at or near the capacity level. All speeds are reduced to a low, but relatively uniform value. Small increases in flow will cause breakdowns in traffic movement.

- **LOS F** is used to define forced or breakdown flow. This condition exists wherever the amount of traffic approaching a point exceeds the amount which can traverse the point. Queues form behind such locations.

The level of service is typically dependent on the quality of traffic flow at the intersections along a roadway. The HCM methodology expresses the level of service at an intersection in terms of delay time for the various intersection approaches. The HCM uses different procedures depending on the type of intersection control. The levels of service determined in this study are calculated using the HCM methodology.

For signalized intersections, average control delay per vehicle is used to determine the level of service. Levels of service at signalized study intersections have been evaluated using the HCM intersection analysis program.

Study area intersections, which are stop sign controlled with stop control on the minor street only, have been analyzed using the unsignalized intersection methodology of the HCM. For these intersections, the calculation of level of service is dependent on the occurrence of gaps occurring in the traffic flow of the main street. Using data collected, describing the intersection configuration and traffic volumes at these locations, the level of service has been calculated. The level of service is determined based on the worst individual movement or movements sharing a single lane. The relationship between level of service and delay is different than for signalized intersections.

Table 2-1 shows the level of service criteria based on the HCM methodology.

Table 2-1
HCM Level of Service – Vehicle Delay

LOS	Intersection LOS Criteria	
	Signalized Delay (Seconds)	Unsignalized Delay (Seconds)
A	0.00 - 10.00	0.00 - 10.00
B	10.01 - 20.00	10.01 - 15.00
C	20.01 - 35.00	15.01 - 25.00
D	35.01 - 55.00	25.01 - 35.00
E	55.01 - 80.00	35.01 - 50.00
F	>80.01	>50.01

This analysis also utilizes recommended saturation flow rate described in the *San Bernardino County Congestion Management Program 2016 Update, June 2016, 2021*. The

following saturation flow rates were utilized in the evaluation of LOS for Existing, Opening Year, and Horizon Year (2040) scenarios:

Existing and Opening Year Scenarios

- Exclusive Thru: 1,800 vehicles per hour green per lane (vphgpl)
- Exclusive Left: 1,700 vphgpl
- Exclusive Right: 1,800 vphgpl
- Exclusive Double Left: 1,600 vphgpl
- Exclusive Triple Left: 1,500 vphgpl

Horizon Year (2040) Scenarios

- Exclusive Thru: 1,900 vphgpl
- Exclusive Left: 1,800 vphgpl
- Exclusive Right: 1,900 vphgpl
- Exclusive Double Left: 1,700 vphgpl
- Exclusive Triple Left: 1,600 vphgpl

2.3 Study Intersection Level of Service (LOS) Performance Criteria & Thresholds for Requiring Improvements

The following is a summary of the performance criteria adopted by the City of Ontario.

Performance Criteria:

The acceptable LOS for intersections in the City of Ontario is **LOS E or better** as established in the City's General Plan. Any intersection operating at a LOS F is considered deficient.

Threshold for Requiring Level of Service Improvements:

Any study intersection operating at a deficient LOS (LOS F) will require improvements to restore the intersection to acceptable conditions (LOS E).

2.4 VMT Analysis Methodology, Performance Criteria, & Thresholds of Significance

Effective July 1st, 2020, the longstanding metric of roadway level of service (LOS), which is typically measured in terms of vehicle delay, roadway capacity and congestion, will no longer be considered a significant impact under the California Environmental Quality Act (CEQA). Pursuant to CEQA Guidelines, Section 15064.3, VMT is now the most appropriate measure of transportation impacts.

The City of Ontario follows the guidelines detailing the appropriate VMT methodologies, thresholds of significance, and feasible mitigation measures as described in the *City of Ontario Planning Commission Resolution No. PC20-021 (May 26, 2020).*

This analysis follows the practices and recommendations in the *City of Ontario Planning Commission Resolution No. PC20-021 (May 26, 2020).*

3.0 Existing Traffic Volumes & Circulation System

This section provides a discussion of existing study area conditions and traffic volumes.

3.1 Existing Traffic Controls and Intersection Geometrics

Exhibit 3-1 identifies the existing roadway conditions within the study area. The number of through traffic lanes for existing roadways and existing intersection controls are identified. The type of traffic control and number of lanes at an intersection are key inputs for the calculation of level of service.

3.2 Existing Traffic Volumes

Due to the effects of the COVID-19 pandemic, collection of new and valid traffic counts may not be feasible. After discussions with City staff, methodologies were approved to utilize historical traffic data that predate the impacts of the COVID-19 pandemic after application of a two percent (2%) growth rate per year to derive existing (2021) traffic conditions.

As previously noted, the analysis evaluates the following time frames:

- Weekday AM peak period of 7:00 AM to 9:00 AM
- Weekday PM peak period of 4:00 PM to 6:00 PM
- Saturday mid-day peak period of 12:45 PM to 2:45 PM (Saturday peak period of traffic was determined by review of existing 24-hour volumes in the project site vicinity)

Existing Conditions – Weekday:

After reviewing available pre-pandemic traffic count data provided by RK's traffic count sub-consultants, pre-pandemic traffic counts (years vary) were identified for all study area intersections with exception to the following. For all the locations that pre-pandemic data was available, RK derived Existing 2021 non pandemic conditions traffic volumes by applying an annual growth rate of 2 percent per year to bring the older counts to 2021 conditions.

- Cleveland Avenue – Via Asti (NS) / 4th Street (EW);
- Resort Parkway – Via Piemonte (EW);
- Project Access 3 (NS) / 4th Street (EW); and
- Concours Street (NS) / Ontario Center Parkway (EW).

As a result, the following methodology was performed to derive valid weekday conditions existing (2021) traffic count data for the aforementioned study intersections.

1. ***Collect 2021 Field Counts:*** Existing (2021) traffic count data were collected at the following intersections:
    - Cleveland Avenue – Via Asti (NS) / 4th Street (EW);
    - Resort Parkway – Via Piemonte (NS) / 4th Street (EW);
    - Project Access 3 (NS) / 4th Street (EW);
    - Concours Street (NS) / Ontario Center Parkway (EW); and
    - The nearby intersection of Milliken Avenue (NS) / 4th Street (EW)
2. ***Derive 2021 Counts from Pre-Pandemic Counts:*** Using the available pre-pandemic conditions traffic counts from 2016 at the nearby Milliken Avenue / 4th Street intersection, RK projected 2021 traffic count data for the Milliken Avenue / 4th Street intersection from the 2016 pre-pandemic counts by applying a growth rate of two percent (2%) per year for five (5) years.
3. ***Determine Adjustment Factor for Converting Pandemic Conditions to Non-pandemic Conditions:*** RK compared the 2021 field collected counts at the nearby intersection of Milliken Avenue / 4th Street as part of Step 1 to the derived 2021 traffic count volumes at this intersection from Step 2 and determine an appropriate adjustment factor to convert between pandemic and non-pandemic conditions.

4. ***Derive 2021 Non-Pandemic Conditions Counts at the Study Intersection:*** Using the adjustment factor derived as part of Step 3, RK converted the 2021 counts collected at the other four (4) study intersections defined in Step 1 into non-pandemic traffic volumes for 2021.

Exhibit 3-2 shows the weekday conditions existing (2021) conditions traffic volumes for the study area.

Existing Conditions – Saturday:

No historical pre-pandemic traffic count data was available for Saturday Conditions. As a result, the following methodology was performed to derive valid Saturday conditions existing (2021) traffic count data.

In order to determine the Saturday two-hour timeframe to evaluate traffic conditions for the proposed project, a newly collected 24-hour Saturday ADT was obtained along the segment of:

- 4th Street from Haven Avenue to Milliken Avenue.

The Saturday peak two-hour time frame was identified from the newly collected 24-hour Saturday ADT, RK utilized the following methodology in order to derive valid existing Saturday (2021) traffic count data for the sixteen (16) study area intersections.

1. **Collect 24-Hour ADT Counts:** A newly collected 24-hour ADT along the segment of *4th Street from Haven Avenue to Milliken Aven*ue was performed to determine the Saturday two-hour timeframe of analysis.

2. ***Collect 2021 Field Counts:*** Existing Saturday (2021) traffic count data was newly collected at all study area intersections.

3. ***Utilize Adjustment Factor for Converting Pandemic Conditions to Non-pandemic Conditions:*** Utilizing the adjustment factor derived in Step 3 of the weekday conditions traffic count methodology, RK converted the newly collected existing Saturday (2021) pandemic conditions counts to existing Saturday (2021) non-pandemic conditions.

Exhibit 3-3 shows the Saturday conditions existing (2021) conditions traffic volumes for the study area.

The weekday and Saturday traffic count worksheets are included in Appendix A.

3.3 City of Ontario Circulation Element

The City of Ontario Typical Street Cross Sections are shown in Exhibit 3-4.

The City of Ontario Master Plan of Streets and Highways are shown in Exhibit 3-5.

The City of Ontario Trucks Routes are shown in Exhibit 3-6.

4.0 Projected & Future Traffic Volumes

This section of the report provides a discussion on methodologies utilized to derive future traffic volumes for the study area.

4.1 Project Traffic Conditions

4.1.1 Trip Generation

Trip generation represents the amount of traffic that is attracted and produced by a development. The trip generation for the project is based upon the specific land uses that have been planned for this development.

Trip generation is typically estimated based on the trip generation rates from the latest *Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition, 2017)*. This publication provides a comprehensive evaluation of trip generation rates for a variety of land uses.

Table 4-1 shows the ITE trip generation rates for the trip generation analysis of the project land uses.

Utilizing the trip generation rates from Table 4-1, Table 4-2 summarizes the daily and peak hour trip generation for weekday and Saturday conditions for the proposed project.

As shown in Table 4-2, based on the ITE trip generation rates:

- The proposed project is forecast to generate approximately 6,447 weekday daily trips which include approximately 315 weekday AM peak hour trips, approximately 575 weekday PM peak hour trips.

- The proposed project is forecast to generate approximately 6,677 Saturday daily trips which include approximately 624 Saturday peak hour trips.

An internal trip capture reduction is applicable when a project site has more than one destination (such as the proposed project), in which a person visits more than one destination onsite during the same visit. The project site's retail component will

provide various land uses which will allow a patron to visit more than one destination on a single trip.

Furthermore, a portion of these trips (pass-by trips) are already on the roadway network making an intermediate stop on their way to a primary destination. Therefore, as also shown in Table 4-2, *after accounting for internal trip capture and applicable ITE pass-by trips rates*:

- The proposed project is forecast to generate approximately 5,691 weekday daily trips which include approximately 300 weekday AM peak hour trips, approximately 458 weekday PM peak hour trips.

- The proposed project is forecast to generate approximately 5,813 Saturday daily trips which include approximately 490 Saturday peak hour trips.

4.1.2 Trip Distribution

Trip distribution represents the directional orientation of traffic to and from the project site. Trip distribution is heavily influenced by the geographical location of the site and the proximity to the regional freeway system. The directional orientation of traffic was determined by evaluating existing and proposed land uses and highways within the study area.

The project outbound trip distribution is shown in Exhibit 4-1.

The project inbound trip distribution is shown in Exhibit 4-2.

4.1.3 Modal Split

Modal split denotes the proportion of traffic generated by a project that would use any of the transportation modes, namely buses, cars, bicycles, motorcycles, trains, carpools, etc. The traffic-reducing potential of public transit and other modes is significant. However, the traffic projections in this study are conservative in that public transit and alternative transportation may be able to reduce the traffic volumes, but, no modal split reduction is applied to the projections. With the implementation of transit service and provision of alternative transportation ideas and incentives, the automobile traffic demand can be reduced significantly.

4.1.4 Project Traffic Volumes/Assignment

The assignment of project traffic to the adjoining roadway system is based upon the project's trip generation, trip distribution, arterial highway, and local street systems that would be in place by the time of initial occupancy of the site.

Weekday project traffic volumes are shown in Exhibit 4-3. Saturday project traffic volumes are shown in Exhibit 4-4.

4.2 Existing Plus Project Conditions Traffic Volumes

Weekday Existing Plus Project Conditions traffic volumes consist of the summation of the weekday existing traffic volumes shown in Exhibit 3-2 and the weekday project traffic volumes shown in Exhibit 4-3.

Weekday Existing Plus Project Conditions traffic volumes are shown on Exhibit 4-5.

Saturday Existing Plus Project Conditions traffic volumes consist of the summation of the Saturday existing traffic volumes shown in Exhibit 3-3 and the Saturday project traffic volumes shown in Exhibit 4-4.

Saturday Existing Plus Project Conditions traffic volumes are shown on Exhibit 4-6.

4.3 Background Traffic

4.3.1 Method of Projection

To assess future conditions, project traffic is combined with existing traffic and area-wide growth. As directed by City staff, to account for area-wide/ambient growth in the study area, an annual growth rate of two percent (2%) per year has been applied to the existing (2021) traffic volumes over a 2-year period from 2021 to opening year (2023). Similarly, an annual growth rate of two percent (2%) per year has been applied to the existing (2021) traffic volumes over a 19-year period from 2021 to horizon year (2040).

4.3.2 Cumulative Projects Traffic

Information on future projects in the vicinity of the study area has been provided by City of Ontario and City of Rancho Cucamonga staff for inclusion in this analysis and is shown in Table 4-3.

The list of cumulative projects provided are for projects that have been officially submitted for land use review, are waiting public hearing approval, or have been approved by the public hearing body.

Table 4-3 shows the land uses, weekday and Saturday trip generation for the nearby cumulative projects provided by the public agencies.

A location map of the cumulative projects is shown in Exhibit 4-7.

Weekday cumulative projects traffic volumes are shown in Exhibit 4-8. Saturday cumulative projects traffic volumes are shown in Exhibit 4-9.

In reality, some of the cumulative projects may be downsized or may not be developed by project opening year (2023). In addition, many of the related projects have been or will be subject to a variety of mitigation measures that will reduce the potential environmental impacts associated with those projects. However, those mitigation measures have not been taken into account in projecting the environmental impact of the related projects.

Therefore, the cumulative analyses set forth below are conservative and could result in greater impacts than actually anticipated. Additionally, the analysis utilizes a growth rate of two percent (2%) per year for project opening year (2023) conditions, which would already capture and account for most projects in the area. The growth rate methodology is considered conservative since it is applied to all movements in all the study intersections.

4.4 Opening Year Without Related Projects Without Project Conditions Traffic Volumes

Opening Year Without Related Projects Without Project Conditions traffic volumes consist of two (2) years of annual growth on top of existing (2021) traffic volumes at two percent (2%) per year.

Weekday Opening Year Without Related Projects Without Project Conditions traffic volumes are shown on Exhibit 4-10.

Saturday Opening Year Without Related Projects Without Project Conditions traffic volumes are shown on Exhibit 4-11.

4.5 Opening Year Without Related Projects With Project Conditions Traffic Volumes

Opening Year Without Related Projects With Project Conditions traffic volumes consist of two (2) years of annual growth on top of existing (2021) traffic volumes at two percent (2%) per year, plus the traffic generated by the proposed project.

Weekday Opening Year Without Related Projects With Project Conditions traffic volumes are shown on Exhibit 4-12.

Saturday Opening Year Without Related Projects With Project Conditions traffic volumes are shown on Exhibit 4-13.

4.6 Opening Year With Related Projects Without Project Conditions Traffic Volumes

Opening Year With Related Projects Without Project Conditions traffic volumes consist of two (2) years of annual growth on top of existing (2021) traffic volumes at two percent (2%) per year, plus the traffic generated by the cumulative projects.

Weekday Opening Year With Related Projects Without Project Conditions traffic volumes are shown on Exhibit 4-14.

Saturday Opening Year With Related Projects Without Project Conditions traffic volumes are shown on Exhibit 4-15.

4.7 Opening Year With Related Projects With Project Conditions Traffic Volumes

Weekday Opening Year With Related Projects With Project Conditions traffic volumes consist of two (2) years of annual growth on top of existing (2021) traffic volumes at two

percent (2%) per year, plus the traffic generated by the cumulative projects and proposed project.

Weekday Opening Year With Related Projects With Project Conditions traffic volumes are shown on Exhibit 4-16.

Saturday Opening Year With Related Projects With Project Conditions traffic volumes are shown on Exhibit 4-17.

4.8 Horizon Year (2040) Without Project Conditions Traffic Volumes

Horizon Year (2040) Without Project Conditions traffic volumes consist of nineteen (19) years of annual growth on top of existing (2021) traffic volumes at two percent (2%) per year.

Weekday Horizon Year (2040) Without Project Conditions traffic volumes are shown on Exhibit 4-18.

Saturday Horizon Year (2040) Without Project Conditions traffic volumes are shown on Exhibit 4-19.

4.9 Horizon Year (2040) With Project Conditions Traffic Volumes

Horizon Year (2040) With Project Conditions traffic volumes are derived by adding the project-generated traffic to Horizon Year (2040) Without Project Conditions traffic volumes.

Weekday Horizon Year (2040) With Project Conditions traffic volumes are shown on Exhibit 4-20.

Saturday Horizon Year (2040) With Project Conditions traffic volumes are shown on Exhibit 4-21.

5.0 Study Intersection Peak Hour Level of Service Analysis

5.1 Existing Conditions Study Intersection Peak Hour LOS

Existing Conditions level of service (LOS) calculations for the study intersections are shown in Table 5-1 and are based upon the existing (2021) traffic volumes shown in Exhibit 3-2 and Exhibit 3-3, as well as the existing geometry shown in Exhibit 3-1.

As shown in Table 5-1, the study intersections are all currently operating at an acceptable LOS (LOS E or better) during the peak hours for Existing Conditions with exception of the following study intersection:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - SAT Peak Hour – LOS F (82.4 secs)

Detailed LOS analysis sheets for Existing Conditions are contained in Appendix B.

5.2 Existing Plus Project Conditions Study Intersection Peak Hour LOS

Existing Plus Project Conditions level of service (LOS) calculations for the study intersections are shown in Table 5-2 and are based upon the Existing Plus Project Conditions traffic volumes shown in Exhibit 4-5 and Exhibit 4-6, as well as the existing geometry shown in Exhibit 3-1.

As shown in Table 5-2, the study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Existing Plus Project Conditions with exception of the following study intersection:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - SAT Peak Hour – LOS F (82.7 secs)

As also shown in Table 5-2, based on agency-established thresholds, the proposed project is required to contribute to improvements at the following study intersection for Existing Plus Project Conditions:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)

After review of the existing roadway conditions at this intersection, no feasible intersection improvements can be identified for this study intersection to achieve acceptable level of service (LOS E or better) for Existing Plus Project Conditions.

Detailed LOS analysis sheets for Existing Plus Project Conditions are contained in Appendix C.

5.3 Opening Year Without Related Projects Without Project Conditions Study Intersection Peak Hour LOS

Opening Year Without Related Projects Without Project Conditions level of service (LOS) calculations for the study intersections are shown in Table 5-3 and are based upon the Opening Year Without Related Projects Without Project Conditions traffic volumes shown in Exhibit 4-10 and Exhibit 4-11, as well as the existing geometry shown in Exhibit 3-1.

As shown in Table 5-3, the study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Opening Year Without Related Projects Without Project Conditions with exception of the following study intersection:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - SAT Peak Hour – LOS F (90.4 secs)

Detailed LOS analysis sheets for Opening Year Without Related Projects Without Project Conditions are contained in Appendix D.

5.4 Opening Year Without Related Projects With Project Conditions Study Intersection Peak Hour LOS

Opening Year Without Related Projects With Project Conditions level of service (LOS) calculations for the study intersections are shown in Table 5-4 and are based upon the Opening Year Without Related Projects With Project Conditions traffic volumes shown in Exhibit 4-12 and Exhibit 4-13, as well as the existing geometry shown in Exhibit 3-1.

As shown in Table 5-4, the study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Opening Year Without Related Projects With Project Conditions with exception of the following study intersection:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - SAT Peak Hour – LOS F (90.8 secs)

As also shown in Table 5-4, based on agency-established thresholds, the proposed project is required to contribute to improvements at the following study intersection for Opening Year Without Related Projects With Project Conditions:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)

After review of the existing roadway conditions at this intersection, no feasible intersection improvements can be identified for this study intersection to achieve acceptable level of service (LOS E or better) for Opening Year Without Related Projects With Project Conditions.

Detailed LOS analysis sheets for Opening Year Without Related Projects With Project Conditions are contained in Appendix E.

5.5 Opening Year With Related Projects Without Project Conditions Study Intersection Peak Hour LOS

Opening Year With Related Projects Without Project Conditions level of service (LOS) calculations for the study intersections are shown in Table 5-5 and are based upon the Opening Year With Related Projects Without Project Conditions traffic volumes shown in Exhibit 4-14 and Exhibit 4-15, as well as the existing geometry shown in Exhibit 3-1.

As shown in Table 5-5, the study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Opening Year With Related Projects Without Project Conditions with exception to the following study intersection:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (94.4 secs)

- SAT Peak Hour – LOS F (113.9 secs)

Detailed LOS analysis sheets for Opening Year With Related Projects Without Project Conditions are contained in Appendix F.

5.6 Opening Year With Related Projects With Project Conditions Study Intersection Peak Hour LOS

Opening Year With Related Projects With Project Conditions level of service (LOS) calculations for the study intersections are shown in Table 5-6 and are based upon the Opening Year With Related Projects With Project Conditions traffic volumes shown in Exhibit 4-16 and Exhibit 4-17, as well as the existing geometry shown in Exhibit 3-1.

As shown in Table 5-6, the study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Opening Year With Related Projects With Project Conditions with exception to the following study intersections:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
  - PM Peak Hour – LOS F (97.0 secs)
  - SAT Peak Hour – LOS F (116.1 secs)

As also shown in Table 5-6, based on agency-established thresholds, the proposed project is required to contribute to improvements at the following study intersection for Opening Year With Related Projects With Project Conditions:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)

After review of the existing roadway conditions at this intersection, no feasible intersection improvements can be identified for this study intersection to achieve acceptable level of service (LOS E or better) for Opening Year With Related Projects With Project Conditions.

Detailed LOS analysis sheets for Opening Year With Related Projects With Project Conditions are contained in Appendix G.

5.7 Horizon Year (2040) Without Project Conditions Study Intersection Peak Hour LOS

Horizon Year (2040) Without Project Conditions level of service (LOS) calculations for the study intersections are shown in Table 5-7 and are based upon the weekday and Saturday Opening Year With Related Projects Without Project Conditions traffic volumes shown in Exhibit 4-18 and Exhibit 4-19, as well as the existing geometry shown in Exhibit 3-1.

As shown in Table 5-7, the study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Horizon Year (2040) Without Project Conditions with exception to the following study intersection:

- **Int #1:** Haven Avenue (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (98.0 secs)
- **Int #4:** Project Access 3 (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (51.9 secs)
- **Int #5:** Milliken Avenue (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (103.9 secs)
- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - AM Peak Hour LOS – F (118.2 secs)
    - PM Peak Hour – LOS F (149.3 secs)
    - SAT Peak Hour – LOS F (180.2 secs)
- **Int #11:** Haven Avenue (NS) / Inland Empire Boulevard (EW)
    - PM Peak Hour LOS – F (134.7 secs)

- **Int #14:** Milliken Avenue (NS) / Ontario Mills Parkway – I-10 WB Ramps (EW)

    - SAT Peak Hour – LOS F (82.2 secs)

Detailed LOS analysis sheets for Horizon Year (2040) Without Project Conditions are contained in Appendix H.

5.8 Horizon Year (2040) With Project Conditions Study Intersection Peak Hour LOS

Horizon Year (2040) With Project Conditions level of service (LOS) calculations for the study intersections are shown in Table 5-8 and are based upon the weekday and Saturday Horizon Year (2040) With Project Conditions traffic volumes shown in Exhibit 4-20 and Exhibit 4-21, as well as the existing geometry shown in Exhibit 3-1.

As shown in Table 5-8, the study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Horizon Year (2040) With Project Conditions with exception to the following study intersections:

- **Int #1:** Haven Avenue (NS) / 4th Street (EW)

    - PM Peak Hour – LOS F (102.3 secs)

- **Int #4** Project Access 3 (NS) / 4th Street (EW)

    - PM Peak Hour – LOS F (73.8 secs)

- **Int #5:** Milliken Avenue (NS) / 4th Street (EW)

    - PM Peak Hour – LOS F (109.7 secs)

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)

    - AM Peak Hour LOS – F (119.0 secs)

    - PM Peak Hour – LOS F (152.9 secs)

    - SAT Peak Hour – LOS F (184.8 secs)

- **Int #11:** Haven Avenue (NS) / Inland Empire Boulevard (EW)
    - PM Peak Hour LOS – F (136.5 secs)
- **Int #14:** Milliken Avenue (NS) / Ontario Mills Parkway – I-10 WB Ramps (EW)
    - SAT Peak Hour – LOS F (87.3 secs)

As also shown in Table 5-8, based on agency-established thresholds, the proposed project is required to contribute to improvements at the following study intersection for Horizon Year (2040) With Project Conditions:

- **Int #1:** Haven Avenue (NS) / 4th Street (EW)
- **Int #4:** Project Access 3 (NS) / 4th Street (EW)
- **Int #5:** Milliken Avenue (NS) / 4th Street (EW)
- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
- **Int #11:** Haven Avenue (NS) / Inland Empire Boulevard (EW)
- **Int #14:** Milliken Avenue (NS) / Ontario Mills Parkway – I-10 WB Ramps (EW)

After review of the existing roadway conditions at these study intersections, no feasible intersection improvements can be identified for the following study intersections to achieve acceptable level of service (LOS E or better) for Horizon Year (2040) With Project Conditions.

- **Int #1:** Haven Avenue (NS) / 4th Street (EW)
- **Int #4:** Project Access 3 (NS) / 4th Street (EW)
- **Int #5:** Milliken Avenue (NS) / 4th Street (EW)
- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)

- **Int #11:** Haven Avenue (NS) / Inland Empire Boulevard (EW)

The following recommended improvements are identified to restore the intersection of *Milliken Avenue / Ontario Mills Parkway – I-10 WB Ramps* to acceptable conditions (LOS E for Horizon Year (2040) With Project Conditions:

Intersection Improvement #1	**Int 14 – Milliken Avenue / Ontario Mills Parkway – I-10 WB Ramps:** Make a fair-share contribution to widen the eastbound off-ramp approach from two left turn lanes, one through lane and one right turn lane to **three** left turn lanes, one through lane, and one right turn lane.

Detailed LOS analysis sheets for Horizon Year (2040) With Project Conditions are contained in Appendix I.

Detailed LOS analysis sheets for Horizon Year (2040) With Project Conditions With Improvements are contained in Appendix J.

6.0 CEQA Vehicle Miles Traveled (VMT) Analysis

In response to Senate Bill (SB) 743, the California Natural Resource Agency certified and adopted new CEQA Guidelines in December 2018 which now identify Vehicle Miles Traveled (VMT) as the most appropriate metric to evaluate a project's transportation impact under CEQA (§ 15064.3).

Effective July 1, 2020, the previous CEQA metric of LOS, typically measured in terms of automobile delay, roadway capacity and congestion, generally will no longer constitute a significant environmental impact.

The City of Ontario has adopted guidelines to provide recommendations in the form of and methodology and thresholds of significance for identifying VMT related impacts. The proposed project is subject to a VMT analysis and will adhere to the recommendations and practices described in the *City of Ontario Planning Commission Resolution No. PC20-021 (May 26, 2020).*

Based on the analysis methodology described in the City of Ontario's adopted Planning Commission Resolution regarding VMT, project screening procedures have been implemented to identify projects that may be presumed to have a less than significant impact absent substantial evidence to the contrary and will be exempted from further project-level VMT assessment.

According to the City's guidelines, land use projects located within a Transit Priority Area (TPA) and that have the following characteristics are presumed to have a less than significant impact absent substantial evidence to the contrary:

- Has a Floor Area Ratio of 0.75 or higher;
- Includes no more parking for residents, customers, or employees than the City Development Code mandates;
- Is consistent with the Sustainable Communities Strategy (SCS) as determined by the City with input from the Southern California Association of Governments (SCAG) or San Bernardino County Transportation Authority (SBCTA); and

- If there are existing affordable residential units, replaces those residential units with at least as many similarly affordable units and not with a smaller number of moderate or high-income residential units.

Based on the project site plan, the proposed project encompasses the following Assessor Parcel Numbers:

LOT	Assessor Parcel Number (APN)
LOT A & B	APN 021020501
LOT C	APN 021020438
LOT D	APN 021020439
LOT F	APN 021020412-15
LOT G	APN 021020420-25

Hence, the VMT analysis examined in this study focuses on the land use components from Lot A, Lot B, Lot C, and Lot D.

After utilizing the SBCTA VMT Screening Tool, all project parcels *with the exception of a portion of Parcel F* of the proposed project are located within a Transit Priority Area as shown in Exhibit 6-1 and are presumed to maintain the aforementioned characteristics.

The portion of Parcel F which is not within the TPA is not planned to consist of any trip-generating land uses as those portions of the site will only be used to relocate some of the existing parking capacity on the project site. Hence, those non-TPA areas are not subject to VMT analysis.

Additionally, the proposed project is expected to implement the following design features identified in the *Toyota Arena Mixed-Use Development Air Quality and Greenhouse Gas Impact Study, City of Ontario, California, June 4th, 2021.* The following project design features are trip reduction measures to reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking:

1. Improve the walkability and design of the project by including pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e. sidewalks, crosswalks, foot paths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.)

2. Provide traffic calming measures (i.e. marked crosswalks, raised crosswalks, raised intersections, count-own signal timers, curb extensions, speed tables, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.)

3. Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

It should be also noted that the SBCTA VMT Screening Tool additionally generates various project VMT metrics per traffic analysis zone (TAZ) such as:

- Productions and Attractions (PA) VMT Per Population
    - Residential VMT;
- PA VMT Per Worker; and
- PA VMT Per Service Population
    - Residential VMT, Worker VMT, and Customer VMT

Based on the outputted VMT metrics for the project TAZ, it appears that the project's PA VMT Per Population and PA VMT Per Worker is lower than the jurisdictional average. However, when accounting for the Customer VMT in the PA Per Service Population VMT, the project TAZ's VMT is greater than the jurisdictional average. As a result, *the project is in not within a low VMT generating area*.

However, it is still noteworthy that the PA VMT Per Population and PA VMT Per Worker is lower than the jurisdiction average VMT.

SBCTA VMT Screening Tool output is shown in Exhibit 6-2.

In summary, the proposed project is found to have a less than significant VMT impact.

7.0 Findings & Conclusions

7.1 Purpose of Report, Study Objectives & Proposed Project

The purpose of this traffic study is to assess the impacts of the proposed Toyota Arena Mixed-Use Development (hereinafter referred to as project) from a traffic and circulation stand point.

This study has been conducted in accordance with the guidelines detailed in *The Ontario General Plan Update Transportation Technical Report (March 19, 2009)* and recommendations and practices described in the *City of Ontario Planning Commission Resolution No. PC20-021 (May 26, 2020).*

The study has been prepared in accordance with the scope of work discussed and approved by City staff prior to initiating the analysis.

The proposed project is located adjacent to the Toyota Arena, north of Concours Street and south of 4th Street, in the City of Ontario.

The land uses surrounding the site include residential uses to the north, commercial uses to the south and west, and commercial and retail uses to the east at the Ontario Mills Shopping Center. The proposed project consists of the construction and operation of a mixed-use town center development with residential and commercial/retail land uses. The following is a breakdown of the project's development plan:

Proposed Development Plan

Lot	Dwelling Units (DU)	Retail (SF)	Parking Spaces
A	359	25,256	477*
B	98	20,802	130*
C	107	11,047	142*
D	127	14,095	170*
F & G	- -	- -	1,170
Total	**691**	**71,200**	**2,089**

* Parking structure

Main access for the project is planned via the following:

- One (1) signalized intersection at Cleveland Avenue – Via Asti / 4th Street;
- One (1) signalized intersection at Resort Parkway – Via Piemonte / 4th Street;
- One (1) right-in/right-out access driveway along 4th Street; and

The project is planned to open in 2023 and will be evaluated in one single phase.

7.2 Project Trip Generation:

Based on the ITE trip generation rates:

- The proposed project is forecast to generate approximately 6,447 weekday daily trips which include approximately 315 weekday AM peak hour trips, approximately 575 weekday PM peak hour trips.
- The proposed project is forecast to generate approximately 6,677 Saturday daily trips which include approximately 624 Saturday peak hour trips.

After accounting for internal trip capture and applicable ITE pass-by trips rates:

- The proposed project is forecast to generate approximately 5,691 weekday daily trips which include approximately 300 weekday AM peak hour trips, approximately 458 weekday PM peak hour trips.
- The proposed project is forecast to generate approximately 5,813 Saturday daily trips which include approximately 490 Saturday peak hour trips.

7.3.1 Level of Service Analysis Summary – ***Existing Conditions*:**

The study intersections are all currently operating at an acceptable LOS (LOS E or better) during the peak hours for Existing Conditions with exception of the following study intersection:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - SAT Peak Hour – LOS F (82.4 secs)

7.3.2 Level of Service Analysis Summary – ***Existing Plus Project Conditions:***

The study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Existing Plus Project Conditions with exception of the following study intersection:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - SAT Peak Hour – LOS F (82.7 secs)

Based on agency-established thresholds, the proposed project is required to contribute to improvements at the following study intersection for Existing Plus Project Conditions:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)

After review of the existing roadway conditions at this intersection, no feasible intersection improvements can be identified for this study intersection to achieve acceptable level of service (LOS E or better) for Existing Plus Project Conditions.

7.3.3 Level of Service Analysis Summary – ***Opening Year Without Related Projects Without Project Conditions***:

The study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Opening Year Without Related Projects Without Project Conditions with exception of the following study intersection:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - SAT Peak Hour – LOS F (90.4 secs)

7.3.4 Level of Service Analysis Summary – ***Opening Year Without Related Projects With Project Conditions***:

The study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Opening Year Without Related Projects With Project Conditions with exception of the following study intersection:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - SAT Peak Hour – LOS F (90.8 secs)

Based on agency-established thresholds, the proposed project is required to contribute to improvements at the following study intersection for Opening Year Without Related Projects With Project Conditions:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)

After review of the existing roadway conditions at this intersection, no feasible intersection improvements can be identified for this study intersection to achieve acceptable level of service (LOS E or better) for Opening Year Without Related Projects With Project Conditions.

7.3.5 Level of Service Analysis Summary – ***Opening Year With Related Projects Without Project Conditions***:

The study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Opening Year With Related Projects Without Project Conditions with exception to the following study intersection:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (94.4 secs)
    - SAT Peak Hour – LOS F (113.9 secs)

7.3.6 Level of Service Analysis Summary – ***Opening Year With Related Projects With Project Conditions***:

The study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Opening Year With Related Projects With Project Conditions with exception to the following study intersections:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (97.0 secs)
    - SAT Peak Hour – LOS F (116.1 secs)

Based on agency-established thresholds, the proposed project is required to contribute to improvements at the following study intersection for Opening Year With Related Projects With Project Conditions:

- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)

After review of the existing roadway conditions at this intersection, no feasible intersection improvements can be identified for this study intersection to achieve acceptable level of service (LOS E or better) for Opening Year With Related Projects With Project Conditions.

7.3.7 Level of Service Analysis Summary – ***Horizon Year (2040) Without Project Conditions***:

The study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Horizon Year (2040) Without Project Conditions with exception to the following study intersection:

- **Int #1:** Haven Avenue (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (98.0 secs)
- **Int #4:** Project Access 3 (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (51.9 secs)
- **Int #5:** Milliken Avenue (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (103.9 secs)
- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - AM Peak Hour LOS – F (118.2 secs)
    - PM Peak Hour – LOS F (149.3 secs)
    - SAT Peak Hour – LOS F (180.2 secs)
- **Int #11:** Haven Avenue (NS) / Inland Empire Boulevard (EW)
    - PM Peak Hour LOS – F (134.7 secs)
- **Int #14:** Milliken Avenue (NS) / Ontario Mills Parkway – I-10 WB Ramps (EW)
    - SAT Peak Hour – LOS F (82.2 secs)

7.3.8 Level of Service Analysis Summary – ***Horizon Year (2040) With Project Conditions***:

The study intersections are all forecast to continue to operate at an acceptable LOS (LOS E or better) during the peak hours for Horizon Year (2040) With Project Conditions with exception to the following study intersections:

- **Int #1:** Haven Avenue (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (102.3 secs)
- **Int #4** Project Access 3 (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (73.8 secs)
- **Int #5:** Milliken Avenue (NS) / 4th Street (EW)
    - PM Peak Hour – LOS F (109.7 secs)
- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
    - AM Peak Hour LOS – F (119.0 secs)
    - PM Peak Hour – LOS F (152.9 secs)
    - SAT Peak Hour – LOS F (184.8 secs)
- **Int #11:** Haven Avenue (NS) / Inland Empire Boulevard (EW)
    - PM Peak Hour LOS – F (136.5 secs)
- **Int #14:** Milliken Avenue (NS) / Ontario Mills Parkway – I-10 WB Ramps (EW)
    - SAT Peak Hour – LOS F (87.3 secs)

Based on agency-established thresholds, the proposed project is required to contribute to improvements at the following study intersection for Horizon Year (2040) With Project Conditions:

- **Int #1:** Haven Avenue (NS) / 4th Street (EW)
- **Int #4:** Project Access 3 (NS) / 4th Street (EW)
- **Int #5:** Milliken Avenue (NS) / 4th Street (EW)
- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
- **Int #11:** Haven Avenue (NS) / Inland Empire Boulevard (EW)
- **Int #14:** Milliken Avenue (NS) / Ontario Mills Parkway – I-10 WB Ramps (EW)

After review of the existing roadway conditions at these study intersections, no feasible intersection improvements can be identified for the following study intersections to achieve acceptable level of service (LOS E or better) for Horizon Year (2040) With Project Conditions.

- **Int #1:** Haven Avenue (NS) / 4th Street (EW)
- **Int #4:** Project Access 3 (NS) / 4th Street (EW)
- **Int #5:** Milliken Avenue (NS) / 4th Street (EW)
- **Int #6:** I-15 SB Ramps – Ontario Mills Drive (NS) / 4th Street (EW)
- **Int #11:** Haven Avenue (NS) / Inland Empire Boulevard (EW)

The following recommended improvements are identified to restore the intersection of *Milliken Avenue / Ontario Mills Parkway – I-10 WB Ramps* to acceptable conditions (LOS E for Horizon Year (2040) With Project Conditions:

Intersection Improvement #1

Int 14 – Milliken Avenue / Ontario Mills Parkway – I-10 WB Ramps: Make a fair-share contribution to widen the

eastbound off-ramp approach from two left turn lanes, one through lane and one right turn lane to **three** left turn lanes, one through lane, and one right turn lane. Exhibit 7-1 shows the recommended improvement.

Table 7-1 shows the project's fair share traffic contribution to the deficiently-operating study intersections for Opening Year With Related Projects With Project Conditions.

Table 7-2 shows the project's fair share traffic contribution to the deficiently-operating study intersections for Horizon Year (2040) With Project Conditions.

7.4 CEQA VMT Analysis Summary

The proposed project is found to have a less than significant VMT impact.

Recommendations

	Existing Conditions	Existing Plus Project Conditions	Opening Year With Related Projects With Project Conditions	Horizon Year (2040) With Project Condtions

HCM 6th Ctrl Delay	21.1
HCM 6th LOS	C

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

User approved changes to right turn type.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary	
HCM 6th Ctrl Delay	32.5
HCM 6th LOS	C

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
