	Will the energy efficiency retrofit project benefit low income or disadvantaged communities? Does the energy efficiency retrofit project fit within the overall assumptions in the reduction measure associated with commercial building energy efficiency retrofits? Does the energy efficiency retrofit project provide co-benefits important to the City? Point value will be determined based upon engineering and design criteria of the energy efficiency retrofit project.		
Reduction Measure PS E4: Commercial/Industrial Renewable Energy			
Photovoltaic	Solar Photovoltaic panels installed on commercial buildings or in collective arrangements within a commercial development such that the total power provided augments:		
	Solar Ready Roofs (sturdy roof and electric hookups)	2 points	
	10 percent of the power needs of the project	8 points	
	20 percent of the power needs of the project	14 points	
	30 percent of the power needs of the project	20 points	
	40 percent of the power needs of the project	26 points	
	50 percent of the power needs of the project	32 points	
	60 percent of the power needs of the project	38 points	
	70 percent of the power needs of the project	44 points	
	80 percent of the power needs of the project	50 points	
	90 percent of the power needs of the project	56 points	
	100 percent of the power needs of the project	60 points	
Wind turbines	Some areas of the City lend themselves to wind turbine applications. Analysis of the areas capability to support wind turbines should be evaluated prior to choosing this feature. Wind turbines as part of the commercial development such that the total power provided augments:		
	10 percent of the power needs of the project	8 points	
	20 percent of the power needs of the project	14 points	
	30 percent of the power needs of the project	20 points	
	40 percent of the power needs of the project	26 points	
	50 percent of the power needs of the project	32 points	
	60 percent of the power needs of the project	38 points	
	70 percent of the power needs of the project	44 points	

Feature	Description	Assigned Point Values	Project Points
	80 percent of the power needs of the project	50 points	
	90 percent of the power needs of the project	56 points	
	100 percent of the power needs of the project	60 points	
Off-site renewable energy project	The applicant may submit a proposal to supply an off-site renewable energy project such as renewable energy retrofits of existing commercial/industrial that will help implement reduction measures associated with existing buildings. These off-site renewable energy retrofit project proposals will be determined on a case by case basis accompanied by a detailed plan documenting the quantity of renewable energy the proposal will generate. Point values will be based upon the energy generated by the proposal.	TBD	
Other Renewable Energy Generation	The applicant may have innovative designs or unique site circumstances (such as geothermal) that allow the project to generate electricity from renewable energy not provided in the table. The ability to supply other renewable energy and the point values allowed will be decided based upon engineering data documenting the ability to generate electricity.	TBD	
Reduction Measure PS W2: Commercial/Industrial Water Conservation			
Irrigation and Landscaping			
Water Efficient Landscaping	Eliminate conventional turf from landscaping	0 points	08
	Only moderate water using plants	3 points	
	Only low water using plants	4 points	
	Only California Native landscape that requires no or only supplemental irrigation	8 points	
Trees	Increase tree planting in parking areas 50% beyond City Code requirements	TBD	
Water Efficient irrigation systems	Low precipitation spray heads< .75"/hr or drip irrigation	1 point	01
	Weather based irrigation control systems combined with drip irrigation (demonstrate 20 reduced water use)	5 points	
Recycled Water	Recycled water connection (purple pipe)to irrigation system on site	5 points	
Storm water Reuse Systems	Innovative on-site stormwater collection, filtration and reuse systems are being developed that provide supplemental irrigation water and provide vector control. These systems can greatly reduce the irrigation needs of a project. Point values for these types of systems will be determined based upon design and engineering data documenting the water savings.	TBD	

Feature	Description	Assigned Point Values	Project Points
Potable Water			
Showers	Water Efficient Showerheads (2.0 gpm)	3 points	
Toilets	Water Efficient Toilets/Urinals (1.5gpm) Waterless Urinals (note that commercial buildings having both waterless urinals and high efficiency toilets will have a combined point value of 6 points)	3 points 4 points	07
Faucets	Water Efficient faucets (1.28gpm)	3 points	03
Commercial Dishwashers	Water Efficient dishwashers (20% water savings)	4 points	04
Commercial Laundry Washers	Water Efficient laundry (15% water savings) High Efficiency laundry Equipment that captures and reuses rinse water (30% water savings)	3 points 6 points	
Commercial Water Operations Program	Establish an operational program to reduce water loss from pools, water features, etc., by covering pools, adjusting fountain operational hours, and using water treatment to reduce draw down and replacement of water. Point values for these types of plans will be determined based upon design and engineering data documenting the water savings.	TBD	
Reduction Measure PS T1: Land Use Based Trips and VMT Reduction			
Mixed Use	Mixes of land uses that complement one another in a way that reduces the need for vehicle trips can greatly reduce GHG emissions. The point value of mixed use projects will be determined based upon traffic studies that demonstrate trip reductions and/or reductions in vehicle miles traveled	TBD	
Local Retail Near Residential (Commercial only Projects)	Having residential developments within walking and biking distance of local retail helps to reduce vehicle trips and/or vehicle miles traveled. The point value of residential projects in close proximity to local retail will be determined based upon traffic studies that demonstrate trip reductions and/or reductions in vehicle miles traveled	TBD	
Reduction Measure PS T2: Bicycle Master Plan			
Bicycle Infrastructure	Ontario's Bicycle Master Plan is extensive and describes the construction on 11.5 miles of Class I bike paths and 23 miles of Class II and Class III bikeways to build upon the current 8 miles of bikeways. Provide bicycle paths within project boundaries. Provide bicycle path linkages between project site and other land uses. Provide bicycle path linkages between project site and transit.	TBD TBD 2 points 5 points	

Feature	Description	Assigned Point Values	Project Points
Reduction Measure PS T3: Electric Vehicle Infrastructure			
Electric Vehicles	Provide public charging station for use by an electric vehicle. *(ten points for each charging station within the facility)*	10 points	10
Reduction Measure PS T4: Employee Based Trip &VMT Reduction Policy			
Compressed Work Week	Reduce the number of days per week that employees need to be on site will reduce the number of vehicle trips associated with commercial/industrial development. Compressed work week such that full time employees are on site: 5 days per week 4 days per week on site 3 days per week on site	TBD	
Car/Vanpools	Car/vanpool program Car/vanpool program with preferred parking Car/vanpool with guaranteed ride home program Subsidized employee incentive car/vanpool program Combination of all the above	TBD	
Employee Bicycle/ Pedestrian Programs	Complete sidewalk to residential within ½ mile Complete bike path to residential within 3 miles Bike lockers and secure racks Showers and changing facilities Subsidized employee walk/bike program (Note combine all applicable points for total value)	TBD	
Shuttle/Transit Programs	Local transit within ¼ mile Light rail transit within ½ mile Shuttle service to light rail transit station Guaranteed ride home program Subsidized Transit passes Note combine all applicable points for total value	TBD	
CRT	Employer based Commute Trip Reduction (CRT). CRTs apply to commercial, offices, or industrial projects that include a reduction of vehicle trip or VMT goal using a variety of employee commutes trip reduction methods. The point value will be determined based upon a TIA that demonstrates the trip/VMT reductions. Suggested point ranges: Incentive based CRT Programs (1-8 points) Mandatory CRT programs (5-20 points)	TBD	
Other Trip Reductions	Other trip or VMT reduction measures not listed above with TIA and/or other traffic data supporting the trip and/or VMT for the project.	TBD	
Total Points from Commercial/Industrial Project:			141

1.0 Introduction

1.1 Purpose of Analysis and Study Objectives

The purpose of this report is to evaluate the potential noise impacts from the proposed Toyota Arena Mixed-Use Development (project) and provide recommendations, if necessary, to minimize any project noise impacts. The assessment was conducted within the context of the California Environmental Quality Act (CEQA) and utilizes the noise standards set forth by the applicable Federal, State, and local agencies.

The following is provided in this report:

- A description of the study area and the proposed project
- Information regarding the fundamentals of noise
- Identification of the regulatory setting and applicable noise standards
- Analysis of the existing noise environment
- Analysis of the project's operational noise impact to adjacent receptors
- Analysis of the project's construction noise and vibration impact to adjacent sensitive receptors
- Summary of recommended mitigation measures and project design features to reduce noise level impacts.

1.2 Site Location

The proposed Toyota Arena Mixed-Use Development project site is located adjacent to the Toyota Arena, north of Concourse Street and south of Fourth Street, in the City of Ontario. The project site is located approximately 1,013 feet above sea level and the topography is relatively flat.

The project site location map is provided in Exhibit A.

The project site is located within the Ontario Center Specific Plan and zoned for Urban Commercial use. The City of Ontario General Plan land use map designates the project site as Mixed Use.

1.3 Project Description

The project consists of construction and operation of a mixed use town center development with residential and commercial/retail land use within four development lots.

The proposed project includes a total of 691 residential dwelling units, 71,200 square feet of commercial/retail uses and the demolition and relocation of approximately 1,170 surface parking spaces. The total project site area is approximately 18.73 acres.

The site plan used for this analysis, provided by the applicant, is illustrated in Exhibit B. Table 1 summarizes the proposed project land uses.

Table 1
Land Use Summary

Lot	Dwelling Units	Retail (SF)[1]	Parking Spaces
A	359	25,256	477[2]
B	98	20,802	130[2]
C	107	11,047	142[2]
D	127	14,095	170[2]
F & G	--	--	1,170
Total	691	71,200	2,089

[1] S.F. – Square Feet
[2] Parking Structure

This report analyzes long-term and short-term noise impacts associated with the day-to-day operation of the project. The primary sources of long-term noise impacts would be on-site circulation and parking lot noise and HVAC units.

1.4 Summary of Analysis Results

Table 2 provides a summary of the noise analysis results, per the CEQA impact criteria checklist. With the implementation of the recommended mitigation measures, the project is not expected to result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

Table 2
CEQA Noise Impact Criteria

Noise Impact Criteria	Potentially Significant	Potentially Significant Unless Mitigated	Less Than Significant Impact	No Impact
Would the project result in?				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			X	
b) Generation of excessive groundborne vibration or groundborne noise levels?			X	
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			X	

1.5 Recommended Project Design Features

The following recommended project design features include standard rules and requirements, best practices and recognized design guidelines for reducing noise levels. Design features are assumed to be part of the conditions of the project and integrated into its design. Design features are not typically considered mitigation under CEQA.

Operational Design Features

DF-1 Prior to the issuance of building permits, the project shall prepare a final acoustical study that demonstrates building construction will achieve the minimum interior noise standard of 45 dBA CNEL for all residential units located along arterial roadways and/or adjacent to industrial uses, per the California Building Standards Code. The following noise control measures may be required for dwelling units located near adjacent roadways and industrial uses:

- Install sound barriers between residences and noise sources.
- Install double-paned or similar sound rated windows.

- Provide sound insulating exterior walls and roofing systems.
- Locate and/or design attic vents to minimize sound propagation into each home.
- Provide forced-air ventilation systems.
- Place dwellings as far as practical from the noise source

DF-2 The project shall comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g. floor/ceiling assemblies and demising walls).

DF-3 For proper acoustical performance, all exterior windows, doors, and sliding glass doors should have a positive seal and leaks/cracks must be kept to a minimum.

DF-4 The final building plans shall ensure that HVAC units are not located within an area of the project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Ontario Municipal Code requirements. To meet the City's noise standards the following measures should be followed:

- All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses.

Construction Design Features

DF-5 Prepare a construction management plan and obtain a construction work permit from the City of Ontario prior to starting construction. The construction management plan shall ensure all contractors implement construction best management practices to reduce construction noise levels. Best management practices shall include the following:

- All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields).

- Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible.

- If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load.

- Use electric air compressors and similar power tools rather than diesel equipment, where feasible.

- Locate staging area, generators and stationary construction equipment as far from the adjacent residential homes as feasible.

- Construction-related equipment, including heavy-duty equipment, motor vehicles, and portable equipment, shall be turned off when not in use for more than 5 minutes.

- Provide notifications and signage in readily visible locations along the perimeter of construction sites that indicate the dates and duration of construction activities, as well as provide a telephone number where neighbors can enquire about the construction process and register complaints to a designated construction noise disturbance coordinator.

- Construction activities shall not take place between the hours of 6:00 p.m. and 7:00 a.m. on weekdays and Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

DF-6 No impact pile driving or blasting activities shall be permitted on the project site during construction. If impact pile driving or blasting is required, a follow-up noise and vibration impact assessment shall be conducted prior to start of any activity.

2.0 Fundamentals of Noise

This section of the report provides basic information about noise and vibration and presents some of the terms used in the report.

2.1 Sound, Noise, and Acoustics

The sound is a disturbance created by a moving or vibrating source and is capable of being detected by the hearing organs. The sound may be thought of as mechanical energy of a moving object transmitted by pressure waves through a medium to a human ear. For traffic or stationary noise, the medium of concern is air. *Noise* is defined as sound that is loud, unpleasant, unexpected, or unwanted.

2.2 Frequency and Hertz

A continuous sound is described by its *frequency* (pitch) and its *amplitude* (loudness). Frequency relates to the number of pressure oscillations per second. Low-frequency sounds are low in pitch (bass sounding) and high-frequency sounds are high in pitch (squeak). These oscillations per second (cycles) are commonly referred to as Hertz (Hz). The human ear can hear from the bass pitch starting out at 20 Hz all the way to the high pitch of 20,000 Hz.

2.3 Sound Pressure Levels and Decibels

The *amplitude* of a sound determines its loudness. The loudness of sound increases or decreases, as the amplitude increases or decreases. Sound pressure amplitude is measured in units of micro-Newton per square inch meter (N/m2), also called micro-Pascal (μPa). One μPa is approximately one hundred billionths (0.00000000001) of normal atmospheric pressure. Sound pressure level (SPL or L_p) is used to describe in logarithmic units the ratio of actual sound pressures to a reference pressure squared. These units are called decibels and abbreviated as dB.

2.4 Addition of Decibels

Because decibels are on a logarithmic scale, sound pressure levels cannot be added or subtracted by simple plus or minus addition. When two (2) sounds of equal SPL are combined, they will produce an SPL 3 dB greater than the original single SPL. In other words, sound energy must be doubled to produce a 3dB increase.

If two (2) sounds differ by approximately 10 dB the higher sound level is the predominant sound.

2.5 Human Response to Changes in Noise Levels[1]

In general, the healthy human ear is most sensitive to sounds between 1,000 Hz and 5,000 Hz, (A-weighted scale) and it perceives a sound within that range as being more intense than a sound with a higher or lower frequency with the same magnitude. For purposes of this report as well as with most environmental documents, the A-scale weighing is typically reported in terms of A-weighted decibel (dBA). Typically, the human ear can barely perceive the change in the noise level of 3 dB. A change in 5 dB is readily perceptible, and a change in 10 dB is perceived as being twice or half as loud. As previously discussed, a doubling of sound energy results in a 3 dB increase in sound, which means that a doubling of sound energy (e.g. doubling the volume of traffic on a highway), would result in a barely perceptible change in sound level.

2.6 Noise Descriptors

Noise in our daily environment fluctuates over time. Some noise levels occur in regular patterns, others are random. Some noise levels are constant, while others are sporadic. Noise descriptors were created to describe the different time-varying noise levels. Following are the most commonly used noise descriptors along with brief definitions.

A-Weighted Sound Level

The sound pressure level in decibels as measured on a sound level meter using the A-weighted filter network. The A-weighting filter de-emphasizes the very low and very high-frequency components of the sound in a manner similar to the response of the human ear. A numerical method of rating human judgment of loudness.

Ambient Noise Level

The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location.

[1] Technical Noise Supplement to the Traffic Noise Analysis Protocol, September 2013.

Community Noise Equivalent Level (CNEL)

The average equivalent A-weighted sound level during a 24-hour day, obtained after addition of five (5) decibels to sound levels in the evening from 7:00 to 10:00 PM and after addition of ten (10) decibels to sound levels in the night before 7:00 AM and after 10:00 PM.

Decibel (dB)

A unit for measuring the amplitude of a sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure, which is 20 micro-pascals.

dB(A)

A-weighted sound level (see definition above).

Equivalent Sound Level (LEQ)

The sound level corresponding to a steady noise level over a given sample period with the same amount of acoustic energy as the actual time-varying noise level. The energy average noise level during the sample period.

Habitable Room

Any room meeting the requirements of the Uniform Building Code or other applicable regulations which is intended to be used for sleeping, living, cooking or dining purposes, excluding such enclosed spaces as closets, pantries, bath or toilet rooms, service rooms, connecting corridors, laundries, unfinished attics, foyers, storage spaces, cellars, utility rooms, and similar spaces.

L(n)

The A-weighted sound level exceeded during a certain percentage of the sample time. For example, L10 in the sound level exceeded 10 percent of the sample time. Similarly, L50, L90, and L99, etc.

Noise

Any unwanted sound or sound which is undesirable because it interferes with speech and hearing, or is intense enough to damage hearing, or is otherwise annoying. The State Noise Control Act defines noise as "...excessive undesirable sound...".

Percent Noise Levels

See L(n).

Sound Level (Noise Level)

The weighted sound pressure level obtained by use of a sound level meter having a standard frequency-filter for attenuating part of the sound spectrum.

Sound Level Meter

An instrument, including a microphone, an amplifier, an output meter, and frequency weighting networks for the measurement and determination of noise and sound levels.

Single Event Noise Exposure Level (SENEL)

The dBA level which, if it lasted for one (1) second, would produce the same A-weighted sound energy as the actual event.

2.7 Sound Propagation

As sound propagates from a source it spreads geometrically. The sound from a small, localized source (i.e., a point source) radiates uniformly outward as it travels away from the source in a spherical pattern. The sound level attenuates at a rate of 6 dB per doubling of distance. The movement of vehicles down a roadway makes the source of the sound appear to propagate from a line (i.e., line source) rather than a point source. This line source results in the noise propagating from a roadway in a cylindrical spreading versus a spherical spreading that results from a point source. The sound level attenuates for a line source at a rate of 3 dB per doubling of distance.

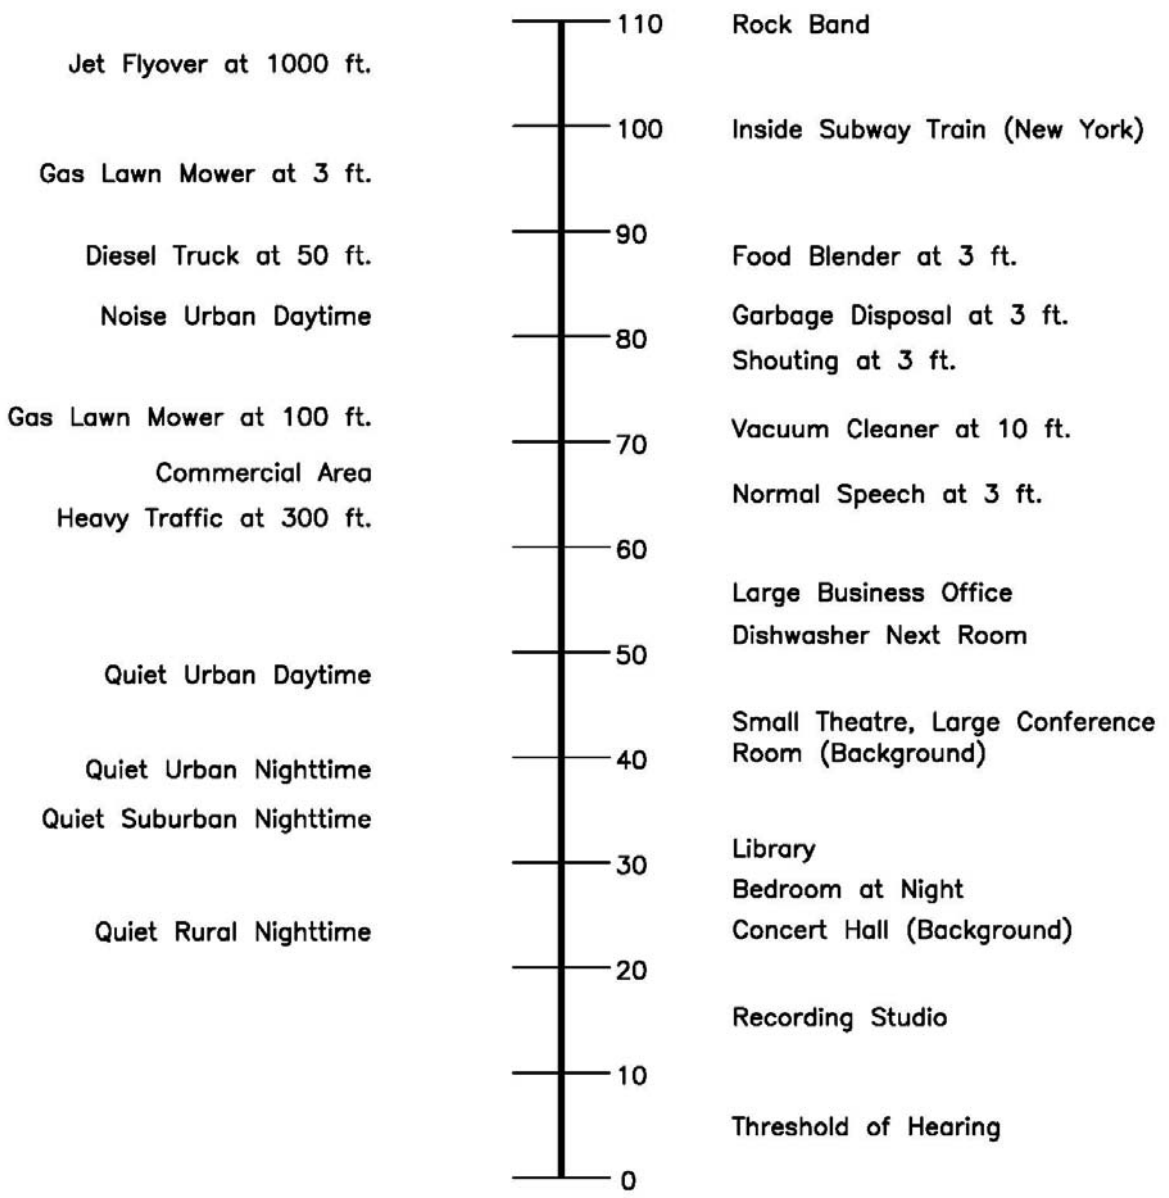
As noise propagates from the source, it is affected by the ground and atmosphere. Noise models use the hard site (reflective surfaces) and soft site (absorptive surfaces) to help calculate predicted noise levels. Hard site conditions assume no excessive ground absorption between the noise source and the receiver. Soft site conditions such as grass, soft dirt or landscaping attenuate noise at an additional rate of 1.5 dB per doubling of distance. When added to the geometric spreading, the excess ground attenuation results in an overall noise attenuation of 4.5 dB per doubling of distance for a line source and 6.0 dB per doubling of distance for a point source.

Research has demonstrated that atmospheric conditions can have a significant effect on noise levels when noise receivers are located 200 feet and greater from a noise source. Wind, temperature, air humidity, and turbulence can further impact how far sound can travel.

Figure 1 shows typical sound levels from indoor and outdoor noise sources.

Figure 1[2]

TYPICAL SOUND LEVELS FROM
INDOOR AND OUTDOOR NOISE SOURCES



[2] Technical Noise Supplement to the Traffic Noise Analysis Protocol, September 2013.

2.8 Vibration Descriptors

Ground-borne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. The effects of ground-borne vibrations typically only cause a nuisance to people, but at extreme vibration levels, damage to buildings may occur. Although ground-borne vibration can be felt outdoors, it is typically only an annoyance to people indoors where the associated effects of the shaking of a building can be notable. Ground-borne noise is an effect of ground-borne vibration and only exists indoors since it is produced from noise radiated from the motion of the walls and floors of a room and may also consist of the rattling of windows or dishes on shelves.

Several different methods are used to quantify vibration amplitude.

PPV

Known as the peak particle velocity (PPV) which is the maximum instantaneous peak in vibration velocity, typically given in inches per second.

RMS

Known as the root mean squared (RMS) can be used to denote vibration amplitude.

VdB

A commonly used abbreviation to describe the vibration level (VdB) for a vibration source.

2.9 Vibration Perception

Typically, developed areas are continuously affected by vibration velocities of 50 VdB or lower. These continuous vibrations are not noticeable to humans whose threshold of perception is around 65 VdB. Outdoor sources that may produce perceptible vibrations are usually caused by construction equipment, steel-wheeled trains, and traffic on rough roads, while smooth roads rarely produce perceptible ground-borne noise or vibration. To counter the effects of ground-borne vibration, the Federal Transit Administration (FTA) has published guidance relative to vibration impacts.

2.10 Vibration Propagation

There are three main types of vibration propagation: surface, compression, and shear waves. Surface waves, or Rayleigh waves, travel along the ground's surface. These waves carry most of their energy along an expanding circular wavefront, similar to ripples produced by throwing a rock into a pool of water. P-waves, or compression waves, are body waves that carry their energy along an expanding spherical wavefront. The particle motion in these waves is longitudinal (i.e., in a "push-pull" fashion). P-waves are analogous to airborne sound waves. S-waves, or shear waves, are also body waves that carry energy along an expanding spherical wavefront. However, unlike P-waves, the particle motion is transverse, or side-to-side and perpendicular to the direction of propagation.

As vibration waves propagate from a source, the vibration energy decreases in a logarithmic nature and the vibration levels typically decrease by 6 VdB per doubling of the distance from the vibration source. As stated above, this drop-off rate can vary greatly depending on the soil but has been shown to be effective enough for screening purposes, in order to identify potential vibration impacts that may need to be studied through actual field tests.

2.11 Construction Related Vibration Level Prediction[3]

Operational activities are separated into two different categories. The vibration can be transient or continuous in nature. Each category can result in varying degrees of ground vibration, depending on the equipment used on the site. Operation of equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Buildings in the vicinity of the project area site respond to these vibrations with varying results ranging from no perceptible effects at the low levels to slight damage at the highest levels. The thresholds from Caltrans Transportation and Construction Vibration Guidance Manual, April 2020, in the table below provide general guidelines as to the maximum vibration limits for when vibration becomes potentially annoying.

[3] Caltrans Transportation and Construction Vibration Guidance Manual, April 2020

Table 3
Vibration Annoyance Potential Criteria

Human Response	PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Barely perceptible	0.04	0.01
Distinctly perceptible	0.25	0.04
Strongly perceptible	0.90	0.10
Severe	2.00	0.40

Note: Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

The Caltrans Transportation and Construction Vibration Guidance Manual, April 2020 provides general thresholds and guidelines as to the vibration damage potential from vibratory impacts. The table below provides general vibration damage potential thresholds:

Table 4
Vibration Damage Potential Threshold Criteria

Structure and Condition	PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Extremely fragile historic buildings ruin ancient monuments	0.12	0.08
Fragile buildings	0.20	0.10
Historic and some old buildings	0.50	0.25
Older residential structures	0.50	0.30
New residential structures	1.00	0.50
Modern industrial/commercial buildings	2.00	0.50

Soil conditions have an impact on how vibration propagates through the ground. The Caltrans Transportation and Construction Vibration Guidance Manual, April 2020 provides suggested "n" values based on soil class. The table below outlines the manual's suggested values and description.

Table 5
Suggested "n" Values Based on Soil Classes

Soil Class	Description of Soil Material	Suggested Value of "n"
I	Weak or soft soils: loose soils, dry or partially saturated peat and muck, mud, loose beach sand, and dune sand.	1.4
II	Most sands, sandy clays, silty clays, gravel, silts, weathered rock.	1.3
III	Hard soils: densely compacted sand, dry consolidated clay, consolidated glacial till, some exposed rock.	1.1
IV	Hard, component rock: bedrock, freshly exposed hard rock.	1.0

3.0 Regulatory Setting

The proposed project is located in the City of Ontario and noise regulations are addressed through the various federal, state, and local government agencies. The agencies responsible for regulating noise are discussed below.

3.1 Federal Regulations

The adverse impact of noise was officially recognized by the federal government in the Noise Control Act of 1972, which serves three (3) purposes:

- Publicize noise emission standards for interstate commerce
- Assist state and local abatement efforts
- Promote noise education and research

The Federal Office of Noise Abatement and Control (ONAC) was originally tasked with implementing the Noise Control Act. However, it was eventually eliminated leaving other federal agencies and committees to develop noise policies and programs. Some examples of these agencies are as follows: The Department of Transportation (DOT) assumed a significant role in noise control through its various agencies. The Federal Aviation Agency (FAA) is responsible to regulate noise from aircraft and airports. The Federal Highway Administration (FHWA) is responsible to regulate noise from the interstate highway system. The Occupational Safety and Health Administration (OSHA) is responsible for the prohibition of excessive noise exposure to workers.

The Federal government and the State advocate that local jurisdiction use their land use regulatory authority to arrange new development in such a way that "noise sensitive" uses are either prohibited from being constructed adjacent to a highway or, or alternatively that the developments are planned and constructed in such a manner that potential noise impacts are minimized.

Since the Federal government and the State have preempted the setting of standards for noise levels that can be emitted by the transportation source, the City is restricted to regulating the noise generated by the transportation system through nuisance abatement ordinances and land use planning.

3.2 State Regulations

Established in 1973, the California Department of Health Services Office of Noise Control (ONC) was instrumental in developing regularity tools to control and abate noise for use by local agencies. One significant model is the "Land Use Compatibility for Community Noise Environments Matrix." The matrix allows the local jurisdiction to clearly delineate compatibility of sensitive uses with various incremental levels of noise.

The State of California has established noise insulation standards as outlined in Title 24 and the Uniform Building Code (UBC) which in some cases requires acoustical analyses to outline exterior noise levels and to ensure interior noise levels do not exceed the interior threshold. The State mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines published by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable.

Noise insulation design standards for residences have been established by the State of California Uniform Building Code (UBC) Chapter 12, Division II and by the Title 24 noise insulation standards of the California Administrative Code. The City is required by the State Housing Law to adopt these State codes as minimum performance standards. The City may enact stricter noise standards throughout the city or on a case-by-case basis if deemed necessary. In brief, the Title 24 noise standards require the following for multi-family dwellings:

1. Party wall and floor-ceiling assembly designs must provide a minimum STC of 50, based on lab tests. Field tested assemblies must provide a minimum noise isolation class (NIC) of 45.

2. Floor-ceiling assembly designs must provide for a minimum impact insulation class (IIC) of 50, based on lab tests. Field tested assemblies must provide a minimum FIIC of 45.

3. Entry doors from interior corridors must provide an STC of 26 or more.

4. Penetrations or openings in sound rated assemblies must be treated to maintain required ratings.

5. Interior noise levels due to exterior sources must not exceed a community noise equivalent level (CNEL) or a day-night level (LDN) of 45 dBA, in any habitable room.

Thus, the interior limit is 45 dBA CNEL between dwelling units and from exterior noise sources to interior living spaces.

3.3 City of Ontario Noise Regulations

The project is required to comply with the noise standards and thresholds established within the City of Ontario Municipal Code and the Ontario Plan. The noise standards from the Municipal Code and the Ontario Plan are provided in Appendix A.

3.3.1 City of Ontario Municipal Code Noise Standards

The City of Ontario Municipal Code, Chapter 29: Noise, requires that a project shall not create loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness.

Exterior Noise Standards:

Noise standards are defined in Section 5-29.04, Exterior Noise Standards of the Noise chapter of the Municipal Code and are applicable to the project site and surrounding noise sensitive uses.

Table 6 shows the exterior noise standards from the City of Ontario Municipal Code Chapter 29: Noise Exterior Noise Standards for the project site and surrounding residential land uses.

Table 6
City of Ontario Municipal Code Exterior Noise Standards

Land Use	7:00 AM – 10:00 PM	10:00 PM – 7:00 AM
	Leq (dBA)	Leq (dBA)
Multi-Family Residential	65	50
Residential Portion of Mixed Use	70	70
Commercial Property	65	60

[1]Applies to that portion of residential property falling within 100 feet of a commercial property use, if the noise originates from that commercial property use.

Interior Noise Standards:

Noise standards are defined in Section 5-29.05 Interior Noise Standards of the Noise chapter of the Municipal Code and are applicable to the project site and surrounding noise sensitive uses.

Table 7 shows the exterior noise standards from the City of Ontario Municipal Code Chapter 29: Noise Interior Noise Standards for the project land uses.

Table 7
City of Ontario Municipal Code Interior Noise Standards

Land Use	7:00 AM – 10:00 PM	10:00 PM – 7:00 AM
	Leq (dBA)	Leq (dBA)
Multi-Family Residential	45	40
Residential Portion of Mixed Use[1]	45	40

[1]Applies to that portion of residential property falling within 100 feet of a commercial property use, if the noise originates from that commercial property use.

Construction Noise Regulations

Chapter 29: Noise, Section 5-29.06 of the City's municipal code states that the following activities shall be exempted from the provisions of the noise code;

- Noise sources associated with construction, repair, remodeling, demolition or grading of any real property. Such activities shall instead be subject to the following provisions of § 5-29.09;

  i. No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

  ii. No landowner, construction company owner, contractor, subcontractor, or employer shall permit or allow any person or persons working under their

direction and control to operate any tool, equipment or machine in violation of the provisions of this section.

3.3.2 City of Ontario General Plan (The Ontario Plan)

The Ontario Plan establishes planning criteria for determining a development's noise/land use compatibility based on the community noise equivalent level (CNEL). CNEL noise levels are typically used to evaluate mobile source noise impacts such as from roadways, airports and rail lines.

Table 8 summarizes the City's Noise/Land Use Compatibility guidelines for the project and surrounding land uses.

Table 8
Noise/Land Use Compatibility Guidelines

Land Use	Noise Limit (CNEL)			
	Normally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable
Residential – Multiple Family	<60	60-65	65-75	>75
Commercial – Retail	<70	70-75	75-80	>80

Clearly Acceptable: No special noise insulation required, assuming buildings of normal conventional construction.

Normally Acceptable: Acoustical reports will be required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditioning will normally suffice.

Normally Unacceptable: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of noise reduction requirements must be made and needed noise insulation features included.

Clearly Unacceptable: No new construction should be permitted.

4.0 Study Method and Procedures

The following section describes the measurement procedures, measurement locations, and noise modeling procedures and assumptions used in the noise analysis.

4.1 Measurement Procedures and Criteria

Noise measurements are taken to determine the existing noise levels. A noise receiver or receptor is any location in the noise analysis in which noise might produce an impact. The following criteria are used to select measurement locations and receptors:

- Locations expected to receive the highest noise impacts, such as the first row of houses
- Locations that are acoustically representative and equivalent of the area of concern
- Human land usage
- Sites clear of major obstruction and contamination

RK conducted the sound level measurements in accordance with Caltrans technical noise specifications. All measurement equipment meets American National Standards Institute (ANSI) specifications for sound level meters (S1.4: Specification of Sound Level Meters, 1983).

A Piccolo-II Type 2 integrating-averaging level meter was used to conduct long-term (24-hour) noise measurements at the project site and property boundaries.

The Leq, Lmin, Lmax, L2, L8, L25, and L50 statistical data were recorded over the measurement time period intervals and the information was utilized to define the noise characteristics for the project. The following gives a brief description of the Caltrans Technical Noise Supplement procedures for sound level measurements:

- Microphones for sound level meters were placed five (5) feet above the ground for long-term noise measurements
- Sound level meters were calibrated before and after each measurement
- Following the calibration of equipment, a windscreen was placed over the microphone
- Frequency weighting was set on "A" and slow response
- Temperature and sky conditions were observed and documented

Appendix B includes photos, field sheets, and measured noise data.

4.2 Stationary Noise Modeling

The stationary noise was projected using a computer program that replicates the FHWA Noise Prediction Model (FHWA-RD-77-108). The FHWA model arrives at the predicted noise level through a series of adjustments to the reference energy noise level. For stationary source, the following noise level was applied to the model. The model outputs the projected noise level based on the following key parameters:

- Referenced noise level – (e.g. how loud a source is at a specific distance)
- Vertical and horizontal distances (sensitive receptor distance from noise source)
- Noise barrier vertical and horizontal distances (noise barrier distance from sound source and receptor).
- Typical noise source spectra
- Topography

Table 9 indicates the referenced noise level used in this analysis.

Table 9
Stationary Source Noise Level

Source	Distance from Source (feet)	Noise Levels (dBA)
		Leq
HVAC Condenser Unit	3.0	77.0
Parking Lot	6.0	63.8

To estimate the future noise levels during typical conditions, RK adjusted the reference noise levels from noise source to the nearest receptors. Adjusted noise levels are based on the distance of the receptor location relative to the noise source and local topography. The noise levels assume that the stationary sources are operating continuously when in reality not all noise sources will operate continuously throughout the day and night.

4.3 Construction Noise Modeling

The construction noise analysis utilizes the Federal Highway Administration (FHWA) Roadway Construction Noise Model, together with several key construction parameters. Key inputs include distance to the sensitive receiver, equipment usage, and baseline

parameters for the project site. This study evaluates the potential exterior noise impacts during each phase of construction. Noise levels were projected at an average distance of 160 feet to the nearest residential (to the north of Log F and Lot G) sensitive receptor of equipment operating over an 8-hour period from to the nearest sensitive receptor property line

- Construction phasing and equipment usage assumptions are referenced from the Toyota Arena Mixed Use Development AQ & GHG Study, by RK Engineering, June 2021.

4.4 Interior Noise Modeling

The interior noise level is the difference between the projected exterior noise level at the structure's façade and the noise reduction provided by the structure itself. Typical building construction will provide a conservative 12 dBA noise level reduction with a "windows open" condition and a very conservative 20 dBA noise level reduction with "windows closed". RK estimated the interior noise level by subtracting the building shell design from the estimated exterior noise level.

The interior noise analysis is based on industry standards for building noise reduction established by the Federal Highway Administration (FHWA), the 2013 Caltrans Technical Noise Supplement to the Traffic Noise Analysis Protocol (TeNS), the California Office of Noise Control Catalog of STC and IIC Ratings for Wall and Floor/Ceiling Assemblies, and the California Building Standards Code, Title 24.

The TeNS manual shows that the noise reduction due to building exteriors with ordinary sash windows (windows closed) is at least 20 decibels. By providing upgraded STC rated windows, the project design is considered adequate to meet interior noise standards. The building's exterior walls will be constructed per the latest building code insulation requirements and provide occupants with the most protection from exterior noise. Insulated exterior walls, designed per the latest California Building Standards, would provide a minimum of STC 35-40. Windows, on the other hand, are one of the acoustically weakest parts of the structure. Therefore, for a conservative estimate of preliminary interior noise, the building's noise reduction potential is limited to the STC of the windows.

4.5 Construction Vibration Modeling

The construction vibration assessment is based on the methodology set-forth within the Caltrans Transportation and Construction Induced Vibration Guidance Manual. The

vibration impacts from vibratory rollers and compactors, heavy truck loading and bulldozer activity is analyzed. All vibratory activity is analyzed as a continuous and/or frequent event and is required to comply with the applicable guidance thresholds criteria. It is expected that vibration levels will be highest during paving phase. No impact pile driving is expected as part of this project.

Vibratory impacts were calculated from the site area property line to the closest sensitive receptors and structures using the reference vibration levels, soil conditions and the reference equation *PPV= PPV ref (25/D)^n (in/sec)* (from Caltrans Manual) where:

PPV = reference measurement at 25 feet from vibration source
D = distance from equipment to property line
n= vibration attenuation rate through ground (n=1.0 was utilized for this study)

5.0 Existing Noise Environment

The existing noise environment for the project site and surrounding area has been established based on noise measurement data collected by RK.

5.1 Long-Term (24-Hour) Noise Measurement Results

To determine the existing noise level environment, RK conducted four (4) 24-hour noise measurements at the project study area.

Noise levels were measured on April 7, 2021 using a Piccolo-II Type 2 integrating-averaging sound level meter. The information was utilized to establish the noise characteristics of the existing ambient environment.

The noise monitoring locations were selected based on the proximity and location to adjacent sensitive receptors. Exhibit C graphically illustrates the location of the long-term measurements.

- Long-term noise monitoring location one (LT-1) was taken along southwest corner of Fourth Street and Via Piemonte approximately 140 feet south of the centerline of Fourth Street.

- Long-term noise monitoring location two (LT-2) was taken east of Porsche Way, approximately 60 feet north of the La Quinta Inn property line.

- Long-term noise monitoring location three (LT-3) was taken northwest corner of Concours Street and Ferrari Street, approximately 110 feet to the west from the centerline of Concours Street.

- Long-term noise monitoring location four (LT-4) was taken in the parking lot, approximately 450 feet to the north from the centerline of Concours Street.

Long term noise monitoring locations represent the existing noise levels near the adjacent noise sensitive land uses. Long-term noise measurement results are summarized in Table 10, Table 11, Table 12 and Table 13. Appendix B includes photographs, field sheets and measured noise data.

Table 10
24 Noise Measurement Results LT-1[1]

Time	Leq (dBA)	Time	Leq (dBA)
12:00 AM	52.5	12:00 PM	58.9

[1] LT-4 was taken in the parking lot, approximately 450 feet to the north from the centerline of Concours Street. LT-4 was recorded on 04/07/2021.

6.0 Operational Noise Impacts

This assessment analyzes the anticipated noise levels generated by the project. The main sources of noise generated by the project would include vehicular traffic noise along the adjacent roadways. Noise level impacts are compared to the City of Ontario noise standards.

The project must demonstrate that noise levels generated by the project site would not result in a permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

6.1 Stationary Source Noise Impacts

The project is not expected to consist of significant sources of stationary noise. The main sources of potential stationary noise impacts from the project would mainly include on-site circulation and parking lot noise, HVAC units and outdoor conversational noise.

The types of on-site noise from the project are typically considered compatible with other adjacent commercial/mixed use and would not typically be categorized as loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness. In particular, social activities and vehicular related noise are generally substantially less during the noise sensitive nighttime hours. Although, mechanical HVAC equipment does have the potential to operate 24-hours a day.

Rooftop mechanical HVAC equipment are expected to be located at the center of each building. The nearest noise sensitive residential receptors are located approximately 750 feet away to the west of the proposed Lot C HVAC units and the noise impacts from the operation of mechanical HVAC equipment is expected to be not significant at this distance. Therefore, a preliminary evaluation of noise impacts at the adjacent commercial uses has been provided.

Parking lot noise would occur from vehicle engine idling and exhaust, doors slamming, tires screeching, people talking, and the occasional horn honking. Parking lot noise is expected to occur on Lot F and Lot G and is conservatively assessed from the first parking space to northern residential properties; approximately 160 feet away.

The proposed site plan shows commercial/retail uses will face Via Piemonte and would be mostly shielded from the line of sight from the adjacent receptor property lines. Therefore, the outdoor conversational noise from the commercial/retail uses would not substantially contribute noise impacts to adjacent properties and was not included as a part of this analysis.

Table 14
Stationary Noise Impact Analysis[1]

Receptor			Stationary Noise Source				Combined Exterior Noise Level (Leq) dBA	
Number[2]	Land Use	Location	Source	Location	Distance[3]	Noise Level (Leq) dBA	Daytime[4]	Nighttime[4]
1	Residential	North of Lot F & Lot G	Parking Lot	Lot F & Lot G	160	34.8	34.8	34.8
2	Residential	West of Lot C	HVAC	Lot C	510	32.2	32.6	32.6
			Parking Lot	Lot F	735	21.9		
City of Ontario Residential Exterior Standard Levels							**65.0**	**50.0**
Noise Level Exceeds Standard (?)							**No**	**No**
3	Commercial	South of Lot C and Lot D	HVAC	Lot A	213	39.6	43.7	43.7
			HVAC	Lot C	243	38.5		
			HVAC	Lot D	243	38.5		
			Parking Lot	Lot F & Lot G	530	24.7		
4	Commercial	East of Lot D	HVAC	Lot D	485	32.7	36.6	36.6
			Parking Lot	Lot G	170	34.3		
5	Commercial	East of Lot A	HVAC	Lot A	213	39.6	42.4	42.4
			HVAC	Lot B	525	39.1		
6	Commercial	South of Lot B	HVAC	Lot A	580	31.1	39.0	39.0
			HVAC	Lot B	250	38.2		
City of Ontario Commercial Exterior Standard Levels							**65.0**	**60.0**
Noise Level Exceeds Standard (?)							**No**	**No**

[1] Stationary noise calculation worksheets are shown in Appendix C.
[2] Refer Exhibit A for Receptor Location.
[3] Distance from the receptor to the nearest noise source.
[4] Daytime: (7:00 A.M. to 10:00 P.M.); Nighttime: (10:00 P.M. to 7:00 A.M.)

As shown in Table 14, operational noise levels generated by the project are not expected to exceed the City's daytime standards and nighttime noise standards at the nearest receptor property line for both commercial and residential uses. Stationary noise calculation worksheets are shown in Appendix C.

6.2 Preliminary Interior Noise Analysis

Traffic noise along the adjacent roadways is expected to be the primary source of ambient noise impacting future residents at the project site. Traffic noise is analyzed to determine the project's noise/land use compatibility setting and to determine future noise levels to habitable exterior and interior areas on the project site. This section of the analysis does not necessarily apply to CEQA, as recent court rulings have indicated that CEQA is primarily concerned with the project's impact of the environment, not the environment's impact on a project.

Future traffic noise along the roadways is obtained from The Ontario Plan Figure S-3a, Future Roadway Noise Contours and represents the noise levels at the project site.

Table 15 shows the estimated future traffic noise levels at the project site and the noise/land use compatibly rating based on the City of Ontario General Plan Table LU-7 standards. The Ontario Plan Noise Level Exposure and Land Use Compatibility Guidelines is provided in Appendix A.

Table 15
Future Traffic Noise Levels[1]

Receptor	Exterior Noise Level (Ldn) (dBA CNEL)	Noise/Land Use Compatibility
Multifamily Residential	65-70	Normally Unacceptable
Retail	65-70	Normally Acceptable

[1] Source: The City of Ontario General Plan Table LU-7

The project may experience noise levels that fall within the normally unacceptable range (65-75 CNEL) for the residential part of the project and clearly acceptable (65-70 CNEL) for the retail part of the project. Hence, upgraded building construction techniques are expected to be required to achieve interior noise level standards for the residential uses.

Based on Section 5, the existing noise levels (CNEL) nearest the project site range from 60.6 CNEL to 62.5 CNEL. It should be noted that the existing noise levels were taken during typical weekday conditions and do not include noise levels during an event at the Toyota Arena event center, which may further increase noise levels (i.e., traffic) in the area. Therefore, in order to be conservative, the higher limit of the future traffic noise levels at the project site (70 dBA CNEL) has been utilized to conduct preliminary interior noise analysis.

A preliminary interior noise analysis has been prepared for the sensitive receptor locations using a typical "windows open" and "windows closed" condition. A "windows open" condition assumes 12 dBA of noise attenuation from the exterior noise level. A "windows closed" condition" assumes 20 dBA of noise attenuation from the exterior noise level.

Table 16 indicates the interior noise levels for the residential uses on the project site.

Table 16
Preliminary Interior Noise Impact Analysis

Receptor Location	Exterior Noise Level at Building Facade (CNEL)	Interior Noise Standard (CNEL)	Required Building Shell Noise Reduction (CNEL)	Interior Noise Level with Standard California Construction Windows (STC ≥ 25)		STC Rating for Windows Facing Subject Roadway
				"Windows Open" [1]	"Windows Closed" [2]	
Multifamily Residential	70	45.0	25	58	50	28

[1] A minimum of 12 dBA noise reduction is assumed with the "windows open" condition.
[2] A minimum of 20 dBA noise reduction is assumed with the "windows closed" condition.

The project is expected to require a "windows closed" condition and upgraded STC rated windows to meet the City/State interior noise standard of 45 dBA. To accommodate a windows closed conditions, all units shall be equipped with adequate fresh air ventilation, per the requirements of the California Uniform Building Code (UBC).

Prior to issuance of building permits, the project proponent should demonstrate to the City building department that the proposed building shell and window assemblies will achieve exterior to interior noise reduction necessary to meet the State of California and City of Ontario requirements.

Furthermore, the project shall comply with California Title 24 insulation building requirements for multi-family dwelling units for common separating assemblies (e.g. floor/ceiling assemblies and demising walls).

6.3 Los Angeles Ontario International Airport (LAONT)

The Los Angeles Ontario International Airport (LAONT) is centrally located in the City of Ontario. The airport is a medium-hub, full-service airport. Traffic at the airport includes general aviation, commercial passenger aviation, and air cargo freight movement. LAONT is a member of the Los Angeles World Airport (LAWA) system. LAWA is currently developing a Master Land Use Plan for LAONT that will provide a framework for the airport's development and use through the year 2030.

The LAONT is located approximately one and a quarter (1.25) miles to the northeast of the project site. A noise/land use compatibility assessment has been performed based on the project's location to the LAONT Airport. The noise contour maps for the LAONT Airport are provided in Exhibit D.

The project is located outside of the 60 dB Ldn noise contour limit; therefore, the exterior noise impact from the airport would be within the allowable limits for residential land uses and the project is considered compatible with the surrounding land use and noise environment. Noise from airport operations is expected to generate a less than significant on the proposed project.

6.4 Recommended Operational Design Features

The following recommended project design features include standard rules and requirements, best practices and recognized design guidelines for reducing noise levels. Design features are assumed to be part of the conditions of the project and integrated into its design. Design features are not typically considered mitigation under CEQA.

DF-1 Prior to the issuance of building permits, the project shall prepare a final acoustical study that demonstrates building construction will achieve the minimum interior noise standard of 45 dBA CNEL for all residential units located along arterial roadways and/or adjacent to industrial uses, per the California Building Standards Code. The following noise control measures may be required for dwelling units located near adjacent roadways and industrial uses:

- Install sound barriers between residences and noise sources.
- Install double-paned or similar sound rated windows.
- Provide sound insulating exterior walls and roofing systems.

- Locate and/or design attic vents to minimize sound propagation into each home.

- Provide forced-air ventilation systems.

- Place dwellings as far as practical from the noise source

DF-2 The project shall comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g. floor/ceiling assemblies and demising walls).

DF-3 For proper acoustical performance, all exterior windows, doors, and sliding glass doors should have a positive seal and leaks/cracks must be kept to a minimum.

DF-4 The final building plans shall ensure that HVAC units are not located within an area of the project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Ontario Municipal Code requirements. To meet the City's noise standards the following measures should be followed:

- All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses.

7.0 Construction Noise and Vibration Impacts

Temporary construction noise and vibration impacts have been assessed from the project site to the nearest sensitive residential use to the north of Lot F and Lot G. The degree of construction noise will vary depending on the type of construction activity taking place and the location of the activity relative to the surrounding properties.

Chapter 29: Noise, Section 5-29.06 of the City's municipal code states that the following activities shall be exempted from the provisions of the noise code;

- Noise sources associated with construction, repair, remodeling, demolition or grading of any real property. Such activities shall instead be subject to the following provisions of § 5-29.09;

    i. No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

    ii. No landowner, construction company owner, contractor, subcontractor, or employer shall permit or allow any person or persons working under their direction and control to operate any tool, equipment or machine in violation of the provisions of this section.

To help further assess potential construction noise level impacts under CEQA, the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment (2006) criteria is used as a referenced threshold of significance in this report. The FTA provides reasonable criteria for assessing construction noise impacts based on the potential for adverse community reaction. For residential uses, the daytime noise threshold is 80 dBA Leq for an 8-hour period. In compliance with the City's Municipal Code, it is assumed construction would not occur during the noise-sensitive nighttime hours.

7.1 Typical Construction Noise Levels

Table 17 shows typical construction noise levels compiled by the Environmental Protection Agency (EPA) for common type construction equipment. Typical construction noise levels

are used to estimate potential project construction noise levels at the adjacent sensitive receptors.

Table 17
Typical Construction Noise Levels[1]

Type	Noise Levels (dBA) at 50 Feet
Earth Moving	
Compactors (Rollers)	73 - 76
Front Loaders	73 - 84
Backhoes	73 - 92
Tractors	75 - 95
Scrapers, Graders	78 - 92
Pavers	85 - 87
Trucks	81 - 94
Materials Handling	
Concrete Mixers	72 - 87
Concrete Pumps	81 - 83
Cranes (Movable)	72 - 86
Cranes (Derrick)	85 - 87
Stationary	
Pumps	68 - 71
Generators	71 - 83
Compressors	75 - 86
Impact Equipment	
Pneumatic Wrenches	82 - 87
Jack Hammers, Rock Drills	80 - 99
Pile Drivers (Peak)	95-105
Other	
Vibrators	68 - 82
Saws	71 - 82

[1] Referenced Noise Levels from the Environmental Protection Agency (EPA)

7.2 Construction Noise Impact Analysis

This assessment analyzes potential noise impacts during all expected phases of construction, including; demolition, site preparation, grading, building construction, paving, and architectural coating. Construction phasing and equipment usage assumptions are referenced from:

- Toyota Arena Mixed Use Development AQ & GHG Impact Study, by RK Engineering Group, June 2021.

The project's estimated construction noise levels have been calculated using the Federal Highway Administration Roadway Construction Noise Model Version 1.1. Tables 18 show the noise level impacts to the nearest residential property lines to the north at 160 feet. Construction noise calculation worksheets are provided in Appendix D.

Table 18
Project Construction Noise Levels – Residential Uses to the North

Phase	Equipment	Quantity	Equipment Noise Level at 160ft (dBA Leq)	Combined Noise Level (dBA Leq)
Demolition	Concrete/Industrial Saw	1	72.5	76.3
	Excavator	3	66.6	
	Rubber Tired Dozer	2	67.6	
Site Preparation	Rubber Tired Dozers	3	67.6	77.5
	Tractors/Loaders/Backhoes	4	69.9	
Grading	Excavators	2	66.6	78.1
	Graders	1	70.9	
	Rubber Tired Dozers	1	67.6	
	Scrappers	2	69.5	
	Tractors/Loaders/Backhoes	2	69.9	
Building Construction	Cranes	1	62.5	76.2
	Forklifts	3	60.9	
	Generator Sets	1	67.5	
	Tractors/Loaders/Backhoes	3	69.9	
	Welders	1	59.9	
Paving	Cement and Mortar Mixer	2	64.7	71.8
	Pavers	2	64.1	
	Paving Equipment	2	62.9	
Architectural Coating	Air Compressors	1	63.6	63.6
Worst Case Construction Phase Noise Level - Leq (dBA)				78.1
FTA Construction Noise Criteria (Detailed Assessment: 8-Hour Leq)				80.0
Noise level exceeds FTA criteria?				No

As shown in Table 18, project construction noise levels are expected to be below the recommended 8-hour construction noise threshold provided by the FTA for adverse community reaction at the adjacent residential uses.

7.3 Construction Vibration

To determine the vibratory impacts during construction, reference construction equipment vibration levels were utilized and then extrapolated to the façade of the nearest adjacent structures. The nearest sensitive receptors are the commercial/retail structures located adjacent to the project site. All structures surrounding the project site are "new structures". No historical or fragile buildings are known to be located within the vicinity of the site.

The construction of the proposed project is not expected to require the use of substantial vibration inducing equipment or activities, such as pile drivers or blasting. The main sources of vibration impacts during construction of the project would be the operation of equipment such as bulldozer activity during demolition, loading trucks during grading and excavation, and vibratory rollers during paving.

The construction vibration assessment utilizes the referenced vibration levels and methodology set-forth within the Transit Noise and Vibration Impact Assessment Manual, Federal Transit Administration, September 2018.

Table 19 shows the referenced vibration levels.

Table 19
Typical Construction Vibration Levels[1]

Equipment	Peak Particle Velocity (PPV) (inches/second) at 25 feet	Approximate Vibration Level (LV) at 25 feet
Piledriver (impact)	1.518 (upper range)	112
	0.644 (typical)	104
Piledriver (sonic)	0.734 upper range	105
	0.170 typical	93
Clam shovel drop (slurry wall)	0.202	94
Hydromill	0.008 in soil	66
(slurry wall)	0.017 in rock	75
Vibratory Roller	0.210	94
Hoe Ram	0.089	87
Large bulldozer	0.089	87
Caisson drill	0.089	87
Loaded trucks	0.076	86
Jackhammer	0.035	79
Small bulldozer	0.003	58

[1] Transit Noise and Vibration Impact Assessment Manual, Federal Transit Administration, September 2018

Table 20 shows the project's construction-related vibration analysis at the nearest structures to the project construction area. Construction impacts are assessed from the closest area on the project site to the nearest adjacent structure at approximately 50 feet. The worst case vibratory impact from the site is estimated to be 0.098 PPV (in/sec) at the structures to the west. No damage potential is expected.

Table 20
Construction Vibration Impact Analysis

Construction Activity	Distance to Nearest Structure (ft)	Duration	Calculated Vibration Level - PPV (in/sec)	Damage Potential Level	Annoyance Criteria Level
Large Bulldozer	50	Continuous/Frequent	0.042	No Impacts	Distinctly Perceptible
Vibratory Roller	50	Continuous/Frequent	0.035	No Impacts	Barely Perceptible
Loaded Trucks	50	Continuous/Frequent	0.098	Extremely Fragile Buildings, Ruins Ancient Monuments	Distinctly Perceptible
Caisson Drilling	50	Continuous/Frequent	0.042	No Impacts	Distinctly Perceptible

As shown in Table 20, project related construction activity is not expected to cause any potential damage to the nearest structures. The annoyance potential of vibration from construction activities would range from "distinctly perceptible" to "Barely perceptible".

Construction vibration calculation worksheets are shown in Appendix D.

7.4 Recommended Construction Design Features

The following recommended project design features include standard rules and requirements, best practices and recognized design guidelines for reducing noise levels. Design features are assumed to be part of the conditions of the project and integrated into its design. Design features are not typically considered mitigation under CEQA

DF-7 Prepare a construction management plan and obtain a construction work permit from the City of Ontario prior to starting construction. The construction management plan shall ensure all contractors implement construction best management practices to reduce construction noise levels. Best management practices shall include the following:

- All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields).
- Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible.
- If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load.
- Use electric air compressors and similar power tools rather than diesel equipment, where feasible.
- Locate staging area, generators and stationary construction equipment as far from the adjacent residential homes as feasible.
- Construction-related equipment, including heavy-duty equipment, motor vehicles, and portable equipment, shall be turned off when not in use for more than 5 minutes.

- Provide notifications and signage in readily visible locations along the perimeter of construction sites that indicate the dates and duration of construction activities, as well as provide a telephone number where neighbors can enquire about the construction process and register complaints to a designated construction noise disturbance coordinator.

- Construction activities shall not take place between the hours of 6:00 p.m. and 7:00 a.m. on weekdays and Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

DF-8 No impact pile driving or blasting activities shall be permitted on the project site during construction. If impact pile driving or blasting is required, a follow-up noise and vibration impact assessment shall be conducted prior to start of any activity.

Sec. 5-29.01. Declaration of findings and policy.

It is hereby found and declared that:

(a) The making and creation of excessive, unnecessary or unusually loud noises within the limits of the City is a condition that has existed for some time, however, the extent and volume of such noises is increasing;

(b) The making, creation or maintenance of such excessive, unnecessary, unnatural or unusually loud noises that are prolonged, unusual and unnatural in their time, place and use affect and are a detriment to public health, comfort, convenience, safety, welfare and prosperity of the residents of the City; and

(c) The necessity in the public interest for the provisions and prohibitions hereinafter contained and enacted, is declared as a matter of legislative determination and public policy, and it is further declared

that the provisions and prohibitions hereinafter contained and enacted are in pursuance of and for the purpose of securing and promoting the public health, comfort, convenience, safety, welfare and prosperity and the peace and quiet of the residents of the City.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.02. Definitions.

As used in this chapter, specific words and phrases are defined as follows:

(a) "Ambient noise level" shall mean the all-encompassing noise level associated with a given environment and is a composite of sounds from all sources, excluding the alleged offensive noise or excessive sound, at the location and approximate time at which a comparison with the alleged offensive noise is to be made.

(b) "Applicable (noise) zone" shall mean the noise zone category based on the actual use of the property, provided that the actual use is a legal use in the City.

(c) "A-weighted sound level" shall mean the sound pressure level in decibels (dBAs) as measured with a sound level meter using the A-weighted filter network (scale) at slow response and at a pressure of twenty (20) micropascals. The A-weighted filter de-emphasizes the very low and a very high frequency component of sound in a manner similar to the response of the human ear, and is a numerical method of rating human judgment of loudness.

(d) "Decibel (dBA)" shall mean a unit for measuring the amplitude of a sound, equal to twenty (20) times the logarithm to the base ten (10) of the ratio of pressure of the sound measured to the reference pressure of twenty (20) micropascals.

(e) "Equivalent sound or noise level (Leq)" shall mean the International Electrotechnical Commission (IEC) 60804 Standard for measurement, or the most recent revision thereof, for the sound level corresponding to a steady state noise level over a given sample period with the same amount of acoustic energy as the actual time varying noise level or the energy average noise level during the sample period. The measurement period for the purposes of this chapter is fifteen (15) minutes.

(f) "Impulsive noise" shall mean a noise of short duration usually less than one (1) second and of high intensity, with an abrupt onset and rapid decay. Such objectionable noises may also be repetitive.

(g) "Intrusive noise" shall mean that noise that intrudes over and above the ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, time of occurrence and tonal information content, as well as the prevailing ambient noise level.

(h) "Maintenance" shall mean the upkeep, repair or preservation of existing property or structures.

(i) "Noise" shall mean any unwanted sound or sound that is undesirable because it interferes with speech and hearing, or is intense enough to damage hearing or is otherwise annoying.

(j) "Noise level (sound level)" shall mean the weighted sound pressure level obtained by use of a sound level meter having a standard frequency filter for attenuating part of the sound spectrum. For purposes of this chapter, all noise levels (sound levels) shall be A-weighted sound pressure level.

(k) "Noise (sound) level meter" shall mean an instrument, including a microphone, an amplifier, an output meter and frequency weighting networks for the measurement and determination of noise and sound levels. For the purposes of this chapter, the sound level meter must meet the International Electrotechnical Commission (IEC) 60651 and 60804 Standards, or the most recent revisions thereof, for Type 1 sound level meters or an instrument and the associated recording and analyzing equipment that will provide equivalent data.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.03. Designated noise zones.

The properties hereinafter described shall be assigned to the following noise zones:

Noise Zone I:	All single-family residential properties;
Noise Zone II:	All multi-family residential properties and mobile home parks;
Noise Zone III:	All commercial property;
Noise Zone IV:	The residential portion of mixed use properties;
Noise Zone V:	All manufacturing or industrial properties and all other uses.

The actual use of the property, and not necessarily its zoning designation, shall be the determining factor in establishing whether a property is in Noise Zone I, II, III, IV or V, provided that the actual use is a legal use within the applicable zone.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.04. Exterior noise standards.

(a) The following exterior noise standards, unless otherwise specifically indicated, shall apply to all properties within a designated noise zone.

Allowable Exterior Noise Level (1)		***Allowed Equivalent Noise Level, Leq. (2)***	
Noise Zone	***Type of Land Use***	***7 a.m. to 10 p.m.***	***10 p.m. to 7 a.m.***
I	Single-Family Residential	65 dBA	45 dBA
II	Multi-Family Residential, Mobile Home Parks	65 dBA	50 dBA
III	Commercial Property	65 dBA	60 dBA
IV	Residential Portion of Mixed Use	70 dBA	70 dBA
V	Manufacturing and Industrial, Other Uses	70 dBA	70 dBA

(1) If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard.

(2) Measurements for compliance are made on the affected property pursuant to § 5-29.15.

(b) It is unlawful for any person at any location within the incorporated area of the City to create noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which noise causes the noise level, when measured at any location on any other property, to exceed either of the following:

(1) The noise standard for the applicable zone for any fifteen-minute (15) period; and

(2) A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).

(c) In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.

(d) The Noise Zone IV standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.

(e) If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.05. Interior noise standards.

(a) The following interior noise standards, unless otherwise specifically indicated, shall apply to all properties within a designated noise zone.

Allowable Interior Noise Level (1)		**Allowed Equivalent Noise Level, Leq.** (2)	
Noise Zone	***Type of Land Use***	***7 a.m. to 10 p.m.***	***10 p.m. to 7 a.m.***
I	Single-Family Residential	45 dBA	40 dBA
II	Multi-Family Residential, Mobile Home Parks	45 dBA	40 dBA
IV	Residential Portion of Mixed Use	45 dBA	40 dBA

(1) If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard.

(2) Measurements for compliance are made on the affected property pursuant to § 5-29.15.

(b) It is unlawful for any person at any location within the incorporated area of the City to create noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which noise causes the noise level, when measured at any location on any other property, to exceed either of the following:

(1) The noise standard for the applicable zone for any fifteen-minute (15) period;

(2) A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).

(c) In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.

(d) The Noise Zone IV standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.

(e) If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.06. Exemptions.

The following activities shall be exempted from the provisions of this chapter:

(a) Any activity conducted on public property, or on private property with the consent of the owner, by any public entity or its officers, employees, representatives, agents, subcontractors, permittees, licensees or lessees that the public entity has authorized are exempt from the provisions of this chapter. This includes, without limitation, sporting and recreational activities that are sponsored, co-sponsored, permitted or allowed by the City or any school district within the City's jurisdictional boundaries. This also includes, without limitation, occasional outdoor gatherings, public dances, shows or sporting and entertainment events, provided such events are conducted pursuant to an approval, authorization, contract, lease, permit or sublease by the appropriate public entity, specifically the planning commission or City Council;

(b) Occasional outdoor gatherings, public dances, show, sporting and entertainment events, provided said events are conducted pursuant to a permit or license issued by the appropriate jurisdiction relative to the staging of said events;

(c) Any mechanical device, apparatus or equipment used, related to or connected with emergency machinery, vehicle, work or warning alarm or bell, provided the sounding of any bell or alarm on any building or motor vehicle shall terminate its operation within forty-five (45) minutes in any hour of its being activated;

(d) Noise sources associated with construction, repair, remodeling, demolition or grading of any real property. Such activities shall instead be subject to the provisions of § 5-29.09;

(e) Noise sources associated with construction, repair, remodeling, demolition or grading of public rights-of-way or during authorized seismic surveys;

(f) All mechanical devices, apparatus or equipment associated with agriculture operations provided that:

(1) Operations do not take place between 8:00 p.m. and 7:00 a.m.;

(2) Such operations and equipment are utilized for the protection or salvage of agricultural crops during periods of potential or actual frost damage or other adverse weather conditions; or

(3) Such operations and equipment are associated with agricultural pest control through pesticide application, provided the application is made in accordance with permits issued by or regulations enforced by the California Department of Agriculture;

(g) Noise sources associated with the maintenance of real property. Such activities shall instead be subject to the provisions of § 5-29.08;

(h) Any activity to the extent regulation thereof has been preempted by state or federal law;

(i) Any noise sources associated with people and/or music associated with a party at a residential property. Such noise shall be subject to the provisions of OMC § 5-29.07;

(j) Any noise source emanating from an ice cream truck within the City. Such noise shall be subject to the provisions of OMC § 4-18.04;

(k) Any noise sources associated with barking dogs or other intermittent noises made by animals on any properly within the City. Such noise shall be subject to the provisions of OMC Chapter 1, Title 6;

(l) Noise sources related to uses approved by a permit or development agreement adopted prior to the date of adoption of this chapter and that contains acoustic or noise standard conditions of approval. This exemption shall only be applicable during the effective period of the City-approved permit or development agreement.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.07. Loud and disturbing noise.

(a) It is unlawful for any person or property owner within the City to make, cause or allow to be made any loud, excessive, impulsive or intrusive noise, disturbance or commotion that disturbs the peace or quiet of any area or that causes discomfort or annoyance to any reasonable person of normal sensitivities in the area, after a Police or Code Enforcement Officer has first requested that the person or property owner cease and desist from making such noise. The types of loud, disturbing, excessive, impulsive or intrusive noise may include, but shall not be limited to, yelling, shouting, hooting, whistling, singing, playing a musical instrument, or emitting or transmitting any loud music or noise from any mechanical or electrical sound making or sound-amplifying device.

(b) The factors, standards, and conditions that may be considered in determining whether a violation of the provisions of this section has been committed, included, but not limited to, the following:

(1) The level of the noise;

(2) The level and intensity of the background (ambient) noise, if any;

(3) The proximity of the noise to residential or commercial sleeping areas;

(4) The nature and zoning of the area within which the noise emanates;

(5) The density of inhabitation of the area within which the noise emanates;

(6) The time of day and night the noise occurs;

(7) The duration of the noise;

(8) Whether the noise is constant, recurrent or intermittent;

(9) Whether the noise is produced by a commercial or noncommercial activity; and

(10) Whether the use is lawful under the provisions of Title 5 of this Code and whether the noise is one that could reasonably be expected from the activity or allowed use.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.08. Real property maintenance noise regulations.

(a) No person, while engaged in maintenance of real property, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, except between the hours of 8:00 a.m. and 6:00 p.m.

(b) Trimming or pruning that requires the use of chainsaws or mulching machines shall only be allowed between the hours of 8:00 a.m. and 6:00 p.m. on a weekday and between the hours of 9:00 a.m. and 5:00 p.m. on Saturday or Sunday.

(c) The use of electrical or gasoline powered blowers, such as commonly used by gardeners or other persons for cleaning lawns, yards, driveways, gutters and other property shall only be allowed between the hours of 8:00 a.m. and 6:00 p.m. on a weekday and between the hours of 9:00 a.m. and 5:00 p.m. on Saturday or Sunday.

(d) No landowner, gardener, property maintenance service, contractor, subcontractor or employer shall permit or allow any person or persons working under his or her direction or control to operate any tool, equipment or machine in violation of the provisions of this section.

(e) Exceptions. The provisions of this section shall not apply to the following:

(1) Emergency property maintenance required by the building official;

(2) The maintenance, repair or improvement of any public work or facility by public employees, by any person or persons acting pursuant to a public works contract, or by any person or persons performing such work or pursuant to the direction of, or on behalf of, any public agency; provided, however, this exception shall not apply to the City, or its employees, contractors or agents, unless:

(i) The City Manager or department head determines that the maintenance, repair or improvement is immediately necessary to maintain public service,

(ii) The maintenance, repair or improvement is of a nature that cannot feasibly be conducted during normal business hours, or

(iii) The City Council has approved project specifications, contract provisions, or an environmental document that specifically authorizes maintenance during hours of the day that would otherwise be prohibited pursuant to this section; and

(3) Any maintenance that complies with the noise limits specified in § 5-29.04.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.09. Construction activity noise regulations.

(a) No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

(b) No landowner, construction company owner, contractor, subcontractor, or employer shall permit or allow any person or persons working under their direction and control to operate any tool, equipment or machine in violation of the provisions of this section.

(c) Exceptions.

(1) The provisions of this section shall not apply to emergency construction work performed by a private party when authorized by the City Manager or his or her designee;

(2) The maintenance, repair or improvement of any public work or facility by public employees, by any person or persons acting pursuant to a public works contract, or by any person or persons performing such work or pursuant to the direction of, or on behalf of, any public agency; provided, however, this exception shall not apply to the City, or its employees, contractors or agents, unless:

(i) The City Manager or a department head determines that the maintenance, repair or improvement is immediately necessary to maintain public services,

(ii) The maintenance, repair or improvement is of a nature that cannot feasibly be conducted during normal business hours, or

(iii) The City Council has approved project specifications, contract provisions, or an environmental document that specifically authorizes construction during hours of the day that would otherwise be prohibited pursuant to this section; and

(3) Any construction that complies with the noise limits specified in §§ 5-29.04 or 5-29.05.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.10. Other public agency exceptions.

The provisions of this chapter shall not be construed to prohibit any work at different hours by or under the direction of any other public agency or public or private utility companies in cases of necessity or emergency.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.11. Schools, day care centers, churches, libraries, museums, health care institutions; Special provisions.

It is unlawful for any person to create any noise that causes the outdoor noise level at any school, day care center, hospital or similar health care institution, church, library or museum while the same is in use, to exceed the noise standards specified in § 5-29.04 prescribed for the assigned Noise Zone I.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.12. Sound amplifying equipment.

Loudspeakers, sound amplifiers, public address systems or similar devices used to amplify sounds shall be subject to the provisions of § 5-29.13. Such sound amplifying equipment shall not be construed to include electronic devices, including but not limited to, radios, tape players, tape recorders, compact disc players, MP3 players, electric keyboards, music synthesizers, record players or televisions, which are designed and operated for personal use, or used entirely within a building and are not designed or used to convey the human voice, music or any other sound to an audience outside such building, or which are used in vehicles and heard only by occupants of the vehicle in which installed.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.13. Amplified sound.

(a) The City Council enacts the following legislation for the sole purpose of securing and promoting the public health, comfort, safety and welfare for its citizenry. While recognizing that the use of sound amplifying equipment may be entitled to certain protection by the constitutional rights of freedom of speech and assembly, the City Council finds that in order to protect the public safety and the correlative rights of the citizens of this community to privacy and freedom from public nuisance of loud and unnecessary noise, reasonable regulation of the time, place and manner of the use of amplifying equipment is necessary. In no event shall approval or authorization required herein be withheld by reason of the constitutionally protected content of any material proposed to be broadcast through amplifying equipment.

(b) It is unlawful for any person, other than personnel of law enforcement or governmental agencies, to install, use or operate a loudspeaker or sound amplifying device in a fixed or movable position or mounted upon any vehicle within the City for the purpose of giving instructions, directions, talks, addresses or lectures to any persons or assemblages of persons in or upon any street, alley, sidewalk, park, place or public property without a permit to do so from the Police Chief or his or her designee. Notwithstanding any other provision of this chapter, the provisions of this section shall also apply to the use of sound amplifying equipment upon public or private property when used in connection with outdoor or indoor public or private events, whether or not admission is charged or food or beverages are sold, when such activity is to be attended by more than one hundred (100) persons and the noise emanating from the event will be audible at the property plane, or in the case of a street dance or concert on the nearest residential property. Those activities listed in § 5-29.06(a) are exempt from the requirements of this section.

(c) The Police Chief or his or her designee is authorized to approve and issue permits under this section.

(d) An application for a permit required by this section shall be filed with the Police Chief at least sixteen (16) days and no more than one hundred twenty (120) days prior to the date on which the sound amplifying equipment is intended to be used. Applications for events covered by the First Amendment of the United States Constitution are exempt from the time requirements of this section if it is shown that circumstances require a shorter filing period and the event will not constitute an unsafe condition. The application shall contain the following information:

(1) The name, address and telephone number of both the owner and the user of the sound amplifying equipment;

(2) The license number, if a sound truck is to be used;

(3) A general description of the sound amplifying equipment which is to be used;

(4) Whether sound amplifying equipment will be used for commercial or noncommercial purpose;

(5) The dates and times upon and within which, and the streets or property over or upon which, the equipment is proposed to be operated;

(6) The name or names of one (1) or more persons who will be present during the conduct of any activities for which registration is sought and who will have authority to reduce the volume of any sound amplifying equipment during the course of the activities if required pursuant to this chapter and, otherwise, to insure compliance with the provisions of this chapter;

(7) A statement by the applicant that he or she is willing and able to comply with the provisions of this chapter and the conditions of the permit; and

(8) A sketch of the area or facilities within which the activities are to be conducted, with approximate dimensions and illustration of the location and orientation of all sound-amplifying equipment.

(e) The Police Chief shall deny the permit application or revoke any permit if the chief finds any of the following:

(1) The application contains materially false or intentionally misleading information;

(2) The use of sound amplifying equipment at an event or activity proposed will be located in or upon a premises, building or structure that is hazardous to the health or safety of the employees or patrons of the premises, business, activity, or event, or the general public, under the standards established by the Uniform Building or Fire Codes, or other applicable codes, as set forth in OMC Titles 4 and 8;

(3) The use of sound amplifying equipment at an event or activity proposed in or upon a premises, building or structure that lacks adequate on-site parking for participants attending the proposed event or activity under the applicable standards set forth in OMC Title 9;

(4) The conditions of any motor vehicle movement are such that, in his or her opinion, the use of the equipment would constitute an unreasonable interference with traffic safety;

(5) The conditions of pedestrian movement are such that the use of the equipment would constitute a detriment to traffic safety;

(6) The application submitted by the applicant reveals that the applicant would violate the provisions of this section or any other provision of federal, state and/or local law;

(7) The applicant is unwilling or unable to comply with the provisions of this chapter or any conditions imposed upon any permit issued;

(8) There had already been a permitted event at the intended location, or within a two hundred (200) yard radius of the intended location and the prior permitted event was located on residentially zoned property or on a street, alley, public parking lot or neighborhood park within three (3) months prior to the intended event. Community parks are exempt from this subsection (8); or

(9) The applicant or location has had previous violations within the past calendar year, and in the judgment of the Police Chief, issuance would be contrary to the intent of this section.

(f) In determining whether the use of the equipment would constitute an unreasonable interference with or detriment to traffic safety, the Police Chief shall consider, but shall not necessarily be limited to:

(1) The volumes, patterns and speed of vehicular and pedestrian traffic in the proposed area of use;

(2) The relationship of the proposed use of equipment and potential impacts upon traffic patterns;

(3) Availability of sufficient room for the operation of the equipment without significantly interfering with the traffic patterns;

(4) Proximity to schools, playgrounds and similar facilities where use of such equipment might attract children into traffic patterns; or

(5) Proximity to busy intersections or other potentially hazardous conditions where use of such equipment might constitute a hazard by reason of its tendency to distract drivers of vehicles or pedestrians.

(g) Issuance or denial.

(1) If the application is approved, the Police Chief shall return an approved copy of the application to the applicant and shall issue a permit. The permit shall constitute permission for the use of the sound amplifying equipment as requested.

(2) Any application filed shall be either approved or disapproved within five (5) days of the filing thereof.

(3) If the application is disapproved, the Police Chief shall return a disapproved copy forthwith to the applicant with a written statement on the reason for disapproval.

(i) Any person aggrieved by a decision of the Police Chief or his or her designee may file an appeal to the City Manager. A complete and proper appeal shall be filed with the City Clerk within ten (10) calendar days of the action that is the subject of the appeal. If the applicant fails to file an appeal within the ten (10) day filing period provided herein, denial shall take effect immediately upon expiration of such filing period. All appeals shall be in writing and shall contain the following information: (a) name(s) of the person filing the appeal, (b) a brief statement in ordinary and concise language of the relief sought, and (c) the signatures of all parties named as appellants and their mailing addresses. After receiving the appeal, the City Clerk shall immediately forward the matter to the City Manager for handling.

(ii) The City Manager shall, upon receipt of the appeal, set the matter for hearing before the City Manager or a hearing officer. Any hearing officer shall be a licensed attorney or recognized mediator designated by the City Manager. The hearing shall be set for not more than ten (10) calendar days after the receipt of the appeal unless a longer time is requested or consented to by the appellant. Notice of such hearing shall be given in writing and mailed at least five (5) calendar days prior to the date of the hearing, by U.S. mail, with a proof of service attached, addressed to the address listed on the permit application, or the written appeal if different from the permit application. The notice shall state the grounds of the complaint or reason for the denial and shall state the time and place where such hearing will be held.

(iii) The City Manager or hearing officer shall, within ten (10) calendar days following the conclusion of the hearing, make a written finding and decision, which shall be delivered to the City and the appellant by first class mail. Notwithstanding any provision in this Code, the decision of the City Manager or hearing officer shall be the final administrative decision of the City. Any party dissatisfied with the decision of the City Manager or hearing officer may seek review of such decision under the provisions of Code Civil Procedure, §§ 1094.5 and 1094.8, as amended from time to time.

(h) In addition to any other provisions of this Code, the use of sound-amplifying equipment and sound trucks in the City shall be subject to the following regulations:

(1) The only sounds permitted are music and human speech;

(2) Sound shall not be emitted within one hundred (100) yards of hospitals, churches, schools and City Hall;

(3) The volume of sound shall be controlled so that it will not be audible for a distance in excess of one hundred (100) feet from the sound amplifying equipment or sound truck, and so that the volume is not unreasonably loud, raucous, jarring, disturbing or a nuisance to persons within the range of allowed audibility; or

(4) The sound amplifying equipment or sound truck shall not be used between the hours of 8:00 p.m. and 8:00 a.m.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.14. Motor vehicles.

The use of any motor vehicle in such a condition as to create excessive, impulsive or intrusive noises is prohibited. The discharge into the open air of the exhaust of any internal combustion engine, stationary or mounted on wheels, motorboat or motor vehicle, including motor cycle, whether or not discharged through a muffler or other similar device, which discharge creates excessive, unusual, impulsive or intrusive noise is prohibited. Motor vehicles shall comply with the noise regulations of the California Vehicle Code.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.15. Noise level measurement.

(a) The location selected for measuring exterior noise levels in a residential area shall be at any part of a private yard, patio, deck or balcony normally used for human activity and identified by the owner or, if occupied by someone other than the owner, the occupant of the affected property as suspected of exceeding the noise level standard. This location may be the closest point in the private yard or patio, or on the deck or balcony, to the noise source, but should not be located in nonhuman activity areas such as trash container storage areas, planter beds, above or contacting a property line fence, or other areas not normally used as part of the yard, patio, deck or balcony. The location selected for measuring exterior noise levels in a nonresidential area shall be at the closest point to the noise source. The measurement microphone height shall be five (5) feet above finish elevation or, in the case of a deck or balcony, the measurement microphone height shall be five (5) feet above the finished floor level.

(b) The location selected for measuring interior noise levels shall be made within the affected residential unit. The measurements shall be made at a point at least four (4) feet from the wall, ceiling or floor, or within the frame of a window opening, nearest the noise source. The measurements shall be made with windows in an open position.

(c) Any decibel measurement made pursuant to the provisions of this chapter shall be measured in decibels (dBAs) as measured with a sound level meter using the A-weighted sound pressure level.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.16. Prima facie violation.

Any noise exceeding the noise level standard as specified in §§ 5-29.04 and 5-29.05, shall be deemed to be prima facie evidence of a violation of the provisions of this chapter.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.17. Penalty.

(a) Any person who negligently or knowingly violates any provision of this chapter shall be guilty of an infraction and upon conviction shall be punishable by a fine specified in OMC § 1-2.01. Each day a violation occurs shall constitute a separate offense and shall be punishable as such.

(b) Any person who negligently or knowingly violates any provision of this chapter may also be subject to fine(s) specified in the administrative citation schedule of fines set forth in OMC § 1-5.04. The manner of issuing administrative citations shall comply with all the procedures specified in OMC Chapter 5, Title 1.

(c) As an additional remedy, the operation or maintenance of any device, instrument, vehicle or machinery in violation of any provisions of this chapter, which operation or maintenance causes or creates sound levels exceeding the allowable standards as specified in this chapter, shall be deemed and is declared to be a public nuisance and may be subject to abatement by a restraining order or injunction issued by a court of competent jurisdiction.

(d) Any violation of this chapter is declared to be a public nuisance and may be abated in accordance with law. The expense of enforcing this chapter is declared to be public nuisance and may be by resolution of the City Council declared to be a lien and special assessment against the property on which such nuisance is maintained, and any such charge shall also be a personal obligation of the property owner.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.18. Enforcement and administration.

(a) It shall be the responsibility of Police or Code Enforcement Officers to enforce the provisions of this chapter and to perform all other functions required by this chapter. Such duties shall include, but not be limited to investigating potential violations, issuing warning notices and citations, and providing evidence to the City prosecutor for legal action.

(b) For violations of § 5-29.07, Police or Code Enforcement Officers shall obtain a declaration under penalty of perjury from two (2) declarants living in separate households within a sixty (60) day period stating in detail all of the following:

(1) That the declarant is a resident of a residential neighborhood located within two hundred (200) yards of the noise source; and

(2) Within the past month declarant has heard noise for substantially long periods to the extreme annoyance of the declarant.

(3) Declarations from two (2) declarants are required to prove a violation of § 5-29.07, but are not required to prove that a person has violated any other provision of this chapter.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.19. City Manager waiver.

The City Manager is authorized to grant a temporary waiver to the provisions of this chapter for a period of time necessary to correct the violations of this chapter, if such temporary waiver would be in the public interest and there is no feasible and prudent alternative to the activity, or the method of conducting the activity, for which the temporary waiver is sought. This time period may include a commitment to a program that includes placing necessary orders and entering into necessary contracts within thirty (30) days for repair or installation.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.20. Noise abatement program.

(a) In circumstances where adopted community-wide noise standards and policies prove impractical in controlling noise generated from a specific source, the City Council may establish a noise abatement program that recognizes the characteristics of the noise source and affected property and that incorporates specialized mitigation measures.

(b) Noise abatement programs shall set forth in detail the approved terms, conditions and requirements for achieving maximum compliance with noise standards and policies. Said terms, conditions and requirements may include, but shall not be limited to, limitations, restrictions, or prohibitions on operating hours, location of operations, and the types of equipment.

(§ 2, Ord. 2888, eff. March 6, 2008)

NOISE LEVEL EXPOSURE AND LAND USE COMPATIBILITY GUIDELINES

Table LU-7

LAND USE CATEGORIES		COMMUNITY NOISE EQUIVALENT LEVEL (CNEL)						
Category	Land Use	55	60	65	70	75	80

	Golf Courses/ Riding Stables							
	Outdoor Spectator Sports							
	Outdoor Music Shells/ Amphitheaters							
	Livestock/Wildlife Preserves							
	Crop Agriculture							

LEGEND

Clearly Acceptable:	No special noise insulation required, assuming buildings of normal conventional construction.
Normally Acceptable:	Acoustical reports will be required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditioning will normally suffice.
Normally Unacceptable:	New construction should be discouraged. Noise/aviation easements required for all new construction. If new construction does proceed, a detailed analysis of noise reduction requirements must be made and necessary noise insulation features included.
Clearly Unacceptable:	No new construction should be permitted.

Note: For noise compatibility criteria and contours for Ontario International Airport refer to the adopted ALUCP for ONT.

1.0 Introduction

1.1 Purpose of Report and Study Objectives

The purpose of this energy conservation analysis is to review the energy implications of the proposed Toyota Arena Mixed-Use Development (project) and provide recommendations to reduce wasteful, inefficient and unnecessary consumption of energy during construction and operation. This analysis has been prepared within the context of the California Environmental Quality Act (CEQA, California Public Resources Code Sections 21000, et seq.).

CEQA Guidelines, Appendix F, Energy Conservation, describes the framework within which energy conservation should be analyzed. Conserving energy implies the wise and efficient use of energy through decreasing overall per capita energy consumption, decreasing reliance on fossil fuels (such as coal, natural gas and oil), and increasing reliance on renewable energy sources. This analysis considers energy impacts to include:

1. The project's energy requirements and its energy use efficiencies by amount and fuel type for each stage of the project including construction and operation.

2. The effects of the project on local and regional energy supplies and on requirements for additional capacity.

3. The effects of the project on peak and base period demands for electricity and other forms of energy.

4. The degree to which the project complies with existing energy standards.

5. The effects of the project on energy resources.

1.2 Site Location

The proposed project site is located adjacent to the Toyota Arena, north of Concourse Street and south of Fourth Street, in the City of Ontario.

The project site is located with Ontario Center Specific Plan and zoned for Urban Commercial within the Specific Plan. The City of Ontario General Plan land use map designates the project site as Mixed Use.

The project location map is provided in Exhibit A.

1.3 Project Description

The project consists of construction and operation of a mixed use town center development with residential and commercial/retail land use within four development lots.

The proposed project includes a total of 691 residential dwelling units, 71,200 square feet of commercial/retail uses and the demolition and relocation of approximately 1,170 surface parking spaces. The total project site area is approximately 18.73 acres.

The site plan used for this analysis, provided by the applicant, is illustrated in Exhibit B. Table 1 summarizes the land use assumptions used for this analysis.

Table 1
Land Use Summary

[2] Parking Structure

The site plan used in this analysis was provided by the applicant, and is illustrated in Exhibit B.

1.4 Utility Providers

The project will be served by the following utility providers, as shown in Table 2.

Table 2
Utility Providers

Utility	Provider
Electricity	Southern California Edison
Natural Gas	Southern California Gas Company
Water	Ontario Public Works & OMUC
Sewer	Ontario Public Works & OMUC
Telephone	Frontier Communications
Cable	Frontier Communications

1.5 Summary of CEQA Impacts

Table 3 provides a summary of the project's impact to Energy resources, per the impact criteria described in CEQA Guidelines, Appendix G.

Table 3
CEQA Energy Impact Criteria

Energy Impact Criteria	Potentially Significant	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			X	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			X	

1.6 Project Design Features

The following project design features are considered standard building code requirements and best practices that will be included in the project design to will help reduce energy consumption. Design features are not typically considered mitigation under CEQA.

Construction Design Features

DF-1 Establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

Operational Design Features

DF-2 Implement the GHG Reduction Measures from the Ontario County Climate Action Plan (CAP) Screening Tables to achieve at least 100 points, per the requirements for Mixed Use Projects.

DF-3 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

DF-4 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod, per CAL Green and City of Ontario requirements.

DF-5 Implement zero waste strategies, recycling and composting programs for residential and non-residential uses.

DF-6 Encourage residents and landscape maintenance crews to use electric landscaping equipment, such as lawn mowers and leaf blowers, wherever feasible.

DF-7 No natural gas or wood burning fireplaces shall be installed in any residential dwelling.

DF-8 Implement trip reduction measures that reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking. Such as;

1. Improve the walkability and design of the project by including pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e. sidewalks, crosswalks, foot paths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.).

2. Provide traffic calming measures (i.e. marked crosswalks, raised crosswalks, raised intersections, count-down signal timers, curb extensions, speed tables, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.)

3. Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

DF-9 Provide electric vehicle charging stations per the requirements of CALGreen.

2.0 Regulatory Setting

Energy is controlled through various federal and state laws and regulations. This section provides a brief overview of key energy legislation and policies at the federal and state levels over the past 50 years.

2.1 Federal Regulations

Table 4
U.S. Energy Policy Legislative Acts

Date	Legislative Act and Description
1975	**Energy Policy and Conservation Act** Established the Strategic Petroleum Reserve and mandated vehicle fuel economy standards
1978	**National Energy Act** Established tax incentives and disincentives, alternative fuel programs, energy efficiency initiatives, and other regulatory and market-based initiatives in response to the oil crisis earlier in the decade. Comprised of 5 statutes: **Energy Tax Act** Created the Gas Guzzler tax for vehicles with mileage below specified levels and offered income tax credit for citizens using solar, wind, or geothermal energy sources at home **Natural Gas Policy Act** Set up wellhead pricing maximums, rules for allocating costs of high-cost gas to industrial consumers, and provided authority to high priority users in times of supply emergency; gave FERC jurisdiction over almost all natural gas production **National Energy Conservation Policy Act** Replaced Minimum Energy Performance Standards (MEPS) set forth in the EPCA of 1975, changed energy standards from voluntary to mandatory, Required federal agencies to do energy audits of their operations, Provided loans for families to purchase solar heating or cooling systems, and Established grants for schools, hospitals, local governments, and public housing authorities willing to use energy conservation measures **Power Plant and Industrial Fuel Use Act** Restricted construction of power plants fueled primarily by oil or natural gas and instead encouraged power plants fueled by coal, nuclear, and alternative fuels and restricted use of oil and natural gas in industrial boilers. Repealed in 1987 with the Natural Gas Utilization Act **Public Utility Regulatory Policies Act** Promoted use of renewable energy, encouraged cogeneration plants.
1980	**Energy Security Act** Title I: US Synthetic Fuels Corporation Act Established the Synthetic Fuels Corporation (which only existed until 1985) for the purpose of partnering with industry for the creation of a market for domestically-produced synthetic liquid fuels; moved research and development for synthetic fuels away from the Department of Energy and into this public-private partnership with the hopes of speeding up results. Title II: Biomass Energy and Alcohol Fuels Act Provided loan guarantees for small-scale biomass energy projects; established the Office of Alcohol Fuels, the Office of Energy from Municipal Waste.

Table 4
U.S. Energy Policy Legislative Acts

Date	Legislative Act and Description
	Title III: Energy Targets Required the submission of energy targets for net imports. Title IV: Renewable Initiatives Established incentives for the use of renewable energy resources Title V: Solar Energy and Energy Conservation Encouraged energy conservation and the use of solar energy, reducing dependence on foreign energy supplies. Title VI: Geothermal Energy Act Authorized loans from the Geothermal Resources Development Fund for exploration and determination of economic viability of a geothermal reservoir, cancels loan if reservoir is deemed unacceptable for development. Title VII: Acid Precipitation Program Established a task force to study the causes and risks of acid precipitation Title VIII: Strategic Petroleum Reserve Established that 500,000,000 barrels of crude oil must be in storage before any can be sold and calls for the reserve to increase its supply 100,000 barrels per day until the storage capacity is reached
1992	**Energy Policy Act** Amended the National Energy Conservation Policy Act of 1978. Created framework for wholesale electricity generation. Provided financial incentives to users/developers of clean-fuel vehicles; repealed alternative minimum tax for some producers. Intended to expand the use of natural gas.
2002	**Farm Security and Rural Investment Act (Farm Bill)** Included $405 million in mandatory funding over the following 5 years for the procurement of bio-based products, grants and loans for renewable energy and energy efficiency projects, research and development and the bioenergy program. Included, for reasons of national energy and security, rural economic development, and environmental sustainability in light of climate change impacts.
2005	**Energy Policy Act** Offers tax benefits to individuals who increase energy efficiency in existing homes, buy or lease hybrid/alternative vehicles, required all public utilities to offer net metering on request, increased required amounts of renewable fuel in gasoline sold in the US, and encourages more domestic energy production
2007	**Energy Independence and Security Act** Increased CAFE standards to 35 mpg (fleet-wide for passenger autos and light trucks) by 2020; instituted new conservation measures for federal fleet vehicles; authorized increased taxpayer-funded biofuel production (36 billion gallons by 2022 - 21 billion of which must be derived from non-cornstarch products). Revised standards for appliances and lighting; all federal buildings must use Energy Star lighting products; training for green jobs; loans for small business energy efficiency improvements.
2008	**Food, Conservation, and Energy Act (Farm Bill)** Includes provisions for loan guarantees for bio-refineries, payments to support expansion of advanced biofuels, expands the existing Rural Energy for America Program, provides grant monies for biofuel and bio-based product research and development
2009	**The American Recovery and Reinvestment Act of 2009**

Table 4
U.S. Energy Policy Legislative Acts

Date	Legislative Act and Description
	$800 billion economic stimulus package aimed at job creation and the promotion of investment and consumer spending; included $4.3 billion in tax credits to homeowners for energy efficiency improvements in 2009-2010, $300 million for reducing diesel engine emissions, $21.5 billion for energy infrastructure, $27.2 billion for energy efficiency and renewable energy research and investment, $2 billion in research for DOE, $600 million in research for NOAA
2015	**The Clean Power Plan** The first comprehensive plan to reduce carbon emissions from power plants by 32% in 2030, compared to 2005 levels. The plan was repealed under the Trump Administration. The Biden Administration has recently said it will not try to resurrect the plan, but will instead be proposing a new rule aimed at limiting GHG emissions from power plants.

2.2 State of California Regulations

California has a long-standing history of support for energy conservation and renewable energy.

Table 5 provides a summary of some of the key legislative acts, policies and regulations in the State of California for encouraging energy conservation and renewable energy.

Table 5
California Energy Policy Legislative Acts and Regulations

Date	Legislative Act and Description
1974	**Warren-Alquist Act** Established the California Energy Commission (CEC) as the state's primary energy policy and planning agency. Responsible for preparing State Energy Plan. CEC's goals are to reduce energy costs and environmental impacts of energy use, while ensuring a safe, resilient, and reliable supply of energy.
1978	**Title 24 of the California Code of Regulations** Establishes the Renewable Portfolio Standard (RPS) program, requiring 20% of retail sales from renewable energy by 2017.
2002	**Senate Bill 1078** Required 20% of retail sales from renewable energy by 2017.
2003	**Energy Action Plan I** Accelerated the 20% renewable deadline to 2010.
2005	**Energy Action Plan II** Recommended further goal of 33% renewable by 2020.
2006	**Senate Bill 107** Codified the accelerated 20% renewable by 2010 deadline into law.
2008	**Executive Order S-14-08** Signed by Gov. Schwarzenegger, requires 33% renewables by 2020.
2009	**Executive Order S-21-09** Directs the California Air Resources Board, under its AB 32 authority, to adopt regulations by July 31, 2010, consistent with the 33% renewable energy target established in Executive Order S-14-08.
2011	**Senate Bill X1-2** Signed by Gov. Edmund G. Brown, Jr., codifies 33% renewable by 2020 RPS
2015	**Senate Bill 350 – Clean Energy and Pollution Reduction Act of 2015** Signed by Gov. Edmund G. Brown, Jr. codifies 50% by 2030 RPS
2018	**Senate Bill 100** Signed by Gov. Edmund G. Brown, Jr. codifies 60% by 2030 & 100% by 2045 RPS

3.0 Project Energy Consumption

3.1 Energy Consumption Methodology

The three (3) main types of energy expected to be consumed by the project include electricity, natural gas and petroleum products in the form of gasoline and diesel fuel. Energy usage for the proposed project is calculated based on the *CalEEMod* and *Toyota Arena Mixed Use Development Air Quality and Greenhouse Gas Analysis, prepared by RK Engineering Group, Inc., dated June 2021* (Air/GHG Study).

The California Emissions Estimator Model Version 2020.4.0 (CalEEMod) is used to calculate energy usage from project construction and operational activities.

The CalEEMod Annual Reports for the project are provided in Appendix A.

3.2 Electricity Consumption

The project will use electricity for many different operational activities including, but not limited to, building heating and cooling, lighting, appliances, electronics, mechanical equipment, electric vehicle charging, and parking lot lighting. Indirect electricity usage will also be required to supply, distribute, and treat water and wastewater. Electricity will be provided to the site by Southern California Edison.

Temporary electricity usage for construction activities may include lighting, electric equipment and mobile office uses, however, CalEEMod does not calculate electricity usage during construction. Electricity usage during construction is expected to be short-term and relatively minor compared to the operational demand, and therefore electricity usage during construction is not counted in this analysis.

Table 6 shows the project's estimated operational electricity consumption in kilowatt-hours per year (kWh/year) and millions of Btu per year.

Table 6
Project Electricity Consumption

Land Use/Activity	Electricity Consumption[1]	
	(kWhr/yr)[2]	(MBtu/yr)[2]
Apartments Mid Rise	2,736,370.00	9,336.49
Enclosed Parking with Elevator	1,999,740.00	6,823.11
Parking Lot	163,800.00	558.89
Regional Shopping Center	864,368.00	2,949.22
Water Supply and Treatment	1,066,561.70	3,639.11
Total	6,830,839.70	23,306.83

[1] Source: CalEEMod Defaults. Refer Appendix A

[2] kWhr/yr = Kilowatt Hours per Year
MBtu/yr = Million British Thermal Units per Year

3.3 Natural Gas Consumption

The project will use natural gas for such things as building heating and cooling, cooking, kitchen appliances, and gas water heaters. Natural gas is not expected to be used during construction in any significant quantities and is not included in the overall calculation of the project's natural gas consumption.

Table 7 shows the project's estimated operational natural gas consumption in millions of Btu per year.

Table 7
Project Natural Gas Consumption

Land Use/Activity	Natural Gas Consumption[1] (MBtu/yr)[2]
Apartments Mid Rise	9,938.08
Regional Shopping Center	156.64
Total	10,094.72

[1] Source: CalEEMod Defaults. Refer Appendix A

[2] MBtu/yr = Millions of British Thermal Units per Year

3.4 Petroleum Consumption

The project's energy consumption from petroleum products is primarily associated with transportation related activities. This includes gasoline and diesel fuel usage for auto and truck trips during construction and operation and off-road equipment usage during construction.

3.4.1 Petroleum Consumption - Construction

Construction of the project is estimated to last approximately 21 months and consist of demolition, site preparation, grading, building construction, paving, and architectural coating phases. Construction activities will consume energy in the form of motor vehicle fuel (gasoline and diesel) for off-road construction equipment and on-road vehicle trips. Vehicle trips include workers and vendors traveling to and from the job-site.

Table 8 shows the project's energy consumption for all off-road equipment during construction. For purposes of this analysis, all off-road equipment is assumed to run on diesel fuel. Table 9 shows the project's energy consumption from on-road vehicle trips during construction.

TABLE 8

3.4.2 Petroleum Consumption - Operation

The project is expected to consume energy from auto and truck trips generated by the proposed land uses, as described in the Toyota Arena Mixed Use Development Traffic Impact Study Scoping Agreement, by RK, May 2021 and the Toyota Arena Mixed Use Development Air Quality and Greenhouse Gas Impact Study, prepared by RK Engineering Group, Inc., dated June 2021. Operational vehicle trips are associated with workers, customers and vendors/non-workers (i.e., delivery, service, maintenance vehicles, etc.) traveling to and from the site.

Table 10 shows the project's petroleum energy consumption for all operational trips generated by the project on an annual basis.

Table 10

3.5 Summary of Project Energy Consumption

Table 11 provides a summary of the project's annual operational energy consumption.

Table 11
Annual Energy Consumption

Activity	Energy Consumption (MBtu/yr)[1]
Total Annual Operational Energy Consumption	**80,509.21**
Electricity	23,306.83
Natural Gas	10,094.72
Petroleum	47,107.67

[1] MBtu/yr = Millions of Btu per year. Operational activities only.

4.0 Energy Impacts

4.1 Energy Impact Criteria

This analysis has been prepared within the context of the CEQA Guidelines, Appendix F, Energy Conservation, and Appendix G, Environmental Checklist Form. According to CEQA, the goal of conserving energy implies the wise and efficient use of energy through decreasing overall per capita energy consumption, decreasing reliance on fossil fuels (such as coal, natural gas and oil), and increasing reliance on renewable energy sources.

A significant environmental impact would result if the project would;

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation, or;

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

4.2 Energy Impact – 1

Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

The project's impact is considered less than significant with the inclusion of the mandatory requirements of California's Building Energy Efficiency Standards (Title 24, Part 6) and Green Building Standards (CALGreen, Title 24, Part 11). California's building energy efficiency standards are some of the strictest in the nation and the project's compliance with California's building code will ensure that wasteful, inefficient or unnecessary consumption of energy is minimized. The building standards code is designed to reduce the amount of energy needed to heat or cool a building, reduce energy usage for lighting and appliances.

The following recommended design features are provided to reduce wasteful, inefficient and unnecessary consumption of energy. Design features are consistent with the recommended design features provided with Air/GHG study.

Construction Design Features

DF-1 Establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

Operational Design Features

DF-2 Implement the GHG Reduction Measures from the Ontario County Climate Action Plan (CAP) Screening Tables to achieve at least 100 points, per the requirements for Mixed Use Projects.

DF-3 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

DF-4 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod, per CAL Green and City of Ontario requirements.

DF-5 Implement zero waste strategies, recycling and composting programs for residential and non-residential uses.

DF-6 Encourage residents and landscape maintenance crews to use electric landscaping equipment, such as lawn mowers and leaf blowers, wherever feasible.

DF-7 No natural gas or wood burning fireplaces shall be installed in any residential dwelling.

DF-8 Implement trip reduction measures that reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking. Such as;

1. Improve the walkability and design of the project by including pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e. sidewalks, crosswalks, foot paths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.).

2. Provide traffic calming measures (i.e. marked crosswalks, raised crosswalks, raised intersections, count-down signal timers, curb extensions, speed tables, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.)

3. Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

DF-9 Provide electric vehicle charging stations per the requirements of CALGreen.

4.3 Energy Impact – 2

Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

The project's impact is considered less than significant as the project will purchase electricity through Southern California Edison which is subject to the requirements of California Senate Bill 100 (SB 100). SB 100 is the most stringent and current energy legislation in California; requiring that renewable energy resources and zero-carbon resources supply 100% of retail sales of electricity to California end-use customers and 100% of electricity procured to serve all state agencies by December 31, 2045.[1]

The project will further comply with the mandatory requirements of California's Green Building and Building Energy Efficiency standards that promote renewable energy and energy efficiency.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - The proposed project consists of a mixed-use town center development with 691 multifamily DU and 71,200 square feet of commercial/retail land uses on approximately 18.73 acres.

Construction Phase - The project's architectural coating phase will be extended to 75 days.

Demolition - The project is proposing to demolish approximetely 326,026 square feet of surface asphalt parking lot.

Vehicle Trips - The trip generation rates have been updated to reflect Toyota Arena TIA Scoping Agreement, by RK, May 25, 2021 and Traffic Impact Study and SANBAG VMT Model.

Fleet Mix - Operational fleet mix adjusted to equal 2% trucks with GVWR > 10,000 lbs.

Woodstoves - SCAQMD Rule 445 restricts wood burning hearths/fireplaces from being installed in new development.

Construction Off-road Equipment Mitigation - Project will be required to comply with SCAQMD Rule 403 regarding fugitive dust control.

Toyota Arena Mixed Use Development - San Bernardino-South Coast County, Annual

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Water Unpaved Roads

Reduce Vehicle Speed on Unpaved Roads

Toyota Arena Mixed Use Development - San Bernardino-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

APPENDIX E
OTHER CEQA TOPICS/ENVIRONMENTAL ANALYSIS CHECKLIST

UPDATES TO THE CEQA GUIDELINES

The State of California adopted revisions to the CEQA Guidelines which became effective on January 1, 2019. Pursuant to CEQA Guidelines Sections 15007(d), the City of Ontario must comply with the new Guidelines 120 days after they become effective, which in this case is May 1, 2019. City staff have provided the following supplemental discussion of CEQA Guidelines Appendix G topics where appropriate. Additionally, this section includes a discussion of the CEQA Environmental Checklist.

ENVIRONMENTAL ANALYSIS CHECKLIST

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
1. AESTHETICS. Would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	☐	☐	☐	☒
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☐	☒
2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	☐	☒	☐	☐
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	☐	☐	☒	☐
d) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
e) Create objectionable odors affecting a substantial number of people?	☐	☐	☐	☒
4. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
5. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☐	☐	☐	☒
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☐	☒
d) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☐	☒
6. GEOLOGY AND SOILS. Would the project:				
a) Result in potentially significant environmental impact due to the wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation:	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficient:	☐	☐	☒	☐
7. GEOLOGY AND SOILS. Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii. Strong seismic ground shaking?	☐	☐	☐	☒
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv. Landslides?	☐	☐	☒	☐
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☐	☐	☒
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
8. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases?	☐	☐	☒	☐
9. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e) For a project located within the safety zone of the airport land use compatibility plan for ONT or Chino Airports, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	☐	☐	☐	☒
10. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any other water quality standards or waste discharge requirements or potential for discharge of storm water pollutants from areas of material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?	☐	☒	☐	☐
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	☐	☐	☐	☒

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site or volume of storm water runoff to cause environmental harm or potential for significant increase in erosion of the project site or surrounding areas?	☐	☐	☐	☒
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site or potential for significant changes in the flow velocity or volume of storm water runoff to cause environmental harm?	☐	☐	☐	☒
e) Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff during construction and/or post- construction activity?	☐	☐	☐	☒
f) Otherwise substantially degrade water quality or potential for discharge of storm water to affect the beneficial uses of receiving water?	☐	☒	☐	☐
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	☐	☐	☐	☒
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	☐	☐	☐	☒
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☐	☒
j) Expose people or structures to inundation by seiche, tsunami, or mudflow?	☐	☐	☐	☒
11. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, airport land use compatibility plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	☐	☐	☐	☒
12. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally- important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
13. NOISE. Would the project result in:				
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☐	☒
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☐	☒
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☐	☒
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☒	☐
e) For a project located within the noise impact zones of the airport land use compatibility plan for ONT and Chino Airports, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
14. POPULATION AND HOUSING. Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?	☐	☐	☐	☒
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
15. PUBLIC SERVICES. Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i. Fire protection?	☐	☒	☐	☐
ii. Police protection?	☐	☒	☐	☐
iii. Schools?	☐	☒	☐	☐
iv. Parks?	☐	☒	☐	☐
v. Other public facilities?	☐	☐	☐	☒

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
16. RECREATION. Would the project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which have an adverse physical effect on the environment?	☐	☐	☐	☒
17. TRANSPORTATION/TRAFFIC. Would the project:				
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	☐	☐	☒	☐
b) Conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	☐	☐	☐	☒
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☐	☒
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☒
e) Result in inadequate emergency access?	☐	☐	☐	☒
18. TRIBAL CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a Tribal Cultural Resource as defined in Public Resources Code Section 21074?	☐	☐	☐	☒
19. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	☐	☐	☐	☒
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☐	☒
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☐	☒
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed? In making this determination, the City shall consider whether the project is	☐	☒	☐	☐

Issues	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
subject to the water supply assessment requirements of Water Code Section 10910, et seq. (SB 610), and the requirements of Government Code Section 664737 (SB 221).				
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☒	☐	☐
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	☐	☒	☐	☐
g) Comply with federal, state, and local statutes and regulations related to solid waste?	☐	☐	☐	☒
20. WILDFIRE. Would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d) Expose people or structures to significant risks, including downslope, or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒
21. MANDATORY FINDINGS OF SIGNIFICANCE.				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?	☐	☐	☐	☒
c) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)	☐	☐	☒	☐
d) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

EXPLANATION OF THRESHOLDS

1. AESTHETICS

Would the project:

a) Have a substantial adverse effect on a scenic vista?

Discussion of Effects: The Policy Plan (General Plan) does not identify scenic vistas within the City. However, the Policy Plan (Policy CD1-5) requires all major north-south streets to be designed and redeveloped to feature views of the San Gabriel Mountains located to the east. The Project site is located south of Fourth Street, north of Concours Street, between Haven Avenue and Milliken Avenue, and less than one-quarter mile north of Interstate 10 (I-10); refer to Figure 1. The Project site is not located in a major north-south arterial street as identified in the Functional Roadway Classification Plan (Figure M-2) of the Mobility Element within the General Plan.

Additionally, implementation of the proposed Project would result in development of commercial/retail and residential uses that are similar in scale, character, and intensity to those envisioned under the adopted OCSP and assessed in the Certified EIR. On this basis, the Project is not anticipated to result in different or greater aesthetic impacts than those identified in the Certified EIR. Therefore, no adverse impacts are anticipated in relation to the Project.

Mitigation: None required.

b) Substantially damage scenic resources, including, but not limited to, tress, rock outcroppings and historic buildings within a state scenic highway?

Discussion of Effects: The City of Ontario is served by three freeways: I-10, I-15, and SR-60. I-10 and SR-60 traverse the northern and central portion of the City, respectively, in an east–west direction. I-15 traverses the northeastern portion of the City in a north–south direction. These segments of I-10, I-15, and SR-60 have not been officially designated as scenic highways by the California Department of Transportation. In addition, there are no historic buildings, or any scenic resources identified on or in the vicinity of the Project site. Therefore, it would not result in adverse environmental impacts.

Mitigation: None required.

c) Substantially degrade the existing visual character or quality of the site and its surroundings?

Discussion of Effects: The proposed Project would not degrade the existing visual character or quality of the site or its surroundings. The Project site is located in an area that is characterized by a mix of commercial, entertainment retail, office, and high-density residential land uses, and is surrounded by commercial and office land uses.

The proposed Project would substantially improve the visual quality of the area through development of the site with a mix of commercial, entertainment retail, office, and high-density residential land uses, which would be consistent with the policies of the Community Design Element of the Policy Plan (General Plan) and zoning designations on the property, as well as with the commercial and office development in the surrounding area. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

d) Create a new source of substantial light or glare that would adversely affect day or nighttime views in the area?

Discussion of Effects: New lighting would be introduced to the site with the development of the proposed Project. Pursuant to the requirements of the City's Development Code, Project on-site lighting would be shielded, diffused or indirect, to avoid glare to pedestrians or motorists. In addition, lighting fixtures would be selected and located to confine the area of illumination to within the Project site and minimize light spillage.

Site lighting plans would be subject to review by the Planning Department and Police Department prior to issuance of building permits (pursuant to the City's Building Security Ordinance). Therefore, no adverse impacts are anticipated.

Mitigation: None required.

2. AGRICULTURE AND FOREST RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Discussion of Effects: The site is presently vacant and does not contain any agricultural uses. Further, the site is identified as "Other Land" and "Urban and Built-Up Land" on the map prepared by the California Resources Agency, pursuant to the Farmland Mapping and Monitoring Program. The "Other Land" consists of vacant and nonagricultural land that is greater than 40 acres in area and is surrounded on all sides by urban development. As a result, no adverse environmental impacts are anticipated.

Mitigation: None required.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Discussion of Effects: The Project site is not zoned for agricultural use. The project site is zoned SP (Specific Plan) and is located within the Urban Commercial land use district and the Piemonte Overlay district of the OCSP, which is intended for development with a mix of commercial, entertainment retail, office, and high density residential land uses. The proposed Project is consistent with the development standards and allowed land uses of the proposed land use district. Furthermore, there is no Williamson Act contract in effect on the subject site. Therefore, no impacts to agricultural uses are anticipated, nor would there be any conflict with existing or Williamson Act contracts.

Mitigation: None required.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?

Discussion of Effects: The proposed Project is intended for development with a mix of commercial, entertainment retail, office, and high-density residential land uses. The proposed Project is consistent with the Land Use Element (Figure LU-6) of the Policy Plan (General Plan) and the development standards and allowed land uses of the Urban Commercial land use district and the Piemonte Overlay district of the OCSP. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

Discussion of Effects: There is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code section 12220(g). Neither The Ontario Plan nor the City's Zoning Code provide designations for forest land. Consequently, the proposed Project would not result in the loss or conversion of forest land.

Mitigation: None required.

e) Involve other changes in the existing environment, which, due to their location or nature, could individually or cumulatively result in loss of Farmland to non-agricultural use or conversion of forest land to non-forest use?

Discussion of Effects: The proposed Project site is not designated as Farmland is currently zoned Specific Plan, and is located within the Urban Commercial land use district and the Piemonte Overlay district of the OCSP, which is intended for development with a mix of commercial, entertainment retail, office, and high-density residential land uses. The proposed Project site is currently partly vacant, but previously graded, on the northern portion of the site and fully developed with parking areas currently utilized for the Toyota Arena. There are no agricultural uses occurring onsite. As a result, to the extent that the Project would result in changes to the existing environment those changes would not result in loss of Farmland to non-agricultural use.

Additionally, there is currently no land in the City of Ontario that qualifies as forest land as defined in Public Resources Code Section 12220(g). Neither The Ontario Plan nor the City's Zoning Code provide designations for forest land. Consequently, to the extent that the proposed Project would result in changes to the existing environment, those changes would not impact forest land.

Mitigation Required: None required.

3. AIR QUALITY

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

a) Conflict with or obstruct implementation of the applicable air quality plan?

Discussion of Effects: The Project would not conflict with or obstruct implementation of any air quality plan. As noted in The Ontario Plan FEIR (Section 5.3), pollutant levels in the Ontario area already exceed Federal and State standards. To reduce pollutant levels, the City of Ontario is actively participating in

efforts to enhance air quality by implementing Control Measures in the Air Quality Management Plan for local jurisdictions within the South Coast Air Basin.

The proposed Project is consistent with The Ontario Plan, for which the EIR was prepared and impacts evaluated. Furthermore, the Project is consistent with the City's participation in the Air Quality Management Plan (AQMP).

Additionally, implementation of the Project would result in the construction of commercial/retail and residential uses in a much lower scope and character to those assessed in the Certified EIR. As such, construction-related air pollutant emissions would be lower to than those considered in the Certified EIR. Further, shown in Table 3-7, the proposed Project would not exceed any construction emission thresholds. Additionally, as discussed in the Addendum, a reduction in total average daily traffic generation is anticipated under the Project. As a result, reductions in vehicle pollutant emissions are anticipated. Based on the preceding discussion, the proposed Project would not result in different or greater air quality impacts than those identified in the Certified EIR. Please refer also to Addendum Section 3.5.3, "Air Quality." A less than significant impact would occur.

Mitigation: None required.

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Discussion of Effects: Short term air quality impacts will result from construction related activities associated with construction activity, such as excavation and grading, machinery and equipment emissions, vehicle emissions from construction employees, etc. The daily emissions of nitrogen oxides and particulates from resulting grading and vehicular emissions may exceed threshold levels of the South SCAQMD.

The Project must follow mandatory SCAQMD rules and requirements with regards to fugitive dust control, as described in Section 6.1.3 of the SCAQMD rules. Compliance with the standard dust control measures is considered to be part of the conditions of approval for the Project and built into the design features. Table 3-7, shows that, the Project's daily construction emissions would be below the applicable SCAQMD air quality standards and thresholds of significance. As a result, the Project would not contribute substantially to an existing or projected air quality violation. As noted in Table 1-1, the Certified EIR include a set of mitigation measures that are applicable to the proposed Project.

Mitigation: Air Quality

MM-AQ-1 Regular watering, paving construction roads, or other dust control measures defined in SCAQMD Rule 403 will occur during construction.

MM-AQ-2 Construction equipment will be maintained in proper tune to minimize the volume of equipment exhaust emissions.

MM-AQ-3 Comprehensive ridesharing incentive program will be developed as part of a Transportation System Management.

MM-AQ-4 Orientation of Project for transit convenience and accessibility will occur in design phase; provision of easy pedestrian access will occur in design phase; provision of bus shelters, benches and bus pockets on streets.

MM-AQ-5 Provision of traffic flow improvements will occur as buildout of project occurs.

MM-AQ-6 Inclusion of solar and other energy-saving devices in residences and businesses including:

- delamping
- increased building insulation
- heating/ventilation/air conditioning improvements
- solar heaters
- utilization of landscape features to shade buildings

MM-AQ-7 Construction activities should avoid high ozone days and discontinue construction during second stage alerts. After grading, seed and water until vegetation cover is established.

MM-AQ-8 Wet area down, sufficient enough to form a crust on the surface with repeated soakings, as necessary, to maintain the crust and prevent dust pickup by the wind.

MM-AQ-9 Use water trucks or sprinkler systems to keep all areas where vehicles move damp enough to prevent dust from being raised beyond site operations. Wet construction areas down in the late morning and after work is completed in the day.

MM-AQ-10 Use low sulfur fuel for construction equipment (0.5 percent by weight).

As noted in the Certified EIR, a less than significant impact will occur with implementation of the applicable mitigation measures.

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions that exceed quantitative thresholds for ozone precursors)?

Discussion of Effects: The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the region is in non-attainment under an applicable federal or state ambient air quality because of the limited size and scope of the project. Although no impacts are anticipated, the Project would still comply with the air quality standards of the TOP FEIR and the SCAQMD resulting in impacts that are less than significant [please refer also to Addendum Section 3.5.3, "Air Quality."] A less than significant impact would occur.

Mitigation: None required.

d) Expose sensitive receptors to substantial pollutant concentrations?

Discussion of Effects: Sensitive receptors are defined as populations that are more susceptible to the effects of pollution than the population at large. The SCAQMD identifies the following as sensitive receptors: long-term health care facilities, rehabilitation centers, convalescent centers, retirement homes, residences, schools, playgrounds, childcare centers, and athletic facilities. According to the SCAQMD, projects have the potential to create significant impacts if they are located within one-quarter mile of sensitive receptors and would emit toxic air contaminants identified in SCAQMD Rule 1401.

Given the close proximity of the project to nearest sensitive receptors (residential homes to the north), several measures are provided to help ensure the potential health risk associated with Diesel Particulate Matter (DPM) during construction is reduced to the maximum extent feasible. This includes a requirement for Tier 4 engines on all diesel-powered construction equipment. Tier 4 engines, along with the latest

national fuel standards, have been shown to yield PM reductions of over 95 percent from the typical Tier 2 and Tier 3 engines[8].

It is presumed that with the recommended design features and Tier 4 engines in place that the potential short term construction health risks would be adequately reduced to be less than significant. Design features DF-3 through DF-9 are recommended to help ensure the Project does not expose receptors to substantial pollution concentrations during construction. However, these are not considered mitigation measures. A less than significant impact would occur.

Mitigation: None required.

e) Create objectionable odors affecting a substantial number of people?

Discussion of Effects: The uses proposed on the subject site, as well as those permitted within the Urban Commercial land use district and the OCSP, do not create objectionable odors. Further, the Project shall comply with the policies of the Ontario Municipal Code and the General Plan. Additionally, as noted in the Air Quality and Greenhouse Gas Analysis, the Project's operations would result in less than significant odor impacts. Therefore, no adverse impacts are anticipated.

4. BIOLOGICAL RESOURCES

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Discussion of Effects: The site is located within an area that has historically been found to contain Delhi Soils, which is potential habitat for the Delhi Sand Flower-loving Fly (DSF), a federally listed endangered species. However, as a result of previous development, grading, and land uses on the Project site, including construction and operation of the Ontario Motor Speedway (razed in 1981), and more recently, construction activity associated with the phased development of approximately 1.3 million square feet of retail, office, hotel, and entertainment uses, and 800 multiple-family dwelling units, including mass grading of the entire Project area, the installation of public utilities, and the construction of street improvements, have left the Project site in an extremely disturbed state. This determination is supported by previous environmental reports addressing the Project site, including Ontario International Centre EIR 80-3 (SCH No. 80062538), Certified EIR 88-2 (SCH No. 89041009), and the POCA, all of which have found the Project site to be in an extremely disturbed state, with no native soils or native vegetation on the site. The Project site has not been designated as a planned recovery zone for the DSF, and in its current condition, does not provide suitable habitat. No impact would occur.

Mitigation: None required.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife, or U.S. Fish and Wildlife Service?

[8] EPA. Control of Emissions of Air Pollution from Nonroad Diesel Engines and Fuel; Final Rule. (40 CFR Parts 9, 69, et al.)

Discussion of Effects: The Project site does not contain any riparian habitat or other sensitive natural community identified by the California Department of Fish & Wildlife, or U.S. Fish & Wildlife Service. Therefore, no adverse environmental impacts are anticipated.

Mitigation: None required.

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Discussion of Effects: No wetland habitat is present on site. Therefore, Project implementation would have no impact on these resources.

Mitigation: None required.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Discussion of Effects: The Project site is a mixed vacant and fully developed property that is bounded on all four sides by development. As a result, there are no wildlife corridors connecting this site to other areas. Therefore, no adverse environmental impacts are anticipated.

Mitigation: None required.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Discussion of Effects: The City of Ontario does not have any ordinances protecting biological resources. Further, the site does not contain any mature trees necessitating the need for preservation. As a result, no adverse environmental impacts are anticipated.

Mitigation: None required.

f) Conflict with the provisions of an adopted Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or other approved local, regional, or state habitat conservation plan?

Discussion of Effects: The site is not part of an adopted HCP, NCCP or other approved habitat conservation plan. As a result, no adverse environmental impacts are anticipated.

Mitigation: None required.

5. CULTURAL RESOURCES

Would the project:

a) Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?

Discussion of Effects: The Project site does not contain any buildings, structures, or objects. Additionally, as part of the Project site development during the OCSP, CECA, POCA, POOSCP, the Project site has been previously disturbed and fully graded. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Discussion of Effects: The Ontario Plan FEIR (Section 5.5) indicates no archeological sites or resources have been recorded in the City with the Archeological Information Center at San Bernardino. As noted above, because the site has been previously fully disturbed and graded and no historical structures existing on-site, no adverse change in significance or an archaeological resource is anticipated.

Mitigation: None required.

c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Discussion of Effects: As described in the Certified EIR, cultural resources were not anticipated to be affected by the OCSP. As previously noted, the Project site has been previously graded. As such, the proposed Project would not affect areas or resources not previously considered in the Certified EIR. No additional or different impacts have been identified based on the Project

Mitigation: None required.

d) Disturb any human remains, including those interred outside of formal cemeteries?

Discussion of Effects: The proposed Project is in an area that has been previously disturbed by development. No known religious or sacred sites exist within the Project area. Thus, human remains are not expected to be encountered during any construction activities. However, in the unlikely event that human remains are discovered, existing regulations, including the California Public Resources Code Section 5097.98, would afford protection for human remains discovered during development activities. Furthermore, standard conditions have been imposed on the Project that in the event of unanticipated discoveries of human remains are identified during excavation, construction activities, the area shall not be disturbed until any required investigation is completed by the County Coroner and/or Native American consultation has been completed, if deemed applicable.

Mitigation: None required.

6. Energy

Would the project:

a) Result in potentially significant environmental impact due to the wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation:

A Project specific Energy Study was prepared by RK Engineering Group, Inc. Findings are summarized herein, and the technical study is available as Appendix D of this Addendum.

Discussion of Effects: As described in the Certified EIR, the Project's impact is considered less than significant with the inclusion of the mandatory requirements of California's Building Energy Efficiency Standards (Title 24, Part 6) and Green Building Standards (CALGreen, Title 24, Part 11). California's building energy efficiency standards are some of the strictest in the nation and the Project's compliance with California's building code would ensure that wasteful, inefficient or unnecessary consumption of energy

is minimized. The building standards code is designed to reduce the amount of energy needed to heat or cool a building and reduce energy usage for lighting and appliances.

The proposed Project is anticipated to have a less than significant impact on energy. The following recommended energy design features (DF) are provided to further reduce wasteful, inefficient and unnecessary consumption of energy. Design features are consistent with the recommended design features provided with Air/GHG study. These DF are not considered mitigation measures.

Construction Energy Design Features

E-DF-1 Establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

Operational Design Features

E-DF-2 Implement the GHG Reduction Measures from the Ontario County Climate Action Plan (CAP) Screening Tables to achieve at least 100 points, per the requirements for Mixed Use Projects.

E-DF-3 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

E-DF-4 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod, per CAL Green and City of Ontario requirements.

E-DF-5 Implement zero waste strategies, recycling and composting programs for residential and non-residential uses.

E-DF-6 Encourage residents and landscape maintenance crews to use electric landscaping equipment, such as lawnmowers and leaf blowers, wherever feasible.

E-DF-7 No natural gas or wood burning fireplaces shall be installed in any residential dwelling.

E-DF-8 Implement trip reduction measures that reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking. Such as;

1. Improve the walkability and design of the project by including pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e., sidewalks, crosswalks, foot paths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.).
2. Provide traffic calming measures (i.e., marked crosswalks, raised crosswalks, raised intersections, count-down signal timers, curb extensions, speed tables, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.)
3. Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

E-DF-9 Provide electric vehicle charging stations per the requirements of CALGreen.

A less than significant impact would occur.

Mitigation: None required.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficient:

Discussion of Effects: The proposed Project's impact is considered less than significant as the Project would purchase electricity through Southern California Edison which is subject to the requirements of California Senate Bill 100 (SB 100). SB 100 is the most stringent and current energy legislation in California; requiring that renewable energy resources and zero-carbon resources supply 100 percent of retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all state agencies by December 31, 2045.1 The Project would further comply with the mandatory requirements of California's Green Building and Building Energy Efficiency standards that promote renewable energy and energy efficiency. A less than significant impact would occur.

Mitigation: None required.

7. GEOLOGY & SOILS

Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Discussion of Effects: There are no active faults known on the site and the Project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Ontario Plan FEIR (Section 5.7/ Figure 5.7-2) identifies eight active or potentially active fault zones near the City. Given that the closest fault zone is located more than ten miles from the Project site, fault rupture within the Project area is not likely. All development would comply with the UBC seismic design standards to reduce geologic hazard susceptibility. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

ii) Strong seismic ground shaking?

Discussion of Effects: There are no active faults known on the site and the Project site is located outside the Fault Rapture Hazard Zone (formerly Alquist-Priolo Zone). The Land Use Plan (Figure LU-6) of the Policy Plan (General Plan) FEIR (Section 5.7/Figure 5.7-2) identifies eight active or potentially active fault zones near the City. The closest fault zone is located more than ten miles from the Project site. The proximity of the site to the active faults would result in ground shaking during moderate to severe seismic events. All construction would be in compliance with the California Building Code (CBC), the Ontario Municipal Code, The Ontario Plan and all other ordinances adopted by the City related to construction and safety. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

iii) Seismic-related ground failure, including liquefaction?

Discussion of Effects: As identified in the TOP FEIR (Section 5.7), groundwater saturation of sediments is required for earthquake induced liquefaction. In general, groundwater depths shallower than 10 feet to the surface can cause the highest liquefaction susceptibility. According to the POOC MND, depth to ground water at the Project site during the winter months is estimated to be between 250 to 450 feet below ground surface. Therefore, the liquefaction potential within the Project area is minimal.

Implementation of The Ontario Plan strategies, UBC and Ontario Municipal Code would reduce impacts to a less than significant level.

Mitigation: None required.

iv) Landslides?

Discussion of Effects: The proposed Project would not expose people or structures to potential adverse effects, including the risk of loss, injury, or death involving landslides because the relatively flat topography of the Project site (less than two percent slope across the City) makes the chance of landslides remote. Implementation of The Ontario Plan strategies, UBC and OMC would reduce impacts to a less than significant level.

Mitigation: None required.

b) Result in substantial soil erosion or the loss of topsoil?

Discussion of Effects: The proposed Project would not result in significant soil erosion or loss of topsoil because of the previously disturbed and developed nature of the Project site and the limited size and scope of the Project. Grading increases the potential for erosion by removing protective vegetation, changing natural drainage patterns, and constructing slopes. However, compliance with the CBC and review of grading plans by the City Engineer would ensure no significant impacts would occur. In addition, the City requires an erosion/dust control plan for projects located within this area. Implementation of a NPDES program, the Environmental Resource Element of the General Plan strategies, UBC, and OMC would reduce impacts to a less than significant level.

Mitigation: None required.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Discussion of Effects: The Project site would not result in the location of development on a geologic unit or soil that is unstable, or that would become unstable because as previously discussed, the potential for liquefaction and landslides associated with the Project site is less than significant. The Ontario Plan FEIR (Section 5.7) indicates that subsidence is generally associated with large decreases or withdrawals of water from the aquifer. The Project would not withdraw water from the existing aquifer. Further, implementation of The Ontario Plan strategies, UBC and OMC would reduce impacts to a less than significant level.

Mitigation: None required.

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Discussion of Effects: The majority of Ontario, including the Project site, is located on alluvial soil deposits. These types of soils are not considered to be expansive. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Discussion of Effects: The area is served by the local sewer system and the use of alternative systems is not necessary. There would be no impact to the sewage system.

Mitigation: None required.

8. GREENHOUSE GAS EMISSIONS

Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Discussion of Effects: The impact of buildout of The Ontario Plan on the environment due to the emission of greenhouse gases ("GHGs") was analyzed in the Environmental Impact Report ("EIR") for the Policy Plan (General Plan). According to the EIR, this impact would be significant and unavoidable. (Recirculated Portions of the Ontario Plan Draft Environmental Impact Report, p. 2-118). This EIR was certified by the City on January 27, 2010, at which time a statement of overriding considerations was also adopted for The Ontario Plan's significant and unavoidable impacts, including that concerning the emission of GHGs.

Pursuant to Public Resources Code section 21083.3, this impact need not be analyzed further, because (1) the proposed project would result in an impact that was previously analyzed in The Ontario Plan EIR, which was certified by the City; (2) the proposed project would not result in any greenhouse gas impacts that were not addressed in The Ontario Plan EIR; (3) the proposed project is consistent with The Ontario Plan.

A Project-specific Air Quality and Greenhouse Gas Impact Study was prepared. The results are provided herein, and the technical study is included as Appendix B of this Addendum. For purposes of this Project, the City of Ontario, Ontario County Climate Action Plan (CCAP) establishes the requirements for determining whether a project would have a significant impact to GHG emissions under CEQA.

The CCAP uses Screening Tables, which are setup similar to a checklist, with points allocated to certain elements of the Project to reduce GHG emissions. If a project garners 100 points (by including enough GHG reducing elements), then the project is consistent with CCAP and the impact may be considered less than significant for purposes of CEQA.

The proposed Project is expected to comply with the CCAP by implementing the Screening Table requirements into the Project design. To help ensure the Project adheres to the CCAP requirements, the following GHG Project DFs GHG-DF-10 through GHG-DF-17 are provided:

Design Features

GHG-DF-10 Implement the GHG Reduction Measures from the CCAP Screening Tables to achieve at least 100 points, per the requirements for Mixed Use Projects.

As described in Appendix B of the CCAP, for mixed use projects, both the residential and non-residential screening tables shall be completed. Mixed use Projects that garner at least 100 points will be consistent with the reduction quantities in the City's CAP and are considered less than significant for GHG emissions.

Therefore, with the implementation of the CCAP Screening Tables, the Project is not expected to generate GHG emissions, either directly or indirectly, that would cause a significant impact on the environment.

Also, by complying with the CCAP, the Project will not conflict with an applicable plan, policy or regulation for the purpose of reducing the emissions of greenhouse gases and the impact is considered less than significant.

Furthermore, since the purpose of the City's CCAP is to ensure compliance with the state's climate initiatives for reducing GHG emissions, by complying with the CCAP, the Project will also be in compliant with the broader statewide goals for combating climate change; such as those required in the CARB Scoping Plan and AB 32.

The mixed-use Project is also located within close proximity to high quality transit, located in a low VMT zone, and offers high-density residential development near commercial uses. The Project will include pedestrian friendly and walkable design that will encourage fewer auto-based trips. The following Project design features will be provided to further help reduce GHG emissions:

GHG-DF-11 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

GHG-DF-12 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod, per CAL Green and City of Ontario requirements.

GHG-DF-13 Implement zero waste strategies, recycling and composting programs for residential and non-residential uses.

GHG-DF-14 Encourage residents and landscape maintenance crews to use electric landscaping equipment, such as lawn mowers and leaf blowers, wherever feasible.

GHG-DF-15 No natural gas or wood burning fireplaces shall be installed in any residential dwelling.

GHG-DF-16 Implement trip reduction measures that reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking. Such as;

1. Improve the walkability and design of the project by including pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e., sidewalks, crosswalks, foot paths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.).
2. Provide traffic calming measures (i.e., marked crosswalks, raised crosswalks, raised intersections, count-down signal timers, curb extensions, speed tables, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.)
3. Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

GHG-DF-17 Provide electric vehicle charging stations per the requirements of CALGreen.

The Project is anticipated to have a less than significant impact. Additionally, with implementation of the Project DF, the Project would continue to have a less than significant impact on GHG.

9. HAZARDS & HAZARDOUS MATERIALS

Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?

Discussion of Effects: The Project is not anticipated to involve the transport, use or disposal of hazardous materials during either construction or Project implementation. Typical construction activities involve the use and handling of solvents, paints, and other chemicals. However, none of the proposed uses involve the use or handling of dangerous chemicals that could create a significant hazard to the public or the environment. Additionally, the Project site have been previously graded, and no hazardous materials exist onsite. Therefore, no adverse impacts are anticipated. However, in the unlikely event of an accident, implementation of the strategies included in The Ontario Plan would decrease the potential for health and safety risks from hazardous materials to a less than significant impact.

Mitigation: None required.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Discussion of Effects: The proposed Project does not include the use of hazardous materials or volatile fuels. In addition, there are no known stationary commercial or industrial land uses within close proximity to the subject site, which use/store hazardous materials to the extent that they would pose a significant hazard to visitors/occupants to the subject site, in the event of an upset condition resulting in the release of a hazardous material. No impacts are anticipated.

Mitigation: None required

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances or waste within one-quarter mile of an existing or proposed school?

Discussion of Effects: The proposed Project does not include the use, emissions or handling of hazardous or acutely hazardous materials, substances or waste. Therefore, no impacts are anticipated.

Mitigation: None required.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Discussion of Effects: The proposed Project site is not listed on the hazardous materials site compiled pursuant to Government Code Section 65962.5. Therefore, the Project would not create a hazard to the public or the environment and no impact is anticipated.

Mitigation: None required.

e) For a project located within the safety zone of the airport land use compatibility plan for ONT or Chino Airports, would the project result in a safety hazard for people residing or working in the project area?

Discussion of Effects: According to Land Use Element (Exhibit LU-06 Airport Environs) of the General Plan, the Project site is located within the airport land use plan. However, the Project would not result in a safety hazard for people working or residing in the Project area because it would not obstruct aircraft maneuvering because of the Project's low elevation and the architectural style of the Project. Additionally, the Land Use Compatibility Guidelines for Noise Impacts (Table LU-08) shows the proposed use as normally accepted in the 65 CNEL. The proposed use would comply with standards for mitigating noise. Therefore, no impacts are anticipated.

Mitigation: None required.

f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

Discussion of Effects: The Project site is not located within the vicinity of a private airstrip. Therefore, no impacts are anticipated.

Mitigation: None required.

g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Discussion of Effects: The City's Safety Element, as contained within The Ontario Plan, includes policies and procedures to be administered in the event of a disaster. The Ontario Plan seeks interdepartmental and inter-jurisdictional coordination and collaboration to be prepared for, respond to, and recover from everyday and disaster emergencies. In addition, the Project would comply with the requirements of the Ontario Fire Department and all City requirements for fire and other emergency access. Because the Project is required to comply with all applicable City codes, any impacts would be reduced to a less than significant level.

Mitigation: None required.

h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Discussion of Effects: The Project site is not located in or near wildlands. Therefore, no impacts are anticipated.

Mitigation: None required.

10. HYDROLOGY & WATER QUALITY

Would the project:

a) Violate any other water quality standards or waste discharge requirements or potential for discharge of storm water pollutants from areas of material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?

Discussion of Effects: The Project site is served by City water and sewer service and would not affect water quality standards or waste discharge requirements. Discharge of storm water pollutants from areas of

materials storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing, waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work) areas could result in a temporary increase in the amount of suspended solids, trash and debris, oil and grease, organic compounds, pesticides, nutrients, heavy metals and bacteria pathogens in surface flows during a concurrent storm event, thus resulting in surface water quality impacts. The site is required to comply with the statewide National Pollutant Discharge Elimination System (NPDES) General Industrial Activities Stormwater Permit, the San Bernardino County Area-Wide Urban Runoff Permit (MS4 permit) and the City of Ontario's Municipal Code (Title 6, Chapter 6 (Stormwater Drainage System)). In addition to the NPDES, MS4, and other permits listed in this section, this site is required to comply with the latest trash capture requirements from the State and RWQCB. This would reduce any impacts to below a level of significance. However, as part of the Certified EIR, the following Mitigation Measures (MMs) were imposed as part of the development of the OCSP:

Mitigation: Hydrology

MM-HYD-1 On-site drainage plans will be designed, submitted to, and approved by the City of Ontario prior to the issuance of a grading permit.

MM-HYD-2 Proposed storm drainage facilities to be installed as The Ontario Center develops, will be placed in public streets. W here storm drains must be placed in areas other than public streets, a drainage easement will be dedicated as needed.

MM-HYD-3 Some modification will be necessary to existing drainage facilities. No existing facility will be removed without replacement by another structure to serve the particular condition.

MM-HYD-4 As development proceeds, there will be a need for temporary siltation basins to reduce sedimentation from construction activities. These will be located in specific areas of construction and sized in accordance with City of Ontario criteria.

With implementation of the applicable Certified EIR MMs, the Project would have a less than significant impact.

b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

Discussion of Effects: No increases in the current amount of water flow to the Project site are anticipated, and the proposed Project would not deplete groundwater supplies, nor will it interfere with recharge. The water use associated with the proposed use of the property would be negligible. The development of the site would require the grading of the site and excavation is expected to be less than three feet and would not affect the existing aquifer, estimated to be about 230 to 250 feet below the ground surface. No adverse impacts are anticipated.

Mitigation: None required.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site or volume of storm water runoff to cause environmental

harm or potential for significant increases in erosion of the project site or surrounding areas?

Discussion of Effects: It is not anticipated that the Project would alter the drainage pattern of the site or area, in a manner that would result in erosion, siltation or flooding on-or-off site nor would the proposed Project increase the erosion of the subject site or surrounding areas. The existing drainage pattern of the Project site would not be altered, and it would have no significant impact on downstream hydrology. Stormwater generated by the Project would be discharged in compliance with the statewide NPDES General Construction Activities Stormwater Permit and San Bernardino County MS4 permit requirements. With the full implementation of a Storm Water Pollution Prevention Plan (SWPPP) developed in compliance with the General Construction Activities Permit requirements, the BMPs included in the SWPPP, and a stormwater monitoring program would reduce any impacts to below a level of significance. No streams or streambeds are present on the site. No changes in erosion off-site are anticipated.

Mitigation: None required.

d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner that would result in flooding on- or off-site or potential for significant changes in the flow velocity or volume of storm water runoff to cause environmental harm?

Discussion of Effects: The proposed Project is not anticipated to increase the flow velocity or volume of storm water runoff to cause environmental harm from the site and would not create a burden on existing infrastructure. Furthermore, with the implementation of an approved Water Quality Management Plan (WQMP) developed for the site, in compliance with the San Bernardino County MS4 Permit requirements, stormwater runoff volume shall be reduced to below a level of significance.

Mitigation: None required.

e) Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff (a&b) during construction and/or post-construction activity?

Discussion of Effects: It is not anticipated that the Project would create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or create or contribute stormwater runoff pollutants during construction and/or post-construction activity. Pursuant to the requirements of The Ontario Plan, the City's Development Code, and the San Bernardino County MS4 Permit's WQMP, individual developments must provide site drainage and WQMP plans according to guidelines established by the City's Engineering Department. If master drainage facilities are not in place at the time of Project development, then standard engineering practices for controlling post-development runoff may be required, which could include the construction of on-site storm water detention and/or retention/infiltration facilities. Therefore, no impacts are anticipated.

Mitigation: None required.

f) Otherwise substantially degrade water quality or potential for discharge of storm water to affect the beneficial uses of receiving water?

Discussion of Effects: Activities associated with the construction period, could result in a temporary increase in the amount of suspended solids in surface flows during a concurrent storm event, thus resulting in surface water quality impacts. The site is required to comply with the statewide NPDES General Construction Permit and the City of Ontario's Municipal Code (Title 6, Chapter 6 (Stormwater Drainage System)) to minimize water pollution. Thus, it is anticipated that there is no potential for discharges of stormwater during construction that would affect the beneficial uses of the receiving waters. However, with the General Construction Permit requirement and implementation of the policies in The Ontario Plan, any impacts associated with the Project would be less than significant. However, as part of the Certified EIR, the following MMs were imposed as part of the development of the OCSP:

Mitigation: Water Quality

MM-WQ-1 During construction, a variety of temporary structural measures such as velocity dissipators, siltation fences or basins and. vegetative buffer zones will be used to reduce siltation and sedimentation runoff from construction sites.

MM-WQ-2 Periodic cleaning of storm drains and inlets, construction of pervious pavement surfaces in areas designated by the City, periodic street sweeping.

MM-WQ-3 Periodic street sweeping will be conducted by the City of Ontario for streets dedicated to the City. Periodic vacuum sweeping will be conducted by the owners of individual sites.

g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

Discussion of Effects: The project site is not located within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map. Therefore, no impacts are anticipated.

Mitigation: None required.

h) Place within a 100-year flood hazard area, structures that would impede or redirect flood flows?

Discussion of Effects: As identified in the Safety Element (Exhibit S-2) of the Policy Plan (General Plan), the site lies outside of the 100-year flood hazard area. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

Discussion of Effects: As identified in the Safety Element (Exhibit S-2) of The Ontario Plan, the site lies outside of the 100-year flood hazard area. No levees or dams are located near the Project site. Therefore, no adverse impacts are anticipated.

Mitigation: None required.

j) Expose people or structures to inundation by seiche, tsunami or mudflow?

Discussion of Effects: There are no lakes or substantial reservoirs near the project site; therefore, impacts from seiche are not anticipated. The City of Ontario has relatively flat topography, less than two percent across the City, and the chance of mudflow is remote. Therefore, no impacts are anticipated.

Mitigation: None required.

11. LAND USE & PLANNING

Would the project:

a) Physically divide an established community?

Discussion of Effects: The Project site is located in an area that is currently developed with urban land uses. This Project would be of similar design and size to surrounding development. The Project would become a part of the larger commercial, entertainment retail, office, and high-density residential communities, which surround the Project site. No adverse impacts are anticipated.

Mitigation: None required.

b) Conflict with applicable land use plan, policy or regulation of agencies with jurisdiction over the project (including, but not limited to general plan, airport land use compatibility plan, specific plan, or development code) adopted for the purpose of avoiding or mitigation an environmental effect?

Discussion of Effects: The proposed Project is consistent with The Ontario Plan and does not interfere with any policies for environmental protection. As such, no impacts are anticipated.

Mitigation: None required.

c) Conflict with any applicable habitat conservation plan or natural community conservation plan?

Discussion of Effects: There are no adopted habitat conservation plans in the Project area. As such no conflicts or impacts are anticipated.

Mitigation: None required.

12. MINERAL RESOURCES

Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Discussion of Effects: The Project site is located within a mostly developed area surrounded by urban land uses. There are no known mineral resources in the area. Therefore, no impacts are anticipated.

Mitigation: None required.

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Discussion of Effects: There are no known mineral resources in the area. No impacts are anticipated.

Mitigation: None required.

13. NOISE

Would the project result in:

a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Discussion of Effects: As noted in Section 3.5.8, Noise, and as shown in Tables 3-8 and 3-9, the Project would not expose people to or generate noise levels in excess of standards as established in The Ontario Plan FEIR (Section 5.12). No additional analysis would be required at the time of site development review.

Mitigation: None required.

b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

Discussion of Effects: The uses associated with this Project normally do not induce groundborne vibrations. As such, no impacts are anticipated. Typical construction vibration is shown on Tables 3-10 and 3-11 which conclude that Project vibration would not expose persons or generate excessive groundborne vibration or noise levels.

Mitigation: None required.

c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Discussion of Effects: The Project would not be a significant permanent noise generator and would not cause a substantial permanent increase in ambient noise levels because of the limited size and scope of the Project. Moreover, the proposed use would be required to operate within the noise levels permitted for commercial development, pursuant to City of Ontario Development Code. The Project would create typical construction noise as shown in Tables 3-8 and 3-9. Therefore, no increases in noise levels within the vicinity of the project are anticipated.

Mitigation: None required.

d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

Discussion of Effects: Temporary construction activities would minimally impact ambient noise levels. All construction machinery would be maintained according to industry standards to help minimize the impacts. Normal activities associated with the Project are unlikely to increase ambient noise levels. As shown in Tables 3-12, 3-13, and 3-14 show that the Project would not create substantial temporary or periodic increase in ambient noise. A less than significant impact is anticipated.

Mitigation: None required.

e) For a project located within the noise impact zones of the airport land use compatibility plan for ONT and Chino Airports, would the project expose people residing or working in the project area to excessive noise levels?

Discussion of Effects: According to the Safety Element in The Ontario Plan and the Noise Impact Analysis, the proposed site is located within the airport land use plan. However, the Project is located outside of

the 60 CNEL noise contour. Therefore, the exterior noise impact from the airport would be within the allowable limits for residential land uses and the Project is considered compatible with the surrounding land use and noise environment. Noise from airport operations is expected to generate a less than significant on the proposed Project.

Mitigation: None required.

f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

Discussion of Effects: The Project site is not located within the vicinity of a private airstrip. Therefore, no impacts are anticipated.

Mitigation: None required.

14. POPULATION & HOUSING

Would the project:

a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of road or other infrastructure)?

Discussion of Effects: The Project is located in a developed area and would not induce population growth as the proposed multi-family DUs have been previously analyzed as part of the OCSP development in the Certified EIR and population growth as part of the OCSP has already been assumed and accounted for in the General Plan and regionally. Therefore, no impacts are anticipated

Mitigation: None required.

b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

Discussion of Effects: The Project site is currently undeveloped. Therefore, no impacts are anticipated.

Mitigation: None required.

c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

Discussion of Effects: The Project site is currently undeveloped. Therefore, no impacts are anticipated.

Mitigation: None required.

15. PUBLIC SERVICES

Would the project:

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i) Fire protection?

Discussion of Effects: The site is in a developed area currently served by the Ontario Fire Department. As previously noted, the site has already been accounted for in the General Plan that it will be developed to include a greater amount of commercial SF and a larger amount of multi-family DUs. The Project would not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated. However, as part of the development of the OCSP, the Certified EIR noted that the following MMs would be applicable to the development of the OCSP:

Mitigation: Fire Protection

MM-PS-1 The developer will pay a fair share of "in-lieu" fees to subsidize additional facilities and equipment as mutually agreed upon by both the developer and the City of Ontario.

MM-PS-2 All new development will participate in updating the City of Ontario Water Master Plan and will contribute on a "fair share" basis toward implementation of Master Plan programs.

MM-PS-3 Ontario Fire Department and project developer Will provide, in writing, assurance of water supply adequacy from local water purveyor.

MM-PS-4 Design features at the site plan level will reduce risk of fire hazard. Site plan proposals will be reviewed during site plan review by Ontario Fire Department (OFD). Protection measures recommended by the OFD will be implemented by project proponent.

With implementation of MMs PS-1 through PS-4, a less than significant impact on fire services would occur.

ii) Police protection?

Discussion of Effects: The site is in a developed area, currently served by the Ontario Police Department. The Project would not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities and no impact are anticipated on police protection services. However, as part of the development of the OCSP, the Certified EIR noted that the following MMs would be applicable to the development of the OCSP:

Mitigation: Law Enforcement

MM-PS-5 If a proposed ordinance is adopted, the regional center builder/developer may be required to pay a one-time developer assessment fee to the Police Department at the time of issuance of a building permit. This developer fee will mitigate the fiscal impact incurred by the Police Department.

Due to the projected increase in police calls for service to be generated by the development. The amount of this fee will be established by the Ontario Police Department based on land use and projected calls-for-service from that use.

MM-PS-6 Each individual project within The Ontario Center will incorporate on-site security measures. These measures will be reviewed by the Ontario Police Department. They will include, but not be limited to, limited-height landscaping, exterior lighting, security hardware.

MM-PS-7 In addition to these physical security and lighting requirements, the Police Department requests that the developer submit a plan delineating which functions are to be addressed by on-site private security and what functions are to be served by the Police Department. This

plan may include personnel selection and training and physical security measures, i.e., video surveillance, emergency call boxes, communication and alarms. This plan shall be approved by the Police Department prior to implementation.

With implementation of MMs PS-5 through PS-7, a less than significant impact on police services would occur.

iii) Schools?

Discussion of Effects: The Project would be required to pay school fees as prescribed by state law prior to the issuance of building permits. However, as part of the development of the OCSP, the Certified EIR noted that the following MMs would be applicable to the development of the OCSP:

Mitigation: School

MM-PS-8 Developers of residential projects within The Ontario Center will pay required school impact mitigation fees of $29,000 gross acre to Cucamonga School District per agreement reached between the District and the developer dated December 31, 1986.

MM-PS-9 Developers of projects within The Ontario Center will pay fees, as noted below, to the Chaffey Joint Unified School District:

Residential $.48/square foot

Commercial/Industrial/Office $.08/square foot

iv) Parks?

Discussion of Effects: The site is in a developed area, currently served by the City of Ontario. The Project would not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. However, as part of the development of the OCSP, the Certified EIR noted that the following MMs would be applicable to the development of the OCSP:

Mitigation: Parks and Recreation

MM-PS-10 Regional Parks: The responsibility for rehabilitating existing regional parks and/or building new facilities, rests with the County of San Bernardino Parks Department. A Draft Ordinance has been prepared by the County Parks Department which will require developers to pay fees for future parks and open space. Developers within The Ontario Center shall comply with the City of Ontario's implementation of the County's fee ordinance for the collection of development fees for regional parks, trails, and open space if and when it is enacted.

MM-PS-11 Local Parks: A Park Development Fund Fee of $802/single family detached unit and $700/multiple family unit will be paid at the time of issuance of building permits.

MM-PS-12 Private recreational opportunities shall be encouraged for the commercial retail/industrial use areas.

v) Other public facilities?

Discussion of Effects: The site is in a developed area, currently served by the City of Ontario. The Project would not require the construction of any new facilities or alteration of any existing facilities or cause a decline in the levels of service, which could cause the need to construct new facilities. No impacts are anticipated.

Mitigation: None required.

16. RECREATION

Would the project:

a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities that have an adverse physical effect on the environment?

Discussion of Effects: This Project is not proposing any significant new housing or large employment generator that would cause an increase in the use of neighborhood parks or other recreational facilities that have not already been analyzed as part of the OCSP or the Certified EIR and/or considered in the General Plan. Implementation of the proposed Project would not require the construction of neighborhood parks or other recreational facilities. No impacts are anticipated.

Mitigation: None required.

17. TRANSPORTATION/TRAFFIC

Would the project:

A Project-specific Traffic Impact Analysis was prepared by RK Engineering Group. The results are provided herein, and the technical study is included as Appendix A of this Addendum.

a) Conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Discussion of Effects: The Project is in an area that is mostly developed with all street improvements existing. As noted in Table 3-3, the number of vehicle trips per day is forecast at 5,691 daily trips or 5.4 percent compared to the allowable 105,332 daily trips allowable per the OCSP for the site. Therefore, as noted in Section 3.5.5, Traffic and Circulation, the Project would not create a substantial increase in the number of vehicle trips, traffic volume or congestion at intersections and would not conflict with an applicable plan, ordinance, or policy addressing the circulation system, transit, roadway, bicycle, or pedestrian facilities. Less than significant impacts are anticipated. However, as part of the Certified EIR, the following MMs were imposed as part of the development of the OCSP:

Mitigation: Traffic and Transportation

MM-TRF-1 Buildout in the project vicinity of the proposed circulation system defined in the Specific Plan Amendment will occur.

MM-TRF-2 Development and implementation of a Transportation Systems Management (TSM) program with a goal of a ten percent reduction in peak hour trips will occur as defined the Specific Plan Amendment.

MM-TRF-3 Applicants for all future specific plans and specific plan amendments in the vicinity of The Ontario Center project will be required to complete traffic impact and mitigation studies to ensure that the forty (40) intersections studied this EIR will not exceed an intersection capacity utilization greater than Level of Service E.

With implementation of the applicable Certified EIR MMs, the Project would have a less than significant impact.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Discussion of Effects: As noted in Section 3.5.5.1, CEQA Vehicle Miles Traveled, the Project is found to have a less than significant impact regarding VMT.

Mitigation: None required.

c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

Discussion of Effects: The Project would not create a substantial safety risk or interfere with air traffic patterns at Ontario International Airport as it either is outside of areas with FAA-imposed height restrictions or is under such height restrictions. No impacts are anticipated.

Mitigation: None required.

d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Discussion of Effects: The Project is in an area that is mostly developed. All street improvements are complete, and no alterations are proposed for adjacent intersections or arterials. The Project would, therefore, not create a substantial increase in hazards due to a design feature. No impacts are anticipated.

Mitigation: None required.

e) Result in inadequate emergency access?

Discussion of Effects: The Project would be designed to provide access for all emergency vehicles and would therefore not create an inadequate emergency access. No impacts are anticipated.

Mitigation: None required.

18. TRIBAL CULTURAL RESOURCES

Would the project:

a) Cause a substantial adverse change in the significance of a Tribal Cultural Resource as defined in Public Resources Code Section 21074?

Discussion of Effects: The proposed Project is in an area that has been previously disturbed by development. No known Tribal Cultural Resource sites exist within the Project area. Thus, tribal artifacts are not expected to be encountered during any excavation, grading, or construction activities.

Mitigation: None required.

19. UTILITIES AND SERVICE SYSTEMS

Would the project:

a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

Discussion of Effects: The proposed Project is served by the City of Ontario sewer system, which has waste treated by the Inland Empire Utilities Agency at the RP-1 and/or RP-5 treatment plant. The Project is required to meet the requirements of the Ontario Engineering Department regarding wastewater. Additionally, as noted in Section 2.3, Land Use and Development, the proposed Project would implement a Project at a much lower development intensity than the originally approved project under the OCSP and the Certified EIR. As such, no impacts are anticipated.

Mitigation: None required.

b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Discussion of Effects: The proposed Project is served by the City of Ontario sewer system and which has waste treated by the Inland Empire Utilities Agency at the RP-1 and/or RP-5 treatment plant. RP-1 and/or RP-5 is not at capacity and this Project would not cause RP-1 and/or RP-5 to exceed capacity. The Project would, therefore, not require the construction of new wastewater treatment facilities, or the expansion of existing facilities. No impacts are anticipated.

Mitigation: None required.

c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Discussion of Effects: The proposed Project is served by the City of Ontario. The Project is required to meet the requirements of the Ontario Engineering Department regarding storm drain facilities. Because the Project is much less intense than the previously approved project on the same footprint, no impacts are anticipated.

Mitigation: None required.

d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed? In making this determination, the City shall consider whether the project is subject to the water supply assessment requirements of Water Code Section 10910, et seq. (SB 610), and the requirements of Government Code Section 664737 (SB 221).

Discussion of Effects: The Project is served by the City of Ontario water system. There is currently a sufficient water supply available to the City of Ontario to serve this project. Additionally, as noted in Table 2-4, the Project is anticipated to require 316,027 GPD compared to the 727,888 GPD of the originally approved project and analyzed under Certified EIR. The proposed Project would require approximately 54 percent of the originally accounted for water demand. Although a less than significant impact is anticipated in this regard, the Certified EIR included the following MMs as part of the original OCSP analysis.

Mitigation: Water Supply

MM-UTL-1 All existing and future users will share in costs of supplemental city-wide water supply system.

MM-UTL-2 Reclaimed water, as it is available from CBMWD Regional Plant No. 4, will be used for open space irrigation when economically feasible.

MM-UTL-3 Cooperation between CBMWD, the City of Ontario, developers of The Ontario Center and other landowners will be necessary to ensure adequate capacity.

A less than significant impact would occur with implementation of MMs UTL-1 through UTL-3.

e) Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Discussion of Effects: The proposed Project is served by the City of Ontario sewer system, which has waste treated by the Inland Empire Utilities Agency at the RP-1 and/or RP-5 treatment plant. RP-1 and/or RP-5 is not at capacity and this project would not cause RP-1 and/or RP-5 to exceed capacity. Although no impact is anticipated in this regard, the Certified EIR included the following MMs as part of the original OCSP analysis.

Mitigation: Wastewater

MM-UTL-4 Design and construction of wastewater collection facilities within the Ontario Center will be completed under the jurisdiction of the City of Ontario.

MM-UTL-5 Any plans for use of the non-reclaim able waste line (NRW) system will be made known to the City and CBMWD.

MM-UTL-6 Wastewater collection facilities will be designed so that all parcels can be served by gravity mains without pumping.

MM-UTL-7 The Ontario Center project development will coordinate construction activities with the City of Ontario and CBMWD to assure adequate interceptor, trunk sewer and treatment plant capacity is available as development proceeds.

MM-UTL-8 Continued coordination between CBMWD, the City, developers of The Ontario Center, and other property owners/developers will occur to assure adequate capacity is available in the Cucamonga Interceptor as development occurs within the tributary area.

A less than significant impact would occur with implementation of MMs UTL-4 through UTL-8.

f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

Discussion of Effects: City of Ontario serves the proposed Project. Currently, the City of Ontario contracts with a waste disposal company that transports trash to a landfill with sufficient capacity to handle the City's solid waste disposal needs. No impacts are anticipated. Although no impact is anticipated in this regard, the Certified EIR included the following MM as part of the original OCSP analysis.

Mitigation: Solid Waste

MM-UTL-9 Solid waste will be disposed of in Milliken Landfill. Upon closing of the Milliken Landfill, waste will be disposed of at the San Timoteo Landfill. A transfer station for the City will be constructed by the City in the next 2 to 3 years to transport waste from Ontario to the San Timoteo Landfill.

A less than significant impact would occur with implementation of MM UTL-9.

g) Comply with federal, state, and local statutes and regulations related to solid waste?

Discussion of Effects: This Project would comply with federal, state, and local statutes and regulations regarding solid waste. Therefore, no impacts are anticipated.

Mitigation: None required.

20. Wildfire

Would the project:

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Discussion of Effects: According to the General Plan and CAL FIRE, the Project site is not located within a Very High, High, or Medium Fire Hazard area. The Project would not interfere with the City's Emergency Management Plan because it does not contain any features that would prohibit the execution of such plans. The Project would maintain the existing ingress and egress which were designed to accommodate existing and future growth of the site. No impacts are anticipated.

Mitigation: None required.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Discussion of Effects: Like most of southern California, the City of Ontario faces a diverse array of potential natural hazards. The General Plan notes that severe windstorms can pose a significant risk to property and life in the region by creating conditions that disrupt essential systems such as public utilities, telecommunications, and transportation routes. High winds, including Santa Ana winds, can cause damage to homes, businesses, landscaping, public property, and utilities, and pose threats to public safety, including accelerating a fire. The alluvial sand that underlies the majority of Ontario is generally granular, poorly consolidated, and very susceptible to erosion. In strong winds this sand can impact property, air quality and visibility. However, no special circumstances occur on the Project that do not occur in the rest of the City of region. No impact from wind hazards is anticipated to occur.

Mitigation: None required.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Discussion of Effects: All proposed Project components would be within the Project site property lines, and impacts associated with the development of the Project within this footprint area analyzed throughout this document and has been previously analyzed in the Certified EIR. No impacts are anticipated to occur.

Mitigation: None required.

d) Expose people or structures to significant risks, including downslope, or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Discussion of Effects: As previously analyzed in the Certified EIR, the Project site is not located in a landslide hazard area or a floodplain. No changes in findings in this regard would occur compared to those findings in the Certified EIR for the Project site. As such, no impact in this regard would occur.

Mitigation: None required.

21. MANDATORY FINDINGS OF SIGNIFICANCE

a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat or a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Discussion of Effects: The site is located within an area that has been previously heavily disturbed, mass graded, and partially developed with various uses including multi-family residential DUs and commercial. The Project is not anticipated to have the potential to degrade the quality of the environment or reduce the overall habitat as there is no native habitat.

b) Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?

Discussion of Effects: The Project does not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals. As shown throughout this addendum, the Project would not cause any more intense impacts than those already previously considered in the Certified EIR, CEA, POCA, and POOC environmental documents.

Mitigation: None required.

c) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current project, and the effects of probable future projects.)

Discussion of Effects: The Project does not have impacts that are cumulatively considerable that have not already been considered in the Certified EIR, CEA, POCA, and POOC environmental documents.

Mitigation: None required.

d) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

Discussion of Effects: The Project does not have environmental effects that would cause substantial adverse effects on human beings, either directly or indirectly.

Mitigation: None required.

1.0 Introduction

The purpose of this air quality and greenhouse gas (GHG) impact study is to determine whether the estimated criteria air pollutants and greenhouse gas emissions generated from the construction and operation of the proposed Toyota Arena Mixed-Use Development (hereinafter referred to as project) would cause significant impacts to air resources.

This assessment was conducted within the context of the California Environmental Quality Act (CEQA, California Public Resources Code Sections 21000, et seq.). The methodology follows the California Air Resources Board (CARB), the South Coast Air Quality Management District (SCAQMD), and City of Ontario recommendations for quantification of emissions and evaluation of potential impacts.

1.1 Site Location

The proposed project site is located adjacent to the Toyota Arena, north of Concourse Street and south of Fourth Street, in the City of Ontario.

The project site is located within the South Coast Air Basin (SCAB), the SCAQMD San Bernardino Valley General Forecast Area, and the Southwest San Bernardino Valley Air Monitoring Area-33.

The project site is located within the Ontario Center Specific Plan and zoned for Urban Commercial use. The City of Ontario General Plan land use map designates the project site as Mixed Use.

The project location map is provided in Exhibit A.

1.2 Project Description

The project consists of construction and operation of a mixed use town center development with residential and commercial/retail land use within four development lots.

The proposed project includes a total of 691 residential dwelling units, 71,200 square feet of commercial/retail uses and the demolition and relocation of approximately 1,170 surface parking spaces. The total project site area is approximately 18.73 acres.

The site plan used for this analysis, provided by the applicant, is illustrated in Exhibit B. Table 1 summarizes the land use assumptions used for this analysis.

Table 1
Land Use Summary

Lot	Dwelling Units	Retail (SF)[1]	Parking Spaces
A	359	25,256	477[2]
B	98	20,802	130[2]
C	107	11,047	142[2]
D	127	14,095	170[2]
E & F	--	--	1,170
Total	691	71,200	2,089

[1] S.F. – Square Feet
[2] Parking Structure

Construction of the project is estimated to begin in the year 2021 and last approximately 21 months. Construction activities are expected to consist of demolition, site preparation, grading, building construction, paving, and architectural coating. The project is expected to demolish an existing asphalt surface parking lot of approximately 7.48 acres within Lot A and Lot B.

The project is not expected to require the import or export of earthwork materials; preliminary grading estimates show a balanced site. The project is expected to be operational in the year 2023.

1.3 Sensitive Receptors

Sensitive receptors are considered land uses or other types of population groups that are more sensitive to air pollution exposure. Sensitive population groups include children, the elderly, the acutely and chronically ill, and those with cardio-respiratory diseases. For CEQA purposes, the SCAQMD considers a sensitive receptor to be a location where a sensitive individual could remain for 24-hours or longer, such as residences, hospitals, and schools (etc), as described in the Localized Significance Threshold Methodology (SCAQMD 2008a, page 3-2).

The nearest sensitive land uses to the project site include the following:

- Existing residential dwelling units located approximately 150 feet north of Lot G, across Fourth Street.

- Existing residential dwelling units located approximately 475 feet to the west of Lot F.

1.4 Summary of Air Quality and Greenhouse Gas Impacts

Table 2 provides a summary of the CEQA air quality impact analysis results.

Table 2
CEQA Air Quality Impact Criteria

Air Quality Impact Criteria	Potentially Significant	Potentially Significant Unless Mitigated	Less Than Significant Impact	No Impact
Would the project:				
a) Conflict with, or obstruct implementation of, the applicable air quality plan?			**X**	
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable Federal or State ambient air quality standard?			X	
d) Expose sensitive receptors to substantial pollutant concentrations?			**X**	
e) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?			**X**	

Table 3 provides a summary of the CEQA GHG impact criteria analysis results.

Table 3
CEQA GHG Impact Criteria

GHG Impact Criteria	Potentially Significant	Potentially Significant Unless Mitigated	Less Than Significant Impact	No Impact
Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			X	
b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of greenhouse gases?			X	

1.5 Recommended Design Features

This section provides a summary of the recommended design features that are expected to be included as part of the project description and design and have been identified to help reduce the project's impact from air quality and GHG emissions. The recommended project design features include several standard rules and requirements, best practices, and common project design features for reducing air quality emissions.

Construction Design Features:

DF-1 Prepare and implement a Construction Management Plan which will include Best Available Control Measures to be submitted to the City of Ontario.

DF-2 Follow the standard SCAQMD rules and requirements with regards to fugitive dust control, which includes, but are not limited to the following:

1. All active construction areas shall be watered two (2) times daily.
2. Speed on unpaved roads shall be reduced to less than 15 mph.
3. Any visible dirt deposition on any public roadway shall be swept or washed at the site access points within 30 minutes.
4. Any on-site stockpiles of debris, dirt or other dusty material shall be covered or watered twice daily.
5. All operations on any unpaved surface shall be suspended if winds exceed 15 mph.
6. Access points shall be washed or swept daily.
7. Construction sites shall be sandbagged for erosion control.

8. Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more).
9. Cover all trucks hauling dirt, sand, soil, or other loose materials, and maintain at least 2 feet of freeboard space in accordance with the requirements of California Vehicle Code (CVC) section 23114.
10. Pave or gravel construction access roads at least 100 feet onto the site from the main road and use gravel aprons at truck exits.
11. Replace the ground cover of disturbed areas as quickly possible.
12. A fugitive dust control plan should be prepared and submitted to SCAQMD prior to the start of construction.

DF-3 All diesel construction equipment shall have Tier 4 low emission "clean diesel" engines (OEM or retrofit) that include diesel oxidation catalysts and diesel particulate filters that meet the latest CARB best available control technology.

DF-4 Construction equipment shall be maintained in proper tune.

DF-5 All construction vehicles shall be prohibited from excessive idling. Excessive idling is defined as five (5) minutes or longer.

DF-6 Minimize the simultaneous operation of multiple construction equipment units.

DF-7 The use of heavy construction equipment and earthmoving activity shall be suspended during Air Alerts when the Air Quality Index reaches the "Unhealthy" level.

DF-8 Establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

DF-9 Utilize zero VOC and low VOC paints and solvents, wherever possible.

Operational Design Features:

DF-10 Implement the GHG Reduction Measures from the Ontario County Climate Action Plan (CAP) Screening Tables to achieve at least 100 points, per the requirements for Mixed Use Projects.

DF-11 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

DF-12 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod, per CAL Green and City of Ontario requirements.

DF-13 Implement zero waste strategies, recycling and composting programs for residential and non-residential uses.

DF-14 Encourage residents and landscape maintenance crews to use electric landscaping equipment, such as lawn mowers and leaf blowers, wherever feasible.

DF-15 No natural gas or wood burning fireplaces shall be installed in any residential dwelling.

DF-16 Implement trip reduction measures that reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking. Such as;

1. Improve the walkability and design of the project by including pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e. sidewalks, crosswalks, foot paths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.).

2. Provide traffic calming measures (i.e. marked crosswalks, raised crosswalks, raised intersections, count-down signal timers, curb extensions, speed tables, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.)

3. Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

DF-17 Provide electric vehicle charging stations per the requirements of CALGreen.

2.0 Air Quality Setting

The Federal Clean Air Act (§ 7602) defines air pollution as any agent or combination of such agents, including any physical, chemical, biological, or radioactive substance which is emitted into or otherwise enters the ambient air. Household combustion devices, motor vehicles, industrial facilities and forest fires are common sources of air pollution. Air pollution can cause disease, allergies and even death. It affects soil, water, crops, vegetation, manmade materials, animals, wildlife, weather, visibility, and climate. It can also cause damage to and deterioration of property, present hazards to transportation, and negatively impact the economy.

This section provides background information on criteria air pollutants, the applicable federal, state and local regulations concerning air pollution, and the existing physical setting of the project within the context of local air quality.

2.1 Description of Air Pollutants[1].

The following section describes the air pollutants of concern related to the project. Criteria air pollutants are defined as those pollutants for which the federal and state governments have established air quality standards for outdoor or ambient concentrations to protect public health. The following descriptions of criteria air pollutants have been provided by the SCAQMD.

- **Carbon Monoxide (CO)** is a colorless, odorless, toxic gas produced by incomplete combustion of carbon-containing fuels (e.g., gasoline, diesel fuel, and biomass). Sources include motor vehicle exhaust, industrial processes (metals processing and chemical manufacturing), residential wood burning, and natural sources. CO is somewhat soluble in water; therefore, rainfall and fog can suppress CO conditions. CO enters the body through the lungs, dissolves in the blood, and competes with oxygen, often replacing it in the blood, thus reducing the blood's ability to transport oxygen to vital organs in the body. The ambient air quality standard for carbon monoxide is intended to protect persons whose medical condition already compromises their circulatory system's ability to deliver oxygen. These medical conditions include certain heart ailments, chronic lung diseases, and anemia. Persons with these conditions have reduced exercise capacity even when exposed to relatively low levels of CO. Fetuses are at risk because their blood has an even greater affinity to bind with CO. Smokers are also at risk from ambient CO levels because smoking

[1] SCAQMD. Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning (May 6, 2005)

increases the background level of CO in their blood. The South Coast basin has recently achieved attainment status for carbon monoxide by both USEPA and CARB.

- **Nitrogen Dioxide (NO_2)** is a byproduct of fuel combustion. The principal form of nitrogen oxide produced by combustion is nitric oxide (NO), but NO reacts quickly to form NO_2, creating the mixture of NO and NO_2 commonly called NO_x. NO_2 acts as an acute irritant and, in equal concentrations, is more injurious than NO. At atmospheric concentrations, however, NO_2 is only potentially irritating. There is some indication of a relationship between NO_2 and chronic pulmonary fibrosis. Some increase in bronchitis in young children has also been observed at concentrations below 0.3 parts per million (ppm). NO_2 absorbs blue light which results in a brownish red cast to the atmosphere and reduced visibility. Although NO_2 concentrations have not exceeded national standards since 1991 and the state hourly standard since 1993, NO_x emissions remain of concern because of their contribution to the formation of O_3 and particulate matter.

- **Ozone (O_3)** is one of several substances called photochemical oxidants that are formed when volatile organic compounds (VOC) and NO_x react in the presence of ultraviolet sunlight. O_3 concentrations in the South Coast basin are typically among the highest in the nation, and the damaging effects of photochemical smog, which is a popular name for a number of oxidants in combination, are generally related to the concentrations of O_3. Individuals exercising outdoors, children, and people with preexisting lung disease, such as asthma and chronic pulmonary lung disease, are considered to be the subgroups most susceptible to O_3 effects. Short-term exposures (lasting for a few hours) to O_3 at levels typically observed in southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes. In recent years, a correlation between elevated ambient O_3 levels and increases in daily hospital admission rates, as well as mortality, has also been reported. The South Coast Air Basin is designated by the USEPA as an extreme non-attainment area for ozone. Although O_3 concentrations have declined substantially since the early 1990s, the South Coast basin continues to have peak O_3 levels that exceed both state and federal standards.

- **Fine Particulate Matter (PM_{10})** consists of extremely small, suspended particles or droplets 10 microns or smaller in diameter that can lodge in the lungs, contributing to respiratory problems. PM_{10} arises from such sources as re-entrained road dust, diesel soot, combustion products, tire and brake abrasion, construction operations, and fires. It is also formed in the atmosphere from NO_x and SO_2 reactions with ammonia. PM_{10} scatters light and significantly reduces visibility. Inhalable particulates

pose a serious health hazard, alone or in combination with other pollutants. More than half of the smallest particles inhaled will be deposited in the lungs and can cause permanent lung damage. Inhalable particulates can also have a damaging effect on health by interfering with the body's mechanism for clearing the respiratory tract or by acting as a carrier of an absorbed toxic substance. The South Coast basin has recently achieved federal attainment status for PM_{10}, but is non-attainment based on state requirements.

- **Ultra-Fine Particulate Matter ($PM_{2.5}$)** is defined as particulate matter with a diameter less than 2.5 microns and is a subset of PM_{10}. $PM_{2.5}$ consists mostly of products from the reaction of NO_x and SO_2 with ammonia, secondary organics, finer dust particles, and the combustion of fuels, including diesel soot. $PM_{2.5}$ can cause exacerbation of symptoms in sensitive patients with respiratory or cardiovascular disease, declines in pulmonary function growth in children, and increased risk of premature death from heart or lung diseases in the elderly. Daily fluctuations in $PM_{2.5}$ levels have been related to hospital admissions for acute respiratory conditions, school absences, and increased medication use in children and adults with asthma. The South Coast basin is designated as non-attainment for $PM_{2.5}$ by both federal and state standards.

- **Sulfur dioxide (SO_2)** is a colorless, pungent gas formed primarily by the combustion of sulfur-containing fossil fuels. Health effects include acute respiratory symptoms and difficulty in breathing for children. Individuals with asthma may experience constriction of airways with exposure to SO_2. Though SO_2 concentrations have been reduced to levels well below state and federal standards, further reductions in SO_2 emissions are needed because SO_2 is a precursor to sulfate and PM_{10}. The South Coast basin is considered a SO_2 attainment area by USEPA and CARB.

- **Lead (Pb)** is a toxic heavy metal that can be emitted into the air through some industrial processes, burning of leaded gasoline and past use of lead-based consumer products. Lead is a neurotoxin that accumulates in soft tissues and bones, damages the nervous system, and causes blood disorders. It is particularly problematic in children, in that permanent brain damage may result, even if blood levels are promptly normalized with treatment. Concentrations of lead once exceeded the state and federal air quality standards by a wide margin, but as a result of the removal of lead from motor vehicle gasoline, ambient air quality standards for lead have not been exceeded since 1982. Though special monitoring sites immediately downwind of lead sources recorded localized violations of the state standard in 1994, no violations have been recorded since. Consequently, the South Coast basin is designated as an attainment area for lead by both the USEPA and CARB. This report

does not analyze lead emissions from the project, as it is not expected to emit lead in any significant measurable quantity.

- **Volatile Organic Compounds (VOC),** although not actually a criteria air pollutant, VOCs are regulated by the SCAQMD because they cause chemical reactions which contribute to the formation of ozone. VOCs are also transformed into organic aerosols in the atmosphere, contributing to higher PM_{10} and lower visibility levels. Sources of VOCs include combustion engines, and evaporative emissions associated with fuel, paints and solvents, asphalt paving, and the use of household consumer products such as aerosols. Although health-based standards have not been established for VOCs, health effects can occur from exposures to high concentrations of VOC. Some hydrocarbon components classified as VOC emissions are hazardous air pollutants. Benzene, for example, is a hydrocarbon component of VOC emissions that are known to be a human carcinogen. The term reactive organic gases (ROG) are often used interchangeably with VOC.

- **Toxic Air Contaminants (TACs)** are defined as air pollutants which may cause or contribute to an increase in mortality or serious illness, or which may pose a hazard to human health, and for which there is no concentration that does not present some risk. This contrasts with the criteria pollutants, in that there is no threshold level for TAC exposure below which adverse health impacts are not expected to occur. The majority of the estimated health risk from TACs can be attributed to a relatively few compounds, the most common being diesel particulate matter (DPM) from diesel engine exhaust. In addition to DPM, benzene and 1,3-butadiene are also significant contributors to overall ambient public health risk in California.

2.2 Federal and State Ambient Air Quality Standards

The Federal Clean Air Act, which was last amended in 1990, requires the EPA to set National Ambient Air Quality Standards (NAAQS) for criteria pollutants considered harmful to public health and the environment. The State of California has also established additional and more stringent California Ambient Air Quality Standards (CAAQS) in addition to the seven criteria pollutants designated by the federal government.

AAQS are designed to protect the health and welfare of the populace with a reasonable margin of safety. The standards are divided into two categories, primary standards, and secondary standards. Primary standards are implemented to provide protection for the "sensitive" populations such as those with asthma, or the children and elderly. Secondary standards are to provide protection against visible pollution as well as damage to the surrounding environment, including animals, crops, and buildings.

Table 4 shows the Federal and State Ambient Air Quality Standards.

Table 4
Federal and State Ambient Air Quality Standards (AAQS)[1]

Air Pollutant	Averaging Time [2]	Federal Standard (NAAQS)[2]	California Standard (CAAQS)[2]
Ozone	1 Hour	--	0.09 ppm
	8 Hour	0.070 ppm	0.070 ppm
Carbon Monoxide (CO)	1 Hour	35 ppm	20 ppm
	8 Hour	9 ppm	9 ppm
Nitrogen Dioxide (NO_2)	1 Hour	0.100 ppm	0.18 ppm
	Annual	0.053 ppm	0.030 ppm
Sulfur Dioxide (SO_2)	1 Hour	0.075 ppm	0.25 ppm
	3 Hour	0.5 ppm[3]	--
	24 Hour	--	0.04 ppm
Particulate Matter (PM_{10})	24 Hour	150 μg/m^3	50 μg/m^3
	Mean	--	20 μg/m^3
Particulate Matter (PM2.5)	24 Hour	35 μg/m^3	--
	Annual	12 μg/m^3	12 μg/m^3
Lead	30-day	--	1.5 μg/m
	Quarter	1.5 μg/m	--
	3-month average	0.15 μg/m	--
Visibility reducing particles	8 Hour	--	0.23/km extinction coefficient. (10-mile visibility standard)
Sulfates	24 Hour	--	25 μg/m
Vinyl chloride	24 Hour	--	0.01 ppm
Hydrogen sulfide	24 Hour	--	0.03 ppm

[1] Source: USEPA: https://www.epa.gov/criteria-air-pollutants/naaqs-table and
CARB: https://ww2.arb.ca.gov/resources/california-ambient-air-quality-standards

[2] ppm = parts per million of air, by volume; µg/m3 = micrograms per cubic meter; Annual = Annual Arithmetic Mean; 30-day = 30-day average; Quarter = Calendar quarter.

[3] Secondary standards

Several pollutants listed in Table 4 are not addressed in this analysis. Lead is not included because the project is not anticipated to emit lead. Visibility-reducing particles are not explicitly addressed in this analysis because particulate matter is addressed. The project is not expected to generate or be exposed to vinyl chloride because proposed project uses do not utilize the chemical processes that create this pollutant and there are no such uses in the project vicinity. The proposed project is not expected to cause exposure to hydrogen sulfide because it would not generate hydrogen sulfide in any substantial quantity.

2.3 Attainment Status

The Clean Air Act requires states to prepare a State Implementation Plan (SIP) to ensure air quality meets the NAAQS. The California Air Resources Board (CARB) provides designations of attainment for air basins where AAQS are either met or exceeded. If the AAQS are met, the area is designated as being in "attainment", if the air pollutant concentrations exceed the AAQS, than the area is designated as being "nonattainment". If there is inadequate or inconclusive data to make a definitive attainment designation, the area is considered "unclassified."

National nonattainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards. Each standard has a different definition, or 'form' of what constitutes attainment, based on specific air quality statistics. For example, the Federal 8-hour CO standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring values exceeds the threshold per year. In contrast, the federal annual $PM_{2.5}$ standard is met if the three-year average of the annual average $PM_{2.5}$ concentration is less than or equal to the standard.

When a state submits a request to the EPA to re-designate a nonattainment area to attainment, the Clean Air Act (CAA) section 175A(a) requires that the state (or states, if the area is a multi-state area) submit a maintenance plan ensuring the area can maintain the air quality standard for which the area is to be re-designated for at least 10 years following the effective date of re-designation.

Table 5 lists the attainment status for the criteria pollutants in the South Coast Air Basin (SCAB).

Table 5
South Coast Air Basin Attainment Status[1]

Pollutant	State Status	National Status
Ozone	Nonattainment	Nonattainment (Extreme)[2]
Carbon monoxide	Attainment	Attainment (Maintenance)
Nitrogen dioxide	Attainment	Attainment (Maintenance)
PM_{10}	Nonattainment	Attainment (Maintenance)
$PM_{2.5}$	Nonattainment	Nonattainment
Lead	Attainment	Nonattainment (Partial)[3]

[2] 8-Hour Ozone.
[3] Partial Nonattainment designation – Los Angeles County portion of Basin only.

2.4 South Coast Air Quality Management District (SCAQMD)

The agency responsible for air pollution control for the South Coast Air Basin (SCAB) is the South Coast Air Quality Management District (SCAQMD). SCAQMD is responsible for controlling emissions primarily from stationary sources. SCAQMD maintains air quality monitoring stations throughout the SCAB. SCAQMD, in coordination with the Southern California Association of Governments, is also responsible for developing, updating, and implementing the Air Quality Management Plan (AQMP) for the SCAB. An AQMP is a plan prepared and implemented by an air pollution district for a county or region designated as nonattainment of the federal and/or California ambient air quality standards. The term nonattainment area is used to refer to an air SCAB where one or more ambient air quality standards are exceeded.

The latest version is the 2016 AQMP. The 2016 AQMP is a regional blueprint for achieving the federal air quality standards and healthful air. While air quality has dramatically improved over the years, the SCAB still exceeds federal public health standards for both ozone and particulate matter (PM) and experiences some of the worst air pollution in the nation. The 2016 AQMP includes both stationary and mobile source strategies to ensure that rapidly approaching attainment deadlines are met, that public health is protected to the maximum extent feasible, and that the region is not faced with burdensome sanctions if the Plan is not approved or if the NAAQS are not met on time.

According to the 2016 AQMP, the most significant air quality challenge in the SCAB is to reduce nitrogen oxide (NOx) emissions sufficiently to meet the upcoming ozone standard deadlines. Based on the inventory and modeling results, 522 tons per day (tpd) of total

SCAB NOx 2012 emissions are projected to drop to 255 tpd and 214 tpd in the 8-hour ozone attainment years of 2023 and 2031 respectively, due to continued implementation of already adopted regulatory actions ("baseline emissions"). The analysis suggests that total SCAB emissions of NOx must be reduced to approximately 141 tpd in 2023 and 96 tpd in 2031 to attain the 8-hour ozone standards. This represents an additional 45 percent reduction in NOx in 2023, and an additional 55 percent NOx reduction beyond 2031 levels.[2]

2.4.1 SCAQMD Rules and Regulations

The SCAQMD establishes a program of rules and regulations to obtain attainment of the state and federal standards in conjunction with the AQMP. Several of the rules and regulations that may be applicable to this project include, but are not limited to, the following:

- **SCAQMD Rule 402** prohibits a person from discharging from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

- **SCAQMD Rule 403** governs emissions of fugitive dust during construction and operation activities. Compliance with this rule is achieved through application of standard Best Management Practices, such as application of water or chemical stabilizers to disturbed soils, covering haul vehicles, restricting vehicle speeds on unpaved roads to 15 miles per hour, sweeping loose dirt from paved site access roadways, cessation of construction activity when winds exceed 25 mph, and establishing a permanent ground cover on finished sites.

- **SCAQMD Rule 445** restricts wood burning devices from being installed into any new development and is intended to reduce the emissions of particulate matter for wood burning devices.

- **SCAQMD Rule 1113** governs the sale, use, and manufacturing of architectural coating and limits the VOC content in paints and paint solvents. This rule regulates the VOC content of paints available during construction. Therefore, all paints and

[2] SCAQMD. Final 2016 Air Quality Management Plan. http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/final-2016-aqmp

solvents used during construction and operation of project must comply with Rule 1113.

- **SCAQMD Rule 1143** governs the manufacture, sale, and use of paint thinners and solvents used in thinning of coating materials, cleaning of coating application equipment, and other solvent cleaning operations by limiting their VOC content. This rule regulates the VOC content of solvents used during construction. Solvents used during the construction phase must comply with this rule.

- **SCAQMD Rule 1186** limits the presence of fugitive dust on paved and unpaved roads and sets certification protocols and requirements for street sweepers that are under contract to provide sweeping services to any federal, state, county, agency or special district such as water, air, sanitation, transit, or school district.

2.5 Local Climate and Meteorology

The project is located in the South Coast Air Basin (SCAB). Climatological data from the nearest weather station to the project site is summarized in Table 6.

Table 6
Meteorological Summary[1]

Month	Temperature (˚F)			Mean Precipitation (inches)
	Max.	Min.	Mean	
January	66.8	44.0	55.5	3.65
February	69.4	45.0	57.2	2.85
March	70.1	46.3	58.2	2.80
April	74.5	48.4	61.5	1.13
May	79.9	52.6	66.2	0.26
June	86.7	56.6	71.7	0.04
July	95.0	62.2	78.6	0.01
August	94.4	62.9	78.7	0.11
September	91.3	61.3	76.3	0.34
October	83.0	55.4	69.2	0.34
November	73.6	48.5	61.0	1.72
December	68.3	44.4	56.3	2.07
Annual	**79.4**	**52.3**	**65.9**	**15.32**

2.6 Local Air Quality

The air quality at any site is dependent on the regional air quality and local pollutant sources. Regional air quality is determined by the release of pollutants throughout the air basin. Estimates of the existing emissions in the Basin provided in the Final 2016 Air Quality Management Plan, prepared by SCAQMD, March 2017, indicate that collectively, mobile sources account for 60 percent of the VOC, 90 percent of the NOx emissions, 95 percent of the CO emissions and 34 percent of directly emitted PM2.5, with another 13 percent of PM2.5 from road dust.

The SCAQMD has divided the SCAB into fourteen general forecasting areas and thirty eight Source Receptor Areas (SRA) for monitoring and reporting local air quality. The SCAQMD provides daily reports of the current air quality conditions in each general forecast area and SRA. The monitoring areas provide a general representation of the local meteorological, terrain, and air quality conditions within the SCAB.

The project is located within the San Bernardino Valley general forecasting area and Southwest San Bernardino Valley (SRA-33). The Southwest San Bernardino Valley has been divided into two (2) regions; I-10 Near Road and CA-60 Near Road. Due to the close proximity of the project site to the I-10 Road, published air quality monitoring data has been used from this location.

Table 7 summarizes the published air quality monitoring for the most recent 3-year period available. These pollutant levels were used to comprise a "background" for the project location and existing local air quality. For criteria pollutants not monitored near the site, data from the nearest monitoring station with a comparable setting were used.

Table 7
Local Air Quality

Air Pollutant Location	Averaging Time	Item	2017	2018	2019
Carbon Monoxide -- I-10 Near Road	1 Hour	Max 1-Hour (ppm)	4.2	1.6	1.5
		Exceeded State Standard (20 ppm)	No	No	No
		Exceeded National Standard (35 ppm)	No	No	No
	8 Hour	Max 8 Hour (ppm)	1.3	1.3	1.1
		Exceeded State Standard (9 ppm)	No	No	No
		Exceeded National Standard (9 ppm)	No	No	No
Ozone -- Central San Bernardino Valley-1	1 Hour	Max 1-Hour (ppm)	0.137	0.141	0.124
		Days > State Standard (0.09 ppm)	33	38	41
	8 Hour	Max 8 Hour (ppm)	0.118	0.116	0.114
		Days > State Standard (0.07 ppm)	49	69	67
		Days >National Standard (0.070 ppm)	49	69	67
Nitrogen Dioxide -- I-10 Near Road	1 Hour	Max 1-Hour (ppm)	0.086	0.0883	0.0863
		Exceeded State Standard (0.18 ppm)	No	No	No
	Annual	Annual Average (ppm)	0.0288	0.0272	0.0276
		Exceeded >State Standard (0.030 ppm)	No	No	No
		Exceeded >National Standard (0.053 ppm)	No	No	No
Sulfur Dioxide -- Central San Bernardino Valley-1	1 Hour	Max 1 Hour (ppm)	0.0039	0.0029	0.0024
		Exceed State Standard (0.25 ppm)	No	No	No
		Exceed National Standard (0.075 ppm)	No	No	No
Coarse Particles (PM10) -- Central San Bernardino Valley-1	24 Hour	Max 24-Hour ($\mu g/m^3$)	75	64	88
		Days > State Standard (50 $\mu g/m^3$)	2	9	12
		Days >National Standard (150 $\mu g/m^3$)	0	0	0
	Annual	Annual Average ($\mu g/m^3$)	39.3	34.1	34.8
		Exceeded State Standard (20 $\mu g/m^3$)	Yes	Yes	Yes
Fine Particulates (PM2.5) -- Central San Bernardino Valley-1	24 Hour	Max 24-Hour ($\mu g/m^3$)	39.2	29.2	46.5
		Days >National Standard (35 $\mu g/m^3$)	1	0	2
	Annual	Annual Average ($\mu g/m^3$)	12.04	11.13	10.84
		Exceeded State Standard (12 $\mu g/m^3$)	No	No	No
		Exceeded National Standard (15 $\mu g/m^3$)	No	No	No

3.0 Global Climate Change Setting

Global climate change is the change in the average weather of the earth that is measured by such things as alterations in temperature, wind patterns, storms, and precipitation. Current data shows that the recent period of warming is occurring more rapidly than past geological events. The average global surface temperature has increased by approximately 1.4° Fahrenheit since the early 20th Century. 1.4° Fahrenheit may seem like a small change, but it's an unusual event in Earth's recent history, and as we are seeing, even small changes in temperature can cause enormous changes in the environment.

The planet's climate record, preserved in tree rings, ice cores, and coral reefs, shows that the global average temperature has been stable over long periods of time. For example, at the end of the last ice age, when the Northeast United States was covered by more than 3,000 feet of ice, average global temperatures were only 5° to 9° Fahrenheit cooler than today. The Intergovernmental Panel on Climate Change (IPCC), which includes more than 1,300 scientists from the United States and other countries, forecasts a temperature rise of 2.5° to 10° Fahrenheit over the next century. Therefore, significant changes to the environment are expected in the near future.

The consequences of global climate change include more frequent and severe weather, worsening air pollution by increasing ground level ozone, higher rates of plant and animal extinction, more acidic and oxygen depleted oceans, strain on food and water resources, and threats to densely populated coastal and low lying areas from sea level rise.

The impacts of climate change are already visible in the Southwest United States. In California, the consequences of climate change include;

- A rise in sea levels resulting in the displacement of coastal businesses and residencies
- A reduction in the quality and supply of water from the Sierra snowpack
- Increased risk of large wildfires
- Exacerbation of air quality problems
- Reductions in the quality and quantity of agricultural products
- An increased temperature and extreme weather events
- A decrease in the health and productivity of California's forests

3.1 Greenhouse Gases

GHGs comprise less than 0.1 percent of the total atmospheric composition, yet they play an essential role in influencing climate. Greenhouse gases include naturally occurring compounds such as carbon dioxide (CO_2), methane (CH_4), water vapor (H_2O), and nitrous oxide (N_2O), while others are synthetic. Man-made GHGs include the chlorofluorocarbons (CFCs), hydrofluorocarbons (HFCs) and Perfluorocarbons (PFCs), as well as sulfur hexafluoride (SF_6). Different GHGs have different effects on the Earth's warming. GHGs differ from each other in their ability to absorb energy (their "radiative efficiency") and how long they stay in the atmosphere, also known as the "lifetime".

The Global Warming Potential (GWP) was developed to allow comparisons of the global warming impacts of different gases. Specifically, it is a measure of how much energy the emissions of 1 ton of a gas will absorb over a given period of time, relative to the emissions of 1 ton of CO_2. The larger the GWP, the more that a given gas warms the Earth compared to CO_2 over that time period. The time period usually used for GWPs is 100 years. GWPs provide a common unit of measure, which allows analysts to add up emissions estimates of different gases and allows policymakers to compare emissions reduction opportunities across sectors and gases.

Table 8 lists the 100-year GWP of GHGs from the Intergovernmental Panel on Climate Change (IPCC) fifth assessment report (AR5).

Table 8
Global Warming Potential of Greenhouse Gases[1, 2]

Gas Name	Formula	Lifetime (years)	GWP
Carbon Dioxide	CO_2		1
Methane	CH_4	12	28
Nitrous Oxide	N_2O	114	265
Sulphur Hexafluoride	SF_6	3200	23,500
Nitrogen Trifluoride	NF_3	740	16,100
Hexafluoroethane (PFC-116)	C_2F_6	10,000	11,100
Octafluoropropane (PFC-218)	C_3F_8	2,600	8,900
Octafluorocyclobutane (PFC-318)	C_4F_8	3,200	9,540
Tetrafluoromethane (PFC-14)	CF_4	50,000	6,630
Hydrofluorocarbon 125	HFC-125	29	3,170
Hydrofluorocarbon 134a	HFC-134a	14	1,300
Hydrofluorocarbon 143a	HFC-143a	52	4,800
Hydrofluorocarbon 152a	HFC-152a	1	138
Hydrofluorocarbon 227ea	HFC-227ea	34	3,350
Hydrofluorocarbon 23	HFC-23	270	12,400
Hydrofluorocarbon 236fa	HFC-236fa	240	8,060
Hydrofluorocarbon 245fa	HFC-245fa	8	858
Hydrofluorocarbon 32	HFC-32	5	677
Hydrofluorocarbon 365mfc	HFC-365mfc	9	804
Hydrofluorocarbon 43-10mee	HFC-43-10mee	16	1,650

https://www.ipcc.ch/site/assets/uploads/2018/02/WG1AR5_Chapter08_FINAL.pdf
[2] GWPs are used to convert GHG emission values to "carbon dioxide equivalent" (CO_2e) units

3.2 GHG Regulatory Setting – State of California

The State of California has been a leader in climate change legislation and has passed numerous bills to reduce greenhouse gas emissions across all sectors of the economy. Some of the key climate legislation in the State include the following:

- **Assembly Bill (AB) 32, California Global Warming Solutions Act of 2006.** AB 32 set the stage for the State's transition to a sustainable, low-carbon future. AB 32 was the first program in the country to take a comprehensive, long-term approach to addressing climate change.[3]

- **Senate Bill (SB) 375, Sustainable Communities & Climate Protection Act of 2008.** SB 375 requires the Air Resources Board to develop regional greenhouse gas emission reduction targets for passenger vehicles GHG reduction targets for 2020 and 2035 for each region covered by the State's 18 metropolitan planning organizations.[4]

- **Senate Bill (SB) 100, California Renewables Portfolio Standard Program.** SB 100 established a landmark policy requiring renewable energy and zero-carbon resources supply 100 percent of electric retail sales to end-use customers by 2045.[5]

3.3 GHG Emissions Inventory

Table 9 shows the latest GHG emission inventories at the national, state, regional and local levels.

Table 9
GHG Emissions Inventory[1]

United States (2018)[2]	State of California (2018)[3]	SCAG (2020)[4]	City of Ontario (2020)[5]
6,678 $MMTCO_2e$	425 $MMTCO_2e$	216.4 $MMTCO_2e$	3.12 $MMTCO_2e$

[1] $MMTCO_2e$ = Million Metric Tons of Carbon Dioxide Equivalent

4.0 Modeling Parameters and Assumptions

The California Emissions Estimator Model Version 2020.4.0 (CalEEMod) was used to calculate criteria air pollutants and GHG emissions from the construction and operation of the project. CalEEMod is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify criteria air pollutant and GHG emissions.

The model quantifies direct emissions from construction and operation activities (including vehicle use), as well as indirect emissions, such as GHG emissions from off-site energy generation, solid waste disposal, vegetation planting and/or removal, and water use. The model also identifies design features to reduce criteria pollutant and GHG emissions. The model was developed for the California Air Pollution Control Officers Association (CAPCOA) in collaboration with the California air districts.

4.1 Construction Assumptions

Construction of the project is estimated to begin in the year 2021 and last approximately 21 months. Construction activities are expected to consist of demolition, site preparation, grading, building construction, paving, and architectural coating. The project is expected to be operational in the year 2023. For purposes of this analysis, construction phases are not expected to overlap.

The project is expected to demolish an existing asphalt surface parking lot of approximately 7.48 acres within Lot A and Lot B. The project is not expected to require the import or export any earthwork material during grading phase; preliminary earthwork estimates show a balanced site.

Assumptions for off-road equipment usage, soil disturbance area, worker and vendor trips, paving, and architectural coatings utilize the CalEEMod defaults.

The project will be required to comply with several standard fugitive dust control measures, per SCAQMD Rule 403. The following key inputs are utilized in CalEEMod and are based upon data provided from SCAQMD[6]:

- Utilize soil stabilizers - 30% PM_{10} and $PM_{2.5}$ reduction.

[6] SCAQMD. Fugitive Dust Mitigation Measures. http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies/fugitive-dust

- Replace ground cover - 15% PM_{10} and $PM_{2.5}$ reduction.
- Water exposed areas 2x per day.
- Unpaved road moisture content – 25%.
- Unpaved road vehicle speed – 15 mph.

4.2 Operational Assumptions

Operational emissions occur over the life of the project and are considered "long-term" sources of emissions. Operational emissions include both direct and indirect sources. This section briefly describes the operational sources of emissions analyzed for the project.

4.2.1 Mobile Source Emissions

Mobile source emissions are the largest source of long-term air pollutants from the operation of the project. Mobile sources are direct sources of project emissions that are primarily attributed to tailpipe exhaust and road dust (tire, brake, clutch, and road surface wear) from motor vehicles traveling to and from the site.

Estimates of mobile source emissions require information on four parameters: trip generation, trip length, vehicle/fleet mix, and emission factors (quantity of emission for each mile traveled or time spent idling by each vehicle).

The trip generation rates, trip length and trip percentages for this project are based on the latest version of the Toyota Arena Mixed Use Development Traffic Impact Study Scoping Agreement, by RK, May 2021 and San Bernardino County Transportation Authority (SBCTA) VMT Tool[7].

The Emission Factors (EMFAC2017) 2017 model and off-model adjustments factors to account for the SAFE Vehicle Rule is used to estimate the mobile source emissions are embedded in the CalEEMod emissions model. No adjustments have been made to default emission factors.

The project's total vehicle miles traveled estimated by CalEEMod is shown in the Table 10 for this project.

[7] SBCTA VMT Screening Tool. https://devapps.fehrandpeers.com/sbctavmt/

Table 10
Operational Vehicle Miles Traveled

Land Use	Annual Vehicle Miles Traveled (VMT)
Multifamily Mid-Rise[1]	5,682,657
Commercial/Retail Center	4,539,098
Total	**10,221,754**

[1] The VMT estimates for residential home-based trips are based on estimates from the SBCTA VMT Tool, which shows daily home-based VMT per capita for TAZ 53690101 of 7.9 VMT per population for model year 2023.

The operational vehicle fleet mix has been adjusted to reflect vehicle types used for typical residential home-based trips and the commercial/retail and office trips generated by the project. The Southern California Association of Governments (SCAG) regional travel demand model does not include heavy-duty trucks, buses or other large vehicles that would require passenger car equivalent (PCE) adjustments for residential home-based trips. The project does not consist of land uses that would typically require PCE adjustments to account for large trucks, such as warehousing.

To be conservative, the Air Quality/GHG analysis has assumed that 2% of the total residential home-based trips and commercial/retail and office trips will include trucks with a gross vehicle weight rating (GVWR) of 10,000 pound or greater. This includes LHD2, MHD, HHD, OBUS, UBUS, and SBUS vehicles. The 2% mix is also consistent with the default Highway Capacity Manual (HCM) assumptions. The adjusted vehicle mix is proportioned according to the default CalEEMod vehicle mix.

Table 11 summarizes vehicle mix used for this project.

Table 11
Vehicle Mix for Trips[1]

YUY	Vehicle Mix (%)
Light Duty Automobile (LDA)	55.05%
Light Duty Truck (LDTI)	5.72%
Light Duty Truck (LDT2)	17.64%
Medium Duty Truck (MDV)	14.23%
Light Heavy Truck (LHD1)	2.76%
Light Heavy Truck (LHD2)	0.34%
Medium Heavy Truck (MHD)	0.53%
Heavy Heavy Truck (HHD)	0.81%
Other Bus (OBUS)	0.03%
Urban Bus (UBUS)	0.01%
Motorcycle (MCY)	2.59%
School Bus (SBUS)	0.04%
Motor Home (MH)	0.24%
Total	**100.0%**

[1] Adjusted fleet mix to include 2% total trucks over 10,000 lbs GVWR. (LHD2, MHD, HHD, OBUS, UBUS, SBUS, MH)

5.0 Significance Thresholds

5.1 Air Quality Regional Significance Thresholds

The SCAQMD has established air quality emissions thresholds for criteria air pollutants for the purposes of determining whether a project may have a significant effect on the environment per Section 15002(g) of the Guidelines for implementing CEQA. By complying with the thresholds of significance, the project would be in compliance with the SCAQMD Air Quality Management Plan (AQMP) and the federal and state air quality standards.

Table 12 lists the air quality significance thresholds for the six air pollutants analyzed in this report. Lead is not included as part of this analysis as the project is not expected to emit lead in any significant measurable quantity.

Table 12
SCAQMD Regional Significance Air Quality Thresholds

Pollutant	Construction (lbs/day)	Operation (lbs/day)
NO_X	100	55
VOC	75	55
PM_{10}	150	150
$PM_{2.5}$	55	55
SO_X	150	150
CO	550	550

[1] Source: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf

5.2 City of Ontario General Plan

The City of Ontario describes several goals and policies for addressing air quality and greenhouse gas in the General Plan ER4 Air Quality. The following policy goals are aimed at providing guidance and policy direction in providing better indoor and outdoor air quality for Ontario and the air basin will improve the quality of life of residents, workers and visitors, decrease health care costs and make Ontario more prosperous by making the City a more desirable place to be.

GOAL ER4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions

ER4-1 *Land Use.* We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.

ER4-2 *Sensitive Land Uses.* We prohibit the future siting of sensitive land uses, within the distances defined by the California Air Resources Board for specific source categories, without sufficient mitigation.

ER4-3 *Greenhouse Gases (GHG) Emissions Reductions.* We will reduce GHG emissions in accordance with regional, state and federal regulations.

ER4-4 *Indoor Air Quality.* We will comply with State Green Building Codes relative to indoor air quality.

ER4-5 *Transportation.* We promote mass transit and non-motorized mobility options (e.g. walking, biking) to reduce air pollutant emissions.

ER4-6 Particulate Matter. We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.

ER4-7 *Other Agency Collaboration.* We collaborate with other agencies within the South Coast Air Basin to improve regional air quality at the emission source.

5.4 City of Ontario Community Climate Action Plan

The City of Ontario has adopted the Community Climate Action Plan (CCAP) to help reduce citywide GHG emissions and align the City with the statewide Scoping Plan GHG reduction efforts.

The CCAP has established Screening Tables, which are setup similar to a checklist, with points allocated to certain elements of the project that would contribute to reduced GHG emissions. If a project garners 100 points (by including enough GHG reducing elements), then the project is consistent with Ontario City's Community Climate Action Plan for reducing emissions and the impact may be considered less than significant for purposes of CEQA.

6.0 Air Quality Impact Analysis

Consistent with CEQA and the State CEQA Guidelines, a significant impact related to air quality would occur if the proposed project is determined to:

a) Conflict with or obstruct implementation of the applicable air quality plan.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable Federal or State ambient air quality standard.

c) Expose sensitive receptors to substantial pollutant concentrations.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

6.1 Short Term Air Quality Impacts - Construction

6.1.1 Daily Emissions - Construction

Daily air quality emissions include both on-site and off-site emissions associated with construction of the project. Regional daily emissions of criteria pollutants are compared to the SCAQMD thresholds of significance.

As shown in Table 13, daily emissions of criteria pollutants are expected to be below the allowable thresholds of significance.

CalEEMod daily emissions outputs are provided in Appendix A.

Table 13
Daily Construction Emissions

Maximum Daily Emissions (lbs/day)[1, 2]						
Activity	**VOC**	**NO_x**	**CO**	**SO_2**	**PM_{10}**	**$PM_{2.5}$**
Demolition	0.91	14.16	26.89	0.09	7.84	1.56
Site Preparation	0.55	2.08	21.68	0.04	7.78	3.98
Grading	0.85	3.36	33.90	0.06	3.85	1.56
Building Construction	4.86	17.12	60.88	0.16	11.46	3.28
Paving	1.29	1.25	17.86	0.02	0.21	0.08
Architectural Coating	70.26	0.56	8.39	0.02	1.96	0.53
Maximum[1]	**70.26**	**17.12**	**60.88**	**0.16**	**11.46**	**3.98**
SCAQMD Threshold	75	100	550	150	150	55
Exceeds Threshold (?)	**No**	**No**	**No**	**No**	**No**	**No**

[1] Maximum daily emission during summer or winter; includes both on-site and off-site project emissions.
[2] Includes fugitive dust control measures and Tier 4 engine requirements.

The project must follow mandatory SCAQMD rules and requirements with regards to fugitive dust control, as described in Section 6.1.3. Compliance with the standard dust control measures is considered to be part of the conditions of approval for the project and built into the design features.

Table 13 shows that, the project's daily construction emissions will be below the applicable SCAQMD air quality standards and thresholds of significance. As a result, the project would not contribute substantially to an existing or projected air quality violation.

Furthermore, by complying with the SCAQMD standards, the project would not contribute to a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

The project's short-term construction impact on regional air resources is less than significant.

6.1.2 Fugitive Dust - Construction

The Project is required to comply with regional rules that assist in reducing short-term air pollutant emissions associated with suspended particulate matter, also known as fugitive dust. Fugitive dust emissions are commonly associated with land clearing activities, cut-and-fill grading operations, and exposure of soils to the air and wind. SCAQMD Rule 403 requires that fugitive dust is controlled with best-available control measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. In addition, SCAQMD Rules 402 and 403 require implementation of dust suppression techniques to prevent fugitive dust from creating a nuisance off site.

The following recommendations are listed to ensure full compliance with the applicable dust control standards.

DF-1 Prepare and implement a Construction Management Plan which will include Best Available Control Measures to be submitted to the City of Ontario.

DF-2 Follow the standard SCAQMD rules and requirements with regards to fugitive dust control, which includes, but are not limited to the following:

1. All active construction areas shall be watered two (2) times daily.
2. Speed on unpaved roads shall be reduced to less than 15 mph.
3. Any visible dirt deposition on any public roadway shall be swept or washed at the site access points within 30 minutes.
4. Any on-site stockpiles of debris, dirt or other dusty material shall be covered or watered twice daily.
5. All operations on any unpaved surface shall be suspended if winds exceed 15 mph.
6. Access points shall be washed or swept daily.
7. Construction sites shall be sandbagged for erosion control.
8. Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more).
9. Cover all trucks hauling dirt, sand, soil, or other loose materials, and maintain at least 2 feet of freeboard space in accordance with the requirements of California Vehicle Code (CVC) section 23114.
10. Pave or gravel construction access roads at least 100 feet onto the site from the main road and use gravel aprons at truck exits.
11. Replace the ground cover of disturbed areas as quickly possible.

12. A fugitive dust control plan should be prepared and submitted to SCAQMD prior to the start of construction.

6.1.3 Odors - Construction

Heavy-duty equipment in the project area during construction will emit odors; however, the construction activity would cease to occur after individual construction is completed. The project is required to comply with Rule 402 during construction, which states that a person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. No other sources of objectionable odors have been identified for the proposed Project.

Therefore, the project impact from odor emissions is less than significant.

6.1.4 Asbestos - Construction

Asbestos is a carcinogen and is categorized as a hazardous air pollutant by the Environmental Protection Agency (EPA). Asbestos fibers imbedded within construction materials become a health hazard once they are disturbed and rendered airborne, such as through physical contact like building renovation and demolition activities. Asbestos is regulated through the National Emissions Standards for Hazardous Air Pollutants (NESHAP) and SCAQMD is the local enforcement authority for asbestos.

The project is not expected to require the demolition of existing building or structures. Therefore, the potential risk from exposure to asbestos during construction is small.

Asbestos also occurs naturally in serpentine and ultramafic rock. Based on the California Division of Mines and Geology General Location Guide for Ultramafic Rocks in California - Areas More Likely to Contain Naturally Occurring Asbestos, naturally occurring asbestos has not been shown to occur within in the vicinity of the project site. Therefore, the potential risk for naturally occurring asbestos (NOA) during project construction is small.

In the event asbestos is found on the site, the project will be required to comply with SCAQMD and NESHAP standards and protocols. SCAQMD Rule 1403 establishes the survey requirements, notification, and work practice requirements to prevent asbestos emissions

during construction activities. By following the required asbestos abatement protocols, the project impact from asbestos would be less than significant.

6.1.5 Diesel Particulate Matter - Construction

The greatest potential for toxic air contaminant emissions from the project would be related to diesel particulate matter (DPM) emissions associated with heavy diesel equipment used during construction. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of "individual cancer risk". "Individual Cancer Risk" is the likelihood that a person exposed to concentrations of toxic air contaminants over a 30-year lifetime will contract cancer, based on the use of standard risk-assessment methodology.

The proposed project's construction activity is not expected to be a long-term (i.e., 30 years) source of toxic air contaminant emissions, thus the individual cancer risk is greatly reduced.

However, given the close proximity of the project to nearest sensitive receptors (residential homes to the north), several measures are provided to help ensure the potential health risk associated with DPM during construction is reduced to the maximum extent feasible. This includes a requirement for Tier 4 engines on all diesel-powered construction equipment. Tier 4 engines, along with the latest national fuel standards, have been shown to yield PM reductions of over 95% from the typical Tier 2 and Tier 3 engines[8].

It is presumed that with the recommended design features and Tier 4 engines in place that the potential short term construction health risks will be adequately reduced to be less than significant. It should be noted however, that a quantified diesel health risk assessment (HRA) has not been prepared as part of the scope of this analysis.

The following design features are recommended to help ensure the project does not expose receptors to substantial pollution concentrations during construction:

DF-3 All diesel construction equipment shall have Tier 4 low emission "clean diesel" engines (OEM or retrofit) that include diesel oxidation catalysts and diesel particulate filters that meet the latest CARB best available control technology.

[8] EPA. Control of Emissions of Air Pollution from Nonroad Diesel Engines and Fuel; Final Rule. (40 CFR Parts 9, 69, et al.)

DF-4 Construction equipment shall be maintained in proper tune.

DF-5 All construction vehicles shall be prohibited from excessive idling. Excessive idling is defined as five (5) minutes or longer.

DF-6 Minimize the simultaneous operation of multiple construction equipment units.

DF-7 The use of heavy construction equipment and earthmoving activity shall be suspended during Air Alerts when the Air Quality Index reaches the "Unhealthy" level.

DF-8 Establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

DF-9 Utilize zero VOC and low VOC paints and solvents, wherever possible.

6.2 Long Term Air Quality Impacts - Operation

6.2.1 Daily Emissions - Operation

Long-term operational air pollutant impacts from the project are shown in Table 14. The project is not expected to exceed any of the allowable daily emissions thresholds for criteria pollutants at the regional level. CalEEMod daily emissions outputs are provided in Appendix A.

The project's daily operational emissions will be below the applicable SCAQMD air quality thresholds of significance and the project would not contribute substantially to an existing or projected air quality violation. Furthermore, by complying with the SCAQMD standards, the project would not contribute to a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

The project related long-term air quality impacts are less than significant.

Table 14
Daily Operational Emissions

Maximum Daily Emissions (lbs/day)[1]						
Activity	**VOC**	**NO_x**	**CO**	**SO_2**	**PM_{10}**	**$PM_{2.5}$**
Mobile Sources	17.27	14.68	127.09	0.24	23.87	6.46
Energy Sources	0.30	2.55	1.10	0.02	0.21	0.21
Area Sources	19.70	10.40	61.39	0.07	1.10	1.10
Total	**37.26**	**27.64**	**189.58**	**0.32**	**25.18**	**7.77**
SCAQMD Threshold	55	55	550	150	150	55
Exceeds Threshold (?)	No	No	No	No	No	No

[1] Maximum daily emission during summer or winter; includes both on-site and off-site project emissions.
[2] Daily emissions reports are provided in Appendix A.

6.2.2 Odors - Operation

Land uses that commonly receive odor complaints include agricultural uses (farming and livestock), chemical plants, composting operations, dairies, fiberglass molding facilities, food processing plants, landfills, refineries, rail yards, and wastewater treatment plants. The proposed project does not contain land uses that would typically be associated with significant odor emissions.

The project will be required to comply with standard building code requirements related to exhaust ventilation, as well as comply with SCAQMD Rule 402. Rule 402 requires that a person may not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. Project related odors are not expected to meet the criteria of being a nuisance. **The project's operation would result in less than significant odor impacts.**

6.2.3 Toxic Air Contaminants - Operations

The project would consist of commercial/retail and residential land uses. These types of projects do not include major sources of toxic air contaminants (TAC) emissions that would result in significant exposure of sensitive receptors to substantial pollutant concentrations. Therefore, **the project impact is considered less than significant.**

7.0 Greenhouse Gas Impact Analysis

Consistent with CEQA Guidelines, a significant impact related to greenhouse gas would occur if the proposed project is determined to:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.

b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of greenhouse gases.

For purposes of this project, the City of Ontario CCAP establishes the requirements for determining whether a project would have a significant impact to GHG emissions under CEQA.

The CCAP uses Screening Tables, which are setup similar to a checklist, with points allocated to certain elements of the project to reduce GHG emissions. If a project garners 100 points (by including enough GHG reducing elements), then the project is consistent with CCAP and the impact may be considered less than significant for purposes of CEQA.

The proposed project is expected to comply with the CCAP by implementing the Screening Table requirements into the project design. To help ensure the project adheres to the CCAP requirements, the following project design feature is provided:

DF-10 Implement the GHG Reduction Measures from the Ontario County Climate Action Plan (CAP) Screening Tables to achieve at least 100 points, per the requirements for Mixed Use Projects.

As described in Appendix B of the CCAP, for mixed use projects, both the residential and non-residential screening tables shall be completed. Mixed use Projects that garner at least 100 points will be consistent with the reduction quantities in the City's CAP and are considered less than significant for GHG emissions.

Therefore, with the implementation of the CCAP Screening Tables, the project is not expected to generate GHG emissions, either directly or indirectly, that would cause a significant impact on the environment. Also, by complying with the CCAP, the project will not conflict with an applicable plan, policy or regulation for the purpose of reducing the emissions of greenhouse gases and the impact is considered less than significant.

Furthermore, since the purpose of the City's CCAP is to ensure compliance with the state's climate initiatives for reducing GHG emissions, by complying with the CCAP, the project will also be in compliant with the broader statewide goals for combating climate change; such as those required in the CARB Scoping Plan and AB 32.

The mixed use project is also located within close proximity to high quality transit, located in a low VMT zone, and offers high-density residential development near commercial uses. The project will include pedestrian friendly and walkable design that will encourage fewer auto-based trips. The following project design features will be provided to further help reduce GHG emissions:

DF-11 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

DF-12 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod, per CAL Green and City of Ontario requirements.

DF-13 Implement zero waste strategies, recycling and composting programs for residential and non-residential uses.

DF-14 Encourage residents and landscape maintenance crews to use electric landscaping equipment, such as lawn mowers and leaf blowers, wherever feasible.

DF-15 No natural gas or wood burning fireplaces shall be installed in any residential dwelling.

DF-16 Implement trip reduction measures that reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking. Such as;

1. Improve the walkability and design of the project by including pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e. sidewalks, crosswalks, foot paths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.).

2. Provide traffic calming measures (i.e. marked crosswalks, raised crosswalks, raised intersections, count-down signal timers, curb

extensions, speed tables, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.)

3. Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

DF-17 Provide electric vehicle charging stations per the requirements of CALGreen.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - The proposed project consists of a mixed-use town center development with 691 multifamily DU and 71,200 square feet of commercial/retail land uses on approximately 18.73 acres.

Construction Phase - The project's architectural coating phase will be extended to 75 days.

Demolition - The project is proposing to demolish approximetely 326,026 square feet of surface asphalt parking lot.

Vehicle Trips - The trip generation rates have been updated to reflect Toyota Arena TIA Scoping Agreement, by RK, May 25, 2021 and Traffic Impact Study and SANBAG VMT Model.

Fleet Mix - Operational fleet mix adjusted to equal 2% trucks with GVWR > 10,000 lbs.

Woodstoves - SCAQMD Rule 445 restricts wood burning hearths/fireplaces from being installed in new development.

Construction Off-road Equipment Mitigation - Project will be required to comply with SCAQMD Rule 403 regarding fugitive dust control.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - The proposed project consists of a mixed-use town center development with 691 multifamily DU and 71,200 square feet of commercial/retail land uses on approximately 18.73 acres.

Construction Phase - The project's architectural coating phase will be extended to 75 days.

Demolition - The project is proposing to demolish approximetely 326,026 square feet of surface asphalt parking lot.

Vehicle Trips - The trip generation rates have been updated to reflect Toyota Arena TIA Scoping Agreement, by RK, May 25, 2021 and Traffic Impact Study and SANBAG VMT Model.

Fleet Mix - Operational fleet mix adjusted to equal 2% trucks with GVWR > 10,000 lbs.

Woodstoves - SCAQMD Rule 445 restricts wood burning hearths/fireplaces from being installed in new development.

Construction Off-road Equipment Mitigation - Project will be required to comply with SCAQMD Rule 403 regarding fugitive dust control.

Toyota Arena Mixed Use Development - San Bernardino-South Coast County, Winter

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Replace Ground Cover

Water Exposed Area

Water Unpaved Roads

Reduce Vehicle Speed on Unpaved Roads

3.2 Demolition - 2021

Unmitigated Construction On-Site

City of Ontario
Community Climate Action Plan Screening Table

Instructions for Residential, Commercial, or Industrial Projects

The Screening Table assigns points for each option incorporated into a project as mitigation or a project design feature (collectively referred to as "feature"). The point values correspond to the minimum emissions reduction expected from each feature. The menu of features allows maximum flexibility and options for how development projects can implement the GHG reduction measures. The point levels are based upon improvements compared to 2008 emission levels of efficiency. Projects that garner at least 100 points will be consistent with the reduction quantities anticipated in the City's CAP. As such, those projects that garner a total of 100 points or greater would not require quantification of project specific GHG emissions. Consistent with CEQA Guidelines, such projects would be determined to have a less than significant individual and cumulative impact for GHG emissions.

Instructions for Mixed Use Projects

Mixed use projects provide additional opportunities to reduce emissions by combining complimentary land uses in a manner that can reduce vehicle trips. Mixed use projects also have the potential to complement energy efficient infrastructure in a way that reduces emissions. For mixed use projects, fill out both Screening Table 1 and Table 2, but proportion the points identical to the proportioning of the mix of uses. As an example, a mixed use project that is 50% commercial uses and 50% residential uses will show ½ point for each assigned point value in Table 1 and Table 2. Add the points from both tables. Mixed use Projects that garner at least 100 points will be consistent with the reduction quantities in the City's CAP and are considered less than significant for GHG emissions.

Those projects that do not garnish 100 points using the screening tables will need to provide additional analysis to determine the significance of GHG emissions. Nothing in this guidance shall be construed as limiting the City's authority to adopt a statement of overriding consideration for projects with significant GHG impacts. The following tables provides a menu of performance standards/options related to GHG mitigation measures and design features that can be used to demonstrate consistency with the reduction measures and GHG reduction quantities in the CAP.

Table 1: Screening Table for Implementation of GHG Reduction Measures for Residential Development

Feature	Description	Assigned Point Values	Project Points
Reduction Measure PS E1: Residential Energy Efficiency			
Building Envelope			
Insulation	2008 Baseline (walls R-13:, roof/attic: R-30)	0 points	12
	Modestly Enhanced Insulation (walls R-13:, roof/attic: R-38)	12 points	
	Enhanced Insulation (rigid wall insulation R-13, roof/attic: R-38)	15 points	
	Greatly Enhanced Insulation (spray foam wall insulated walls R-15 or higher, roof/attic R-38 or higher)	18 points	
Windows	2008 Baseline Windows (0.57 U-factor, 0.4 solar heat gain coefficient (SHGC)	0 points	06
	Modestly Enhanced Window Insulation (0.4 U-Factor, 0.32 SHGC)	6 points	
	Enhanced Window Insulation (0.32 U-Factor, 0.25 SHGC)	7 points	
	Greatly Enhanced Window Insulation (0.28 or less U-Factor, 0.22 or less SHGC)	9 points	
Cool Roof	Modest Cool Roof (CRRC Rated 0.15 aged solar reflectance, 0.75 thermal emittance)	10 points	10
	Enhanced Cool Roof(CRRC Rated 0.2 aged solar reflectance, 0.75 thermal emittance)	12 points	
	Greatly Enhanced Cool Roof (CRRC Rated 0.35 aged solar reflectance, 0.75 thermal emittance)	14 points	
Air Infiltration	Minimizing leaks in the building envelope is as important as the insulation properties of the building. Insulation does not work effectively if there is excess air leakage.		10
	Air barrier applied to exterior walls, calking, and visual inspection such as the HERS Verified Quality Insulation Installation (QII or equivalent)	10 points	
	Blower Door HERS Verified Envelope Leakage or equivalent	8 points	
Thermal Storage of Building	Thermal storage is a design characteristic that helps keep a constant temperature in the building. Common thermal storage devices include strategically placed water filled columns, water storage tanks, and thick masonry walls.		
	Modest Thermal Mass (10% of floor or 10% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	2 points	
	Enhanced Thermal Mass (20% of floor or 20% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	4 points	

Feature	Description	Assigned Point Values	Project Points
Indoor Space Efficiencies			
Heating/ Cooling Distribution System	Minimum Duct Insulation (R-4.2 required)	0 points	07
	Modest Duct insulation (R-6)	7 points	
	Enhanced Duct Insulation (R-8)	8 points	
	Distribution loss reduction with inspection (HERS Verified Duct Leakage or equivalent)	12 points	
Space Heating/ Cooling Equipment	2008 Minimum HVAC Efficiency (SEER 13/60% AFUE or 7.7 HSPF)	0 points	04
	Improved Efficiency HVAC (SEER 14/65% AFUE or 8 HSPF)	4 points	
	High Efficiency HVAC (SEER 15/72% AFUE or 8.5 HSPF)	7 points	
	Very High Efficiency HVAC (SEER 16/80% AFUE or 9 HSPF)	9 points	
Water Heaters	2008 Minimum Efficiency (0.57 Energy Factor)	0 points	12
	Improved Efficiency Water Heater (0.675 Energy Factor)	12 points	
	High Efficiency Water Heater (0.72 Energy Factor)	15 points	
	Very High Efficiency Water Heater (0.92 Energy Factor)	18 points	
	Solar Pre-heat System (0.2 Net Solar Fraction)	4 points	
	Enhanced Solar Pre-heat System (0.35 Net Solar Fraction)	8 points	
Daylighting	Daylighting is the ability of each room within the building to provide outside light during the day reducing the need for artificial lighting during daylight hours.		01
	All peripheral rooms within the living space have at least one window (required)	0 points	
	All rooms within the living space have daylight (through use of windows, solar tubes, skylights, etc.)	1 points	
	All rooms daylighted	2 points	
Artificial Lighting	2008 Minimum (required)	0 points	08
	Efficient Lights (25% of in-unit fixtures considered high efficacy. High efficacy is defined as 40 lumens/watt for 15 watt or less fixtures; 50 lumens/watt for 15-40 watt fixtures, 60 lumens/watt for fixtures >40watt)	8 points	
	High Efficiency Lights (50% of in-unit fixtures are high efficacy)	10 points	
	Very High Efficiency Lights (100% of in-unit fixtures are high efficacy)	12 points	
Appliances	Energy Star Refrigerator (new)	1 points	01
	Energy Star Dish Washer (new)	1 points	01
	Energy Star Washing Machine (new)	1 points	01

Feature	Description	Assigned Point Values	Project Points
Miscellaneous Residential Building Efficiencies			
Building Placement	North/South alignment of building or other building placement such that the orientation of the buildings optimizes natural heating, cooling, and lighting.	5 point	
Shading	At least 90% of south-facing glazing will be shaded by vegetation or overhangs at noon on Jun 21st.	4 Points	
Energy Star Homes	EPA Energy Star for Homes (version 3 or above)	25 points	
Independent Energy Efficiency Calculations	Provide point values based upon energy efficiency modeling of the Project. Note that engineering data will be required documenting the energy efficiency and point values based upon the proven efficiency beyond Title 24 Energy Efficiency Standards.	TBD	
Other	This allows innovation by the applicant to provide design features that increases the energy efficiency of the project not provided in the table. Note that engineering data will be required documenting the energy efficiency of innovative designs and point values given based upon the proven efficiency beyond Title 24 Energy Efficiency Standards.	TBD	
Existing Residential Retrofits	The applicant may wish to provide energy efficiency retrofit projects to existing residential dwelling units to further the point value of their project. Retrofitting existing residential dwelling units within the City is a key reduction measure that is needed to reach the reduction goal. The potential for an applicant to take advantage of this program will be decided on a case by case basis and must have the approval of the Ontario Planning Department. The decision to allow applicants to ability to participate in this program will be evaluated based upon, but not limited to the following; Will the energy efficiency retrofit project benefit low income or disadvantaged residents? Does the energy efficiency retrofit project fit within the overall assumptions in reduction measures associated with existing residential retrofits? Does the energy efficiency retrofit project provide co-benefits important to the City? Point value will be determined based upon engineering and design criteria of the energy efficiency retrofit project.	TBD	
Reduction Measure PS E2: Residential Renewable Energy Generation			
Photovoltaic	Solar Photovoltaic panels installed on individual homes or in collective neighborhood arrangements such that the total power provided augments:		
	Solar Ready Homes (sturdy roof and solar ready service panel)	2 points	
	10 percent of the power needs of the project	10 points	
	20 percent of the power needs of the project	15 points	
	30 percent of the power needs of the project	20 points	
	40 percent of the power needs of the project	28 points	
	50 percent of the power needs of the project	35 points	
	60 percent of the power needs of the project	38 points	
	70 percent of the power needs of the project	42 points	
	80 percent of the power needs of the project	46 points	

Feature	Description	Assigned Point Values	Project Points
	90 percent of the power needs of the project	52 points	
	100 percent of the power needs of the project	58 points	
Wind turbines	Some areas of the City lend themselves to wind turbine applications. Analysis of the area's capability to support wind turbines should be evaluated prior to choosing this feature. Individual wind turbines at homes or collective neighborhood arrangements of wind turbines such that the total power provided augments:		
	10 percent of the power needs of the project	10 points	
	20 percent of the power needs of the project	15 points	
	30 percent of the power needs of the project	20 points	
	40 percent of the power needs of the project	28 points	
	50 percent of the power needs of the project	35 points	
	60 percent of the power needs of the project	38 points	
	70 percent of the power needs of the project	42 points	
	80 percent of the power needs of the project	46 points	
	90 percent of the power needs of the project	52 points	
	100 percent of the power needs of the project	58 points	
Off-site renewable energy project	The applicant may submit a proposal to supply an off-site renewable energy project such as renewable energy retrofits of existing homes that will help implement renewable energy within the City. These off-site renewable energy retrofit project proposals will be determined on a case by case basis and must be accompanied by a detailed plan that documents the quantity of renewable energy the proposal will generate. Point values will be determined based upon the energy generated by the proposal.	TBD	
Other Renewable Energy Generation	The applicant may have innovative designs or unique site circumstances (such as geothermal) that allow the project to generate electricity from renewable energy not provided in the table. The ability to supply other renewable energy and the point values allowed will be decided based upon engineering data documenting the ability to generate electricity.	TBD	
Reduction Measure PS W1: Residential Water Conservation			
Irrigation and Landscaping			
Water Efficient Landscaping	Limit conventional turf to < 50% of required landscape area	0 points	08
	Limit conventional turf to < 25% of required landscape area	4 points	
	No conventional turf (warm season turf to < 50% of required landscape area and/or low water using plants are allowed)	6 points	
	Only California Native Plants that requires no irrigation or some supplemental irrigation	8 points	

Feature	Description	Assigned Point Values	Project Points
Water Efficient irrigation systems	Low precipitation spray heads < .75"/hr or drip irrigation Weather based irrigation control systems or moisture sensors (demonstrate 20% reduced water use)	2 point 3 points	02
Recycled Water	Recycled connections (purple pipe) to irrigation system on site	6 points	
Water Reuse	Gray water Reuse System collects Gray water from clothes washers, showers and faucets for irrigation use,	12 points	
Storm water Reuse Systems	Innovative on-site stormwater collection, filtration and reuse systems are being developed that provide supplemental irrigation water and provide vector control. These systems can greatly reduce the irrigation needs of a project. Point values for these types of systems will be determined based upon design and engineering data documenting the water savings.	TBD	As required by LID
Potable Water			
Showers	Water Efficient Showerheads (2.0 gpm)	3 points	03
Toilets	Water Efficient Toilets (1.5 gpm)	3 points	03
Faucets	Water Efficient faucets (1.28 gpm)	3 points	03
Dishwasher	Water Efficient Dishwasher (6 gallons per cycle or less)	1	01
Washing Machine	Water Efficient Washing Machine (Water factor <5.5)	1	01
WaterSense	EPA WaterSense Certification	12 points	
Reduction Measure PS T1: Land Use Based Trips and VMT Reduction			
Mixed Use	Mixes of land uses that complement one another in a way that reduces the need for vehicle trips can greatly reduce GHG emissions. The point value of mixed use projects will be determined based upon a Transportation Impact Analysis (TIA) demonstrating trip reductions and/or reductions in vehicle miles traveled. Suggested ranges: Diversity of land uses complementing each other (2-28 points) Increased destination accessibility other than transit (1-18 points) Increased transit accessibility (1-25 points) Infill location that reduces vehicle trips or VMT beyond the measures described above (points TBD based on traffic data).	TBD	
Residential Near Local Retail (Residential only Projects)	Having residential developments within walking and biking distance of local retail helps to reduce vehicle trips and/or vehicle miles traveled. The point value of residential projects in close proximity to local retail will be determined based upon traffic studies that demonstrate trip reductions and/or reductions in vehicle miles traveled (VMT)	TBD	

Feature	Description	Assigned Point Values	Project Points
Other Trip Reduction Measures	Other trip or VMT reduction measures not listed above with TIA and/or other traffic data supporting the trip and/or VMT for the project.	TBD	
Reduction Measure PS T2: Bicycle Master Plan			
Bicycle Infrastructure	Ontario's Bicycle Master Plan is extensive and describes the construction on 11.5 miles of Class I bike paths and 23 miles of Class II and Class III bikeways to build upon the current 8 miles of bikeways. Provide bicycle paths within project boundaries. Provide bicycle path linkages between residential and other land uses. Provide bicycle path linkages between residential and transit.	TBD 2 points 5 points	
Reduction Measure PS T3: Neighborhood Electric Vehicle Infrastructure			
Electric Vehicle Recharging	Provide circuit and capacity in garages of residential units for use by an electric vehicle. Charging stations are for on-road electric vehicles legally able to drive on all roadways including Interstate Highways and freeways. Install electric vehicle charging stations in the garages of residential units	1 point 8 points	08
Total Points Earned by Residential Project:			102

Without VMT or Mixed Use

Table 2: Screening Table for Implementation of GHG Reduction Measures for Commercial/Industrial Development

Feature	Description	Assigned Point Values	Project Points
Reduction Measure PS E3: Commercial/Industrial Energy Efficiency Development			
Building Envelope			
Insulation	2008 baseline (walls R-13; roof/attic R-30)	0 points	18
	Modestly Enhanced Insulation (walls R-13, roof/attic R-38))	15 points	
	Enhanced Insulation (rigid wall insulation R-13, roof/attic R-38)	18 points	
	Greatly Enhanced Insulation (spray foam insulated walls R-15 or higher, roof/attic R-38 or higher)	20 points	
	(Applies to the conditioned space, defined as those areas within the building that have air conditioning and heating.)		
Windows	2008 Baseline Windows (0.57 U-factor, 0.4 solar heat gain coefficient [SHGC])	0 points	07
	Modestly Enhanced Window Insulation (0.4 U-factor, 0.32 SHGC)	7 points	
	Enhanced Window Insulation (0.32 U-factor, 0.25 SHGC)	8 points	
	Greatly Enhanced Window Insulation (0.28 or less U-factor, 0.22 or less SHGC)	12 points	
	(Applies to the conditioned space, defined as those areas within the building that have air conditioning and heating.)		
Cool Roof	Modest Cool Roof (CRRC Rated 0.15 aged solar reflectance, 0.75 thermal emittance)	12 points	12
	Enhanced Cool Roof (CRRC Rated 0.2 aged solar reflectance, 0.75 thermal emittance)	14 points	
	Greatly Enhanced Cool Roof (CRRC Rated 0.35 aged solar reflectance, 0.75 thermal emittance)	16 points	
Air Infiltration	Minimizing leaks in the building envelope is as important as the insulation properties of the building. Insulation does not work effectively if there is excess air leakage.		12
	Air barrier applied to exterior walls, calking, and visual inspection such as the HERS Verified Quality Insulation Installation (QII or equivalent)	12 points	
	Blower Door HERS Verified Envelope Leakage or equivalent	10 points	
	(Applies to the conditioned space, defined as those areas within the building that have air conditioning and heating.)		
Thermal Storage of Building	Thermal storage is a design characteristic that helps keep a constant temperature in the building. Common thermal storage devices include strategically placed water filled columns, water storage tanks, and thick masonry walls.		

Feature	Description	Assigned Point Values	Project Points
	Modest Thermal Mass (10% of floor or 10% of walls 12" or more thick exposed concrete or masonry with no permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	4 points	04
	Enhanced Thermal Mass (20% of floor or 20% of walls 12" or more thick exposed concrete or masonry with no permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	6 points	
	Enhanced Thermal Mass (80% of floor or 80% of walls 12" or more thick exposed concrete or masonry with no permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	24 points	
Indoor Space Efficiencies			
Heating/ Cooling Distribution System	Minimum Duct Insulation (R-4.2 required)	0 points	08
	Modest Duct insulation (R-6)	8 points	
	Enhanced Duct Insulation (R-8)	10 points	
	Distribution loss reduction with inspection (HERS Verified Duct Leakage or equivalent) *(Applies to the conditioned space, defined as those areas within the building that have air conditioning and heating.)*	14 points	
Space Heating/ Cooling Equipment	2008 Minimum HVAC Efficiency (EER 13/60% AFUE or 7.7 HSPF)	0 points	07
	Improved Efficiency HVAC (EER 14/65% AFUE or 8 HSPF)	7 points	
	High Efficiency HVAC (EER 15/72% AFUE or 8.5 HSPF)	8 points	
	Very High Efficiency HVAC (EER 16/80% AFUE or 9 HSPF) *(Applies to the conditioned space, defined as those areas within the building that have air conditioning and heating.)*	12 points	
Commercial Heat Recovery Systems	Heat recovery strategies employed with commercial laundry, cooking equipment, and other commercial heat sources for reuse in HVAC air intake or other appropriate heat recovery technology. Point values for these types of systems will be determined based upon design and engineering data documenting the energy savings.	TBD	
Water Heaters	2008 Minimum Efficiency (0.57 Energy Factor)	0 points	14
	Improved Efficiency Water Heater (0.675 Energy Factor)	14 points	
	High Efficiency Water Heater (0.72 Energy Factor)	16 points	
	Very High Efficiency Water Heater (0.92 Energy Factor)	19 points	
	Solar Pre-heat System (0.2 Net Solar Fraction)	4 points	
	Enhanced Solar Pre-heat System (0.35 Net Solar Fraction)	8 points	
Daylighting	Daylighting is the ability of each room within the building to provide outside light during the day reducing the need for artificial lighting during daylight hours.		

Feature	Description	Assigned Point Values	Project Points
	All peripheral rooms within building have at least one window or skylight	1 points	05
	All rooms within building have daylight (through use of windows, solar tubes, skylights, etc.)	5 points	
	All rooms daylighted	7 points	
Artificial Lighting	2008 Minimum (required)	0 points	09
	Efficient Lights (25% of in-unit fixtures considered high efficacy. High efficacy is defined as 40 lumens/watt for 15 watt or less fixtures; 50 lumens/watt for 15-40 watt fixtures, 60 lumens/watt for fixtures >40watt)	9 points	
	High Efficiency Lights (50% of in-unit fixtures are high efficacy)	12 points	
	Very High Efficiency Lights (100% of in-unit fixtures are high efficacy)	14 points	
Appliances	Energy Star Commercial Refrigerator (new)	4 points	12
	Energy Star Commercial Dish Washer (new)	4 points	
	Energy Star Commercial Cloths Washing	4 points	
Miscellaneous Commercial/Industrial Building Efficiencies			
Building Placement	North/South alignment of building or other building placement such that the orientation of the buildings optimizes conditions for natural heating, cooling, and lighting.	6 point	
Shading	At least 90% of south-facing glazing will be shaded by vegetation or overhangs at noon on June 21st.	6 Points	
Other	This allows innovation by the applicant to provide design features that increases the energy efficiency of the project not provided in the table. Note that engineering data will be required documenting the energy efficiency of innovative designs and point values given based upon the proven efficiency beyond Title 24 Energy Efficiency Standards.	TBD	
Existing Commercial building Retrofits	The applicant may wish to provide energy efficiency retrofit projects to existing commercial buildings to further the point value of their project. Retrofitting existing commercial buildings within the City is a key reduction measure that is needed to reach the reduction goal. The potential for an applicant to take advantage of this program will be decided on a case by case basis and must have the approval of the Ontario Planning Department. The decision to allow applicants the ability to participate in this program will be evaluated based upon, but not limited to the following:	TBD	

Feature	Description	Assigned Point Values	Project Points
	Will the energy efficiency retrofit project benefit low income or disadvantaged communities? Does the energy efficiency retrofit project fit within the overall assumptions in the reduction measure associated with commercial building energy efficiency retrofits? Does the energy efficiency retrofit project provide co-benefits important to the City? Point value will be determined based upon engineering and design criteria of the energy efficiency retrofit project.		
Reduction Measure PS E4: Commercial/Industrial Renewable Energy			
Photovoltaic	Solar Photovoltaic panels installed on commercial buildings or in collective arrangements within a commercial development such that the total power provided augments:		
	Solar Ready Roofs (sturdy roof and electric hookups)	2 points	
	10 percent of the power needs of the project	8 points	
	20 percent of the power needs of the project	14 points	
	30 percent of the power needs of the project	20 points	
	40 percent of the power needs of the project	26 points	
	50 percent of the power needs of the project	32 points	
	60 percent of the power needs of the project	38 points	
	70 percent of the power needs of the project	44 points	
	80 percent of the power needs of the project	50 points	
	90 percent of the power needs of the project	56 points	
	100 percent of the power needs of the project	60 points	
Wind turbines	Some areas of the City lend themselves to wind turbine applications. Analysis of the areas capability to support wind turbines should be evaluated prior to choosing this feature. Wind turbines as part of the commercial development such that the total power provided augments:		
	10 percent of the power needs of the project	8 points	
	20 percent of the power needs of the project	14 points	
	30 percent of the power needs of the project	20 points	
	40 percent of the power needs of the project	26 points	
	50 percent of the power needs of the project	32 points	
	60 percent of the power needs of the project	38 points	
	70 percent of the power needs of the project	44 points	

Feature	Description	Assigned Point Values	Project Points
	80 percent of the power needs of the project 90 percent of the power needs of the project 100 percent of the power needs of the project	50 points 56 points 60 points	
Off-site renewable energy project	The applicant may submit a proposal to supply an off-site renewable energy project such as renewable energy retrofits of existing commercial/industrial that will help implement reduction measures associated with existing buildings. These off-site renewable energy retrofit project proposals will be determined on a case by case basis accompanied by a detailed plan documenting the quantity of renewable energy the proposal will generate. Point values will be based upon the energy generated by the proposal.	TBD	
Other Renewable Energy Generation	The applicant may have innovative designs or unique site circumstances (such as geothermal) that allow the project to generate electricity from renewable energy not provided in the table. The ability to supply other renewable energy and the point values allowed will be decided based upon engineering data documenting the ability to generate electricity.	TBD	
Reduction Measure PS W2: Commercial/Industrial Water Conservation			
Irrigation and Landscaping			
Water Efficient Landscaping	Eliminate conventional turf from landscaping Only moderate water using plants Only low water using plants Only California Native landscape that requires no or only supplemental irrigation	0 points 3 points 4 points 8 points	08
Trees	Increase tree planting in parking areas 50% beyond City Code requirements	TBD	
Water Efficient irrigation systems	Low precipitation spray heads< .75"/hr or drip irrigation Weather based irrigation control systems combined with drip irrigation (demonstrate 20 reduced water use)	1 point 5 points	01
Recycled Water	Recycled water connection (purple pipe)to irrigation system on site	5 points	
Storm water Reuse Systems	Innovative on-site stormwater collection, filtration and reuse systems are being developed that provide supplemental irrigation water and provide vector control. These systems can greatly reduce the irrigation needs of a project. Point values for these types of systems will be determined based upon design and engineering data documenting the water savings.	TBD	

Feature	Description	Assigned Point Values	Project Points
Potable Water			
Showers	Water Efficient Showerheads (2.0 gpm)	3 points	
Toilets	Water Efficient Toilets/Urinals (1.5gpm) Waterless Urinals (note that commercial buildings having both waterless urinals and high efficiency toilets will have a combined point value of 6 points)	3 points 4 points	07
Faucets	Water Efficient faucets (1.28gpm)	3 points	03
Commercial Dishwashers	Water Efficient dishwashers (20% water savings)	4 points	04
Commercial Laundry Washers	Water Efficient laundry (15% water savings) High Efficiency laundry Equipment that captures and reuses rinse water (30% water savings)	3 points 6 points	
Commercial Water Operations Program	Establish an operational program to reduce water loss from pools, water features, etc., by covering pools, adjusting fountain operational hours, and using water treatment to reduce draw down and replacement of water. Point values for these types of plans will be determined based upon design and engineering data documenting the water savings.	TBD	
Reduction Measure PS T1: Land Use Based Trips and VMT Reduction			
Mixed Use	Mixes of land uses that complement one another in a way that reduces the need for vehicle trips can greatly reduce GHG emissions. The point value of mixed use projects will be determined based upon traffic studies that demonstrate trip reductions and/or reductions in vehicle miles traveled	TBD	
Local Retail Near Residential (Commercial only Projects)	Having residential developments within walking and biking distance of local retail helps to reduce vehicle trips and/or vehicle miles traveled. The point value of residential projects in close proximity to local retail will be determined based upon traffic studies that demonstrate trip reductions and/or reductions in vehicle miles traveled	TBD	
Reduction Measure PS T2: Bicycle Master Plan			
Bicycle Infrastructure	Ontario's Bicycle Master Plan is extensive and describes the construction on 11.5 miles of Class I bike paths and 23 miles of Class II and Class III bikeways to build upon the current 8 miles of bikeways. Provide bicycle paths within project boundaries. Provide bicycle path linkages between project site and other land uses. Provide bicycle path linkages between project site and transit.	TBD TBD 2 points 5 points	

Feature	Description	Assigned Point Values	Project Points
Reduction Measure PS T3: Electric Vehicle Infrastructure			
Electric Vehicles	Provide public charging station for use by an electric vehicle. *(ten points for each charging station within the facility)*	10 points	10
Reduction Measure PS T4: Employee Based Trip &VMT Reduction Policy			
Compressed Work Week	Reduce the number of days per week that employees need to be on site will reduce the number of vehicle trips associated with commercial/industrial development. Compressed work week such that full time employees are on site: 5 days per week 4 days per week on site 3 days per week on site	TBD	
Car/Vanpools	Car/vanpool program Car/vanpool program with preferred parking Car/vanpool with guaranteed ride home program Subsidized employee incentive car/vanpool program Combination of all the above	TBD	
Employee Bicycle/ Pedestrian Programs	Complete sidewalk to residential within ½ mile Complete bike path to residential within 3 miles Bike lockers and secure racks Showers and changing facilities Subsidized employee walk/bike program (Note combine all applicable points for total value)	TBD	
Shuttle/Transit Programs	Local transit within ¼ mile Light rail transit within ½ mile Shuttle service to light rail transit station Guaranteed ride home program Subsidized Transit passes Note combine all applicable points for total value	TBD	
CRT	Employer based Commute Trip Reduction (CRT). CRTs apply to commercial, offices, or industrial projects that include a reduction of vehicle trip or VMT goal using a variety of employee commutes trip reduction methods. The point value will be determined based upon a TIA that demonstrates the trip/VMT reductions. Suggested point ranges: Incentive based CRT Programs (1-8 points) Mandatory CRT programs (5-20 points)	TBD	
Other Trip Reductions	Other trip or VMT reduction measures not listed above with TIA and/or other traffic data supporting the trip and/or VMT for the project.	TBD	
Total Points from Commercial/Industrial Project:			141

1.0 Introduction

1.1 Purpose of Report and Study Objectives

The purpose of this energy conservation analysis is to review the energy implications of the proposed Toyota Arena Mixed-Use Development (project) and provide recommendations to reduce wasteful, inefficient and unnecessary consumption of energy during construction and operation. This analysis has been prepared within the context of the California Environmental Quality Act (CEQA, California Public Resources Code Sections 21000, et seq.).

CEQA Guidelines, Appendix F, Energy Conservation, describes the framework within which energy conservation should be analyzed. Conserving energy implies the wise and efficient use of energy through decreasing overall per capita energy consumption, decreasing reliance on fossil fuels (such as coal, natural gas and oil), and increasing reliance on renewable energy sources. This analysis considers energy impacts to include:

1. The project's energy requirements and its energy use efficiencies by amount and fuel type for each stage of the project including construction and operation.

2. The effects of the project on local and regional energy supplies and on requirements for additional capacity.

3. The effects of the project on peak and base period demands for electricity and other forms of energy.

4. The degree to which the project complies with existing energy standards.

5. The effects of the project on energy resources.

1.2 Site Location

The proposed project site is located adjacent to the Toyota Arena, north of Concourse Street and south of Fourth Street, in the City of Ontario.

The project site is located with Ontario Center Specific Plan and zoned for Urban Commercial within the Specific Plan. The City of Ontario General Plan land use map designates the project site as Mixed Use.

The project location map is provided in Exhibit A.

1.3 Project Description

The project consists of construction and operation of a mixed use town center development with residential and commercial/retail land use within four development lots.

The proposed project includes a total of 691 residential dwelling units, 71,200 square feet of commercial/retail uses and the demolition and relocation of approximately 1,170 surface parking spaces. The total project site area is approximately 18.73 acres.

The site plan used for this analysis, provided by the applicant, is illustrated in Exhibit B. Table 1 summarizes the land use assumptions used for this analysis.

Table 1
Land Use Summary

Lot	Dwelling Units	Retail (SF)[1]	Parking Spaces
A	359	25,256	477[2]
B	98	20,802	130[2]
C	107	11,047	142[2]
D	127	14,095	170[2]
E & F	--	--	1,170
Total	691	71,200	2,089

[1] S.F. – Square Feet
[2] Parking Structure

The site plan used in this analysis was provided by the applicant, and is illustrated in Exhibit B.

1.4 Utility Providers

The project will be served by the following utility providers, as shown in Table 2.

Table 2
Utility Providers

Utility	Provider
Electricity	Southern California Edison
Natural Gas	Southern California Gas Company
Water	Ontario Public Works & OMUC
Sewer	Ontario Public Works & OMUC
Telephone	Frontier Communications
Cable	Frontier Communications

1.5 Summary of CEQA Impacts

Table 3 provides a summary of the project's impact to Energy resources, per the impact criteria described in CEQA Guidelines, Appendix G.

Table 3
CEQA Energy Impact Criteria

Energy Impact Criteria	Potentially Significant	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			X	
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			X	

1.6 Project Design Features

The following project design features are considered standard building code requirements and best practices that will be included in the project design to will help reduce energy consumption. Design features are not typically considered mitigation under CEQA.

Construction Design Features

DF-1 Establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

Operational Design Features

DF-2 Implement the GHG Reduction Measures from the Ontario County Climate Action Plan (CAP) Screening Tables to achieve at least 100 points, per the requirements for Mixed Use Projects.

DF-3 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

DF-4 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod, per CAL Green and City of Ontario requirements.

DF-5 Implement zero waste strategies, recycling and composting programs for residential and non-residential uses.

DF-6 Encourage residents and landscape maintenance crews to use electric landscaping equipment, such as lawn mowers and leaf blowers, wherever feasible.

DF-7 No natural gas or wood burning fireplaces shall be installed in any residential dwelling.

DF-8 Implement trip reduction measures that reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking. Such as;

1. Improve the walkability and design of the project by including pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e. sidewalks, crosswalks, foot paths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.).

2. Provide traffic calming measures (i.e. marked crosswalks, raised crosswalks, raised intersections, count-down signal timers, curb extensions, speed tables, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.)

3. Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

DF-9 Provide electric vehicle charging stations per the requirements of CALGreen.

2.0 Regulatory Setting

Energy is controlled through various federal and state laws and regulations. This section provides a brief overview of key energy legislation and policies at the federal and state levels over the past 50 years.

2.1 Federal Regulations

Table 4
U.S. Energy Policy Legislative Acts

Date	Legislative Act and Description
1975	**Energy Policy and Conservation Act** Established the Strategic Petroleum Reserve and mandated vehicle fuel economy standards
1978	**National Energy Act** Established tax incentives and disincentives, alternative fuel programs, energy efficiency initiatives, and other regulatory and market-based initiatives in response to the oil crisis earlier in the decade. Comprised of 5 statutes: **Energy Tax Act** Created the Gas Guzzler tax for vehicles with mileage below specified levels and offered income tax credit for citizens using solar, wind, or geothermal energy sources at home **Natural Gas Policy Act** Set up wellhead pricing maximums, rules for allocating costs of high-cost gas to industrial consumers, and provided authority to high priority users in times of supply emergency; gave FERC jurisdiction over almost all natural gas production **National Energy Conservation Policy Act** Replaced Minimum Energy Performance Standards (MEPS) set forth in the EPCA of 1975, changed energy standards from voluntary to mandatory, Required federal agencies to do energy audits of their operations, Provided loans for families to purchase solar heating or cooling systems, and Established grants for schools, hospitals, local governments, and public housing authorities willing to use energy conservation measures **Power Plant and Industrial Fuel Use Act** Restricted construction of power plants fueled primarily by oil or natural gas and instead encouraged power plants fueled by coal, nuclear, and alternative fuels and restricted use of oil and natural gas in industrial boilers. Repealed in 1987 with the Natural Gas Utilization Act **Public Utility Regulatory Policies Act** Promoted use of renewable energy, encouraged cogeneration plants.
1980	**Energy Security Act** Title I: US Synthetic Fuels Corporation Act Established the Synthetic Fuels Corporation (which only existed until 1985) for the purpose of partnering with industry for the creation of a market for domestically-produced synthetic liquid fuels; moved research and development for synthetic fuels away from the Department of Energy and into this public-private partnership with the hopes of speeding up results. Title II: Biomass Energy and Alcohol Fuels Act Provided loan guarantees for small-scale biomass energy projects; established the Office of Alcohol Fuels, the Office of Energy from Municipal Waste.

Table 4
U.S. Energy Policy Legislative Acts

Date	Legislative Act and Description
	Title III: Energy Targets Required the submission of energy targets for net imports. Title IV: Renewable Initiatives Established incentives for the use of renewable energy resources Title V: Solar Energy and Energy Conservation Encouraged energy conservation and the use of solar energy, reducing dependence on foreign energy supplies. Title VI: Geothermal Energy Act Authorized loans from the Geothermal Resources Development Fund for exploration and determination of economic viability of a geothermal reservoir, cancels loan if reservoir is deemed unacceptable for development. Title VII: Acid Precipitation Program Established a task force to study the causes and risks of acid precipitation Title VIII: Strategic Petroleum Reserve Established that 500,000,000 barrels of crude oil must be in storage before any can be sold and calls for the reserve to increase its supply 100,000 barrels per day until the storage capacity is reached
1992	**Energy Policy Act** Amended the National Energy Conservation Policy Act of 1978. Created framework for wholesale electricity generation. Provided financial incentives to users/developers of clean-fuel vehicles; repealed alternative minimum tax for some producers. Intended to expand the use of natural gas.
2002	**Farm Security and Rural Investment Act (Farm Bill)** Included $405 million in mandatory funding over the following 5 years for the procurement of bio-based products, grants and loans for renewable energy and energy efficiency projects, research and development and the bioenergy program. Included, for reasons of national energy and security, rural economic development, and environmental sustainability in light of climate change impacts.
2005	**Energy Policy Act** Offers tax benefits to individuals who increase energy efficiency in existing homes, buy or lease hybrid/alternative vehicles, required all public utilities to offer net metering on request, increased required amounts of renewable fuel in gasoline sold in the US, and encourages more domestic energy production
2007	**Energy Independence and Security Act** Increased CAFE standards to 35 mpg (fleet-wide for passenger autos and light trucks) by 2020; instituted new conservation measures for federal fleet vehicles; authorized increased taxpayer-funded biofuel production (36 billion gallons by 2022 - 21 billion of which must be derived from non-cornstarch products). Revised standards for appliances and lighting; all federal buildings must use Energy Star lighting products; training for green jobs; loans for small business energy efficiency improvements.
2008	**Food, Conservation, and Energy Act (Farm Bill)** Includes provisions for loan guarantees for bio-refineries, payments to support expansion of advanced biofuels, expands the existing Rural Energy for America Program, provides grant monies for biofuel and bio-based product research and development
2009	**The American Recovery and Reinvestment Act of 2009**

Table 4
U.S. Energy Policy Legislative Acts

Date	Legislative Act and Description
	$800 billion economic stimulus package aimed at job creation and the promotion of investment and consumer spending; included $4.3 billion in tax credits to homeowners for energy efficiency improvements in 2009-2010, $300 million for reducing diesel engine emissions, $21.5 billion for energy infrastructure, $27.2 billion for energy efficiency and renewable energy research and investment, $2 billion in research for DOE, $600 million in research for NOAA
2015	**The Clean Power Plan** The first comprehensive plan to reduce carbon emissions from power plants by 32% in 2030, compared to 2005 levels. The plan was repealed under the Trump Administration. The Biden Administration has recently said it will not try to resurrect the plan, but will instead be proposing a new rule aimed at limiting GHG emissions from power plants.

2.2 State of California Regulations

California has a long-standing history of support for energy conservation and renewable energy.

Table 5 provides a summary of some of the key legislative acts, policies and regulations in the State of California for encouraging energy conservation and renewable energy.

Table 5
California Energy Policy Legislative Acts and Regulations

Date	Legislative Act and Description
1974	**Warren-Alquist Act** Established the California Energy Commission (CEC) as the state's primary energy policy and planning agency. Responsible for preparing State Energy Plan. CEC's goals are to reduce energy costs and environmental impacts of energy use, while ensuring a safe, resilient, and reliable supply of energy.
1978	**Title 24 of the California Code of Regulations** Establishes the Renewable Portfolio Standard (RPS) program, requiring 20% of retail sales from renewable energy by 2017.
2002	**Senate Bill 1078** Required 20% of retail sales from renewable energy by 2017.
2003	**Energy Action Plan I** Accelerated the 20% renewable deadline to 2010.
2005	**Energy Action Plan II** Recommended further goal of 33% renewable by 2020.
2006	**Senate Bill 107** Codified the accelerated 20% renewable by 2010 deadline into law.
2008	**Executive Order S-14-08** Signed by Gov. Schwarzenegger, requires 33% renewables by 2020.
2009	**Executive Order S-21-09** Directs the California Air Resources Board, under its AB 32 authority, to adopt regulations by July 31, 2010, consistent with the 33% renewable energy target established in Executive Order S-14-08.
2011	**Senate Bill X1-2** Signed by Gov. Edmund G. Brown, Jr., codifies 33% renewable by 2020 RPS
2015	**Senate Bill 350 – Clean Energy and Pollution Reduction Act of 2015** Signed by Gov. Edmund G. Brown, Jr. codifies 50% by 2030 RPS
2018	**Senate Bill 100** Signed by Gov. Edmund G. Brown, Jr. codifies 60% by 2030 & 100% by 2045 RPS

3.0 Project Energy Consumption

3.1 Energy Consumption Methodology

The three (3) main types of energy expected to be consumed by the project include electricity, natural gas and petroleum products in the form of gasoline and diesel fuel. Energy usage for the proposed project is calculated based on the *CalEEMod* and *Toyota Arena Mixed Use Development Air Quality and Greenhouse Gas Analysis, prepared by RK Engineering Group, Inc., dated June 2021* (Air/GHG Study).

The California Emissions Estimator Model Version 2020.4.0 (CalEEMod) is used to calculate energy usage from project construction and operational activities.

The CalEEMod Annual Reports for the project are provided in Appendix A.

3.2 Electricity Consumption

The project will use electricity for many different operational activities including, but not limited to, building heating and cooling, lighting, appliances, electronics, mechanical equipment, electric vehicle charging, and parking lot lighting. Indirect electricity usage will also be required to supply, distribute, and treat water and wastewater. Electricity will be provided to the site by Southern California Edison.

Temporary electricity usage for construction activities may include lighting, electric equipment and mobile office uses, however, CalEEMod does not calculate electricity usage during construction. Electricity usage during construction is expected to be short-term and relatively minor compared to the operational demand, and therefore electricity usage during construction is not counted in this analysis.

Table 6 shows the project's estimated operational electricity consumption in kilowatt-hours per year (kWh/year) and millions of Btu per year.

Table 6
Project Electricity Consumption

Land Use/Activity	Electricity Consumption[1]	
	(kWhr/yr)[2]	(MBtu/yr)[2]
Apartments Mid Rise	2,736,370.00	9,336.49
Enclosed Parking with Elevator	1,999,740.00	6,823.11
Parking Lot	163,800.00	558.89
Regional Shopping Center	864,368.00	2,949.22
Water Supply and Treatment	1,066,561.70	3,639.11
Total	6,830,839.70	23,306.83

[1] Source: CalEEMod Defaults. Refer Appendix A

[2] kWhr/yr = Kilowatt Hours per Year
MBtu/yr = Million British Thermal Units per Year

3.3 Natural Gas Consumption

The project will use natural gas for such things as building heating and cooling, cooking, kitchen appliances, and gas water heaters. Natural gas is not expected to be used during construction in any significant quantities and is not included in the overall calculation of the project's natural gas consumption.

Table 7 shows the project's estimated operational natural gas consumption in millions of Btu per year.

Table 7
Project Natural Gas Consumption

Land Use/Activity	Natural Gas Consumption[1] (MBtu/yr)[2]
Apartments Mid Rise	9,938.08
Regional Shopping Center	156.64
Total	10,094.72

[1] Source: CalEEMod Defaults. Refer Appendix A

[2] MBtu/yr = Millions of British Thermal Units per Year

3.4 Petroleum Consumption

The project's energy consumption from petroleum products is primarily associated with transportation related activities. This includes gasoline and diesel fuel usage for auto and truck trips during construction and operation and off-road equipment usage during construction.

3.4.1 Petroleum Consumption - Construction

Construction of the project is estimated to last approximately 21 months and consist of demolition, site preparation, grading, building construction, paving, and architectural coating phases. Construction activities will consume energy in the form of motor vehicle fuel (gasoline and diesel) for off-road construction equipment and on-road vehicle trips. Vehicle trips include workers and vendors traveling to and from the job-site.

Table 8 shows the project's energy consumption for all off-road equipment during construction. For purposes of this analysis, all off-road equipment is assumed to run on diesel fuel. Table 9 shows the project's energy consumption from on-road vehicle trips during construction.

TABLE 8

3.4.2 Petroleum Consumption - Operation

The project is expected to consume energy from auto and truck trips generated by the proposed land uses, as described in the Toyota Arena Mixed Use Development Traffic Impact Study Scoping Agreement, by RK, May 2021 and the Toyota Arena Mixed Use Development Air Quality and Greenhouse Gas Impact Study, prepared by RK Engineering Group, Inc., dated June 2021. Operational vehicle trips are associated with workers, customers and vendors/non-workers (i.e., delivery, service, maintenance vehicles, etc.) traveling to and from the site.

Table 10 shows the project's petroleum energy consumption for all operational trips generated by the project on an annual basis.

Table 10
Operational Trips Energy Consumption - Annual

Vehicle Class	Vehicle Mix	Average Fuel Economy (MPG)	Mitigated Annual VMT	Gasoline		Diesel		MBtu

[3] MBtu/yr = Millions of Btu per year; assuming 1 gallon of gasoline fuel = 120,429 Btu and 1 gallon of diesel fuel = 137,381 Btu

3.5 Summary of Project Energy Consumption

Table 11 provides a summary of the project's annual operational energy consumption.

Table 11
Annual Energy Consumption

Activity	Energy Consumption (MBtu/yr)[1]
Total Annual Operational Energy Consumption	**80,509.21**
Electricity	23,306.83
Natural Gas	10,094.72
Petroleum	47,107.67

[1] MBtu/yr = Millions of Btu per year. Operational activities only.

4.0 Energy Impacts

4.1 Energy Impact Criteria

This analysis has been prepared within the context of the CEQA Guidelines, Appendix F, Energy Conservation, and Appendix G, Environmental Checklist Form. According to CEQA, the goal of conserving energy implies the wise and efficient use of energy through decreasing overall per capita energy consumption, decreasing reliance on fossil fuels (such as coal, natural gas and oil), and increasing reliance on renewable energy sources.

A significant environmental impact would result if the project would;

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation, or;

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

4.2 Energy Impact – 1

Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

The project's impact is considered less than significant with the inclusion of the mandatory requirements of California's Building Energy Efficiency Standards (Title 24, Part 6) and Green Building Standards (CALGreen, Title 24, Part 11). California's building energy efficiency standards are some of the strictest in the nation and the project's compliance with California's building code will ensure that wasteful, inefficient or unnecessary consumption of energy is minimized. The building standards code is designed to reduce the amount of energy needed to heat or cool a building, reduce energy usage for lighting and appliances.

The following recommended design features are provided to reduce wasteful, inefficient and unnecessary consumption of energy. Design features are consistent with the recommended design features provided with Air/GHG study.

Construction Design Features

DF-1 Establish an electricity supply to the construction site and use electric powered equipment instead of diesel-powered equipment or generators, where feasible.

Operational Design Features

DF-2 Implement the GHG Reduction Measures from the Ontario County Climate Action Plan (CAP) Screening Tables to achieve at least 100 points, per the requirements for Mixed Use Projects.

DF-3 Comply with the mandatory requirements of California Building Standards Code Title 24 Part 6 (Energy Code) and Title 24 Part 11 (CAL Green).

DF-4 Implement water conservation strategies, including low flow fixtures and toilets, water efficient irrigation systems, drought tolerant/native landscaping, and limit the amount of turf/sod, per CAL Green and City of Ontario requirements.

DF-5 Implement zero waste strategies, recycling and composting programs for residential and non-residential uses.

DF-6 Encourage residents and landscape maintenance crews to use electric landscaping equipment, such as lawn mowers and leaf blowers, wherever feasible.

DF-7 No natural gas or wood burning fireplaces shall be installed in any residential dwelling.

DF-8 Implement trip reduction measures that reduce the number of auto-based trips and encourage the use of transit, bicycling, and walking. Such as;

1. Improve the walkability and design of the project by including pedestrian and bicycling connections within the project site and to adjacent off-site facilities (i.e. sidewalks, crosswalks, foot paths, protected bike lanes, multi-purpose trails, direct parcel-to-parcel connections, wayfinding signage, etc.).

2. Provide traffic calming measures (i.e. marked crosswalks, raised crosswalks, raised intersections, count-down signal timers, curb extensions, speed tables, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.)

3. Provide bicycle racks for the retail and commercial uses and secure bicycle parking areas for the office and residential uses.

DF-9 Provide electric vehicle charging stations per the requirements of CALGreen.

4.3 Energy Impact – 2

Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

The project's impact is considered less than significant as the project will purchase electricity through Southern California Edison which is subject to the requirements of California Senate Bill 100 (SB 100). SB 100 is the most stringent and current energy legislation in California; requiring that renewable energy resources and zero-carbon resources supply 100% of retail sales of electricity to California end-use customers and 100% of electricity procured to serve all state agencies by December 31, 2045.[1]

The project will further comply with the mandatory requirements of California's Green Building and Building Energy Efficiency standards that promote renewable energy and energy efficiency.

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	32
Climate Zone	10			**Operational Year**	2023
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	531.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - The proposed project consists of a mixed-use town center development with 691 multifamily DU and 71,200 square feet of commercial/retail land uses on approximately 18.73 acres.

Construction Phase - The project's architectural coating phase will be extended to 75 days.

Demolition - The project is proposing to demolish approximetely 326,026 square feet of surface asphalt parking lot.

Vehicle Trips - The trip generation rates have been updated to reflect Toyota Arena TIA Scoping Agreement, by RK, May 25, 2021 and Traffic Impact Study and SANBAG VMT Model.

Fleet Mix - Operational fleet mix adjusted to equal 2% trucks with GVWR > 10,000 lbs.

Woodstoves - SCAQMD Rule 445 restricts wood burning hearths/fireplaces from being installed in new development.

Construction Off-road Equipment Mitigation - Project will be required to comply with SCAQMD Rule 403 regarding fugitive dust control.

Toyota Arena Mixed Use Development - San Bernardino-South Coast County, Annual

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Water Unpaved Roads

Reduce Vehicle Speed on Unpaved Roads

Toyota Arena Mixed Use Development - San Bernardino-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

1.0 Introduction

1.1 Purpose of Analysis and Study Objectives

The purpose of this report is to evaluate the potential noise impacts from the proposed Toyota Arena Mixed-Use Development (project) and provide recommendations, if necessary, to minimize any project noise impacts. The assessment was conducted within the context of the California Environmental Quality Act (CEQA) and utilizes the noise standards set forth by the applicable Federal, State, and local agencies.

The following is provided in this report:

- A description of the study area and the proposed project
- Information regarding the fundamentals of noise
- Identification of the regulatory setting and applicable noise standards
- Analysis of the existing noise environment
- Analysis of the project's operational noise impact to adjacent receptors
- Analysis of the project's construction noise and vibration impact to adjacent sensitive receptors
- Summary of recommended mitigation measures and project design features to reduce noise level impacts.

1.2 Site Location

The proposed Toyota Arena Mixed-Use Development project site is located adjacent to the Toyota Arena, north of Concourse Street and south of Fourth Street, in the City of Ontario. The project site is located approximately 1,013 feet above sea level and the topography is relatively flat.

The project site location map is provided in Exhibit A.

The project site is located within the Ontario Center Specific Plan and zoned for Urban Commercial use. The City of Ontario General Plan land use map designates the project site as Mixed Use.

1.3 Project Description

The project consists of construction and operation of a mixed use town center development with residential and commercial/retail land use within four development lots.

The proposed project includes a total of 691 residential dwelling units, 71,200 square feet of commercial/retail uses and the demolition and relocation of approximately 1,170 surface parking spaces. The total project site area is approximately 18.73 acres.

The site plan used for this analysis, provided by the applicant, is illustrated in Exhibit B. Table 1 summarizes the proposed project land uses.

Table 1
Land Use Summary

Lot	Dwelling Units	Retail (SF)[1]	Parking Spaces
A	359	25,256	477[2]
B	98	20,802	130[2]
C	107	11,047	142[2]
D	127	14,095	170[2]
F & G	--	--	1,170
Total	691	71,200	2,089

[1] S.F. – Square Feet
[2] Parking Structure

This report analyzes long-term and short-term noise impacts associated with the day-to-day operation of the project. The primary sources of long-term noise impacts would be on-site circulation and parking lot noise and HVAC units.

1.4 Summary of Analysis Results

Table 2 provides a summary of the noise analysis results, per the CEQA impact criteria checklist. With the implementation of the recommended mitigation measures, the project is not expected to result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

Table 2
CEQA Noise Impact Criteria

Noise Impact Criteria	Potentially Significant	Potentially Significant Unless Mitigated	Less Than Significant Impact	No Impact
Would the project result in?				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			X	
b) Generation of excessive groundborne vibration or groundborne noise levels?			X	
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			X	

1.5 Recommended Project Design Features

The following recommended project design features include standard rules and requirements, best practices and recognized design guidelines for reducing noise levels. Design features are assumed to be part of the conditions of the project and integrated into its design. Design features are not typically considered mitigation under CEQA.

Operational Design Features

DF-1 Prior to the issuance of building permits, the project shall prepare a final acoustical study that demonstrates building construction will achieve the minimum interior noise standard of 45 dBA CNEL for all residential units located along arterial roadways and/or adjacent to industrial uses, per the California Building Standards Code. The following noise control measures may be required for dwelling units located near adjacent roadways and industrial uses:

- Install sound barriers between residences and noise sources.
- Install double-paned or similar sound rated windows.

- Provide sound insulating exterior walls and roofing systems.
- Locate and/or design attic vents to minimize sound propagation into each home.
- Provide forced-air ventilation systems.
- Place dwellings as far as practical from the noise source

DF-2 The project shall comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g. floor/ceiling assemblies and demising walls).

DF-3 For proper acoustical performance, all exterior windows, doors, and sliding glass doors should have a positive seal and leaks/cracks must be kept to a minimum.

DF-4 The final building plans shall ensure that HVAC units are not located within an area of the project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Ontario Municipal Code requirements. To meet the City's noise standards the following measures should be followed:

- All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses.

Construction Design Features

DF-5 Prepare a construction management plan and obtain a construction work permit from the City of Ontario prior to starting construction. The construction management plan shall ensure all contractors implement construction best management practices to reduce construction noise levels. Best management practices shall include the following:

- All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields).

- Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible.

- If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load.

- Use electric air compressors and similar power tools rather than diesel equipment, where feasible.

- Locate staging area, generators and stationary construction equipment as far from the adjacent residential homes as feasible.

- Construction-related equipment, including heavy-duty equipment, motor vehicles, and portable equipment, shall be turned off when not in use for more than 5 minutes.

- Provide notifications and signage in readily visible locations along the perimeter of construction sites that indicate the dates and duration of construction activities, as well as provide a telephone number where neighbors can enquire about the construction process and register complaints to a designated construction noise disturbance coordinator.

- Construction activities shall not take place between the hours of 6:00 p.m. and 7:00 a.m. on weekdays and Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

DF-6 No impact pile driving or blasting activities shall be permitted on the project site during construction. If impact pile driving or blasting is required, a follow-up noise and vibration impact assessment shall be conducted prior to start of any activity.

2.0 Fundamentals of Noise

This section of the report provides basic information about noise and vibration and presents some of the terms used in the report.

2.1 Sound, Noise, and Acoustics

The sound is a disturbance created by a moving or vibrating source and is capable of being detected by the hearing organs. The sound may be thought of as mechanical energy of a moving object transmitted by pressure waves through a medium to a human ear. For traffic or stationary noise, the medium of concern is air. *Noise* is defined as sound that is loud, unpleasant, unexpected, or unwanted.

2.2 Frequency and Hertz

A continuous sound is described by its *frequency* (pitch) and its *amplitude* (loudness). Frequency relates to the number of pressure oscillations per second. Low-frequency sounds are low in pitch (bass sounding) and high-frequency sounds are high in pitch (squeak). These oscillations per second (cycles) are commonly referred to as Hertz (Hz). The human ear can hear from the bass pitch starting out at 20 Hz all the way to the high pitch of 20,000 Hz.

2.3 Sound Pressure Levels and Decibels

The *amplitude* of a sound determines its loudness. The loudness of sound increases or decreases, as the amplitude increases or decreases. Sound pressure amplitude is measured in units of micro-Newton per square inch meter (N/m2), also called micro-Pascal (μPa). One μPa is approximately one hundred billionths (0.00000000001) of normal atmospheric pressure. Sound pressure level (SPL or L_p) is used to describe in logarithmic units the ratio of actual sound pressures to a reference pressure squared. These units are called decibels and abbreviated as dB.

2.4 Addition of Decibels

Because decibels are on a logarithmic scale, sound pressure levels cannot be added or subtracted by simple plus or minus addition. When two (2) sounds of equal SPL are combined, they will produce an SPL 3 dB greater than the original single SPL. In other words, sound energy must be doubled to produce a 3dB increase.

If two (2) sounds differ by approximately 10 dB the higher sound level is the predominant sound.

2.5 Human Response to Changes in Noise Levels[1]

In general, the healthy human ear is most sensitive to sounds between 1,000 Hz and 5,000 Hz, (A-weighted scale) and it perceives a sound within that range as being more intense than a sound with a higher or lower frequency with the same magnitude. For purposes of this report as well as with most environmental documents, the A-scale weighing is typically reported in terms of A-weighted decibel (dBA). Typically, the human ear can barely perceive the change in the noise level of 3 dB. A change in 5 dB is readily perceptible, and a change in 10 dB is perceived as being twice or half as loud. As previously discussed, a doubling of sound energy results in a 3 dB increase in sound, which means that a doubling of sound energy (e.g. doubling the volume of traffic on a highway), would result in a barely perceptible change in sound level.

2.6 Noise Descriptors

Noise in our daily environment fluctuates over time. Some noise levels occur in regular patterns, others are random. Some noise levels are constant, while others are sporadic. Noise descriptors were created to describe the different time-varying noise levels. Following are the most commonly used noise descriptors along with brief definitions.

A-Weighted Sound Level

The sound pressure level in decibels as measured on a sound level meter using the A-weighted filter network. The A-weighting filter de-emphasizes the very low and very high-frequency components of the sound in a manner similar to the response of the human ear. A numerical method of rating human judgment of loudness.

Ambient Noise Level

The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location.

[1] Technical Noise Supplement to the Traffic Noise Analysis Protocol, September 2013.

Community Noise Equivalent Level (CNEL)

The average equivalent A-weighted sound level during a 24-hour day, obtained after addition of five (5) decibels to sound levels in the evening from 7:00 to 10:00 PM and after addition of ten (10) decibels to sound levels in the night before 7:00 AM and after 10:00 PM.

Decibel (dB)

A unit for measuring the amplitude of a sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure, which is 20 micro-pascals.

dB(A)

A-weighted sound level (see definition above).

Equivalent Sound Level (LEQ)

The sound level corresponding to a steady noise level over a given sample period with the same amount of acoustic energy as the actual time-varying noise level. The energy average noise level during the sample period.

Habitable Room

Any room meeting the requirements of the Uniform Building Code or other applicable regulations which is intended to be used for sleeping, living, cooking or dining purposes, excluding such enclosed spaces as closets, pantries, bath or toilet rooms, service rooms, connecting corridors, laundries, unfinished attics, foyers, storage spaces, cellars, utility rooms, and similar spaces.

L(n)

The A-weighted sound level exceeded during a certain percentage of the sample time. For example, L10 in the sound level exceeded 10 percent of the sample time. Similarly, L50, L90, and L99, etc.

Noise

Any unwanted sound or sound which is undesirable because it interferes with speech and hearing, or is intense enough to damage hearing, or is otherwise annoying. The State Noise Control Act defines noise as "...excessive undesirable sound...".

Percent Noise Levels

See L(n).

Sound Level (Noise Level)

The weighted sound pressure level obtained by use of a sound level meter having a standard frequency-filter for attenuating part of the sound spectrum.

Sound Level Meter

An instrument, including a microphone, an amplifier, an output meter, and frequency weighting networks for the measurement and determination of noise and sound levels.

Single Event Noise Exposure Level (SENEL)

The dBA level which, if it lasted for one (1) second, would produce the same A-weighted sound energy as the actual event.

2.7 Sound Propagation

As sound propagates from a source it spreads geometrically. The sound from a small, localized source (i.e., a point source) radiates uniformly outward as it travels away from the source in a spherical pattern. The sound level attenuates at a rate of 6 dB per doubling of distance. The movement of vehicles down a roadway makes the source of the sound appear to propagate from a line (i.e., line source) rather than a point source. This line source results in the noise propagating from a roadway in a cylindrical spreading versus a spherical spreading that results from a point source. The sound level attenuates for a line source at a rate of 3 dB per doubling of distance.

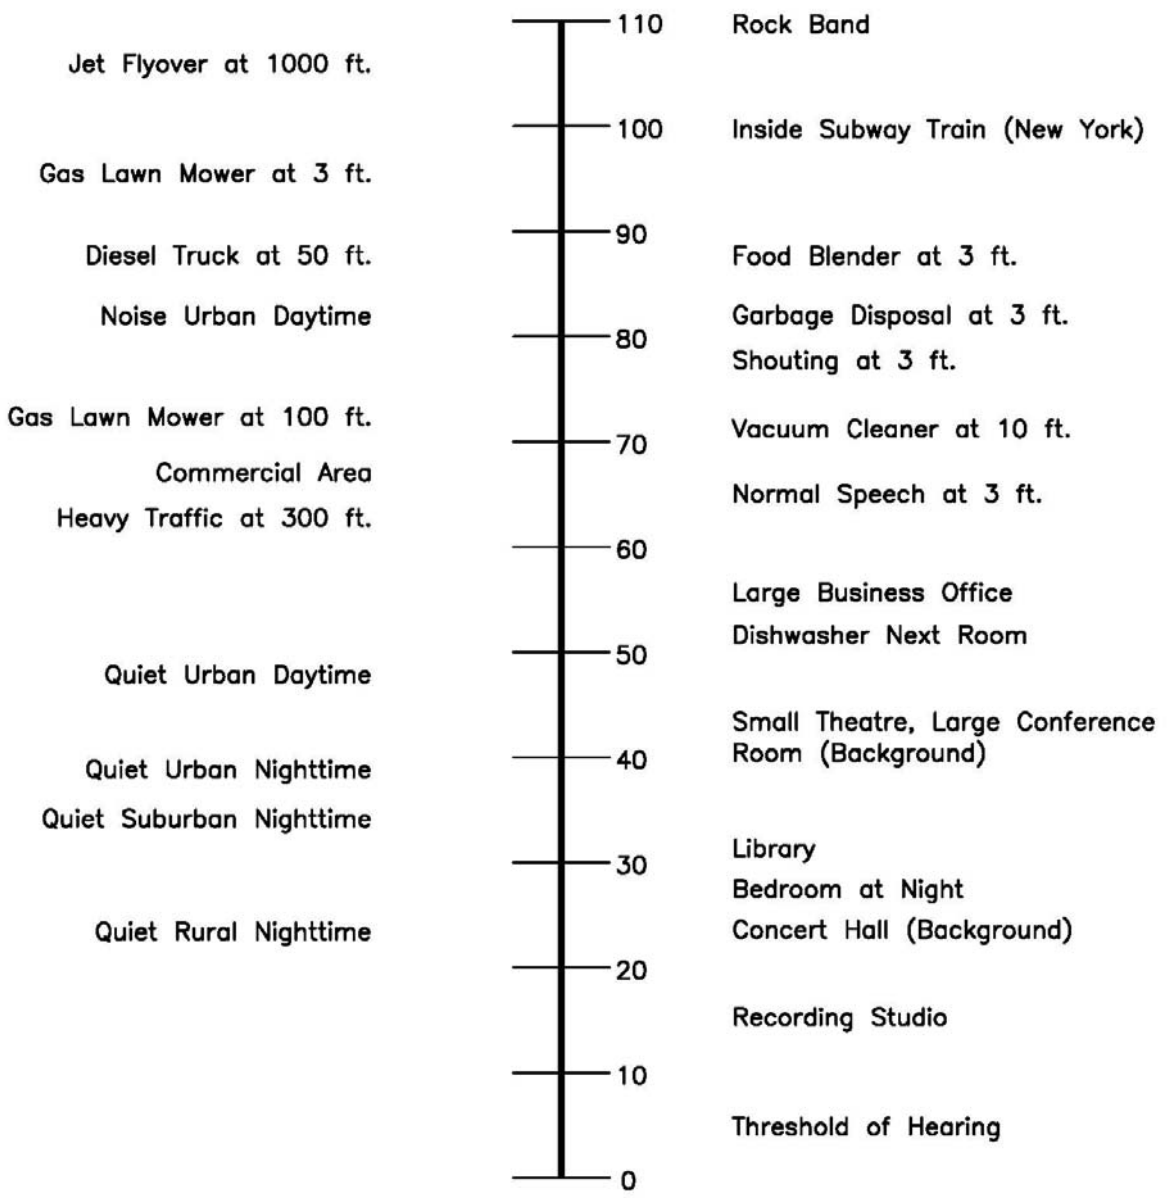
As noise propagates from the source, it is affected by the ground and atmosphere. Noise models use the hard site (reflective surfaces) and soft site (absorptive surfaces) to help calculate predicted noise levels. Hard site conditions assume no excessive ground absorption between the noise source and the receiver. Soft site conditions such as grass, soft dirt or landscaping attenuate noise at an additional rate of 1.5 dB per doubling of distance. When added to the geometric spreading, the excess ground attenuation results in an overall noise attenuation of 4.5 dB per doubling of distance for a line source and 6.0 dB per doubling of distance for a point source.

Research has demonstrated that atmospheric conditions can have a significant effect on noise levels when noise receivers are located 200 feet and greater from a noise source. Wind, temperature, air humidity, and turbulence can further impact how far sound can travel.

Figure 1 shows typical sound levels from indoor and outdoor noise sources.

Figure 1[2]

TYPICAL SOUND LEVELS FROM
INDOOR AND OUTDOOR NOISE SOURCES



[2] Technical Noise Supplement to the Traffic Noise Analysis Protocol, September 2013.

2.8 Vibration Descriptors

Ground-borne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. The effects of ground-borne vibrations typically only cause a nuisance to people, but at extreme vibration levels, damage to buildings may occur. Although ground-borne vibration can be felt outdoors, it is typically only an annoyance to people indoors where the associated effects of the shaking of a building can be notable. Ground-borne noise is an effect of ground-borne vibration and only exists indoors since it is produced from noise radiated from the motion of the walls and floors of a room and may also consist of the rattling of windows or dishes on shelves.

Several different methods are used to quantify vibration amplitude.

PPV

Known as the peak particle velocity (PPV) which is the maximum instantaneous peak in vibration velocity, typically given in inches per second.

RMS

Known as the root mean squared (RMS) can be used to denote vibration amplitude.

VdB

A commonly used abbreviation to describe the vibration level (VdB) for a vibration source.

2.9 Vibration Perception

Typically, developed areas are continuously affected by vibration velocities of 50 VdB or lower. These continuous vibrations are not noticeable to humans whose threshold of perception is around 65 VdB. Outdoor sources that may produce perceptible vibrations are usually caused by construction equipment, steel-wheeled trains, and traffic on rough roads, while smooth roads rarely produce perceptible ground-borne noise or vibration. To counter the effects of ground-borne vibration, the Federal Transit Administration (FTA) has published guidance relative to vibration impacts.

2.10 Vibration Propagation

There are three main types of vibration propagation: surface, compression, and shear waves. Surface waves, or Rayleigh waves, travel along the ground's surface. These waves carry most of their energy along an expanding circular wavefront, similar to ripples produced by throwing a rock into a pool of water. P-waves, or compression waves, are body waves that carry their energy along an expanding spherical wavefront. The particle motion in these waves is longitudinal (i.e., in a "push-pull" fashion). P-waves are analogous to airborne sound waves. S-waves, or shear waves, are also body waves that carry energy along an expanding spherical wavefront. However, unlike P-waves, the particle motion is transverse, or side-to-side and perpendicular to the direction of propagation.

As vibration waves propagate from a source, the vibration energy decreases in a logarithmic nature and the vibration levels typically decrease by 6 VdB per doubling of the distance from the vibration source. As stated above, this drop-off rate can vary greatly depending on the soil but has been shown to be effective enough for screening purposes, in order to identify potential vibration impacts that may need to be studied through actual field tests.

2.11 Construction Related Vibration Level Prediction[3]

Operational activities are separated into two different categories. The vibration can be transient or continuous in nature. Each category can result in varying degrees of ground vibration, depending on the equipment used on the site. Operation of equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Buildings in the vicinity of the project area site respond to these vibrations with varying results ranging from no perceptible effects at the low levels to slight damage at the highest levels. The thresholds from Caltrans Transportation and Construction Vibration Guidance Manual, April 2020, in the table below provide general guidelines as to the maximum vibration limits for when vibration becomes potentially annoying.

[3] Caltrans Transportation and Construction Vibration Guidance Manual, April 2020

Table 3
Vibration Annoyance Potential Criteria

Human Response	PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Barely perceptible	0.04	0.01
Distinctly perceptible	0.25	0.04
Strongly perceptible	0.90	0.10
Severe	2.00	0.40

Note: Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

The Caltrans Transportation and Construction Vibration Guidance Manual, April 2020 provides general thresholds and guidelines as to the vibration damage potential from vibratory impacts. The table below provides general vibration damage potential thresholds:

Table 4
Vibration Damage Potential Threshold Criteria

Structure and Condition	PPV (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Extremely fragile historic buildings ruin ancient monuments	0.12	0.08
Fragile buildings	0.20	0.10
Historic and some old buildings	0.50	0.25
Older residential structures	0.50	0.30
New residential structures	1.00	0.50
Modern industrial/commercial buildings	2.00	0.50

Soil conditions have an impact on how vibration propagates through the ground. The Caltrans Transportation and Construction Vibration Guidance Manual, April 2020 provides suggested "n" values based on soil class. The table below outlines the manual's suggested values and description.

Table 5
Suggested "n" Values Based on Soil Classes

Soil Class	Description of Soil Material	Suggested Value of "n"
I	Weak or soft soils: loose soils, dry or partially saturated peat and muck, mud, loose beach sand, and dune sand.	1.4
II	Most sands, sandy clays, silty clays, gravel, silts, weathered rock.	1.3
III	Hard soils: densely compacted sand, dry consolidated clay, consolidated glacial till, some exposed rock.	1.1
IV	Hard, component rock: bedrock, freshly exposed hard rock.	1.0

3.0 Regulatory Setting

The proposed project is located in the City of Ontario and noise regulations are addressed through the various federal, state, and local government agencies. The agencies responsible for regulating noise are discussed below.

3.1 Federal Regulations

The adverse impact of noise was officially recognized by the federal government in the Noise Control Act of 1972, which serves three (3) purposes:

- Publicize noise emission standards for interstate commerce
- Assist state and local abatement efforts
- Promote noise education and research

The Federal Office of Noise Abatement and Control (ONAC) was originally tasked with implementing the Noise Control Act. However, it was eventually eliminated leaving other federal agencies and committees to develop noise policies and programs. Some examples of these agencies are as follows: The Department of Transportation (DOT) assumed a significant role in noise control through its various agencies. The Federal Aviation Agency (FAA) is responsible to regulate noise from aircraft and airports. The Federal Highway Administration (FHWA) is responsible to regulate noise from the interstate highway system. The Occupational Safety and Health Administration (OSHA) is responsible for the prohibition of excessive noise exposure to workers.

The Federal government and the State advocate that local jurisdiction use their land use regulatory authority to arrange new development in such a way that "noise sensitive" uses are either prohibited from being constructed adjacent to a highway or, or alternatively that the developments are planned and constructed in such a manner that potential noise impacts are minimized.

Since the Federal government and the State have preempted the setting of standards for noise levels that can be emitted by the transportation source, the City is restricted to regulating the noise generated by the transportation system through nuisance abatement ordinances and land use planning.

3.2 State Regulations

Established in 1973, the California Department of Health Services Office of Noise Control (ONC) was instrumental in developing regularity tools to control and abate noise for use by local agencies. One significant model is the "Land Use Compatibility for Community Noise Environments Matrix." The matrix allows the local jurisdiction to clearly delineate compatibility of sensitive uses with various incremental levels of noise.

The State of California has established noise insulation standards as outlined in Title 24 and the Uniform Building Code (UBC) which in some cases requires acoustical analyses to outline exterior noise levels and to ensure interior noise levels do not exceed the interior threshold. The State mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines published by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable.

Noise insulation design standards for residences have been established by the State of California Uniform Building Code (UBC) Chapter 12, Division II and by the Title 24 noise insulation standards of the California Administrative Code. The City is required by the State Housing Law to adopt these State codes as minimum performance standards. The City may enact stricter noise standards throughout the city or on a case-by-case basis if deemed necessary. In brief, the Title 24 noise standards require the following for multi-family dwellings:

1. Party wall and floor-ceiling assembly designs must provide a minimum STC of 50, based on lab tests. Field tested assemblies must provide a minimum noise isolation class (NIC) of 45.

2. Floor-ceiling assembly designs must provide for a minimum impact insulation class (IIC) of 50, based on lab tests. Field tested assemblies must provide a minimum FIIC of 45.

3. Entry doors from interior corridors must provide an STC of 26 or more.

4. Penetrations or openings in sound rated assemblies must be treated to maintain required ratings.

5. Interior noise levels due to exterior sources must not exceed a community noise equivalent level (CNEL) or a day-night level (LDN) of 45 dBA, in any habitable room.

Thus, the interior limit is 45 dBA CNEL between dwelling units and from exterior noise sources to interior living spaces.

3.3 City of Ontario Noise Regulations

The project is required to comply with the noise standards and thresholds established within the City of Ontario Municipal Code and the Ontario Plan. The noise standards from the Municipal Code and the Ontario Plan are provided in Appendix A.

3.3.1 City of Ontario Municipal Code Noise Standards

The City of Ontario Municipal Code, Chapter 29: Noise, requires that a project shall not create loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness.

Exterior Noise Standards:

Noise standards are defined in Section 5-29.04, Exterior Noise Standards of the Noise chapter of the Municipal Code and are applicable to the project site and surrounding noise sensitive uses.

Table 6 shows the exterior noise standards from the City of Ontario Municipal Code Chapter 29: Noise Exterior Noise Standards for the project site and surrounding residential land uses.

Table 6
City of Ontario Municipal Code Exterior Noise Standards

Land Use	7:00 AM – 10:00 PM	10:00 PM – 7:00 AM
	Leq (dBA)	Leq (dBA)
Multi-Family Residential	65	50
Residential Portion of Mixed Use	70	70
Commercial Property	65	60

[1]Applies to that portion of residential property falling within 100 feet of a commercial property use, if the noise originates from that commercial property use.

Interior Noise Standards:

Noise standards are defined in Section 5-29.05 Interior Noise Standards of the Noise chapter of the Municipal Code and are applicable to the project site and surrounding noise sensitive uses.

Table 7 shows the exterior noise standards from the City of Ontario Municipal Code Chapter 29: Noise Interior Noise Standards for the project land uses.

Table 7
City of Ontario Municipal Code Interior Noise Standards

Land Use	7:00 AM – 10:00 PM	10:00 PM – 7:00 AM
	Leq (dBA)	Leq (dBA)
Multi-Family Residential	45	40
Residential Portion of Mixed Use[1]	45	40

[1]Applies to that portion of residential property falling within 100 feet of a commercial property use, if the noise originates from that commercial property use.

Construction Noise Regulations

Chapter 29: Noise, Section 5-29.06 of the City's municipal code states that the following activities shall be exempted from the provisions of the noise code;

- Noise sources associated with construction, repair, remodeling, demolition or grading of any real property. Such activities shall instead be subject to the following provisions of § 5-29.09;

  i. No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

  ii. No landowner, construction company owner, contractor, subcontractor, or employer shall permit or allow any person or persons working under their

direction and control to operate any tool, equipment or machine in violation of the provisions of this section.

3.3.2 City of Ontario General Plan (The Ontario Plan)

The Ontario Plan establishes planning criteria for determining a development's noise/land use compatibility based on the community noise equivalent level (CNEL). CNEL noise levels are typically used to evaluate mobile source noise impacts such as from roadways, airports and rail lines.

Table 8 summarizes the City's Noise/Land Use Compatibility guidelines for the project and surrounding land uses.

Table 8
Noise/Land Use Compatibility Guidelines

Land Use	Noise Limit (CNEL)			
	Normally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable
Residential – Multiple Family	<60	60-65	65-75	>75
Commercial – Retail	<70	70-75	75-80	>80

Clearly Acceptable: No special noise insulation required, assuming buildings of normal conventional construction.

Normally Acceptable: Acoustical reports will be required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditioning will normally suffice.

Normally Unacceptable: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of noise reduction requirements must be made and needed noise insulation features included.

Clearly Unacceptable: No new construction should be permitted.

4.0 Study Method and Procedures

The following section describes the measurement procedures, measurement locations, and noise modeling procedures and assumptions used in the noise analysis.

4.1 Measurement Procedures and Criteria

Noise measurements are taken to determine the existing noise levels. A noise receiver or receptor is any location in the noise analysis in which noise might produce an impact. The following criteria are used to select measurement locations and receptors:

- Locations expected to receive the highest noise impacts, such as the first row of houses
- Locations that are acoustically representative and equivalent of the area of concern
- Human land usage
- Sites clear of major obstruction and contamination

RK conducted the sound level measurements in accordance with Caltrans technical noise specifications. All measurement equipment meets American National Standards Institute (ANSI) specifications for sound level meters (S1.4: Specification of Sound Level Meters, 1983).

A Piccolo-II Type 2 integrating-averaging level meter was used to conduct long-term (24-hour) noise measurements at the project site and property boundaries.

The Leq, Lmin, Lmax, L2, L8, L25, and L50 statistical data were recorded over the measurement time period intervals and the information was utilized to define the noise characteristics for the project. The following gives a brief description of the Caltrans Technical Noise Supplement procedures for sound level measurements:

- Microphones for sound level meters were placed five (5) feet above the ground for long-term noise measurements
- Sound level meters were calibrated before and after each measurement
- Following the calibration of equipment, a windscreen was placed over the microphone
- Frequency weighting was set on "A" and slow response
- Temperature and sky conditions were observed and documented

Appendix B includes photos, field sheets, and measured noise data.

4.2 Stationary Noise Modeling

The stationary noise was projected using a computer program that replicates the FHWA Noise Prediction Model (FHWA-RD-77-108). The FHWA model arrives at the predicted noise level through a series of adjustments to the reference energy noise level. For stationary source, the following noise level was applied to the model. The model outputs the projected noise level based on the following key parameters:

- Referenced noise level – (e.g. how loud a source is at a specific distance)
- Vertical and horizontal distances (sensitive receptor distance from noise source)
- Noise barrier vertical and horizontal distances (noise barrier distance from sound source and receptor).
- Typical noise source spectra
- Topography

Table 9 indicates the referenced noise level used in this analysis.

Table 9
Stationary Source Noise Level

Source	Distance from Source (feet)	Noise Levels (dBA)
		Leq
HVAC Condenser Unit	3.0	77.0
Parking Lot	6.0	63.8

To estimate the future noise levels during typical conditions, RK adjusted the reference noise levels from noise source to the nearest receptors. Adjusted noise levels are based on the distance of the receptor location relative to the noise source and local topography. The noise levels assume that the stationary sources are operating continuously when in reality not all noise sources will operate continuously throughout the day and night.

4.3 Construction Noise Modeling

The construction noise analysis utilizes the Federal Highway Administration (FHWA) Roadway Construction Noise Model, together with several key construction parameters. Key inputs include distance to the sensitive receiver, equipment usage, and baseline

parameters for the project site. This study evaluates the potential exterior noise impacts during each phase of construction. Noise levels were projected at an average distance of 160 feet to the nearest residential (to the north of Log F and Lot G) sensitive receptor of equipment operating over an 8-hour period from to the nearest sensitive receptor property line

- Construction phasing and equipment usage assumptions are referenced from the Toyota Arena Mixed Use Development AQ & GHG Study, by RK Engineering, June 2021.

4.4 Interior Noise Modeling

The interior noise level is the difference between the projected exterior noise level at the structure's façade and the noise reduction provided by the structure itself. Typical building construction will provide a conservative 12 dBA noise level reduction with a "windows open" condition and a very conservative 20 dBA noise level reduction with "windows closed". RK estimated the interior noise level by subtracting the building shell design from the estimated exterior noise level.

The interior noise analysis is based on industry standards for building noise reduction established by the Federal Highway Administration (FHWA), the 2013 Caltrans Technical Noise Supplement to the Traffic Noise Analysis Protocol (TeNS), the California Office of Noise Control Catalog of STC and IIC Ratings for Wall and Floor/Ceiling Assemblies, and the California Building Standards Code, Title 24.

The TeNS manual shows that the noise reduction due to building exteriors with ordinary sash windows (windows closed) is at least 20 decibels. By providing upgraded STC rated windows, the project design is considered adequate to meet interior noise standards. The building's exterior walls will be constructed per the latest building code insulation requirements and provide occupants with the most protection from exterior noise. Insulated exterior walls, designed per the latest California Building Standards, would provide a minimum of STC 35-40. Windows, on the other hand, are one of the acoustically weakest parts of the structure. Therefore, for a conservative estimate of preliminary interior noise, the building's noise reduction potential is limited to the STC of the windows.

4.5 Construction Vibration Modeling

The construction vibration assessment is based on the methodology set-forth within the Caltrans Transportation and Construction Induced Vibration Guidance Manual. The

vibration impacts from vibratory rollers and compactors, heavy truck loading and bulldozer activity is analyzed. All vibratory activity is analyzed as a continuous and/or frequent event and is required to comply with the applicable guidance thresholds criteria. It is expected that vibration levels will be highest during paving phase. No impact pile driving is expected as part of this project.

Vibratory impacts were calculated from the site area property line to the closest sensitive receptors and structures using the reference vibration levels, soil conditions and the reference equation *PPV= PPV ref (25/D)^n (in/sec)* (from Caltrans Manual) where:

PPV = reference measurement at 25 feet from vibration source
D = distance from equipment to property line
n= vibration attenuation rate through ground (n=1.0 was utilized for this study)

5.0 Existing Noise Environment

The existing noise environment for the project site and surrounding area has been established based on noise measurement data collected by RK.

5.1 Long-Term (24-Hour) Noise Measurement Results

To determine the existing noise level environment, RK conducted four (4) 24-hour noise measurements at the project study area.

Noise levels were measured on April 7, 2021 using a Piccolo-II Type 2 integrating-averaging sound level meter. The information was utilized to establish the noise characteristics of the existing ambient environment.

The noise monitoring locations were selected based on the proximity and location to adjacent sensitive receptors. Exhibit C graphically illustrates the location of the long-term measurements.

- Long-term noise monitoring location one (LT-1) was taken along southwest corner of Fourth Street and Via Piemonte approximately 140 feet south of the centerline of Fourth Street.

- Long-term noise monitoring location two (LT-2) was taken east of Porsche Way, approximately 60 feet north of the La Quinta Inn property line.

- Long-term noise monitoring location three (LT-3) was taken northwest corner of Concours Street and Ferrari Street, approximately 110 feet to the west from the centerline of Concours Street.

- Long-term noise monitoring location four (LT-4) was taken in the parking lot, approximately 450 feet to the north from the centerline of Concours Street.

Long term noise monitoring locations represent the existing noise levels near the adjacent noise sensitive land uses. Long-term noise measurement results are summarized in Table 10, Table 11, Table 12 and Table 13. Appendix B includes photographs, field sheets and measured noise data.

Table 10
24 Noise Measurement Results LT-1[1]

24-Hour CNEL			**49.9**

[1] LT-4 was taken in the parking lot, approximately 450 feet to the north from the centerline of Concours Street. LT-4 was recorded on 04/07/2021.

6.0 Operational Noise Impacts

This assessment analyzes the anticipated noise levels generated by the project. The main sources of noise generated by the project would include vehicular traffic noise along the adjacent roadways. Noise level impacts are compared to the City of Ontario noise standards.

The project must demonstrate that noise levels generated by the project site would not result in a permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

6.1 Stationary Source Noise Impacts

The project is not expected to consist of significant sources of stationary noise. The main sources of potential stationary noise impacts from the project would mainly include on-site circulation and parking lot noise, HVAC units and outdoor conversational noise.

The types of on-site noise from the project are typically considered compatible with other adjacent commercial/mixed use and would not typically be categorized as loud, unnecessary, or unusual noise that disturbs the peace or quiet of any neighborhood, or that causes discomfort or annoyance to any person of normal sensitiveness. In particular, social activities and vehicular related noise are generally substantially less during the noise sensitive nighttime hours. Although, mechanical HVAC equipment does have the potential to operate 24-hours a day.

Rooftop mechanical HVAC equipment are expected to be located at the center of each building. The nearest noise sensitive residential receptors are located approximately 750 feet away to the west of the proposed Lot C HVAC units and the noise impacts from the operation of mechanical HVAC equipment is expected to be not significant at this distance. Therefore, a preliminary evaluation of noise impacts at the adjacent commercial uses has been provided.

Parking lot noise would occur from vehicle engine idling and exhaust, doors slamming, tires screeching, people talking, and the occasional horn honking. Parking lot noise is expected to occur on Lot F and Lot G and is conservatively assessed from the first parking space to northern residential properties; approximately 160 feet away.

The proposed site plan shows commercial/retail uses will face Via Piemonte and would be mostly shielded from the line of sight from the adjacent receptor property lines. Therefore, the outdoor conversational noise from the commercial/retail uses would not substantially contribute noise impacts to adjacent properties and was not included as a part of this analysis.

Table 14
Stationary Noise Impact Analysis[1]

Receptor			Stationary Noise Source				Combined Exterior Noise Level (Leq) dBA	
Number[2]	Land Use	Location	Source	Location	Distance[3]	Noise Level (Leq) dBA	Daytime[4]	Nighttime[4]
1	Residential	North of Lot F & Lot G	Parking Lot	Lot F & Lot G	160	34.8	34.8	34.8
2	Residential	West of Lot C	HVAC	Lot C	510	32.2	32.6	32.6
			Parking Lot	Lot F	735	21.9		
City of Ontario Residential Exterior Standard Levels							**65.0**	**50.0**
Noise Level Exceeds Standard (?)							**No**	**No**
3	Commercial	South of Lot C and Lot D	HVAC	Lot A	213	39.6	43.7	43.7
			HVAC	Lot C	243	38.5		
			HVAC	Lot D	243	38.5		
			Parking Lot	Lot F & Lot G	530	24.7		
4	Commercial	East of Lot D	HVAC	Lot D	485	32.7	36.6	36.6
			Parking Lot	Lot G	170	34.3		
5	Commercial	East of Lot A	HVAC	Lot A	213	39.6	42.4	42.4
			HVAC	Lot B	525	39.1		
6	Commercial	South of Lot B	HVAC	Lot A	580	31.1	39.0	39.0
			HVAC	Lot B	250	38.2		
City of Ontario Commercial Exterior Standard Levels							**65.0**	**60.0**
Noise Level Exceeds Standard (?)							**No**	**No**

[1] Stationary noise calculation worksheets are shown in Appendix C.
[2] Refer Exhibit A for Receptor Location.
[3] Distance from the receptor to the nearest noise source.
[4] Daytime: (7:00 A.M. to 10:00 P.M.); Nighttime: (10:00 P.M. to 7:00 A.M.)

As shown in Table 14, operational noise levels generated by the project are not expected to exceed the City's daytime standards and nighttime noise standards at the nearest receptor property line for both commercial and residential uses. Stationary noise calculation worksheets are shown in Appendix C.

6.2 Preliminary Interior Noise Analysis

Traffic noise along the adjacent roadways is expected to be the primary source of ambient noise impacting future residents at the project site. Traffic noise is analyzed to determine the project's noise/land use compatibility setting and to determine future noise levels to habitable exterior and interior areas on the project site. This section of the analysis does not necessarily apply to CEQA, as recent court rulings have indicated that CEQA is primarily concerned with the project's impact of the environment, not the environment's impact on a project.

Future traffic noise along the roadways is obtained from The Ontario Plan Figure S-3a, Future Roadway Noise Contours and represents the noise levels at the project site.

Table 15 shows the estimated future traffic noise levels at the project site and the noise/land use compatibly rating based on the City of Ontario General Plan Table LU-7 standards. The Ontario Plan Noise Level Exposure and Land Use Compatibility Guidelines is provided in Appendix A.

Table 15
Future Traffic Noise Levels[1]

Receptor	Exterior Noise Level (Ldn) (dBA CNEL)	Noise/Land Use Compatibility
Multifamily Residential	65-70	Normally Unacceptable
Retail	65-70	Normally Acceptable

[1] Source: The City of Ontario General Plan Table LU-7

The project may experience noise levels that fall within the normally unacceptable range (65-75 CNEL) for the residential part of the project and clearly acceptable (65-70 CNEL) for the retail part of the project. Hence, upgraded building construction techniques are expected to be required to achieve interior noise level standards for the residential uses.

Based on Section 5, the existing noise levels (CNEL) nearest the project site range from 60.6 CNEL to 62.5 CNEL. It should be noted that the existing noise levels were taken during typical weekday conditions and do not include noise levels during an event at the Toyota Arena event center, which may further increase noise levels (i.e., traffic) in the area. Therefore, in order to be conservative, the higher limit of the future traffic noise levels at the project site (70 dBA CNEL) has been utilized to conduct preliminary interior noise analysis.

A preliminary interior noise analysis has been prepared for the sensitive receptor locations using a typical "windows open" and "windows closed" condition. A "windows open" condition assumes 12 dBA of noise attenuation from the exterior noise level. A "windows closed" condition" assumes 20 dBA of noise attenuation from the exterior noise level.

Table 16 indicates the interior noise levels for the residential uses on the project site.

Table 16
Preliminary Interior Noise Impact Analysis

Receptor Location	Exterior Noise Level at Building Facade (CNEL)	Interior Noise Standard (CNEL)	Required Building Shell Noise Reduction (CNEL)	Interior Noise Level with Standard California Construction Windows (STC ≥ 25)		STC Rating for Windows Facing Subject Roadway
				"Windows Open" [1]	"Windows Closed" [2]	
Multifamily Residential	70	45.0	25	58	50	28

[1] A minimum of 12 dBA noise reduction is assumed with the "windows open" condition.
[2] A minimum of 20 dBA noise reduction is assumed with the "windows closed" condition.

The project is expected to require a "windows closed" condition and upgraded STC rated windows to meet the City/State interior noise standard of 45 dBA. To accommodate a windows closed conditions, all units shall be equipped with adequate fresh air ventilation, per the requirements of the California Uniform Building Code (UBC).

Prior to issuance of building permits, the project proponent should demonstrate to the City building department that the proposed building shell and window assemblies will achieve exterior to interior noise reduction necessary to meet the State of California and City of Ontario requirements.

Furthermore, the project shall comply with California Title 24 insulation building requirements for multi-family dwelling units for common separating assemblies (e.g. floor/ceiling assemblies and demising walls).

6.3 Los Angeles Ontario International Airport (LAONT)

The Los Angeles Ontario International Airport (LAONT) is centrally located in the City of Ontario. The airport is a medium-hub, full-service airport. Traffic at the airport includes general aviation, commercial passenger aviation, and air cargo freight movement. LAONT is a member of the Los Angeles World Airport (LAWA) system. LAWA is currently developing a Master Land Use Plan for LAONT that will provide a framework for the airport's development and use through the year 2030.

The LAONT is located approximately one and a quarter (1.25) miles to the northeast of the project site. A noise/land use compatibility assessment has been performed based on the project's location to the LAONT Airport. The noise contour maps for the LAONT Airport are provided in Exhibit D.

The project is located outside of the 60 dB Ldn noise contour limit; therefore, the exterior noise impact from the airport would be within the allowable limits for residential land uses and the project is considered compatible with the surrounding land use and noise environment. Noise from airport operations is expected to generate a less than significant on the proposed project.

6.4 Recommended Operational Design Features

The following recommended project design features include standard rules and requirements, best practices and recognized design guidelines for reducing noise levels. Design features are assumed to be part of the conditions of the project and integrated into its design. Design features are not typically considered mitigation under CEQA.

DF-1 Prior to the issuance of building permits, the project shall prepare a final acoustical study that demonstrates building construction will achieve the minimum interior noise standard of 45 dBA CNEL for all residential units located along arterial roadways and/or adjacent to industrial uses, per the California Building Standards Code. The following noise control measures may be required for dwelling units located near adjacent roadways and industrial uses:

- Install sound barriers between residences and noise sources.
- Install double-paned or similar sound rated windows.
- Provide sound insulating exterior walls and roofing systems.

- Locate and/or design attic vents to minimize sound propagation into each home.

- Provide forced-air ventilation systems.

- Place dwellings as far as practical from the noise source

DF-2 The project shall comply with California Title 24 building insulation requirements for exterior walls, roofs and common separating assemblies (e.g. floor/ceiling assemblies and demising walls).

DF-3 For proper acoustical performance, all exterior windows, doors, and sliding glass doors should have a positive seal and leaks/cracks must be kept to a minimum.

DF-4 The final building plans shall ensure that HVAC units are not located within an area of the project site that would contribute to a noise level exceedance at any adjacent property line, per the City of Ontario Municipal Code requirements. To meet the City's noise standards the following measures should be followed:

- All HVAC equipment shall be shielded or enclosed from the line of sight of adjacent residential uses.

7.0 Construction Noise and Vibration Impacts

Temporary construction noise and vibration impacts have been assessed from the project site to the nearest sensitive residential use to the north of Lot F and Lot G. The degree of construction noise will vary depending on the type of construction activity taking place and the location of the activity relative to the surrounding properties.

Chapter 29: Noise, Section 5-29.06 of the City's municipal code states that the following activities shall be exempted from the provisions of the noise code;

- Noise sources associated with construction, repair, remodeling, demolition or grading of any real property. Such activities shall instead be subject to the following provisions of § 5-29.09;

    i. No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

    ii. No landowner, construction company owner, contractor, subcontractor, or employer shall permit or allow any person or persons working under their direction and control to operate any tool, equipment or machine in violation of the provisions of this section.

To help further assess potential construction noise level impacts under CEQA, the Federal Transit Administration (FTA) Transit Noise and Vibration Impact Assessment (2006) criteria is used as a referenced threshold of significance in this report. The FTA provides reasonable criteria for assessing construction noise impacts based on the potential for adverse community reaction. For residential uses, the daytime noise threshold is 80 dBA Leq for an 8-hour period. In compliance with the City's Municipal Code, it is assumed construction would not occur during the noise-sensitive nighttime hours.

7.1 Typical Construction Noise Levels

Table 17 shows typical construction noise levels compiled by the Environmental Protection Agency (EPA) for common type construction equipment. Typical construction noise levels

are used to estimate potential project construction noise levels at the adjacent sensitive receptors.

Table 17
Typical Construction Noise Levels[1]

Type	Noise Levels (dBA) at 50 Feet
Earth Moving	
Compactors (Rollers)	73 - 76
Front Loaders	73 - 84
Backhoes	73 - 92
Tractors	75 - 95
Scrapers, Graders	78 - 92
Pavers	85 - 87
Trucks	81 - 94
Materials Handling	
Concrete Mixers	72 - 87
Concrete Pumps	81 - 83
Cranes (Movable)	72 - 86
Cranes (Derrick)	85 - 87

Generators	71 - 83
Compressors	75 - 86
Impact Equipment	
Pneumatic Wrenches	82 - 87
Jack Hammers, Rock Drills	80 - 99
Pile Drivers (Peak)	95-105
Other	
Vibrators	68 - 82
Saws	71 - 82

[1] Referenced Noise Levels from the Environmental Protection Agency (EPA)

7.2 Construction Noise Impact Analysis

This assessment analyzes potential noise impacts during all expected phases of construction, including; demolition, site preparation, grading, building construction, paving, and architectural coating. Construction phasing and equipment usage assumptions are referenced from:

- Toyota Arena Mixed Use Development AQ & GHG Impact Study, by RK Engineering Group, June 2021.

The project's estimated construction noise levels have been calculated using the Federal Highway Administration Roadway Construction Noise Model Version 1.1. Tables 18 show the noise level impacts to the nearest residential property lines to the north at 160 feet. Construction noise calculation worksheets are provided in Appendix D.

Table 18
Project Construction Noise Levels – Residential Uses to the North

Phase	Equipment	Quantity	Equipment Noise Level at 160ft (dBA Leq)	Combined Noise Level (dBA Leq)
Demolition	Concrete/Industrial Saw	1	72.5	76.3
	Excavator	3	66.6	
	Rubber Tired Dozer	2	67.6	
Site Preparation	Rubber Tired Dozers	3	67.6	77.5
	Tractors/Loaders/Backhoes	4	69.9	
Grading	Excavators	2	66.6	78.1
	Graders	1	70.9	
	Rubber Tired Dozers	1	67.6	
	Scrappers	2	69.5	
	Tractors/Loaders/Backhoes	2	69.9	
Building Construction	Cranes	1	62.5	76.2
	Forklifts	3	60.9	
	Generator Sets	1	67.5	
	Tractors/Loaders/Backhoes	3	69.9	
	Welders	1	59.9	
Paving	Cement and Mortar Mixer	2	64.7	71.8
	Pavers	2	64.1	
	Paving Equipment	2	62.9	
Architectural Coating	Air Compressors	1	63.6	63.6
Worst Case Construction Phase Noise Level - Leq (dBA)				78.1
FTA Construction Noise Criteria (Detailed Assessment: 8-Hour Leq)				80.0
Noise level exceeds FTA criteria?				No

As shown in Table 18, project construction noise levels are expected to be below the recommended 8-hour construction noise threshold provided by the FTA for adverse community reaction at the adjacent residential uses.

7.3 Construction Vibration

To determine the vibratory impacts during construction, reference construction equipment vibration levels were utilized and then extrapolated to the façade of the nearest adjacent structures. The nearest sensitive receptors are the commercial/retail structures located adjacent to the project site. All structures surrounding the project site are "new structures". No historical or fragile buildings are known to be located within the vicinity of the site.

The construction of the proposed project is not expected to require the use of substantial vibration inducing equipment or activities, such as pile drivers or blasting. The main sources of vibration impacts during construction of the project would be the operation of equipment such as bulldozer activity during demolition, loading trucks during grading and excavation, and vibratory rollers during paving.

The construction vibration assessment utilizes the referenced vibration levels and methodology set-forth within the Transit Noise and Vibration Impact Assessment Manual, Federal Transit Administration, September 2018.

Table 19 shows the referenced vibration levels.

Table 19
Typical Construction Vibration Levels[1]

Equipment	Peak Particle Velocity (PPV) (inches/second) at 25 feet	Approximate Vibration Level (LV) at 25 feet
Piledriver (impact)	1.518 (upper range)	112
	0.644 (typical)	104
Piledriver (sonic)	0.734 upper range	105
	0.170 typical	93
Clam shovel drop (slurry wall)	0.202	94
Hydromill	0.008 in soil	66
(slurry wall)	0.017 in rock	75
Vibratory Roller	0.210	94
Hoe Ram	0.089	87
Large bulldozer	0.089	87
Caisson drill	0.089	87
Loaded trucks	0.076	86
Jackhammer	0.035	79
Small bulldozer	0.003	58

[1] Transit Noise and Vibration Impact Assessment Manual, Federal Transit Administration, September 2018

Table 20 shows the project's construction-related vibration analysis at the nearest structures to the project construction area. Construction impacts are assessed from the closest area on the project site to the nearest adjacent structure at approximately 50 feet. The worst case vibratory impact from the site is estimated to be 0.098 PPV (in/sec) at the structures to the west. No damage potential is expected.

Table 20
Construction Vibration Impact Analysis

Construction Activity	Distance to Nearest Structure (ft)	Duration	Calculated Vibration Level - PPV (in/sec)	Damage Potential Level	Annoyance Criteria Level
Large Bulldozer	50	Continuous/Frequent	0.042	No Impacts	Distinctly Perceptible
Vibratory Roller	50	Continuous/Frequent	0.035	No Impacts	Barely Perceptible
Loaded Trucks	50	Continuous/Frequent	0.098	Extremely Fragile Buildings, Ruins Ancient Monuments	Distinctly Perceptible
Caisson Drilling	50	Continuous/Frequent	0.042	No Impacts	Distinctly Perceptible

As shown in Table 20, project related construction activity is not expected to cause any potential damage to the nearest structures. The annoyance potential of vibration from construction activities would range from "distinctly perceptible" to "Barely perceptible".

Construction vibration calculation worksheets are shown in Appendix D.

7.4 Recommended Construction Design Features

The following recommended project design features include standard rules and requirements, best practices and recognized design guidelines for reducing noise levels. Design features are assumed to be part of the conditions of the project and integrated into its design. Design features are not typically considered mitigation under CEQA

DF-7 Prepare a construction management plan and obtain a construction work permit from the City of Ontario prior to starting construction. The construction management plan shall ensure all contractors implement construction best management practices to reduce construction noise levels. Best management practices shall include the following:

- All construction equipment shall be equipped with muffles and other suitable noise attenuation devices (e.g., engine shields).
- Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than track equipment), to the maximum extent feasible.
- If feasible, electric hook-ups shall be provided to avoid the use of generators. If electric service is determined to be infeasible for the site, only whisper-quiet generators shall be used (i.e., inverter generators capable of providing variable load.
- Use electric air compressors and similar power tools rather than diesel equipment, where feasible.
- Locate staging area, generators and stationary construction equipment as far from the adjacent residential homes as feasible.
- Construction-related equipment, including heavy-duty equipment, motor vehicles, and portable equipment, shall be turned off when not in use for more than 5 minutes.

- Provide notifications and signage in readily visible locations along the perimeter of construction sites that indicate the dates and duration of construction activities, as well as provide a telephone number where neighbors can enquire about the construction process and register complaints to a designated construction noise disturbance coordinator.

- Construction activities shall not take place between the hours of 6:00 p.m. and 7:00 a.m. on weekdays and Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

DF-8 No impact pile driving or blasting activities shall be permitted on the project site during construction. If impact pile driving or blasting is required, a follow-up noise and vibration impact assessment shall be conducted prior to start of any activity.

5-29.19 City Manager waiver

5-29.20 Noise abatement program

Sec. 5-29.01. Declaration of findings and policy.

It is hereby found and declared that:

(a) The making and creation of excessive, unnecessary or unusually loud noises within the limits of the City is a condition that has existed for some time, however, the extent and volume of such noises is increasing;

(b) The making, creation or maintenance of such excessive, unnecessary, unnatural or unusually loud noises that are prolonged, unusual and unnatural in their time, place and use affect and are a detriment to public health, comfort, convenience, safety, welfare and prosperity of the residents of the City; and

(c) The necessity in the public interest for the provisions and prohibitions hereinafter contained and enacted, is declared as a matter of legislative determination and public policy, and it is further declared

that the provisions and prohibitions hereinafter contained and enacted are in pursuance of and for the purpose of securing and promoting the public health, comfort, convenience, safety, welfare and prosperity and the peace and quiet of the residents of the City.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.02. Definitions.

As used in this chapter, specific words and phrases are defined as follows:

(a) "Ambient noise level" shall mean the all-encompassing noise level associated with a given environment and is a composite of sounds from all sources, excluding the alleged offensive noise or excessive sound, at the location and approximate time at which a comparison with the alleged offensive noise is to be made.

(b) "Applicable (noise) zone" shall mean the noise zone category based on the actual use of the property, provided that the actual use is a legal use in the City.

(c) "A-weighted sound level" shall mean the sound pressure level in decibels (dBAs) as measured with a sound level meter using the A-weighted filter network (scale) at slow response and at a pressure of twenty (20) micropascals. The A-weighted filter de-emphasizes the very low and a very high frequency component of sound in a manner similar to the response of the human ear, and is a numerical method of rating human judgment of loudness.

(d) "Decibel (dBA)" shall mean a unit for measuring the amplitude of a sound, equal to twenty (20) times the logarithm to the base ten (10) of the ratio of pressure of the sound measured to the reference pressure of twenty (20) micropascals.

(e) "Equivalent sound or noise level (Leq)" shall mean the International Electrotechnical Commission (IEC) 60804 Standard for measurement, or the most recent revision thereof, for the sound level corresponding to a steady state noise level over a given sample period with the same amount of acoustic energy as the actual time varying noise level or the energy average noise level during the sample period. The measurement period for the purposes of this chapter is fifteen (15) minutes.

(f) "Impulsive noise" shall mean a noise of short duration usually less than one (1) second and of high intensity, with an abrupt onset and rapid decay. Such objectionable noises may also be repetitive.

(g) "Intrusive noise" shall mean that noise that intrudes over and above the ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, time of occurrence and tonal information content, as well as the prevailing ambient noise level.

(h) "Maintenance" shall mean the upkeep, repair or preservation of existing property or structures.

(i) "Noise" shall mean any unwanted sound or sound that is undesirable because it interferes with speech and hearing, or is intense enough to damage hearing or is otherwise annoying.

(j) "Noise level (sound level)" shall mean the weighted sound pressure level obtained by use of a sound level meter having a standard frequency filter for attenuating part of the sound spectrum. For purposes of this chapter, all noise levels (sound levels) shall be A-weighted sound pressure level.

(k) "Noise (sound) level meter" shall mean an instrument, including a microphone, an amplifier, an output meter and frequency weighting networks for the measurement and determination of noise and sound levels. For the purposes of this chapter, the sound level meter must meet the International Electrotechnical Commission (IEC) 60651 and 60804 Standards, or the most recent revisions thereof, for Type 1 sound level meters or an instrument and the associated recording and analyzing equipment that will provide equivalent data.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.03. Designated noise zones.

The properties hereinafter described shall be assigned to the following noise zones:

Noise Zone I:	All single-family residential properties;
Noise Zone II:	All multi-family residential properties and mobile home parks;
Noise Zone III:	All commercial property;
Noise Zone IV:	The residential portion of mixed use properties;
Noise Zone V:	All manufacturing or industrial properties and all other uses.

The actual use of the property, and not necessarily its zoning designation, shall be the determining factor in establishing whether a property is in Noise Zone I, II, III, IV or V, provided that the actual use is a legal use within the applicable zone.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.04. Exterior noise standards.

(a) The following exterior noise standards, unless otherwise specifically indicated, shall apply to all properties within a designated noise zone.

Allowable Exterior Noise Level (1)		***Allowed Equivalent Noise Level, Leq. (2)***	
Noise Zone	***Type of Land Use***	***7 a.m. to 10 p.m.***	***10 p.m. to 7 a.m.***
I	Single-Family Residential	65 dBA	45 dBA
II	Multi-Family Residential, Mobile Home Parks	65 dBA	50 dBA
III	Commercial Property	65 dBA	60 dBA
IV	Residential Portion of Mixed Use	70 dBA	70 dBA
V	Manufacturing and Industrial, Other Uses	70 dBA	70 dBA

(1) If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard.

(2) Measurements for compliance are made on the affected property pursuant to § 5-29.15.

(b) It is unlawful for any person at any location within the incorporated area of the City to create noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which noise causes the noise level, when measured at any location on any other property, to exceed either of the following:

(1) The noise standard for the applicable zone for any fifteen-minute (15) period; and

(2) A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).

(c) In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.

(d) The Noise Zone IV standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.

(e) If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.05. Interior noise standards.

(a) The following interior noise standards, unless otherwise specifically indicated, shall apply to all properties within a designated noise zone.

Allowable Interior Noise Level (1)		**Allowed Equivalent Noise Level, Leq.** (2)	
Noise Zone	***Type of Land Use***	***7 a.m. to 10 p.m.***	***10 p.m. to 7 a.m.***
I	Single-Family Residential	45 dBA	40 dBA
II	Multi-Family Residential, Mobile Home Parks	45 dBA	40 dBA
IV	Residential Portion of Mixed Use	45 dBA	40 dBA

(1) If the ambient noise level exceeds the resulting standard, the ambient noise level shall be the standard.

(2) Measurements for compliance are made on the affected property pursuant to § 5-29.15.

(b) It is unlawful for any person at any location within the incorporated area of the City to create noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which noise causes the noise level, when measured at any location on any other property, to exceed either of the following:

(1) The noise standard for the applicable zone for any fifteen-minute (15) period;

(2) A maximum instantaneous (single instance) noise level equal to the value of the noise standard plus twenty (20) dBA for any period of time (measured using A-weighted slow response).

(c) In the event the ambient noise level exceeds the noise standard, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.

(d) The Noise Zone IV standard shall apply to that portion of residential property falling within one hundred (100) feet of a commercial property or use, if the noise originates from that commercial property or use.

(e) If the measurement location is on a boundary between two (2) different noise zones, the lower noise level standard applicable to the noise zone shall apply.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.06. Exemptions.

The following activities shall be exempted from the provisions of this chapter:

(a) Any activity conducted on public property, or on private property with the consent of the owner, by any public entity or its officers, employees, representatives, agents, subcontractors, permittees, licensees or lessees that the public entity has authorized are exempt from the provisions of this chapter. This includes, without limitation, sporting and recreational activities that are sponsored, co-sponsored, permitted or allowed by the City or any school district within the City's jurisdictional boundaries. This also includes, without limitation, occasional outdoor gatherings, public dances, shows or sporting and entertainment events, provided such events are conducted pursuant to an approval, authorization, contract, lease, permit or sublease by the appropriate public entity, specifically the planning commission or City Council;

(b) Occasional outdoor gatherings, public dances, show, sporting and entertainment events, provided said events are conducted pursuant to a permit or license issued by the appropriate jurisdiction relative to the staging of said events;

(c) Any mechanical device, apparatus or equipment used, related to or connected with emergency machinery, vehicle, work or warning alarm or bell, provided the sounding of any bell or alarm on any building or motor vehicle shall terminate its operation within forty-five (45) minutes in any hour of its being activated;

(d) Noise sources associated with construction, repair, remodeling, demolition or grading of any real property. Such activities shall instead be subject to the provisions of § 5-29.09;

(e) Noise sources associated with construction, repair, remodeling, demolition or grading of public rights-of-way or during authorized seismic surveys;

(f) All mechanical devices, apparatus or equipment associated with agriculture operations provided that:

(1) Operations do not take place between 8:00 p.m. and 7:00 a.m.;

(2) Such operations and equipment are utilized for the protection or salvage of agricultural crops during periods of potential or actual frost damage or other adverse weather conditions; or

(3) Such operations and equipment are associated with agricultural pest control through pesticide application, provided the application is made in accordance with permits issued by or regulations enforced by the California Department of Agriculture;

(g) Noise sources associated with the maintenance of real property. Such activities shall instead be subject to the provisions of § 5-29.08;

(h) Any activity to the extent regulation thereof has been preempted by state or federal law;

(i) Any noise sources associated with people and/or music associated with a party at a residential property. Such noise shall be subject to the provisions of OMC § 5-29.07;

(j) Any noise source emanating from an ice cream truck within the City. Such noise shall be subject to the provisions of OMC § 4-18.04;

(k) Any noise sources associated with barking dogs or other intermittent noises made by animals on any properly within the City. Such noise shall be subject to the provisions of OMC Chapter 1, Title 6;

(l) Noise sources related to uses approved by a permit or development agreement adopted prior to the date of adoption of this chapter and that contains acoustic or noise standard conditions of approval. This exemption shall only be applicable during the effective period of the City-approved permit or development agreement.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.07. Loud and disturbing noise.

(a) It is unlawful for any person or property owner within the City to make, cause or allow to be made any loud, excessive, impulsive or intrusive noise, disturbance or commotion that disturbs the peace or quiet of any area or that causes discomfort or annoyance to any reasonable person of normal sensitivities in the area, after a Police or Code Enforcement Officer has first requested that the person or property owner cease and desist from making such noise. The types of loud, disturbing, excessive, impulsive or intrusive noise may include, but shall not be limited to, yelling, shouting, hooting, whistling, singing, playing a musical instrument, or emitting or transmitting any loud music or noise from any mechanical or electrical sound making or sound-amplifying device.

(b) The factors, standards, and conditions that may be considered in determining whether a violation of the provisions of this section has been committed, included, but not limited to, the following:

(1) The level of the noise;

(2) The level and intensity of the background (ambient) noise, if any;

(3) The proximity of the noise to residential or commercial sleeping areas;

(4) The nature and zoning of the area within which the noise emanates;

(5) The density of inhabitation of the area within which the noise emanates;

(6) The time of day and night the noise occurs;

(7) The duration of the noise;

(8) Whether the noise is constant, recurrent or intermittent;

(9) Whether the noise is produced by a commercial or noncommercial activity; and

(10) Whether the use is lawful under the provisions of Title 5 of this Code and whether the noise is one that could reasonably be expected from the activity or allowed use.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.08. Real property maintenance noise regulations.

(a) No person, while engaged in maintenance of real property, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, except between the hours of 8:00 a.m. and 6:00 p.m.

(b) Trimming or pruning that requires the use of chainsaws or mulching machines shall only be allowed between the hours of 8:00 a.m. and 6:00 p.m. on a weekday and between the hours of 9:00 a.m. and 5:00 p.m. on Saturday or Sunday.

(c) The use of electrical or gasoline powered blowers, such as commonly used by gardeners or other persons for cleaning lawns, yards, driveways, gutters and other property shall only be allowed between the hours of 8:00 a.m. and 6:00 p.m. on a weekday and between the hours of 9:00 a.m. and 5:00 p.m. on Saturday or Sunday.

(d) No landowner, gardener, property maintenance service, contractor, subcontractor or employer shall permit or allow any person or persons working under his or her direction or control to operate any tool, equipment or machine in violation of the provisions of this section.

(e) Exceptions. The provisions of this section shall not apply to the following:

(1) Emergency property maintenance required by the building official;

(2) The maintenance, repair or improvement of any public work or facility by public employees, by any person or persons acting pursuant to a public works contract, or by any person or persons performing such work or pursuant to the direction of, or on behalf of, any public agency; provided, however, this exception shall not apply to the City, or its employees, contractors or agents, unless:

(i) The City Manager or department head determines that the maintenance, repair or improvement is immediately necessary to maintain public service,

(ii) The maintenance, repair or improvement is of a nature that cannot feasibly be conducted during normal business hours, or

(iii) The City Council has approved project specifications, contract provisions, or an environmental document that specifically authorizes maintenance during hours of the day that would otherwise be prohibited pursuant to this section; and

(3) Any maintenance that complies with the noise limits specified in § 5-29.04.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.09. Construction activity noise regulations.

(a) No person, while engaged in construction, remodeling, digging, grading, demolition or any other related building activity, shall operate any tool, equipment or machine in a manner that produces loud noise that disturbs a person of normal sensitivity who works or resides in the vicinity, or a Police or Code Enforcement Officer, on any weekday except between the hours of 7:00 a.m. and 6:00 p.m. or on Saturday or Sunday between the hours of 9:00 a.m. and 6:00 p.m.

(b) No landowner, construction company owner, contractor, subcontractor, or employer shall permit or allow any person or persons working under their direction and control to operate any tool, equipment or machine in violation of the provisions of this section.

(c) Exceptions.

(1) The provisions of this section shall not apply to emergency construction work performed by a private party when authorized by the City Manager or his or her designee;

(2) The maintenance, repair or improvement of any public work or facility by public employees, by any person or persons acting pursuant to a public works contract, or by any person or persons performing such work or pursuant to the direction of, or on behalf of, any public agency; provided, however, this exception shall not apply to the City, or its employees, contractors or agents, unless:

(i) The City Manager or a department head determines that the maintenance, repair or improvement is immediately necessary to maintain public services,

(ii) The maintenance, repair or improvement is of a nature that cannot feasibly be conducted during normal business hours, or

(iii) The City Council has approved project specifications, contract provisions, or an environmental document that specifically authorizes construction during hours of the day that would otherwise be prohibited pursuant to this section; and

(3) Any construction that complies with the noise limits specified in §§ 5-29.04 or 5-29.05.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.10. Other public agency exceptions.

The provisions of this chapter shall not be construed to prohibit any work at different hours by or under the direction of any other public agency or public or private utility companies in cases of necessity or emergency.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.11. Schools, day care centers, churches, libraries, museums, health care institutions; Special provisions.

It is unlawful for any person to create any noise that causes the outdoor noise level at any school, day care center, hospital or similar health care institution, church, library or museum while the same is in use, to exceed the noise standards specified in § 5-29.04 prescribed for the assigned Noise Zone I.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.12. Sound amplifying equipment.

Loudspeakers, sound amplifiers, public address systems or similar devices used to amplify sounds shall be subject to the provisions of § 5-29.13. Such sound amplifying equipment shall not be construed to include electronic devices, including but not limited to, radios, tape players, tape recorders, compact disc players, MP3 players, electric keyboards, music synthesizers, record players or televisions, which are designed and operated for personal use, or used entirely within a building and are not designed or used to convey the human voice, music or any other sound to an audience outside such building, or which are used in vehicles and heard only by occupants of the vehicle in which installed.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.13. Amplified sound.

(a) The City Council enacts the following legislation for the sole purpose of securing and promoting the public health, comfort, safety and welfare for its citizenry. While recognizing that the use of sound amplifying equipment may be entitled to certain protection by the constitutional rights of freedom of speech and assembly, the City Council finds that in order to protect the public safety and the correlative rights of the citizens of this community to privacy and freedom from public nuisance of loud and unnecessary noise, reasonable regulation of the time, place and manner of the use of amplifying equipment is necessary. In no event shall approval or authorization required herein be withheld by reason of the constitutionally protected content of any material proposed to be broadcast through amplifying equipment.

(b) It is unlawful for any person, other than personnel of law enforcement or governmental agencies, to install, use or operate a loudspeaker or sound amplifying device in a fixed or movable position or mounted upon any vehicle within the City for the purpose of giving instructions, directions, talks, addresses or lectures to any persons or assemblages of persons in or upon any street, alley, sidewalk, park, place or public property without a permit to do so from the Police Chief or his or her designee. Notwithstanding any other provision of this chapter, the provisions of this section shall also apply to the use of sound amplifying equipment upon public or private property when used in connection with outdoor or indoor public or private events, whether or not admission is charged or food or beverages are sold, when such activity is to be attended by more than one hundred (100) persons and the noise emanating from the event will be audible at the property plane, or in the case of a street dance or concert on the nearest residential property. Those activities listed in § 5-29.06(a) are exempt from the requirements of this section.

(c) The Police Chief or his or her designee is authorized to approve and issue permits under this section.

(d) An application for a permit required by this section shall be filed with the Police Chief at least sixteen (16) days and no more than one hundred twenty (120) days prior to the date on which the sound amplifying equipment is intended to be used. Applications for events covered by the First Amendment of the United States Constitution are exempt from the time requirements of this section if it is shown that circumstances require a shorter filing period and the event will not constitute an unsafe condition. The application shall contain the following information:

(1) The name, address and telephone number of both the owner and the user of the sound amplifying equipment;

(2) The license number, if a sound truck is to be used;

(3) A general description of the sound amplifying equipment which is to be used;

(4) Whether sound amplifying equipment will be used for commercial or noncommercial purpose;

(5) The dates and times upon and within which, and the streets or property over or upon which, the equipment is proposed to be operated;

(6) The name or names of one (1) or more persons who will be present during the conduct of any activities for which registration is sought and who will have authority to reduce the volume of any sound amplifying equipment during the course of the activities if required pursuant to this chapter and, otherwise, to insure compliance with the provisions of this chapter;

(7) A statement by the applicant that he or she is willing and able to comply with the provisions of this chapter and the conditions of the permit; and

(8) A sketch of the area or facilities within which the activities are to be conducted, with approximate dimensions and illustration of the location and orientation of all sound-amplifying equipment.

(e) The Police Chief shall deny the permit application or revoke any permit if the chief finds any of the following:

(1) The application contains materially false or intentionally misleading information;

(2) The use of sound amplifying equipment at an event or activity proposed will be located in or upon a premises, building or structure that is hazardous to the health or safety of the employees or patrons of the premises, business, activity, or event, or the general public, under the standards established by the Uniform Building or Fire Codes, or other applicable codes, as set forth in OMC Titles 4 and 8;

(3) The use of sound amplifying equipment at an event or activity proposed in or upon a premises, building or structure that lacks adequate on-site parking for participants attending the proposed event or activity under the applicable standards set forth in OMC Title 9;

(4) The conditions of any motor vehicle movement are such that, in his or her opinion, the use of the equipment would constitute an unreasonable interference with traffic safety;

(5) The conditions of pedestrian movement are such that the use of the equipment would constitute a detriment to traffic safety;

(6) The application submitted by the applicant reveals that the applicant would violate the provisions of this section or any other provision of federal, state and/or local law;

(7) The applicant is unwilling or unable to comply with the provisions of this chapter or any conditions imposed upon any permit issued;

(8) There had already been a permitted event at the intended location, or within a two hundred (200) yard radius of the intended location and the prior permitted event was located on residentially zoned property or on a street, alley, public parking lot or neighborhood park within three (3) months prior to the intended event. Community parks are exempt from this subsection (8); or

(9) The applicant or location has had previous violations within the past calendar year, and in the judgment of the Police Chief, issuance would be contrary to the intent of this section.

(f) In determining whether the use of the equipment would constitute an unreasonable interference with or detriment to traffic safety, the Police Chief shall consider, but shall not necessarily be limited to:

(1) The volumes, patterns and speed of vehicular and pedestrian traffic in the proposed area of use;

(2) The relationship of the proposed use of equipment and potential impacts upon traffic patterns;

(3) Availability of sufficient room for the operation of the equipment without significantly interfering with the traffic patterns;

(4) Proximity to schools, playgrounds and similar facilities where use of such equipment might attract children into traffic patterns; or

(5) Proximity to busy intersections or other potentially hazardous conditions where use of such equipment might constitute a hazard by reason of its tendency to distract drivers of vehicles or pedestrians.

(g) Issuance or denial.

(1) If the application is approved, the Police Chief shall return an approved copy of the application to the applicant and shall issue a permit. The permit shall constitute permission for the use of the sound amplifying equipment as requested.

(2) Any application filed shall be either approved or disapproved within five (5) days of the filing thereof.

(3) If the application is disapproved, the Police Chief shall return a disapproved copy forthwith to the applicant with a written statement on the reason for disapproval.

(i) Any person aggrieved by a decision of the Police Chief or his or her designee may file an appeal to the City Manager. A complete and proper appeal shall be filed with the City Clerk within ten (10) calendar days of the action that is the subject of the appeal. If the applicant fails to file an appeal within the ten (10) day filing period provided herein, denial shall take effect immediately upon expiration of such filing period. All appeals shall be in writing and shall contain the following information: (a) name(s) of the person filing the appeal, (b) a brief statement in ordinary and concise language of the relief sought, and (c) the signatures of all parties named as appellants and their mailing addresses. After receiving the appeal, the City Clerk shall immediately forward the matter to the City Manager for handling.

(ii) The City Manager shall, upon receipt of the appeal, set the matter for hearing before the City Manager or a hearing officer. Any hearing officer shall be a licensed attorney or recognized mediator designated by the City Manager. The hearing shall be set for not more than ten (10) calendar days after the receipt of the appeal unless a longer time is requested or consented to by the appellant. Notice of such hearing shall be given in writing and mailed at least five (5) calendar days prior to the date of the hearing, by U.S. mail, with a proof of service attached, addressed to the address listed on the permit application, or the written appeal if different from the permit application. The notice shall state the grounds of the complaint or reason for the denial and shall state the time and place where such hearing will be held.

(iii) The City Manager or hearing officer shall, within ten (10) calendar days following the conclusion of the hearing, make a written finding and decision, which shall be delivered to the City and the appellant by first class mail. Notwithstanding any provision in this Code, the decision of the City Manager or hearing officer shall be the final administrative decision of the City. Any party dissatisfied with the decision of the City Manager or hearing officer may seek review of such decision under the provisions of Code Civil Procedure, §§ 1094.5 and 1094.8, as amended from time to time.

(h) In addition to any other provisions of this Code, the use of sound-amplifying equipment and sound trucks in the City shall be subject to the following regulations:

(1) The only sounds permitted are music and human speech;

(2) Sound shall not be emitted within one hundred (100) yards of hospitals, churches, schools and City Hall;

(3) The volume of sound shall be controlled so that it will not be audible for a distance in excess of one hundred (100) feet from the sound amplifying equipment or sound truck, and so that the volume is not unreasonably loud, raucous, jarring, disturbing or a nuisance to persons within the range of allowed audibility; or

(4) The sound amplifying equipment or sound truck shall not be used between the hours of 8:00 p.m. and 8:00 a.m.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.14. Motor vehicles.

The use of any motor vehicle in such a condition as to create excessive, impulsive or intrusive noises is prohibited. The discharge into the open air of the exhaust of any internal combustion engine, stationary or mounted on wheels, motorboat or motor vehicle, including motor cycle, whether or not discharged through a muffler or other similar device, which discharge creates excessive, unusual, impulsive or intrusive noise is prohibited. Motor vehicles shall comply with the noise regulations of the California Vehicle Code.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.15. Noise level measurement.

(a) The location selected for measuring exterior noise levels in a residential area shall be at any part of a private yard, patio, deck or balcony normally used for human activity and identified by the owner or, if occupied by someone other than the owner, the occupant of the affected property as suspected of exceeding the noise level standard. This location may be the closest point in the private yard or patio, or on the deck or balcony, to the noise source, but should not be located in nonhuman activity areas such as trash container storage areas, planter beds, above or contacting a property line fence, or other areas not normally used as part of the yard, patio, deck or balcony. The location selected for measuring exterior noise levels in a nonresidential area shall be at the closest point to the noise source. The measurement microphone height shall be five (5) feet above finish elevation or, in the case of a deck or balcony, the measurement microphone height shall be five (5) feet above the finished floor level.

(b) The location selected for measuring interior noise levels shall be made within the affected residential unit. The measurements shall be made at a point at least four (4) feet from the wall, ceiling or floor, or within the frame of a window opening, nearest the noise source. The measurements shall be made with windows in an open position.

(c) Any decibel measurement made pursuant to the provisions of this chapter shall be measured in decibels (dBAs) as measured with a sound level meter using the A-weighted sound pressure level.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.16. Prima facie violation.

Any noise exceeding the noise level standard as specified in §§ 5-29.04 and 5-29.05, shall be deemed to be prima facie evidence of a violation of the provisions of this chapter.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.17. Penalty.

(a) Any person who negligently or knowingly violates any provision of this chapter shall be guilty of an infraction and upon conviction shall be punishable by a fine specified in OMC § 1-2.01. Each day a violation occurs shall constitute a separate offense and shall be punishable as such.

(b) Any person who negligently or knowingly violates any provision of this chapter may also be subject to fine(s) specified in the administrative citation schedule of fines set forth in OMC § 1-5.04. The manner of issuing administrative citations shall comply with all the procedures specified in OMC Chapter 5, Title 1.

(c) As an additional remedy, the operation or maintenance of any device, instrument, vehicle or machinery in violation of any provisions of this chapter, which operation or maintenance causes or creates sound levels exceeding the allowable standards as specified in this chapter, shall be deemed and is declared to be a public nuisance and may be subject to abatement by a restraining order or injunction issued by a court of competent jurisdiction.

(d) Any violation of this chapter is declared to be a public nuisance and may be abated in accordance with law. The expense of enforcing this chapter is declared to be public nuisance and may be by resolution of the City Council declared to be a lien and special assessment against the property on which such nuisance is maintained, and any such charge shall also be a personal obligation of the property owner.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.18. Enforcement and administration.

(a) It shall be the responsibility of Police or Code Enforcement Officers to enforce the provisions of this chapter and to perform all other functions required by this chapter. Such duties shall include, but not be limited to investigating potential violations, issuing warning notices and citations, and providing evidence to the City prosecutor for legal action.

(b) For violations of § 5-29.07, Police or Code Enforcement Officers shall obtain a declaration under penalty of perjury from two (2) declarants living in separate households within a sixty (60) day period stating in detail all of the following:

(1) That the declarant is a resident of a residential neighborhood located within two hundred (200) yards of the noise source; and

(2) Within the past month declarant has heard noise for substantially long periods to the extreme annoyance of the declarant.

(3) Declarations from two (2) declarants are required to prove a violation of § 5-29.07, but are not required to prove that a person has violated any other provision of this chapter.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.19. City Manager waiver.

The City Manager is authorized to grant a temporary waiver to the provisions of this chapter for a period of time necessary to correct the violations of this chapter, if such temporary waiver would be in the public interest and there is no feasible and prudent alternative to the activity, or the method of conducting the activity, for which the temporary waiver is sought. This time period may include a commitment to a program that includes placing necessary orders and entering into necessary contracts within thirty (30) days for repair or installation.

(§ 2, Ord. 2888, eff. March 6, 2008)

Sec. 5-29.20. Noise abatement program.

(a) In circumstances where adopted community-wide noise standards and policies prove impractical in controlling noise generated from a specific source, the City Council may establish a noise abatement program that recognizes the characteristics of the noise source and affected property and that incorporates specialized mitigation measures.

(b) Noise abatement programs shall set forth in detail the approved terms, conditions and requirements for achieving maximum compliance with noise standards and policies. Said terms, conditions and requirements may include, but shall not be limited to, limitations, restrictions, or prohibitions on operating hours, location of operations, and the types of equipment.

(§ 2, Ord. 2888, eff. March 6, 2008)

NOISE LEVEL EXPOSURE AND LAND USE COMPATIBILITY GUIDELINES

Table LU-7

LAND USE CATEGORIES		COMMUNITY NOISE EQUIVALENT LEVEL (CNEL)						
Category	Land Use	55	60	65	70	75	80	
Residential/ Lodging	Single Family / Duplex							
	Multi-Family							
	Mobile Homes							
	Hotel/Motels							
Public/Institutional	Schools/Hospitals							
	Churches/ Libraries							
	Auditoriums/Concert Halls							
Commercial	Offices							
	Retail							
Industrial	Manufacturing							
	Warehousing							
Recreational/ Open Space	Parks/Playgrounds							
	Golf Courses/ Riding Stables							
	Outdoor Spectator Sports							
	Outdoor Music Shells/ Amphitheaters							
	Livestock/Wildlife Preserves							
	Crop Agriculture							

LEGEND

Clearly Acceptable:	No special noise insulation required, assuming buildings of normal conventional construction.
Normally Acceptable:	Acoustical reports will be required for major new residential construction. Conventional construction with closed windows and fresh air supply systems of air conditioning will normally suffice.
Normally Unacceptable:	New construction should be discouraged. Noise/aviation easements required for all new construction. If new construction does proceed, a detailed analysis of noise reduction requirements must be made and necessary noise insulation features included.
Clearly Unacceptable:	No new construction should be permitted.

Note: For noise compatibility criteria and contours for Ontario International Airport refer to the adopted ALUCP for ONT.

Mitigation Measures/Implementing Action	*Responsible for Monitoring*	*Monitoring Frequency*	*Timing of Verification*	*Method of Verification*	*Verified (Initial/Date)*	*Sanctions for Noncompliance*
1) AIR QUALITY						
a) Use of dust control during clearing, grading and construction. Fugitive dust generated during cleaning, grading, earth moving or excavation shall be controlled by regular watering, paving of construction roads, or other dust-preventative measures. If freshwater resources are too precious to waste on dust control, availability of brackish or reclaimed water sources shall be investigated. Soil disturbance shall be terminated when high winds (25 mph or greater) make dust control extremely difficult.	Building Dept & Planning Dept	Throughout construction	As necessary	On-site inspection		Stop work order; or withhold grading permit; or withhold building permit
b) Minimization of construction interference with regional non-project traffic movement. Impacts shall be reduced to below a level of significance by the following mitigation measures: **i)** Scheduling receipt of construction materials to non-peak travel periods. **ii)** Routing construction traffic through areas of least impact sensitivity. **iii)** Limiting lane closures and detours to off-peak travel periods. **iv)** Providing rideshare incentives for contractor and subcontractor personnel.	Building Dept & Planning Dept	Throughout construction	As necessary	On-site inspection		Stop work order; or withhold grading permit; or withhold building permit
c) After clearing, grading or earth moving: **i)** Seed and water until plant cover is established.	Building Dept & Planning Dept	Throughout construction	As necessary	On-site inspection		Stop work order; or withhold grading permit; or withhold

Mitigation Measures/Implementing Action	*Responsible for Monitoring*	*Monitoring Frequency*	*Timing of Verification*	*Method of Verification*	*Verified (Initial/Date)*	*Sanctions for Noncompliance*
ii) Spread soil binders. **iii)** Form and maintain a crust on the surface through repeated soaking that will prevent dust pickup by wind. **iv)** Reduce "spill-over" effects by washing vehicles entering public roadways from dirt off road project areas, and washing/sweeping project access to public roadways on an adequate schedule.						building permit
d) Emissions control from on-site equipment through a routine, mandatory program of low-emission tune-ups.	Building Dept & Planning Dept	Throughout construction	As necessary	On-site inspection		Stop work order; or withhold grading permit; or withhold building permit
2) BIOLOGICAL RESOURCES						
a) Thirty to ninety days prior to ground disturbing construction-related activities, a focused survey for the burrowing owl shall be conducted by a qualified biologist. Should any burrowing owls be located on the project site, the below-listed mitigation measures shall be completed: **i)** Occupied burrows should not be disturbed during nesting season (February 1 through August 31) unless a qualified biologist verifies through non-invasive methods, that: (1) Birds have not begun egg-laying and incubation; or (2) Juveniles from the occupied burrows are foraging independently and are capable of independent survival. **ii)** If owls must be moved away from the disturbance area, relocation techniques shall be used as established in the California Department of Fish and Game, Natural Resources Agency, "Staff Report on Burrowing Owls," dated March 7, 2012.	Planning Dept.	Grading Plan issuance	Prior to issuance of grading permits	Plan check		Withhold grading permit
3) GEOLOGY & SOILS						
a) The applicant shall submit an erosion control plan to reduce wind erosion impacts.	Building Dept, Planning Dept & Engineering Dept	Grading Plan issuance		Plan check		Withhold grading permit
b) Fugitive dust generated during cleaning, grading, earth moving or excavation shall be controlled by regular watering, paving of construction roads, or other dust-preventative measures.	Building Dept	Throughout construction	As necessary	On-site inspection		Stop work order; or withhold grading permit; or withhold building permit
c) After clearing, grading, or earth moving: **i)** Seed and water until plant cover is established.	Building Dept & Planning Dept	Throughout construction	As necessary	On-site inspection		Stop work order; or withhold grading permit; or withhold

Mitigation Measures/Implementing Action	*Responsible for Monitoring*	*Monitoring Frequency*	*Timing of Verification*	*Method of Verification*	*Verified (Initial/Date)*	*Sanctions for Noncompliance*
ii) Spread soil binders. **iii)** Form and maintain a crust on the surface through repeated soaking that will prevent dust pickup by wind. **iv)** Sweep streets if silt is carried to adjacent public thoroughfares						building permit
d) Obtain authorization to discharge storm water under an NPDES construction storm water permit and pay appropriate fees.	Engineering Dept	Grading Plan issuance	Prior to issuance of grading permits	Plan check		Withhold grading permit
4) GREENHOUSE GAS EMISSIONS						
a) The City has reviewed the emission reduction measures and concepts in The Ontario Plan EIR MM 6-2 and 6-3, and has determined that the following actions apply and shall be undertaken by the applicant in connection with the project: **i)** Evaluate existing landscaping and options to convert reflective and impervious surfaces to landscaping, and install or replace vegetation with drought-tolerant, low-maintenance native species or edible landscaping that can also provide shade and reduce heat-island effects. **ii)** Require all new landscaping irrigation systems installed to be automated, high-efficient irrigation systems to reduce water use and require use of bubbler irrigation; low-angle, low-flow spray heads; or moisture sensors. **iii)** Reduce heat gain from pavement and other similar hardscaping. **iv)** All new development shall comply with the requirements of the City of Ontario Community Climate Action Plan.	Building Dept & Planning Dept	Throughout construction	As necessary	Plan check/On-site inspection		Stop work order; or withhold building permit
5) MANDATORY FINDINGS OF SIGNIFICANCE						
a) Thirty to ninety days prior to ground disturbing construction-related activities, a focused survey for the burrowing owl shall be conducted by a qualified biologist. Should any burrowing owls be located on the project site, the below-listed mitigation measures shall be completed:	Planning Dept.	Grading Plan issuance	Prior to issuance of grading permits	Plan check		Withhold grading permit
i) Occupied burrows should not be disturbed during nesting season (February 1 through August 31) unless a qualified biologist verifies through non-invasive methods, that:						
(1) Birds have not begun egg-laying and incubation; or						
(2) Juveniles from the occupied burrows are foraging independently and are capable of independent survival.						

Mitigation Measures/Implementing Action	*Responsible for Monitoring*	*Monitoring Frequency*	*Timing of Verification*	*Method of Verification*	*Verified (Initial/Date)*	*Sanctions for Noncompliance*
ii) If owls must be moved away from the disturbance area, relocation techniques shall be used as established in the California Department of Fish and Game, Natural Resources Agency, "Staff Report on Burrowing Owls," dated March 7, 2012.						

RESOLUTION NO.

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSPA21-001, AN AMENDMENT TO THE PIEMONTE OVERLAY AT THE ONTARIO CENTER SPECIFIC PLAN, [1] REVISING THE OVERLAY BOUNDARY TO ADD APPROXIMATELY 24.9 ACRES, COMPRISING OF THE PROPERTY LOCATED AT 4000 ONTARIO CENTER PARKWAY, TO THE OVERLAY AREA, [2] CHANGING THE LAND USE DESIGNATION ON APPROXIMATELY 4.9 ACRES OF LAND FROM OFFICE AND ENTERTAINMENT/RETAIL TO MIXED USE, IN AN AREA BOUNDED BY FOURTH STREET TO THE NORTH, CONCOURS STREET AND ONTARIO CENTER PARKWAY TO THE SOUTH, VIA ALBA TO THE EAST, AND THE CAMDEN LANDMARK APARTMENTS AND VACANT LAND TO THE WEST, [3] ESTABLISH DEVELOPMENT STANDARDS AND DESIGN GUIDELINES FOR THE MIXED USE LAND USE AREA WITHIN THE PIEMONTE OVERLAY AT ONTARIO CENTER SPECIFIC PLAN, AND MAKING FINDINGS IN SUPPORT THEREOF—APN: 0210-204-12, 0210-204-13, 0210-204-14, 0210-204-15, 0210-204-17, 0210-204-18, 0210-204-20, 0210-204-21, 0210-204-22, 0210-204-23, 0210-204-23, 0210-204-24, 0210-204-25, 0210-204-26, 0210-204-28, 0210-204-36, 0210-204-37, 0210-204-37, 0210-204-38, 0210-204-39, 0210-204-40, 0210-204-41, 0210-531-06, 0210-531-07, 0210-531-08, 0210-531-09, 0210-531-10, 0210-231-11, 0210-231-12, 0210-231-13, 0210-231-14, 0210-231-15, 0210-231-16, 0210-205-01.

WHEREAS, the City of Ontario (hereinafter referred to as "City") has initiated a Specific Plan Amendment, File No. PSPA21-001, which consists of an Amendment to the Piemonte Overlay of the Ontario Center Specific Plan, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Application applies to 119.8 acres of land generally located at the northerly boundary of the City of Ontario, south of Fourth Street, east of Haven Avenue, west of Milliken Avenue, and north of Concours Street, within the Piemonte Overlay at the Ontario Center Specific Plan zoning district, and is presently improved with commercial, office, hotel, Arena, and vacant land; and

WHEREAS, Fourth Street forms the project site’s north boundary and is the corporate boundary dividing the cities of Ontario and Rancho Cucamonga. The properties to the north of the Project site are developed with industrial, residential, and commercial uses. The properties to the east are within the Ontario Center Specific Plan zoning district and is developed with commercial uses. The properties to the south are within the Ontario Center Specific Plan zoning district, and are developed with office, commercial, open space, and vacant land uses. The properties to the west are within the Ontario Center

Specific Plan zoning district, and are developed with residential and commercial uses; and

WHEREAS, on March 23, 2006, City Council adopted Resolution No. 2006-11, approving the creation of the Piemonte Overlay at the Ontario Center Specific Plan within the Urban Commercial land use district of the Ontario Center Specific Plan (File No. PSPA05-003), establishing a master plan for the development of 84 acres of land, which was the former 800-acre Ontario Motor Speedway. The racing facility was completed in 1970 and closed approximately 10 years later. The facility was razed in 1981 and remained vacant until 2006, following the approval of the Piemonte at the Ontario Center Project, which established the Piemonte Overlay, allowing for the development of approximately 1.3 million square feet of retail, office, hotel, and entertainment uses, and more than 800 multiple-family dwelling units on the project site; and

WHEREAS, on May 16, 2017, City Council adopted Resolution No. 2017-041, approving an Amendment to the Piemonte Overlay of the Ontario Center Specific Plan (File No. PSPA16-003) to reduce the development intensity of the project area, designate plaza areas, and expand the design concept to include more contemporary architectural design concepts; and

WHEREAS, on June 2, 2020, City Council adopted Resolution No. 2020-065, approving and Amendment to the Piemonte Overlay at the Ontario Center Specific Plan within the Urban Commercial land use district of the Ontario Center Specific Plan (File No. PSPA19-009) to allow required residential parking to be provided as tandem parking spaces; and

WHEREAS, the Ontario Center Specific Plan Environmental Impact Report (State Clearinghouse No. 89041009) was certified on March 19, 1991 (hereinafter referred to as “Certified EIR”), in which development and use of the Project site was discussed; and

WHEREAS, a Mitigated Negative Declaration was adopted on May 16, 2017, (hereinafter referred to as “MND”), in association with an Amendment to the Ontario Center Specific Plan (File No. PSPA16-003); and

WHEREAS, the Planning Director of the City of Ontario prepared and approved for attachment to the certified EIR and adopted MND, an Addendum to the Certified EIR and MND (hereinafter collectively referred to as “EIR Addendum”) in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as “CEQA”); and

WHEREAS, the environmental impacts of this project were thoroughly analyzed in the EIR Addendum, which concluded that implementation of the Project could result in a

number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an EIR Addendum has been prepared to determine possible environmental impacts; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to the City Council on the subject Application; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as “ALUCP”), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, as the first action on the Project, on March 22, 2022, the Planning Commission issued a Resolution recommending the City Council approve the EIR Addendum, finding that the proposed Project introduces no new significant environmental impacts and applying all previously adopted mitigation measures to the Project, which were incorporated by reference; and

WHEREAS, on March 22, 2022, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to the Ontario Center Specific Plan Environmental Impact Report (State Clearinghouse No. 89041009), certified by the Ontario City Council on March 19, 1991 in conjunction with File No. 4059-SPA, in combination with an Addendum to the Mitigated Negative Declaration, adopted by the Ontario City Council on May 17, 2017 in conjunction with File No. PSPA16-003; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the EIR Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR or MND due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR or MND were prepared, that will require major revisions to the Certified EIR or MND due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and.

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR or MND were certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR or MND; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR or MND; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR or MND would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending body for the Project, the Planning Commission finds that based upon the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan. The project site contains

four properties listed in the Available Land Inventory contained in Table A-3 (Available Land by Planning Area) of the Housing Element Technical Report Appendix. The proposed changes affect two of the four properties listed in the Available Land Inventory (Subareas 8 and 11; Map ID No. 124 and 125). The residential capacity proposed in this Project is consistent with the number of dwelling units (198) and density (48 DU/AC) specified in the Available Land Inventory.

SECTION 4: ***Ontario International Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan. On April 19, 2011, the City Council of the City of Ontario approved and adopted the ALUCP, establishing the Airport Influence Area for Ontario International Airport (hereinafter referred to as "ONT"), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending authority for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ALUCP compatibility factors, including [1] Safety Criteria (ALUCP Table 2-2) and Safety Zones (ALUCP Map 2-2), [2] Noise Criteria (ALUCP Table 2-3) and Noise Impact Zones (ALUCP Map 2-3), [3] Airspace protection Zones (ALUCP Map 2-4), and [4] Overflight Notification Zones (ALUCP Map 2-5). As a result, the PLANNING COMMISSION, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ALUCP.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in Sections 1 thru 4, above, the Planning Commission hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan.*** The proposed Specific Plan Amendment is consistent with the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan, in that the Specific Plan Amendment contributes toward the legislative framework for the implementation of The Ontario Plan components, guiding growth and development within the project area to achieve optimum results from the City's physical, economic, environmental, and human resources.

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The development standards and guidelines established by the proposed Specific Plan Amendment have been created with the intent to safeguard and further the public interest, health, safety, convenience, and/or general welfare, and to ensure that the purposes of The Ontario Plan and the proposed Specific Plan Amendment, are maintained.

(3) ***The proposed Specific Plan Amendment will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The location of the proposed Specific Plan Amendment, and the proposed conditions under which future developments will be constructed and maintained, is consistent with the Policy Plan component of The Ontario Plan and the City's Development Plan, and, therefore, will not adversely affect the harmonious relationship with adjacent properties and land uses.

(4) ***In the case of an application affecting specific properties, the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The proposed Specific Plan Amendment has been reviewed by all City departments, which have established that the project site is physically suitable for the anticipated development in terms of parcel size, shape, and availability of utilities.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 through 5, above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVE the herein described Application.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 22nd day of March 2022, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Rick Gage

1.0 INTRODUCTION

1.1 OVERVIEW

The Piemonte Overlay at Ontario Center (or "Piemonte Overlay" or "Overlay") will stimulate an urban character mixed-use development on an approximately ~~92.4~~119.8-acre site, located within the Ontario Center Specific Plan (OCSP). Within the OCSP, the Piemonte Overlay is located south of Fourth Street, between Haven Avenue and Milliken Avenue. The regional location of the Piemonte Overlay is illustrated in Figure 1.1: Regional Location. Figure 1.2: Overlay Vicinity presents the Piemonte Overlay in its local context.

NTS

Figure 1.1: Regional Location

1.2 PURPOSE AND OBJECTIVES

The purpose of the Piemonte Overlay is to define the range of permitted uses, development regulations, requirements, and design guidelines for development within the Overlay area described below, to accomplish the following objectives:

- Provide design and development standards responding to, and reflecting, the urban characteristic elements of the Piemonte at Ontario Center;
- Implement a mix of related and mutually-supporting land uses at development intensities no greater than those identified for the OCSP;
- Provide for the orderly and master planned development of land uses within the OCSP, ensuring development of economically viable development proposals;
- Ensure development of the Piemonte Overlay area is consistent with the Ontario Plan (TOP) policies, objectives, and implementation programs;
- Provide the City of Ontario with standards for evaluation of individual development proposals within the Piemonte Overlay.

Figure 1.2: Overlay Vicinity

1.3 BACKGROUND

The City of Ontario approved the OCSP in August 1981. The OCSP, as originally approved, allowed for up to 1,530 residential units, close to seven (7) million square feet of commercial development, and nearly two (2) million square feet of industrial uses on approximately 600 acres. Several amendments to the OCSP, along with appropriate environmental review, have been approved by the City since its initial approval. Refer to Figure 1.3: OCSP Land Use Plan for the adopted land uses.

The Piemonte at Ontario Center Overlay was adopted in February of 2006 to allow a mix of urban commercial, retail, residential, and entertainment land uses on a portion of the OCSP, with a maximum of 1,292,068 square feet and 806 residential units on that portion. In June 2017, the Piemonte at Ontario Center Overlay was amended to modify ~~This Specific Plan amendment (SPA) amends and replaces the 2006 Overlay and modifies~~ the location of the residential and non-residential development. ~~This~~ The 2017 Specific Plan Amendment (SPA) expands the architectural and landscape themes ~~in the applicable planning areas~~ to allow more options to ensure compatibility with existing development, to promote urban development and allow for landscape options that reduce the use of potable water and match the urban vernacular. ~~For clarification, Subareas (SAs) have been established for this Overlay. Refer to Figure 1.4: Piemonte Overlay Subareas. Refer to Appendix B for a correlation between OCSP parcel numbers and Subarea numbers. Four SAs are not a part of this amendment, since they are already developed or had no desire to change the requirements for their SA; therefore no changes are made to the requirements of those parcels.~~

This 2022 Specific Plan Amendment incorporates land use and development standards focused on allowing mixed use developments in the Arena area that create a vibrant urban lifestyle.

All modifications to the OCSP have been incorporated into the body of the text,

standards, and exhibits of this document. Revisions to the Design Guidelines and minor text revisions have also been completed. The prior amendments to the OCSP and the ~~2006~~ 2017 Overlay shall not be referenced for the remainder of this document.

1.4 GOVERNING DOCUMENTS

Development of the ~~undeveloped~~ Subareas of this Overlay is regulated by the following documents:

- The Ontario Plan (TOP) Policy Plan (General Plan) which establishes policies governing land use, circulation, housing, conservation and open space, noise, safety, and public facilities within the Specific Plan area;
- The City of Ontario Development Code, as applicable to development, where this Overlay is silent on development standards and regulations; and the subdivision of land within this Overlay area;
- The Airport Land Use Compatibility Plan of Ontario International Airport; and
- The certified Addendum to the Ontario Plan (General Plan) Environmental Impact Report.

1.5 AUTHORITY

This Overlay was prepared in accordance with California Government Code Section (Government Code) 65453 and applicable ordinances, policies, and resolutions of the City of Ontario. The City of Ontario adopts specific plans by ordinance, thereby establishing the zoning regulations for development of this Overlay.

Consistent with general requirements for Specific Plans as outlined under Government Code Article 8, this Overlay presents, or incorporates by reference, applicable regulations, conditions, and programs, which identify the following:

- The distribution, location, and extent of the uses of land, including open space, within the area covered by this Overlay;
- The proposed distribution, location, extent, and intensity of major components

of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses;

- Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable;
- A program of implementation measures including regulations, programs, public works projects, and financing measures necessary to carry out the development and,
- A statement of the relationship to the General Plan.

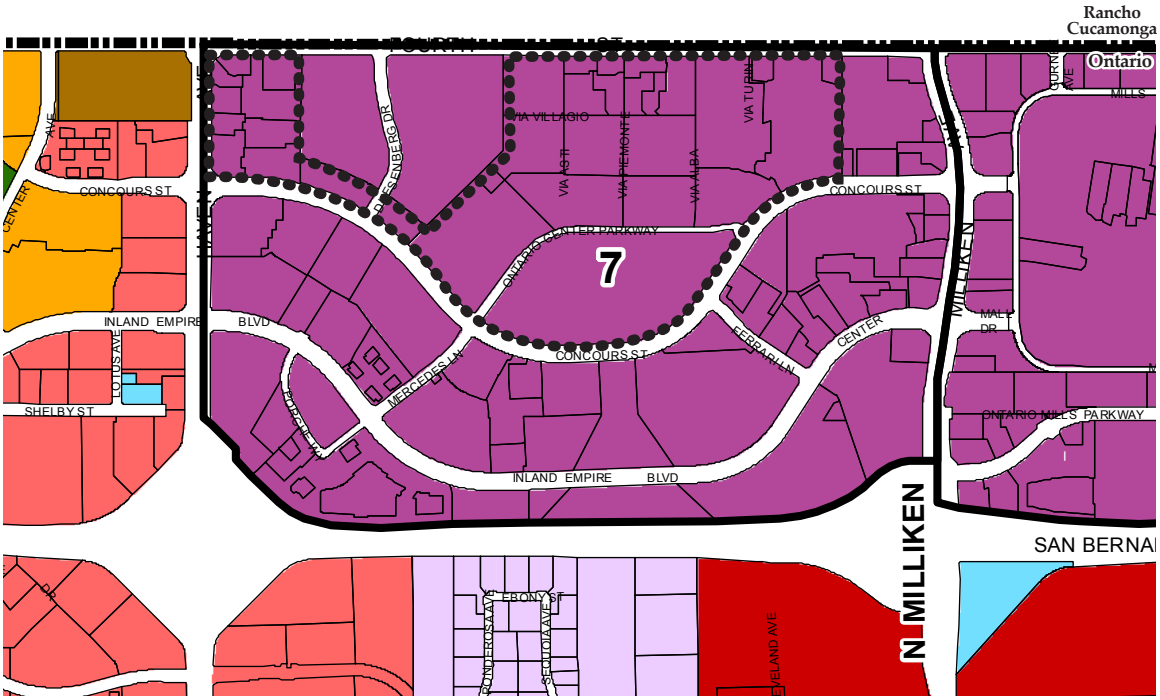
1.6. RELATIONSHIP TO THE GENERAL PLAN (POLICY PLAN) AND ZONING

The Ontario Plan (TOP) establishes the direction and vision for the City of Ontario, providing a single guidance system that will shape the Ontario community for the future. TOP provides for policies to accommodate change over a 30-year period commencing in 2010, the beginning of the planning period. TOP consists of a six part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback.

This Overlay has been prepared in conformance with the goals and policies of TOP. The land use plan of ~~the~~ TOP has identified the entire OCSP area as Mixed Use, refer to Figure 1.5: The Ontario Plan Land Use.

This Overlay implements relevant OCSP goals, principles, and standards. More specifically, the Piemonte Overlay provides for a cohesive and inter-related mix of residential and commercial/retail land uses such as is envisioned under the OCSP and ~~the~~ TOP.

The OCSP further defines the Piemonte Overlay underlying land use and zoning



Legend

Piemonte Overlay area	High Density (25.1-45 du/ac)
7 Mixed Use: Ontario Center	Medium Density (11.1-25 du/ac)
General Commercial	Business Park
Office Commercial	Public Facility

NTS

Figure 1.5: The Ontario Plan Land Use

as "Urban Commercial," as shown on Figure 1.3: OCSP Land Use Plan. These land use designations allow for and encourage a mix of commercial, entertainment/ retail, office, hotel, restaurant, and residential land uses as reflected on Figure 1.6: Piemonte Overlay Land Use Plan.

The Piemonte Overlay satisfies the following OCSP Objectives (from Section 3.1.1 of the OCSP):

- A balance of employment, shopping, and housing opportunities, reducing the need for long commutes. This Overlay provides for integrated development that includes high-density housing, commercial retail/ entertainment, restaurant uses, hotels, and office space. The mix of uses and their collocation within this Overlay provides for multiple employment, entertainment, housing, and shopping opportunities, available to residents of the Piemonte Overlay, and the greater Ontario area and surrounding region. Proximate collocation of this Overlay's mixed uses also promotes, and makes feasible, pedestrian access throughout the area, acting to reduce reliance on private automobiles. This is consistent with the intent of the OCSP to reduce dependence on private automobiles, with correlating reductions in commute distances.
- A higher density housing orientation, recognizing trends toward smaller household size. Up to ~~806~~ 1,485 residential units can be constructed within the Piemonte Overlay. Those areas of the Overlay planned solely for residential development shall target a density of at least 25 units per acre, depending on the final site plan/unit configurations.
- A mixture of entertainment, retail and dining opportunities for OCSP users. The Piemonte Overlay provides a variety of restaurant, shopping, and entertainment opportunities. Further, integral to the Piemonte Overlay concept, is provision of a range of open space opportunities, to include enhanced and articulated streetscapes adjacent to ground-level commercial/ retail and restaurant uses. ~~Additional recreational and entertainment opportunities are available to the Overlay residents and visitors at the Citizens Business Bank Arena, located immediately to the south.~~

- A looped circulation network encouraging public transit opportunities, as well as pedestrian walkways and bicycle routes. This Overlay is defined by major roadways on all sides, with connecting roadways providing access to internal parcels. Transit opportunities will be provided at key locations, consistent with transit concepts articulated within the OCSP.
- A comprehensive urban design treatment, integrating the Arena into an urban form that is both visually pleasing as well as functional. Application of Development Standards and Design Guidelines will ensure development within this Overlay as a visually interesting and attractive component of the OCSP. Further, the Piemonte architectural and site planning concepts continue to define this Overlay area as an inter-related core destination within the City, providing residential, entertainment, business, and shopping opportunities.

The Urban Commercial land use designation provides for development of a mix of tourist-related commercial uses, high and medium-rise office buildings, entertainment/recreation clusters, and high-density residential uses in close proximity. This Overlay also establishes applicable design guidelines and development regulations for these uses.

1.7 FORMAT AND CONTENT OF THE PIEMONTE OVERLAY

Figure 1.6: Piemonte Overlay Land Use Plan designates the Land Use areas as Commercial, ~~Entertainment/Retail~~Mixed-use, Office, Special Use, and Residential. Design Guidelines and Development Regulations applicable to the entire Piemonte Overlay, and specific standards that apply within each of the Land Use areas, are presented in Section 3.0. It is noted here that the predominance of facilities proposed by this Overlay will be implemented consistent with existing standards of the OCSP.

Building designs, architectural renderings, and other representations presented within this Overlay reflect the overall character, development intensity, and composition of development. These graphic portrayals and related descriptions are conceptual in nature, and may be modified as the development is further refined. Within the limits of the maximum of development intensity allowed under the OCSP, subsequent development proposals within this Overlay will be subject to design and conformance review by and through the City of Ontario.

1.7.1 Piemonte Overlay Content

Section 1.0 presents an overview of the Piemonte Overlay designation.

Section 2.0 provides a description of the Overlay, including proposed land uses, facilities, and an overview of major infrastructure systems serving the area.

Section 3.0 presents design guidelines and development regulations applicable within the Piemonte Overlay. Design guidelines and development regulations applicable to the entire Overlay Area are identified, as are the guidelines and development regulations applicable to each Land Use within the Overlay.

Section 4.0 outlines administration of the Piemonte Overlay, including review processes for individual projects prior to any physical development. Means and procedures for interpretation and application of the Piemonte Overlay, associated land uses, and design guidelines, and development regulations are also presented.

Figure 1.6: Piemonte Overlay Land Use Plan

Section 5.0 describes how the Piemonte Overlay is consistent with the goals and policies of The Ontario Plan (TOP) Policy Plan (General Plan).

Appendix A of this document presents the legal description of properties subject to provisions of the Piemonte Overlay.

Appendix B is a correlation between OCSP parcel numbers and the Piemonte Overlay Subarea parcel numbers.

Appendix C includes the tabulation of existing development and remaining development allocation within the Piemonte Overlay.

Appendix D includes the tabulation of the development analyzed in the 2006 traffic study.

Appendix E includes a memorandum of the Piemonte trip generation comparison and the Piemonte/Empire Lakes 4th Street access configuration dated June 8, 2016.

Appendix F includes a summary of the Toyota Arena Mixed-use Development Traffice Impact Analysis dated September 17, 2021.

Appendix ~~F~~ G includes the street tree planting matrix of the OCSP.

2.0 OVERLAY DESCRIPTION

2.1 SETTING

The Piemonte Overlay consists of approximately ~~92.4~~ 119.8 acres of land located at the northerly boundary of the City of Ontario, south of Fourth Street, ~~between~~ east of Haven Avenue and west of Milliken Avenue, less than one-quarter mile north of Interstate 10 (I-10). The Piemonte Overlay is located within a rapidly developing portion of the City, and is one of the few remaining available parcels of substantial size within the OCSP.

Regional access to the Piemonte Overlay is provided by I-10 and Interstate 15 (I-15) freeways, which converge approximately one mile to the east. Local access to I-10 is provided at Milliken and Haven Avenues, and access to I-15 is available from Fourth Street. Supplementing freeway and surface street access, a Metrolink transit station is located approximately 1.5 miles northerly of the Piemonte Overlay, west of Milliken Avenue at Eighth Street.

Figure 2.1: Piemonte Overlay Context

2.1.1 Surrounding Land Uses

Figure 2.1: Piemonte Overlay Context provides an aerial view of the Overlay and surrounding land uses. Local context of the Overlay is described below.

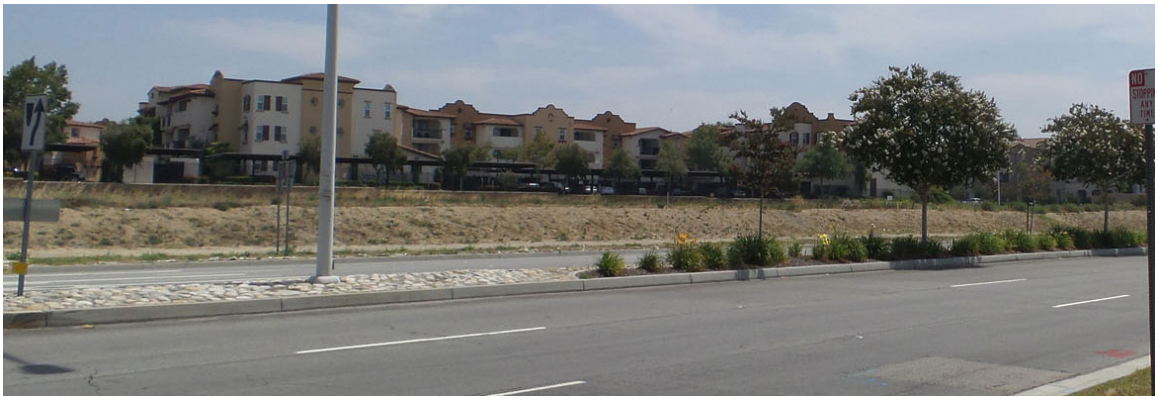
Fourth Street, which forms the site's northerly boundary, is also the ~~corporate~~ jurisdictional boundary dividing the ~~cities~~ Cities of Ontario and Rancho Cucamonga. Apartments, a small retail/restaurant development and a planned residential/mixed use development are located to the north across Fourth Street, in Rancho Cucamonga.

To the east is a commercial center, anchored by a Kohl's department store, located at the southwest corner of Milliken Avenue and Fourth Street. Further to the east, across Milliken Avenue, is the Ontario Mills Shopping Center, comprised of a central mall surrounded by free-standing commercial, entertainment, and restaurant uses.

To the southeast, across Concours Street, additional existing retail uses are located adjacent to Milliken Avenue. ~~Directly~~ To the south ~~across Ontario Center Parkway, is the Citizens Business Bank Arena. To the southwest~~ and southwest across Concours Street are office buildings.

To the west, across Haven Avenue is multi-family housing and a low-rise office/ retail complex.

In the middle of the Piemonte Overlay, and not a part of it, on both sides of Duesenberg Drive between Fourth Street and Concours Street, are the Vintage and Camden Landmark apartments.



Looking north to the Office land use from Concours Street

Looking north along Via Asti

Figure 2.2: Site Photos

2.1.2 Ontario International Airport (ONT) Influence Area

The Airport Land Use Compatibility Plan (ALUCP) for ONT was adopted in April of 2011. The Piemonte Overlay is located within the ONT Airport Influence Area. Although the Overlay is located outside the noise and safety impact zones, the northern portion of the project site is located within the High Terrain Zone where building heights are limited to no more than 70 feet in height. Refer to ONT ALUCP for more information regarding height criteria and policies.

2.2 LAND USE AND DEVELOPMENT

2.2.1 Piemonte Land Uses and Development Components

The Piemonte Overlay Land Use designations shown on Table 2.1: OCSP Statistical Areas D & E Maximum Development allow for and encourage a mix of commercial, entertainment/retail, office, hotel, restaurant, entertainment, and residential land uses.

Figure 2.3: Piemonte Overlay Land Use Plan

2.2.2 Development Intensity

The Piemonte Overlay is located within Statistical Areas "D" and "E" of the OCSP that allows for up to 2,840,000 square feet of development intensity, including 1,606 residential units as shown in Table 2.1: OCSP Statistical Areas D & E Maximum Development. An estimated 1,457,512 square feet and 800 residential units currently exist within the Statistical Areas. See Appendix C for a list of the existing development within the OCSP Statistical Areas "D" and "E." The 2006 Overlay permitted 1,292,068 square feet of development intensity, 90,420 square feet and 15 residential units less ~~that~~ than what is permitted under the OCSP; refer toTable 2.2: Piemonte Overlay Development Intensity Allocation by Subarea.

The 2022 Overlay Amendment proposes new development up to 879,990 SF, which is an additional 789,570 square feet (879,990 SF - 90,420 SF) added to the development intensity within Statistical Area "E", as planned under the 2016 Piemonte Overlay amendment. The total will consist of 808,790 square feet, comprising of 691 residential units and ancillary spaces, and 71,200 square feet of commercial space. Refer to Tables 2.1: OCSP Statistical Areas D & E Maximum Development, and 2.2: Piemonte Overlay Development Intensity Allocation by Subarea.

Table 2.1: OCSP Statistical Areas D & E Maximum Development

	Maximum GFA (in SF)	Maximum No. of DUs
Approved OCSP Development	2,840,000	1,606
Previously developed*	1,457,512	800**
~~Approved~~ 2016 Overlay Amendment	1,292,068	806
Office/Retail	1,001,668	
Hotel 1 (236 rooms)	180,000	
Hotel 2 (100 rooms)	110,400	
Residential Units		791***
Remaining OCSP Allocation	90,420	15
2022 Overlay Amendment	879,990	691
Residential	808,790	691
Retail	71,200	

* See Appendix C for list of developed properties

** Residential units replace office/retail gross floor area (GFA) at the rate of one dwelling unit for each 600 SF of office/retail GFA (based on equivalent traffic generation, water demand, and wastewater generation rates).

*** Only 791 residential units were studied in the traffic report prepared for the 2006 Overlay

~~In short, 1,292,068 square feet of commercial, entertainment/retail, office or hotel uses, and up to 806 residential units, could be developed under the 2016 Overlay. However the traffic study conducted in 2006 for the Piemonte Overlay Amendment used a lower unit count of 791 during its study.~~

In 2016, ~~It is~~ it was anticipated that 571 dwelling units ~~will~~ would be constructed in Subareas 5, 7, 12 and 15. In 2022, it is anticipated that construction for 691 more dwelling units will begin in Subareas 8, 11, 16 and 17. Table 2.2: Piemonte Overlay Development Intensity Allocation by Subarea demonstrates the remaining allocation by Subarea.

Table 2.2: Piemonte Overlay Development Intensity Allocation by Subarea

Sub-areas	Net Acres	Land Use					Maximum Floor Area	Maximum Dwelling Units
		Commercial	~~Entertain-ment/Retail~~ Mixed-use	Special Use (Hotel)	Offices	Residential

19	6.88		•				0***	
Totals ~~109.36 84.43~~							~~1,292,068~~ 1,505,688	~~791~~ 1,482

*Subarea allows for residential development if it is determined by the City Council that commercial development within the subarea is not feasible, thereby allowing additional residential development at the rate of one DU for each 600 SF of available floor area.
** Built-out Subarea
*** Subarea currently improved with a parking lot. Future development plans subject to additional design and environmental review.

An approximation of comparative development intensity can be discerned by contrasting key characteristics of land uses, such as traffic generation, water demand, and wastewater generation rates. These factors are particularly appropriate since the upper limit of development intensity defined for the OCSP was founded largely on estimated roadway and water/sewer carrying capacities. Traffic generation rates and water/sewer demands of the Piemonte Overlay, as compared to traffic generation and water/sewer demands resulting from correlating maximum build-out of urban

commercial uses per the adopted OCSP are summarized below and shown in Appendix D 2006 Overlay Land Use Allocation & Maximum Development Intensity Analyzed for Traffic Generation. Please refer also to a detailed comparative analyses presented within the *Piemonte Trip Generation Comparison and the Piemonte/Empire Lakes 4th Street Access Configuration* (Fehr & Peers, June 2016) found in Appendix E.

The traffic generated by the Piemonte Overlay is significantly less than would result under build-out of the Overlay area per the maximum development intensities allowed under the OCSP, and is less than that identified in the *Piemonte at Ontario Center Project Addendum to the Ontario Center EIR* (Applied Planning, February 2006).

The development concept for the undeveloped portion of the Piemonte Overlay shown on Figure 2.4: Piemonte Overlay Development Concept is projected to generate approximately 13,905 daily trips, 957 AM peak hour trips, and 1,357 PM peak hour trips. Specifically, as demonstrated on Table 3 of the Memorandum in Appendix E, the proposed development is expected to result in 6,616 fewer daily trips, 724 fewer AM peak hour trips, and 554 fewer PM peak hour trips.

While relative traffic generation rates would be substantially reduced because of the residential component, residential uses tend to substantially increase water demands and wastewater generation rates when compared to commercial intensities on the same acreage. When considered in the context of the total Piemonte Overlay, however, the calculated incremental increases in water and sewer demands resulting from the residential land uses are offset by relatively lower development intensities realized throughout the remaining OCSP area.

Based on the preceding discussions, development intensities under the Piemonte Overlay would be less than those anticipated under the adopted OCSP. Further, related environmental effects of any Overlay development would be no greater than, and would likely be reduced, when compared to anticipated environmental effects that would result under the non-residential development of the site envisioned under the adopted OCSP.

2.2.2.1 Development Equivalency Program

In an effort to maintain flexibility to respond to changing community needs and market conditions over the build-out of Piemonte, Chapter 4 Administration provides a land use conversion process that allows additional residential units to be developed over and above the ~~220~~ units of remaining capacity shown on the bottom of Table 2.2: Piemonte Overlay Development Intensity Allocation by Subarea by connecting 600 square feet of non-used commercial development intensity for each residential unit to be added.

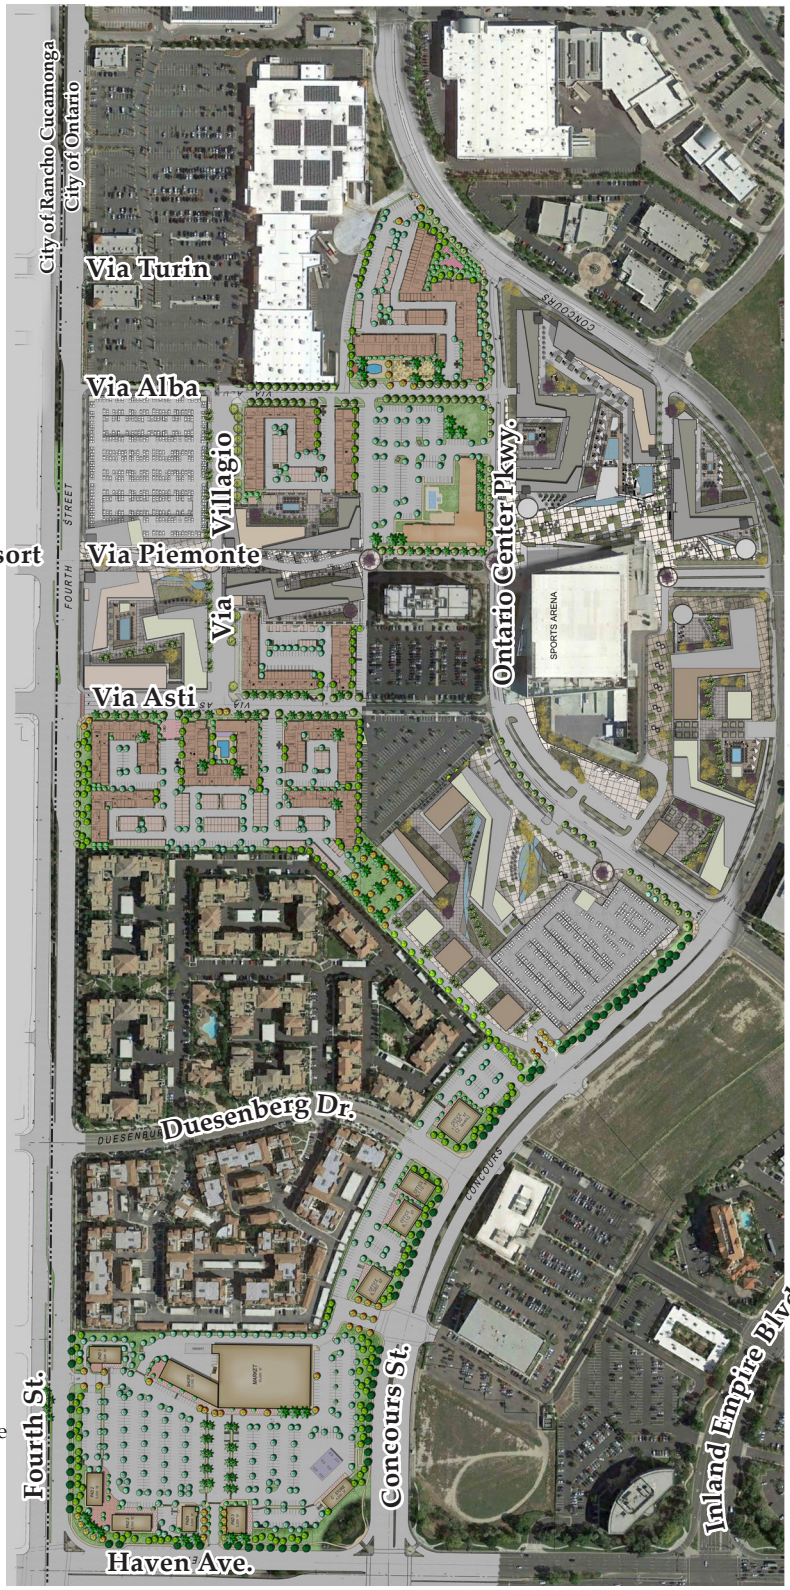
For example, assume that 479 units could be built in Subareas 2 and 3 but there is only a 220-unit remaining capacity. Therefore, 259 units (479 units - 220 units = 259 units) would have to be converted from the non-residential square footage. If the 259 units are added to residential capacity total, 155,400 square feet (259 units x 600 square feet) of the remaining development must be converted to residential using the 600-square-foot conversion factor reducing the amount of non-residential development by that same square feet. This conversion is based on equivalent traffic generation, water demand, and wastewater generation rates. This 600-square-foot conversion factor does not require individual residential units to be 600 square feet or less.

2.3 DEVELOPMENT CHARACTERISTICS

The Piemonte Overlay concept promotes interaction between residential, commercial entertainment/retail, office, and specialty land uses. To these ends, the design and composition of development will provide its residents the opportunity to live, work, shop, and take advantage of various entertainment venues without the need to drive a car. Similarly, employees and visiting patrons are provided retail, dining, and entertainment opportunities without the need for multiple trips.

2.3.1 Development Concept

The Piemonte Overlay Development Concept is illustrated in Figure 2.4: Piemonte Overlay Development Concept. The overall design concept depicts



Note: The site design represented is conceptual in nature, and exemplifies one possible design scenario that has been developed in accordance with the design criteria of the Piemonte Overlay and may not represent ultimate building layout.

NTS

Figure 2.4: Piemonte Overlay Development Concept

a complementary, pedestrian-oriented urban development, with an emphasis on wide, landscaped sidewalks, outdoor seating and dining areas, and contemporary design elements to be employed throughout the Overlay.

~~The central corridor or spine is established by the east/west~~ north/south ~~Via Villagio (a private drive) that is parallel to, and south of, Fourth Street. Via Villagio is anchored by residential uses to the west and residential and major retail uses to the east, and will incorporate varied landscape/hardscape features and pedestrian-oriented activity areas. Building mass and placement along Via Villagio will be used to create interesting spaces, and may include courtyards and outdoor seating and dining areas.~~ The central corridor or spine is established by the north/south Via Piemonte (a private drive) that is perpendicular to Fourth Street, leading to a major open space adjacent to the Arena. Via Piemonte is anchored by a series of retail on the ground floor and residential uses above with a variety of landscape and hardscape features with a focus on pedestrian oriented activity areas. The building mass and placement along Via Piemonte will be used to create interesting spaces, and may include courtyard spaces, open plazas, outdoor seating and dining areas. The building massing will further emphasize the connection between Fourth Street and the entertainment center surrounding the Arena. In so doing, the Via Villagio development concept will provide a visually and spatially varied streetscape.

~~The central portion of Via Villagio is designed to emphasize dining and entertainment opportunities, and will be delineated by decorative pavement and other defining landscape/hardscape treatments. This central core area is also designed to encourage visitors to move in a north/south direction along Via Piemonte (a private drive), fostering interaction with the office use and proposed hotel located to the south. These hotel and office uses are complemented by a central formal pedestrian esplanade.~~

The south side of Via Villagio is designed to emphasize dining and entertainment opportunities, and will be delineated by decorative pavement and other defining landscape/hardscape treatments. This area is also

designated to encourage visitors to move in a north/south direction along Via Piemonte, fostering interaction among the entertainment, dining, retail, office, hotel and Arena uses.

Via Piemonte is designed as a continuous pedestrian parkway to the Arena, providing venus for entertainment, dining, retail and public gathering along the way.

A central core area is designed to foster interaction with office and hotel uses to the south and connected by a formal pedestrian esplanade between Concours Street and Fourth Street.

The various land uses will be connected by a series of defined pedestrian walkways. Pedestrian links in the form of landscaped sidewalks have also been designed to allow workers, residents, and visitors to move through the Piemonte Overlay, and to the ~~Citizens Business Bank~~ Arena.

The OCSP requires three Plazas to be located within the Ontario Center area. Two Plazas have been constructed as shown on Figure 2.3: Piemonte Overlay Land Use Plan. An additional Plaza(s) will be constructed in SA1. These Plaza areas include the following elements, unless alternative designs are approved by the Planning Director:

- Minimum of 0.5 acre (could be in two separate areas).
- 50-foot minimum dimension, not including building or parking setbacks from streets, or roof overhangs, excepting entry canopies.
- Landscaping: ~~55~~ Minimum 10 percent. The planting areas included in the landscape requirement calculations must have minimum 5 feet dimension.
- Hardscape: ~~35~~ Maximum 80 percent.
- Other amenities, such as water features or installations that complement the plaza design: ~~10~~ Minimum 5 percent.

Generally, Plazas are intended to provide an urban environment augmented by extensive use of shade trees and structures, such as benches, fountains, pergolas, arbors, etc.

2.4 CIRCULATION PLAN CONCEPT

A private circulation system and design standards for vehicular and pedestrian movement are established under the Piemonte Overlay. Following, are summary descriptions of both the vehicular and pedestrian circulation systems. The street sections and plans shown in this section are conceptual designs and minor modifications may be implemented in Development Plans as circulation designs are further refined.

2.4.1 Vehicular Circulation

The Vehicular Circulation Plan Concept is presented on Figure 2.5: Piemonte Overlay Circulation Plan. Primary access is provided by public roadways that border the Overlay, including Haven Avenue to the west, Concours Street ~~and Ontario Center Parkway~~ to the south, and Fourth Street to the north. Within the Overlay, access to individual uses will be provided by Ontario Center Parkway and privately owned and maintained drives. Private drives also provide for necessary access/public utilities easements. Along the perimeter, public streets will accommodate public utilities improvements.

Figure 2.5: Piemonte Overlay Circulation Plan also identifies representative street cross-sections locations within, and adjacent to, the Overlay, and the cross-sections are presented in subsequent Figures. Consistent with City requirements, private drives identified within these Figures will be clearly identified on development plans, construction drawings, and property descriptions. To the satisfaction of the City Engineering Department, public access and utilities easements will be provided within private drives.

Figure 2.7e: Private Drive Cross Sections

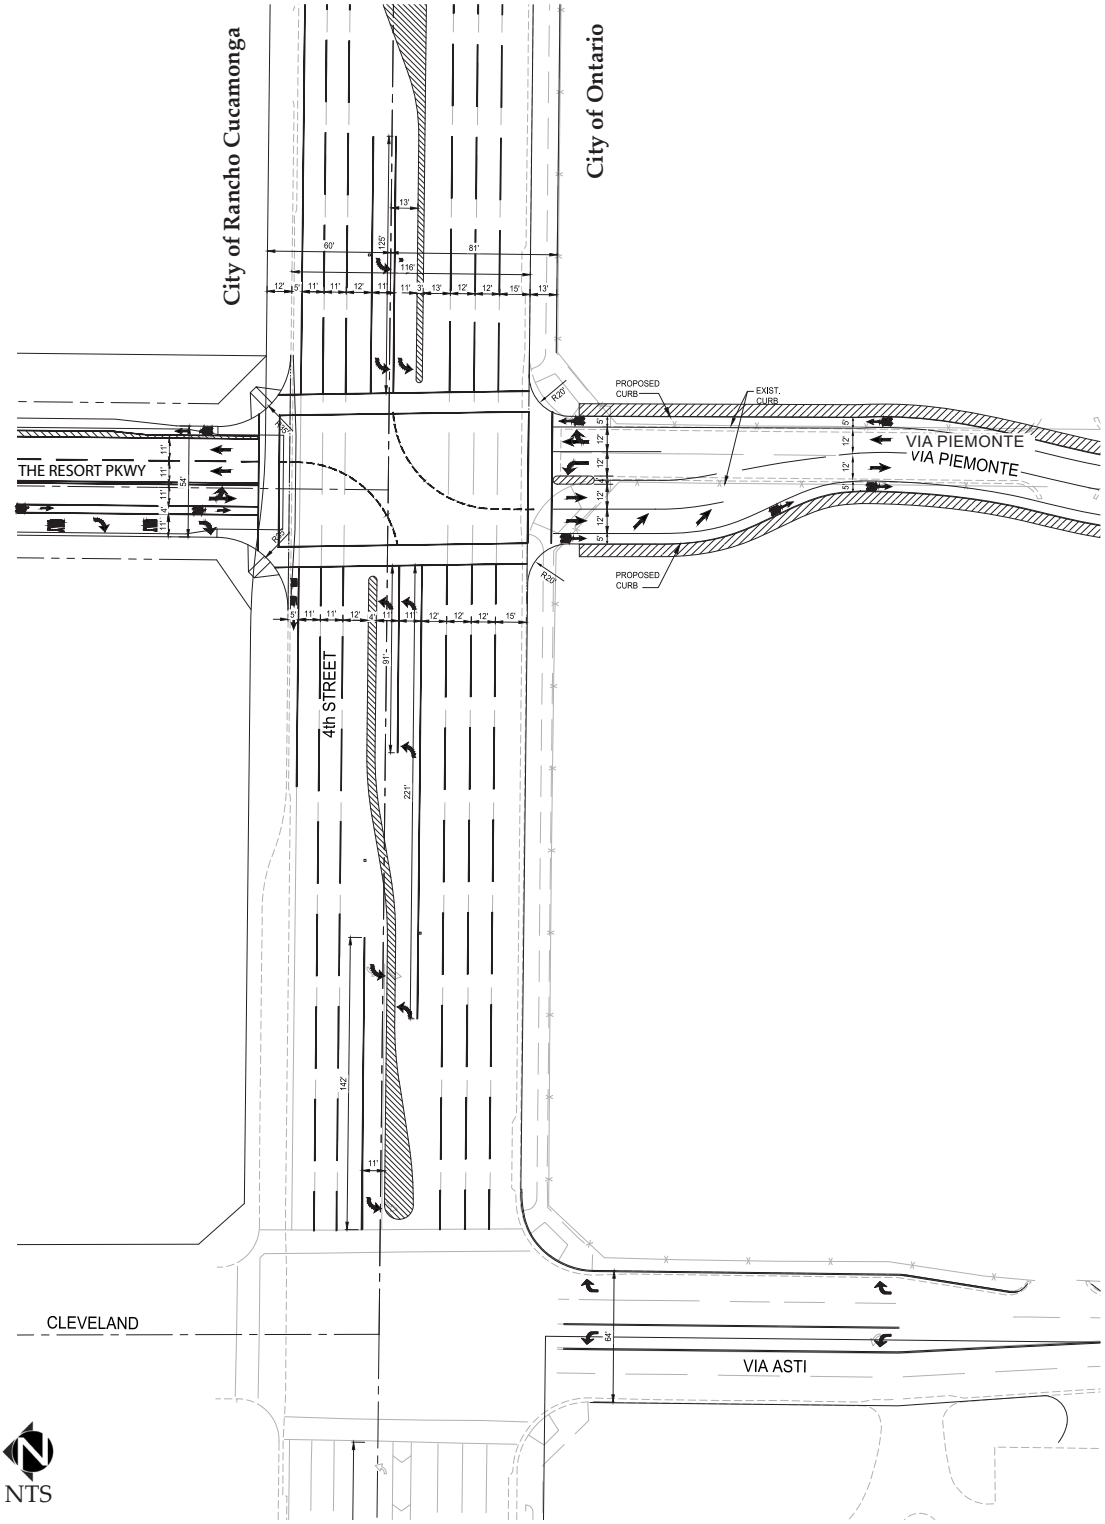

Figure 2.8a: 4th Street Intersection Plan

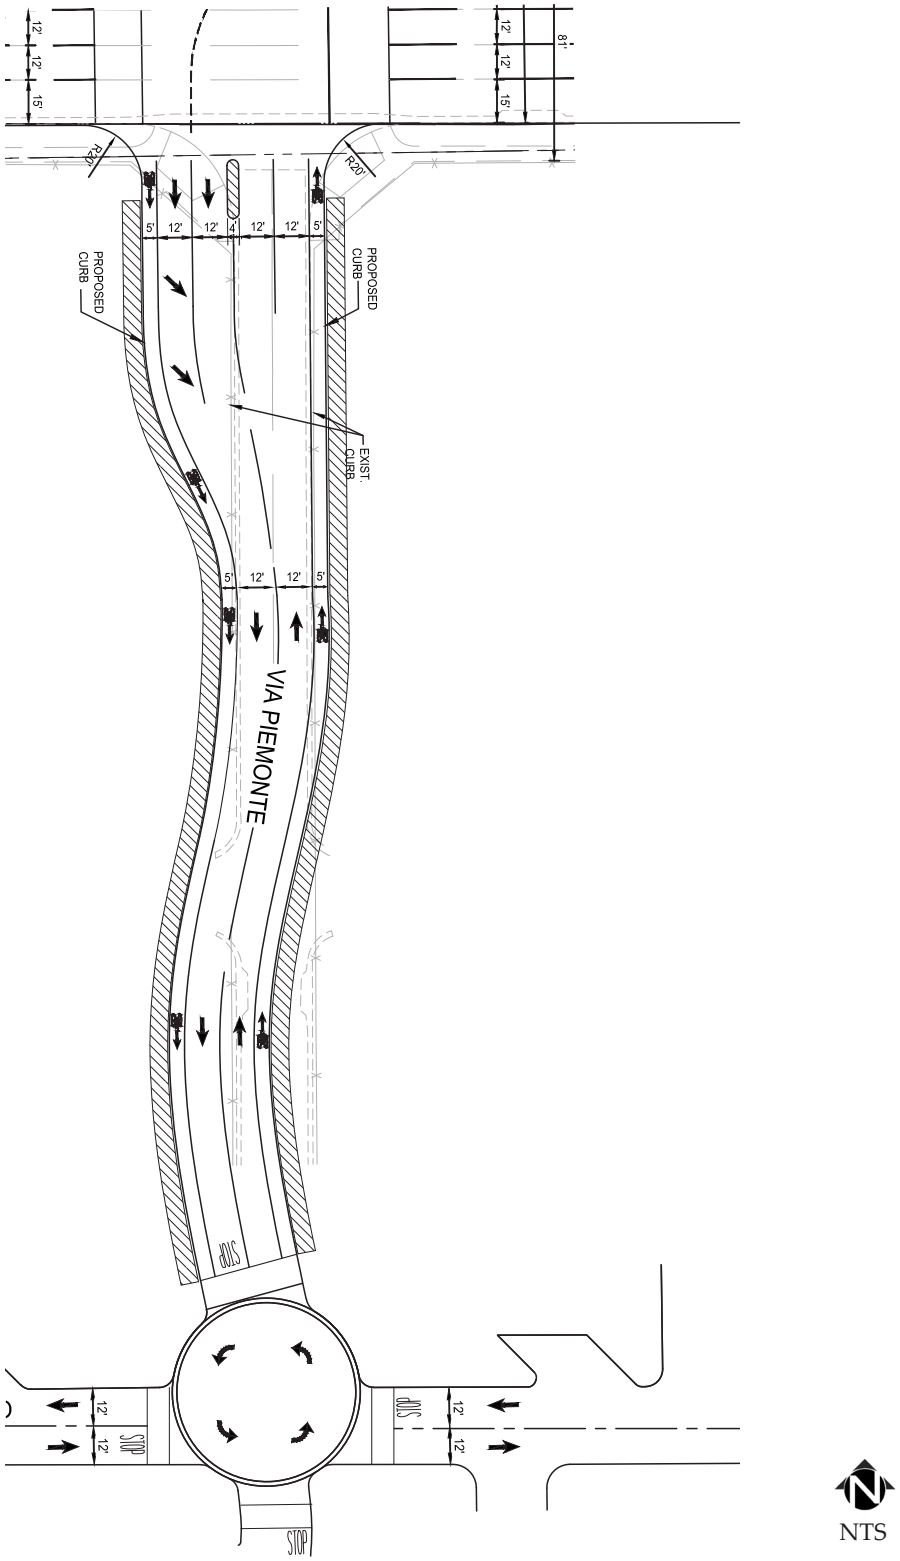

Figure 2.8b: Via Piemonte Plan (South of Fourth Street)

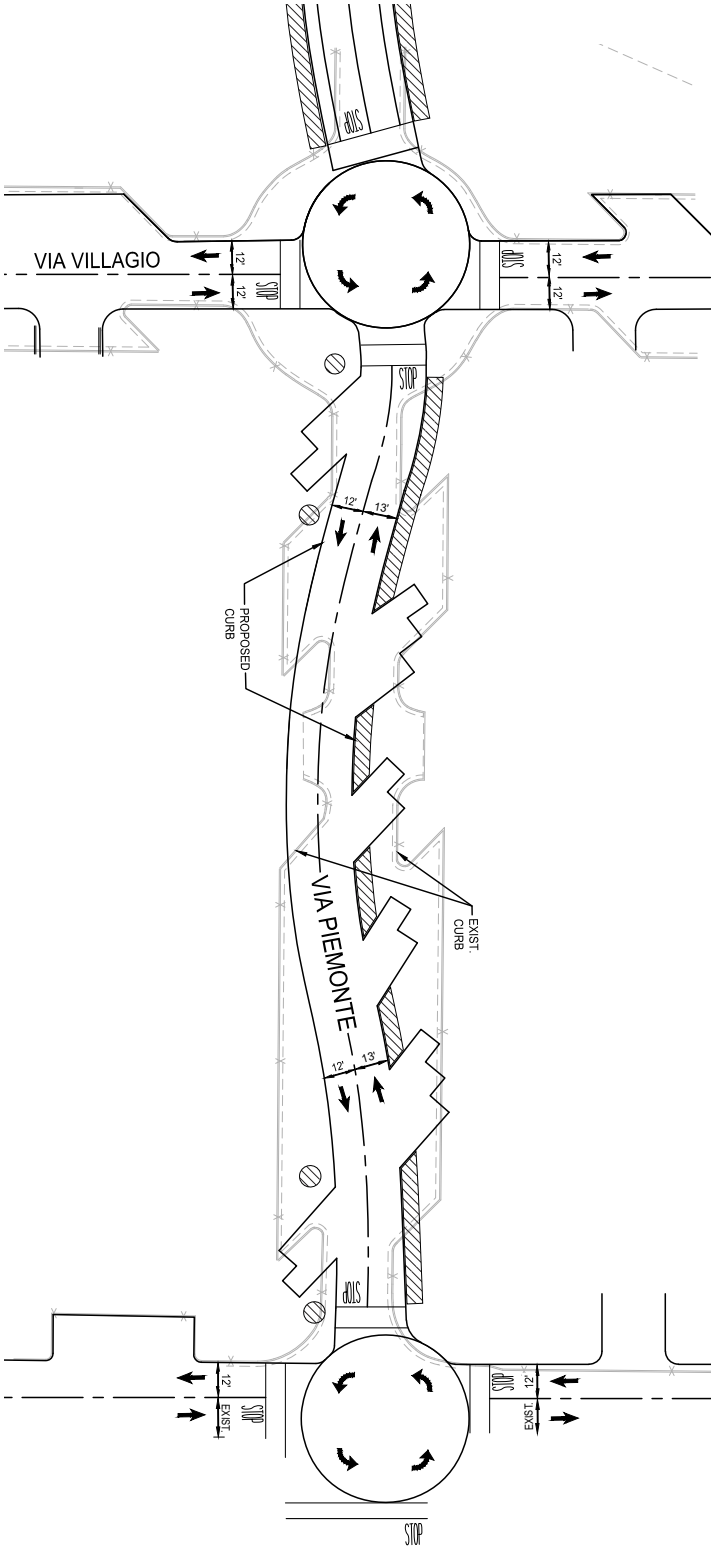

Figure 2.8c: Via Piemonte Plan (South of Via Villagio)

A proposed access from Fourth Street into the SA 1 will be permitted by the City Engineer if the proposed driveway is located as close as practicable to the east property line and the intersection is controlled with a traffic signal.

In addition to the typical street section described and depicted, additional right-of-way and travel lane designs may be required to adequately mitigate impacts identified in the Traffic Impact Analysis/Specific Plan EIR.

2.4.2 Pedestrian Circulation

As illustrated in Figure 2.9: Pedestrian Circulation, the Piemonte Overlay incorporates a pedestrian network which provides connections to, and supports interaction between, the various land uses. The pedestrian network largely parallels the roadway network.

The pedestrian network incorporates design features including enhanced paving/surface treatments and monumented entries. Typical pedestrian walkway enhancements in the Piemonte Overlay entries include the existing arbors/ pergolas with climbing grapevines, acting to identify and define entrances, while differentiating the Overlay from surrounding urban uses. New, more urban, entries may also be provided with each development application for build-out of the residential and commercial uses. Entries will be emphasized by adjacent plantings of specimen trees. Landscaping along pedestrian walkways will typically include ornamental grasses, groundcover, and shrubs, thematically employed throughout. Walkways along public streets will be canopied by planting of adjacent street trees.

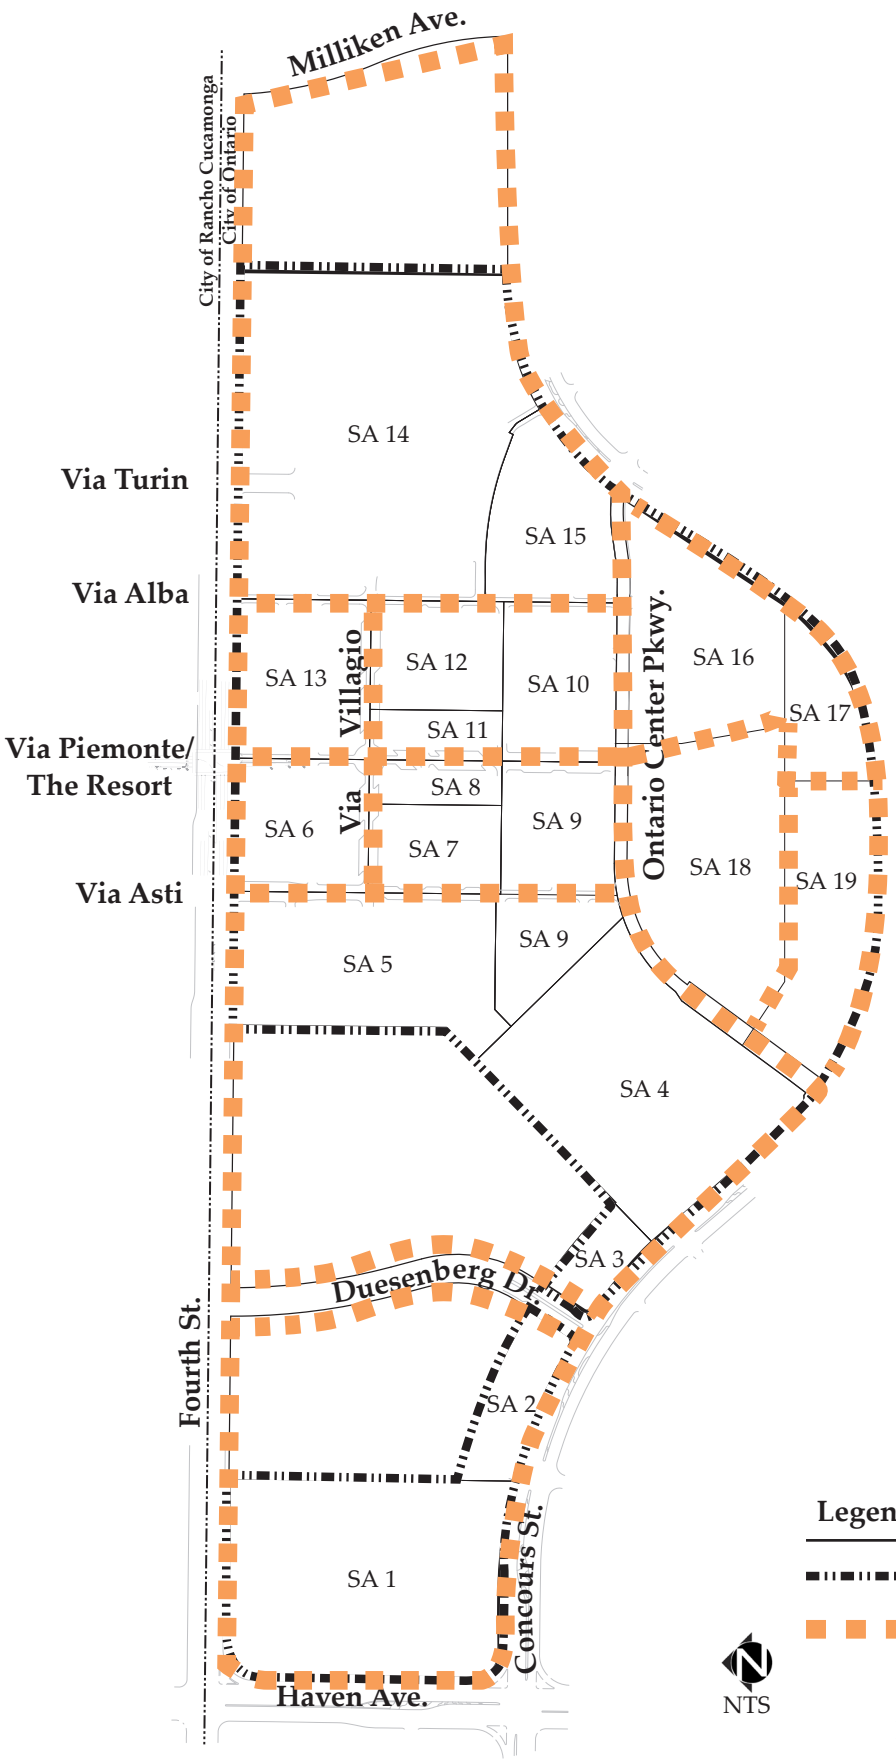

Figure 2.9: Pedestrian Circulation

2.5 LANDSCAPE CONCEPT

Figure 2.4: Piemonte Overlay Development Concept illustrates a contemporary urban landscape concept using clean simple forms, reinforcing Southern California's indoor/outdoor lifestyle, while existing monumentation (as shown in the following photos) picks up the influences of the Piemonte region of Northern Italy. ~~Skyline palms act as "way-finding" features and provide appropriate scale to this vertical urban environment. Pedestrian-scaled canopy shade trees, as well as bold colors and foliage textures of the understory plant material, will enhance the streetscape walking experience. This understory~~ Landscape patterns and street furniture will create a harmonious, functional environment. Tall trees, such as towering palms, eucalyptus, and other drought tolerant trees will act as "way-finding" features and provide appropriate scale to the vertical urban environment. Broad, spreading canopy trees will enhance and add variety to the streetscape walking experience. The multi-colored and varyingly textured understory plant material will be rich in varieties of ornamental grass, succulents, and flower groundcovers creating this semi-arid and environmentally sustainable landscape environment.

All monuments shall conform to current corner sight line and monument placement standards per City of Ontario Standard Drawing No. 1309 and the City Traffic and Transportation Guidelines, Chapter 5: Monument Placement.

2.6 INFRASTRUCTURE

This section describes the existing backbone infrastructure system available for Piemonte Overlay development, and identifies any improvements necessary to accommodate future development in the Overlay. Please refer also to infrastructure descriptions and analyses presented within: *Piemonte Preliminary Sewer Study, Piemonte Water System Summary, Piemonte Reclaimed Water Summary,* and *Piemonte Storm Drain System Summary*, (SB&O, Inc.) January 2006 and *Feasibility Study for the Adept Development Sewer Project*, (Stantec Consulting Services Inc.) February 2022, available from the City of Ontario Planning Department. Development proposals in the Overlay area may warrant additional studies to assure adequate utility capacity, placement and design, which may differ from the information in the subsections below.

2.6.1 Wastewater

Wastewater treatment services for the City of Ontario and other nearby communities are provided by Inland Empire Utilities Agency (IEUA). This Agency is responsible for treatment of wastewater generated from development within the Overlay area. Wastewater will be transported to IEUA Regional Plant No. 1 (RP-1) via the City of Ontario wastewater collection and conveyance system. IEUA Regional Plant No. 1 is located south of the Pomona Freeway (SR-60) and west of Archibald Avenue.

The backbone sanitary sewer system and delineation of private/public sewer system components are identified in Figure 2.11: Wastewater Facilities Plan. The perimeter public streets accommodate sewer system improvements.

A 24-inch IEUA sewer interceptor exists in Fourth Street along the northerly boundary. This interceptor captures all wastewater from north of Fourth Street within Rancho Cucamonga and transfers it west along Fourth Street. Therefore, the Overlay area does not accept any off-site wastewater from the north. All wastewater flows generated within the Piemonte Overlay area are transported via 8- to 10-inch sewer lines to Concours Street. At Concours Street, these lines

are connected to the existing 8- to 12-inch sewer mains. These mains currently connect to an 18-inch main, that in turn connects to the Inland Empire Boulevard sewer main to the south.

The collection sewer main to the south of the Overlay area, originally called the Ontario Motor Speedway Outfall, was sized to handle flows from the site. This outfall line ultimately flows west along Inland Empire Boulevard, then proceeds south beneath I-10. Sanitary sewer facilities constructed south of I-10 have previously been upgraded and sized to adequately handle development within the Overlay and surrounding areas.

The existing wastewater transmission facilities within Concours Street have enough overall capacity to adequately convey wastewater generated by development based on information presented in the *Preliminary Sewer Study for Piemonte,* (SB&O, Inc.) dated January 25, 2006 (Sewer Study). ~~More specifically, as concluded in the Sewer Study, the depth to diameter (d/D) design standard of 0.50 for these transmission facilities will be maintained even with the addition of wastewater generated by Overlay area development.~~ The *Feasibility Study for the Adept Development Sewer Project*, (Stantec Consulting Services Inc.) February 2022 has identified some sections that will require sewer upgrades in terms of capacity and/or replacement of deteriorated infrastructure and Development Plans will be required to address these areas of concern.

It is further noted that the Sewer Study conservatively assumes 2.7 persons per dwelling unit within the Piemonte Overlay, with a calculated wastewater generation rate of 100 gpd/person, or 270 gpd/dwelling unit. The overall mix of residential units will likely result in reduced overall resident populations, with resulting reductions in wastewater generation when compared to the Sewer Study assumptions.

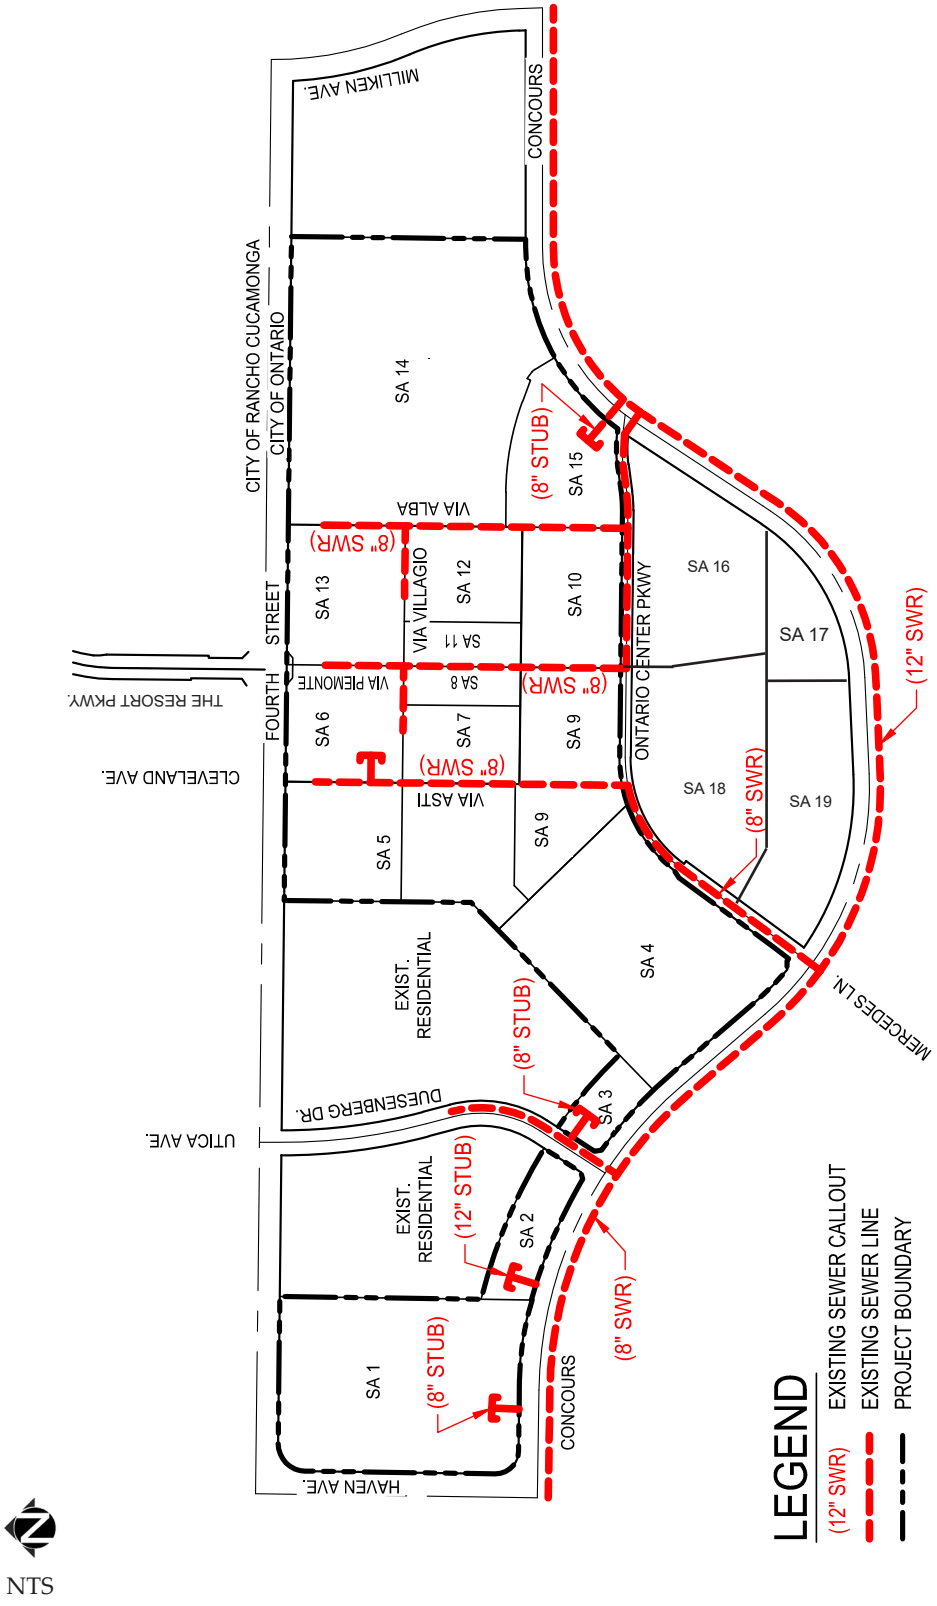

Figure 2.11: Wastewater Facilities Plan

2.6.2 Water Service

Water service to the Piemonte Overlay is provided by the City of Ontario. Existing water facilities include mains located in both Fourth Street and Concours Street. A 12-inch main in Fourth Street serves properties north of the Overlay, in Rancho Cucamonga and an existing City of Ontario 18-inch main located in Fourth Street will serve the Overlay. Fourth Street also contains a 36-inch City of Ontario transmission main. Additionally, Concours Street contains a 16-inch water main that will be used to serve the Overlay area. Water demands by use and for the entire Overlay, are contained within *Preliminary Sewer and Water Demand Study for Rancho Piemonte,* (SB&O, Inc.), dated August 8, 2005, and is available for review from the City of Ontario Planning Department. The proposed on-site water system lines and components are schematically presented in Figure 2.12: Water Facilities Plan.

The Study identifies the water demands for the various Piemonte Overlay uses, and acknowledges that use-specific fire flow requirements are the controlling factor in evaluating the hydraulic adequacy of a water distribution system. Based on the highest fire flow demand (hotel and high density residential at 3,500 gpm requirement), the Study concluded that the existing water system infrastructure surrounding the site is adequate to serve the Piemonte Overlay.

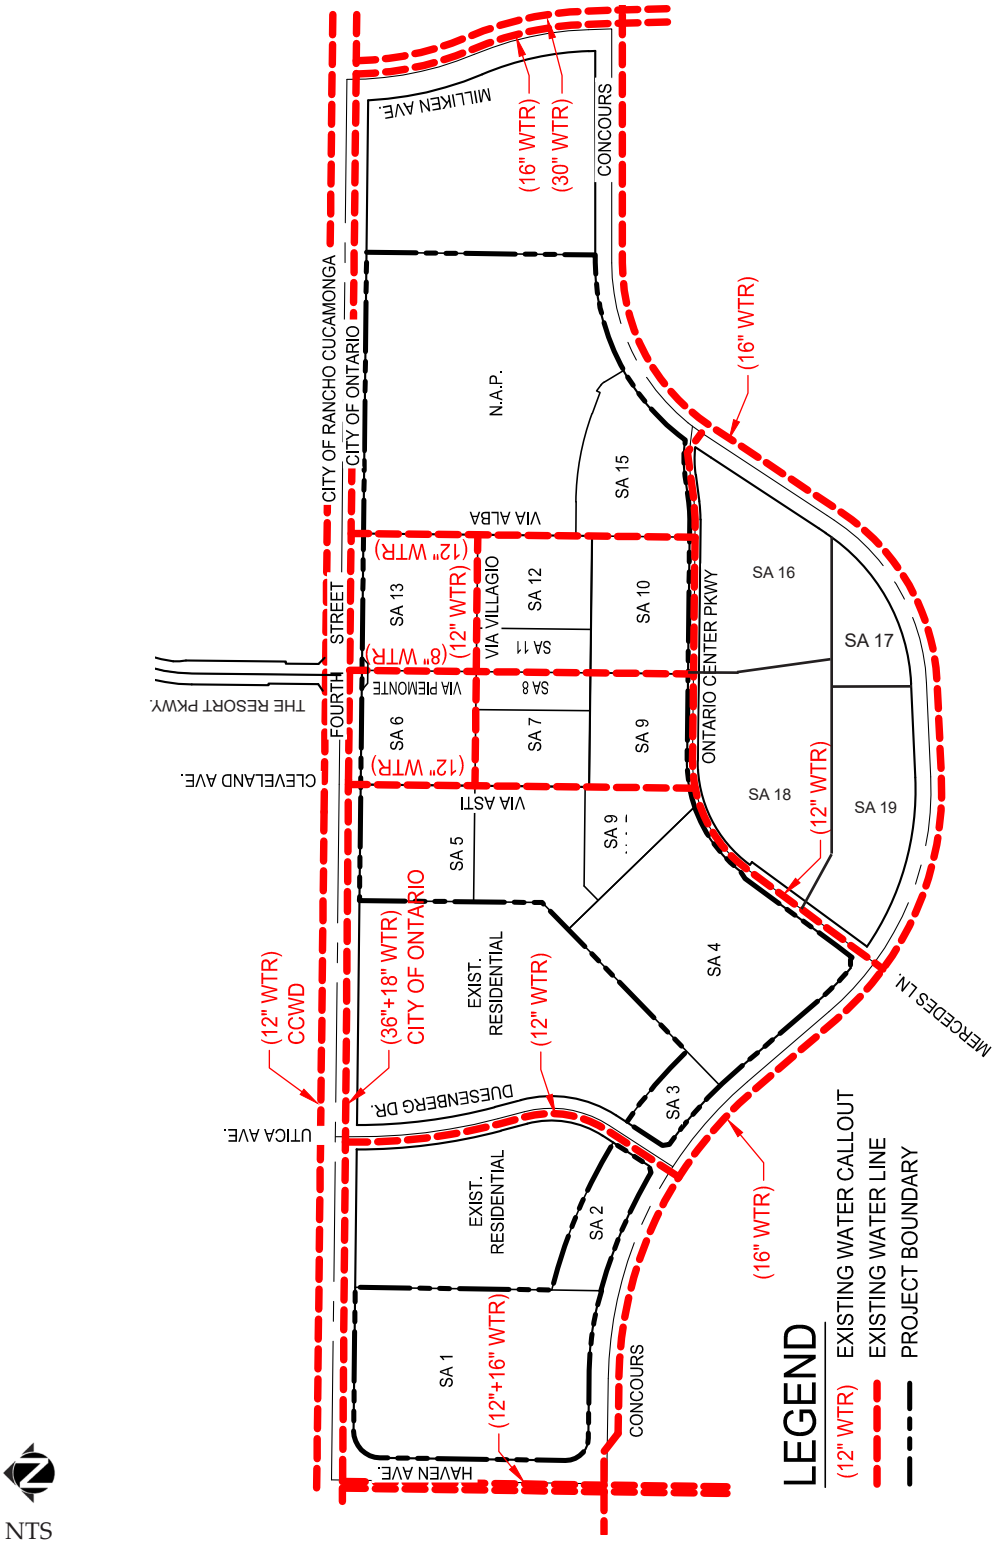

Figure 2.12: Water Facilities Plan

2.6.2.1 Recycled/Reclaimed Water System

Nearest to the Piemonte Overlay are the IUEA reclaimed water main which is installed in Sixth Street; a short segment of reclaimed water line in Haven Avenue between Sixth and Fourth Streets; with another segment located within Fourth Street, west of Haven Avenue. More specifically, a 30-inch reclaimed water main exists in Haven Avenue, turning west in Fourth Street. A 12-inch reclaimed water lateral exists in Milliken Avenue that terminates near Fourth Street. An 8-inch reclaimed water line has been installed in Concours Street, from Haven Street to Milliken Avenue. This reclaimed water line was installed as part of the Concours Street street improvements in 2002.

Additional reclaimed water facilities are constructed within the Piemonte Overlay, with connecting segment(s) in Milliken Avenue, Concours Street and Haven Avenue. Reclaimed water system improvements within the Overlay are illustrated on Figure 2.13: Recycled Water Facilities Plan, and include the following:

- Extension of the reclaimed water lateral from Milliken Avenue and Fourth Street, connecting to the reclaimed water line in Concours Street.
- Construction of a reclaimed water loop in Ontario Center Parkway to each intersection of Concours Street.
- Reclaimed water distribution lines extended northerly from Concours Street within Ontario Center Parkway and Via Alba.

New development shall comply with City Ordinance No. 2689 and make use of recycled water for all approved uses, including but not limited to landscaping irrigation.

Reclaimed water lines within public streets and public utility easements within private streets will be maintained by the City of Ontario Municipal Utilities Company (OMUC). The ownership and maintenance of common reclaimed water system components and lines within private drives in the Overlay will be the responsibility of the Piemonte at Ontario Center Property Owners Association, (POCOA) established pursuant to the Piemonte CC&Rs.

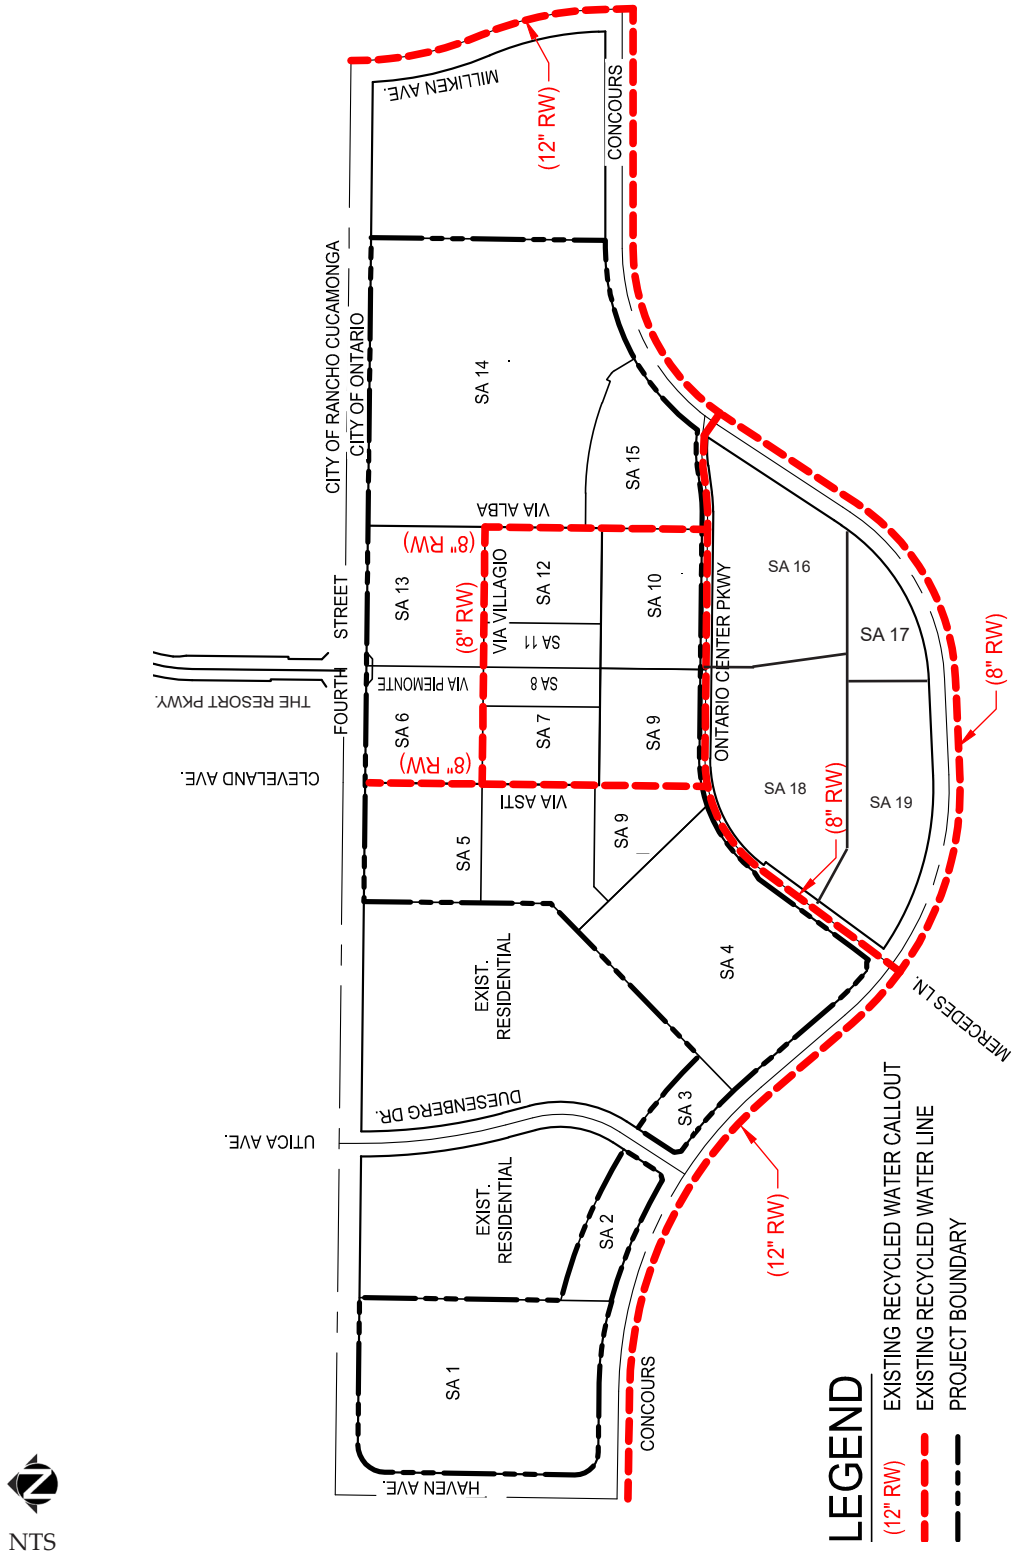

Figure 2.13: Recycled Water Facilities Plan

2.6.3 Stormwater Management

Existing and proposed stormwater management facilities, and conveyance systems and components, are schematically presented on Figure 2.15: Water Quality Management Plan. As a general note, development-related improvements and connections located within public streets will be maintained by the City. However, the ownership and maintenance of common stormwater system components and lines, as well as water quality treatment facilities, will be the responsibility of the POCOA, established pursuant to the Piemonte CC&Rs.

2.6.3.1 Stormwater Collection and Conveyance Facilities

Drainage in the Piemonte Overlay area flows in a generally north to south direction. North of the Overlay, an existing storm drain is located in Fourth Street. This storm drain collects and transports all drainage flows from the north and west, to Guasti Park. As such, the Overlay will not have to accommodate stormwater flows from the north. Stormwater run-off from the Overlay drains southerly, to Concours Street. Receiving reinforced concrete pipe (rcp) drainage facilities are located within Concours Street, and range in size from 48-inches to 72-inches in diameter. Flows from the Concours Street facilities empty into a 9-foot by 6-foot reinforced concrete box (rcb). Flows then continue southerly, toward Inland Empire Boulevard, then westerly to Mercedes Lane, and then southerly beneath I-10 in a 12-foot by 7-foot rcb to Lower Deer Creek Channel. Lower Deer Creek Channel confluences with Cucamonga Creek Channel, and flows to the Prado Basin.

The S*torm Drain System Summary for Piemonte* (SB&O, Inc.), dated January 30, 2006, concludes that the existing storm drainage facilities serving the Piemonte Overlay and vicinity have been previously sized to accommodate any proposed development. Additional internal drainage system improvements will be constructed to connect to the existing area-wide drainage system. Connection points to the existing system will be located so as to take full advantage of available carrying capacities, as shown in Figure 2.15: Water Quality Management Plan.

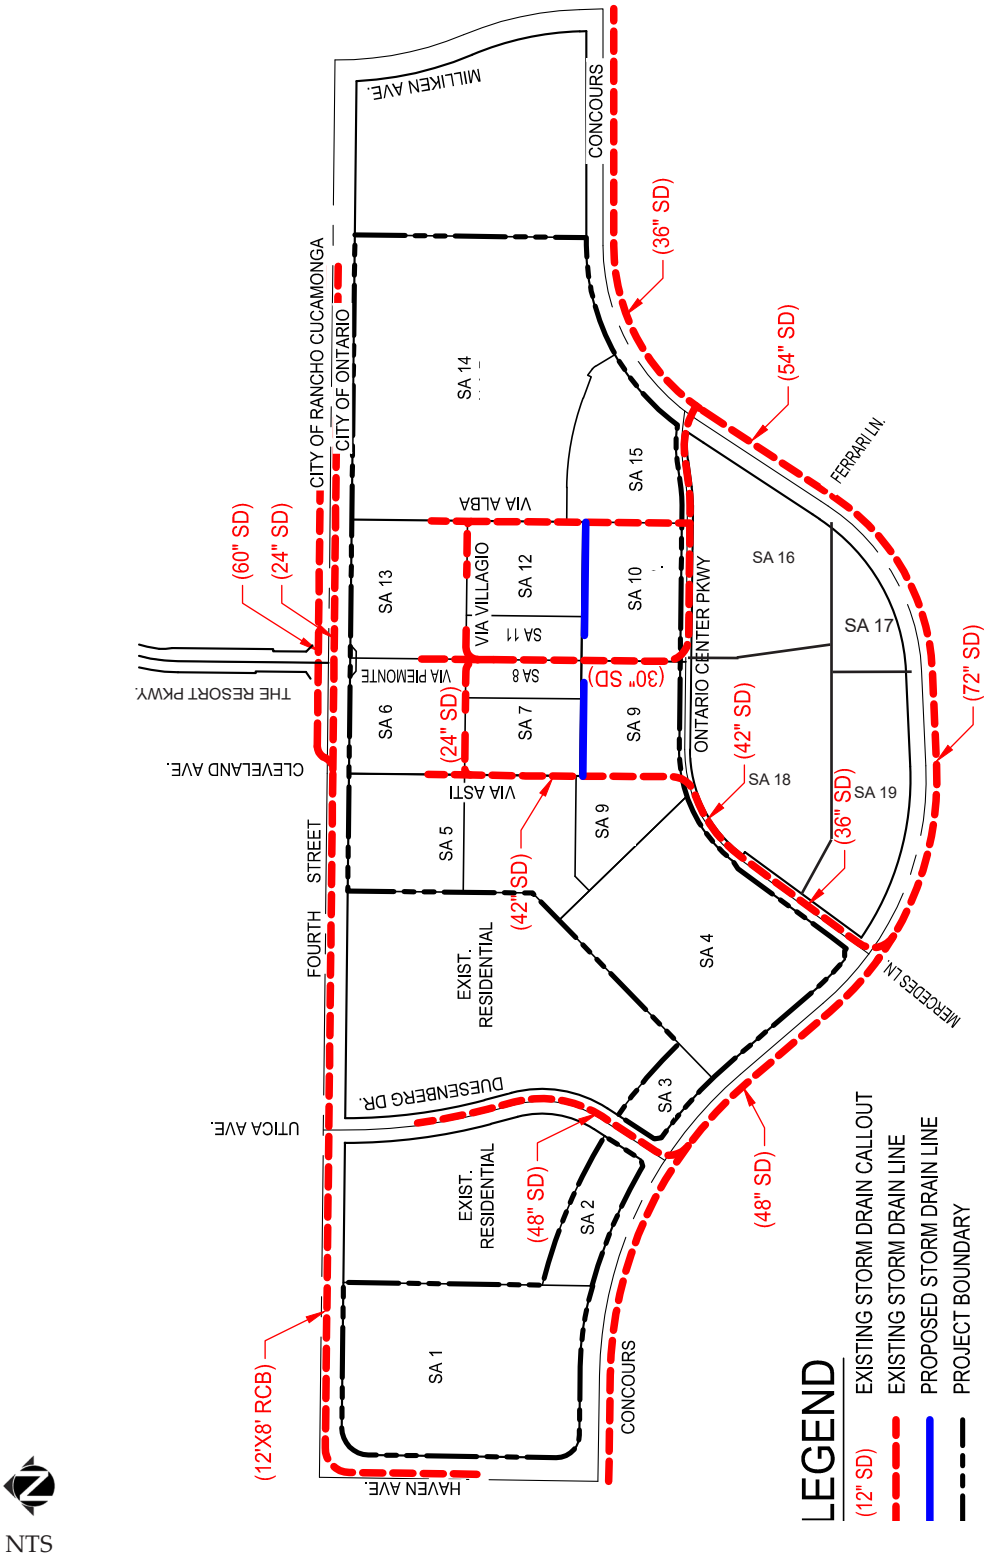

Figure 2.14: Storm Water Collection and Conveyance Facilities Plan

2.6.3.2 Stormwater Water Quality Management Plan (WQMP)

In addition to construction of required stormwater conveyance facilities described above, the City of Ontario and the governing Regional Water Quality Control Board (RWQCB) require that development in the Piemonte Overlay incorporate technically and economically feasible source control and Site Design Best Management Practices (BMPs), as discussed below.

Overview

The Santa Ana Regional Water Quality Control Board (RWQCB), under Order Number R8-2010-0036, NPDES Permit No. CAS618036, requires post-construction BMPs to be implemented for new development and significant redevelopment, for both private and public agency projects. The purpose of a Water Quality Management Plan (WQMP) is to develop and document the installation of structural stormwater quality facilities and the implementation of a program, including application of non-structural BMPs, which minimize the detrimental effects of urban stormwater run-off on the beneficial uses of receiving waters, including potential effects of increased pollutant loads and changes in hydrology.

Potentially adverse effects on receiving waters shall be minimized through the construction of Site Design/Low Impact Development (LID) BMPs with the highest priority for BMPs that retain/infilter the average 2-year, 24-hour storm run-off volume (85th percentile storm event) from the project, then other BMPs, such as harvesting and use, evapotranspiration, and biotreatment. To the maximum extent practicable (MEP), these LID BMPs must be implemented at the protect site. Where LID BMPs are not feasible at the project site, more traditional, but equally effective control measures, must be implemented. The combination of Site Design/LID BMPs, Source Control and/or Treatment Control BMPs included in project-specific WQMPs for new development within the Piemonte Overlay area shall address all identified pollutants of concern and hydrologic conditions of concern in run-off from on-site as well as proposed off-site improvements included in development projects.

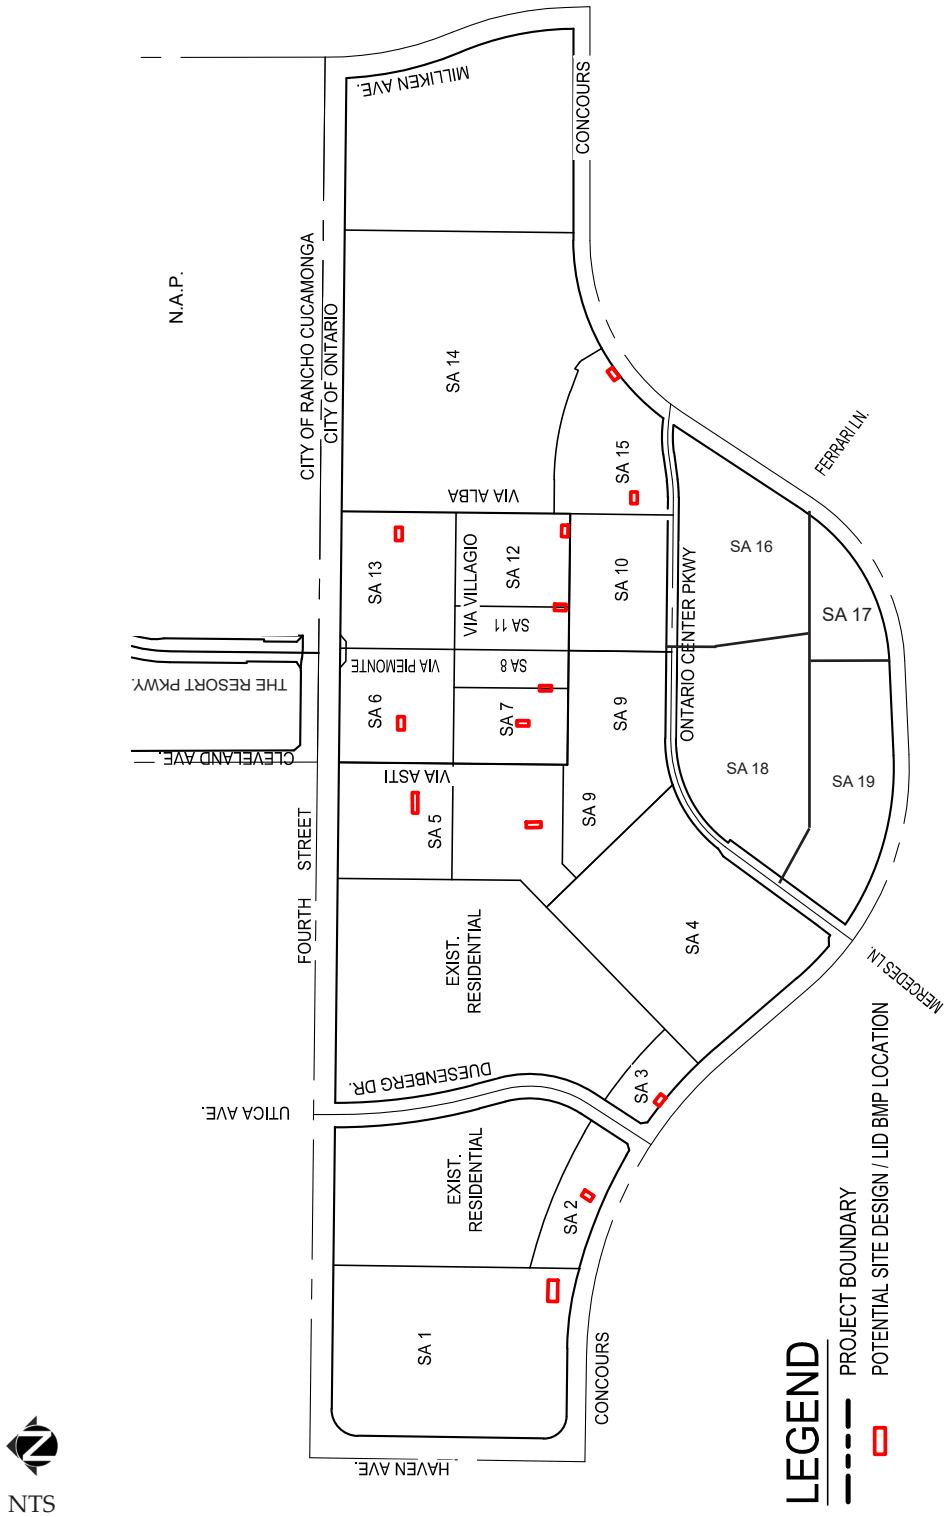

Figure 2.15: Water Quality Management Plan

Development projects within the Piemonte Overlay are required to meet the minimum ~~county~~County-side WQMP requirements applicable to Priority Projects by incorporating infiltration LID BMPs to the MEP; followed by biotreatment and harvest and use BMPS, for the remainder of the required storm run-off volume. Minimum source control BMPs and necessary treatment control BMPs shall also be documented, along with on-site LID BMPs, in project-specific WQMP plans. Where it is proven to be infeasible for a priority project to fully meet LID requirements based on implementing site design and on-site LID BMPs, a development project may alternatively participate in an available and approved regionally-based treatment program that addresses all identified pollutants and hydrologic conditions of concerns.

Project-Related Stormwater Treatment Requirements

The Piemonte Overlay is located within the Santa Ana Basin, designated as Region 8 by the RWQCB, and is tributary to Lower Deer Creek, the Chris Basin, Cucamonga Creek Flood Control Channel, Mill Creek, the Prado Flood Control Basin, and finally the Santa Ana River. In accordance with the Clean Water Act, the State of California maintains a list of impaired water bodies and the pollutant causing the impairment. The Cucamonga Creek Flood Control Channel is included on the State's list of impaired water bodies because of high coliform content. Mill Creek is also included on the impaired water body's list for nutrients, suspended solids, and pathogens. Because these receiving waters (which are tributary to the Piemonte Overlay) are impaired, development in the Overlay must incorporate BMPs that are rated high to medium in effectiveness for reducing the impairments. This assures a no net loading on the affected tributaries, and ensures that there are no additional pollutants added to the already impaired water bodies.

Project-Related Stormwater Treatment Improvements

Since the predominate soil type in the Piemonte Overlay areas is "Class A,"the mandated on-site LID/Site Design BMP measures will be designed into each development project within the Piemonte Overlay Specific Plan area will be

retention/infiltration of the required Design Capture Volume (DCV) of run-off through the use of a combination of various landscaped basins, trenches/swales, and underground infiltration systems (with pre-treatment BMPs), on individual parcels. All proposed LID/BMPs and pre-treatment facilities will be designed and implemented consistent with City and County-wide WQMP requirements. General locations and configurations of proposed LID stormwater retention/infiltration facilities are presented on Figure 2.15: Water Quality Management Plan.

2.6.3.2 Project-Related Stormwater BMP Compliance During Construction Phase

Prior to the issuance of grading or construction permits for any development project disturbing one-acre or more of land, within the Piemonte Overlay Specific Plan area, project applicants shall be required to obtain coverage under the California General Permit (CGP) for Stormwater Discharges Associated with Construction and Land Disturbance Activities and prepare and submit Erosion/ Sediment Control Plans and Storm Water Pollution Prevention Plans (SWPPPs), along with project Grading Plans, to the City of Ontario and the State Water Quality Control Board's "SMARTS"website, at the time of permit application. The SWPPP shall be prepared to comply with the requirements of the California State Water Resources Control Board's (State Water Board) current "General Permit to Discharge Storm Water Associated with Construction Activity" CGP and the current "Area Wide Urban Storm Water Runoff (Regional NPDES) Permit for San Bernardino County.

2.6.4 Solid Waste

Solid Waste services are provided by Integrated Waste. Solid waste requirements are per the City's Solid Waste Department Refuse and Recycling Planning Manual.

2.6.5 Fiber-Optics

The City of Ontario is developing a fiber-optic telecommunications system throughout the City commonly known as OntarioNet. The fiber-optic telecommunications system is capable of providing advanced internet/data services to homes and businesses in feasible areas within the City. OntarioNet will provide community related services including: traffic management; online civic services; meter reading; educational services; and a variety of other community services. OntarioNet and the high-speed data services it provides, will keep the City on par with the modern workforce and ever changing lifestyles of the people and the community.

Communication systems proposed on-site facilities will be placed underground within a duct and structure system to be installed by the Developer, as illustrated in Figure 2.16: Fiber-Optics Plan. Maintenance of the installed system will be the responsibility of the City and/or special district fiber optic entity and not that of the Developer, private homeowners association or private homeowners. Development of the project requires the installation by the Developer of all fiber optic infrastructure necessary to service the project as a stand alone development.

Trenching, joint trenching and boring shall be used to install the fiber-optic conduits. Fiber-optic conduit placement will generally be in a joint trench with street light conduits or in a separate trench/bore and in the Right-of-Way (ROW) generally placed behind the sidewalk. Resulting conduit placement will be on the north side of street and the east side of street based on the direction of the street. Properly sized handholes shall be placed along the conduit path no greater than 500 feet apart in major streets and no greater than 300 feet apart within in-tract community streets. Handholes shall be strategically placed to allow for efficient entrance into commercial buildings, and residential properties and multi-dwelling units. Refer to Figure 2.16: Fiber-Optics Plan for existing and proposed fiber-optics locations.

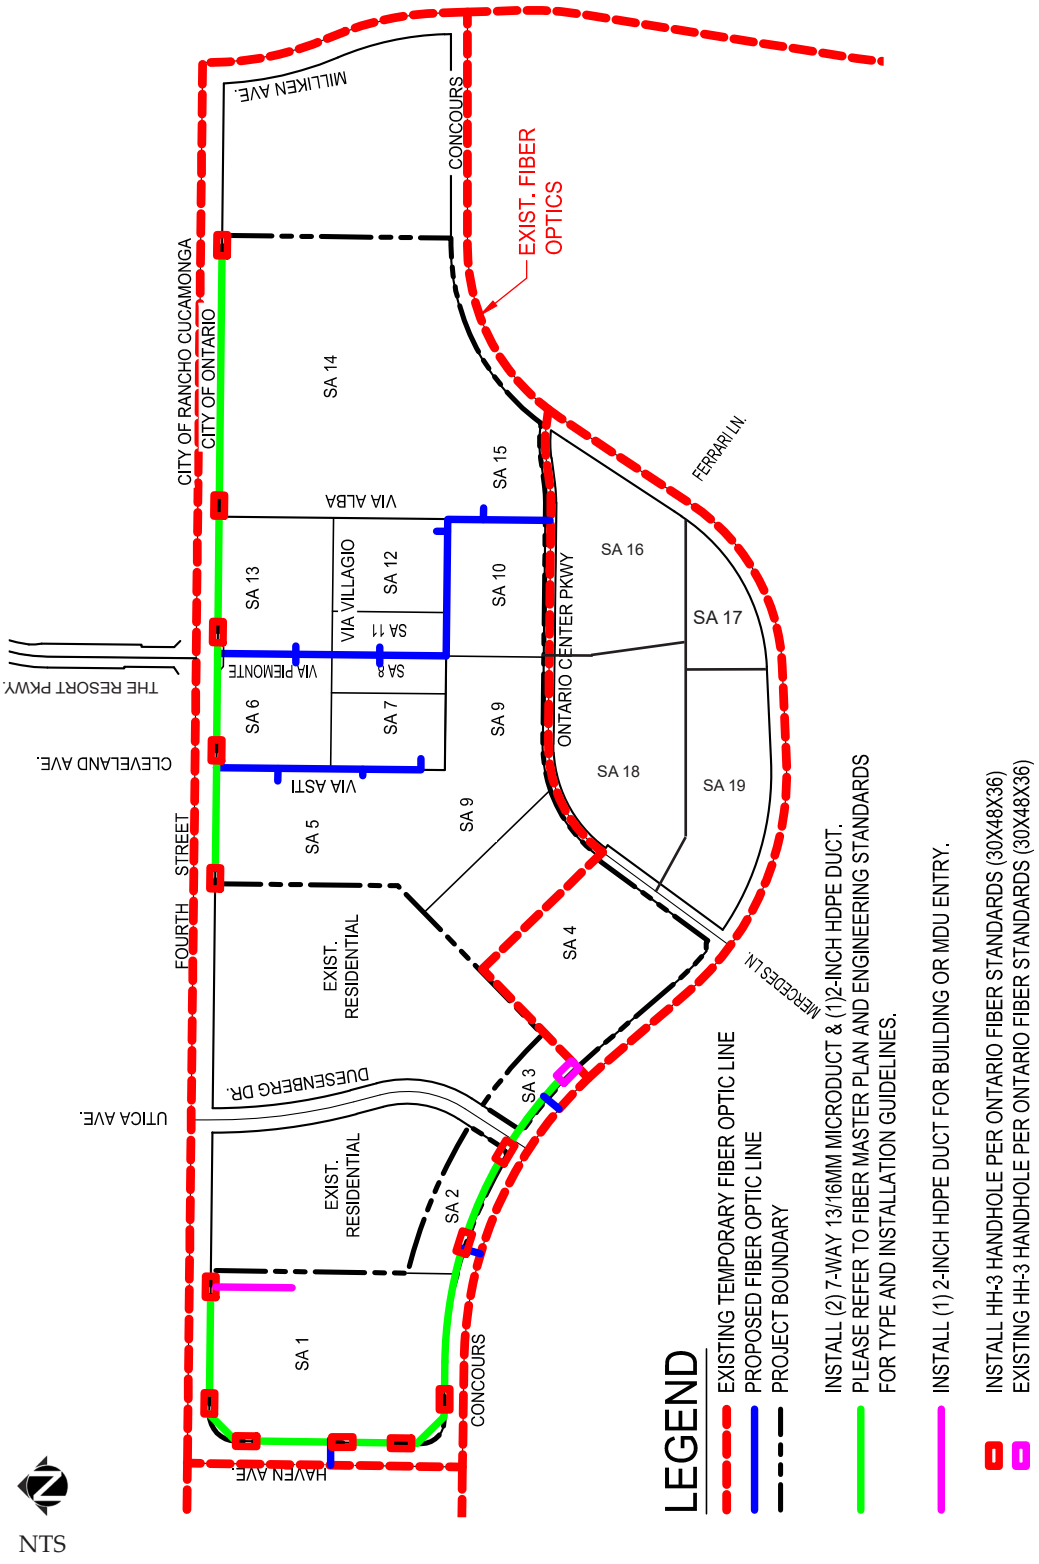

Figure 2.16: Fiber-Optics Plan

2.7 DEVELOPMENT CONSTRUCTION

~~It is anticipated that the Developer will begin preparation of residential construction plans for the Piemonte Overlay units in July 2017, with construction beginning on the sites to the west in early January 2018 after all discretionary approvals and building plans are permitted. The clubhouse and leasing facilities for those parcels, Subareas 5 and 7, on which are planned approximately 340 apartment homes, would be ready for occupancy in December 2018. First units would be ready for occupancy in January 2019; last units would be delivered for occupancy in December 2019. The parcels to the east, Subareas 12 and 15, would include approximately 232 apartment homes and would be under construction by December 2018, with the clubhouse and leasing facilities delivered for occupancy in December 2019, and the first apartment homes ready for occupancy by January 2020; last units would be available for occupancy by September 2020~~. Development of the Piemonte Overlay area is anticipated to be incremental. Subarea 12 is currently under construction for 72 multiple-family residential units. A Development Plan for Subarea 15 was approved for 110 multiple-family residential units.

Specific site grading, frontage and any off-site improvements, will occur as defined in the Tentative Map and/or Development Plan application. The final number of construction phases is unclear at this time. The number of phases and number of units in each phase may be altered from time to time, subject to City review and approval.

Where the pedestrian network is internal to a development parcel or land use, e.g. in the westerly portion of the Piemonte Overlay area, that portion of the network will be completed concurrent with development of the accommodating parcel or land use. Use and tenant-specific infrastructure connections, as well as development-specific amenities, and specific landscaping/streetscaping, will be completed concurrent with each increment of development.

3.0 DESIGN GUIDELINES AND DEVELOPMENT REGULATIONS

This Section presents the Design Guidelines and Development Regulations applicable to the Piemonte Overlay. The Design Guidelines identify physical and thematic attributes or requirements. Complementing these Design Guidelines, the Development Regulations identify permitted land uses and provide direction and requirements for development locations, configurations, orientations, and construction for each Land Use Subarea. Please refer also to the delineation of the Piemonte Overlay area and its component Land Use Subareas, presented previously on page 2-5.

All Design Guidelines and Development Regulations are comprehensively identified within this Section. In this regard, it is noted that the Design Guidelines and Development Regulations are predominantly consistent with requirements of the encompassing OCSP; however where they differ, the Piemonte Overlay supersedes the requirements of the OCSP. For ease of reference, where OCSP requirements are applicable to the Piemonte Overlay, those portions of the OCSP have been incorporated in this document.

Prior to issuance of development permits, all facilities proposed within the Piemonte Overlay will be evaluated by the City for consistency with the Piemonte Design Guidelines and Development Regulations, and applicable City regulations. Please refer also to development review and approval processes outlined in Section 4.0, Administration.

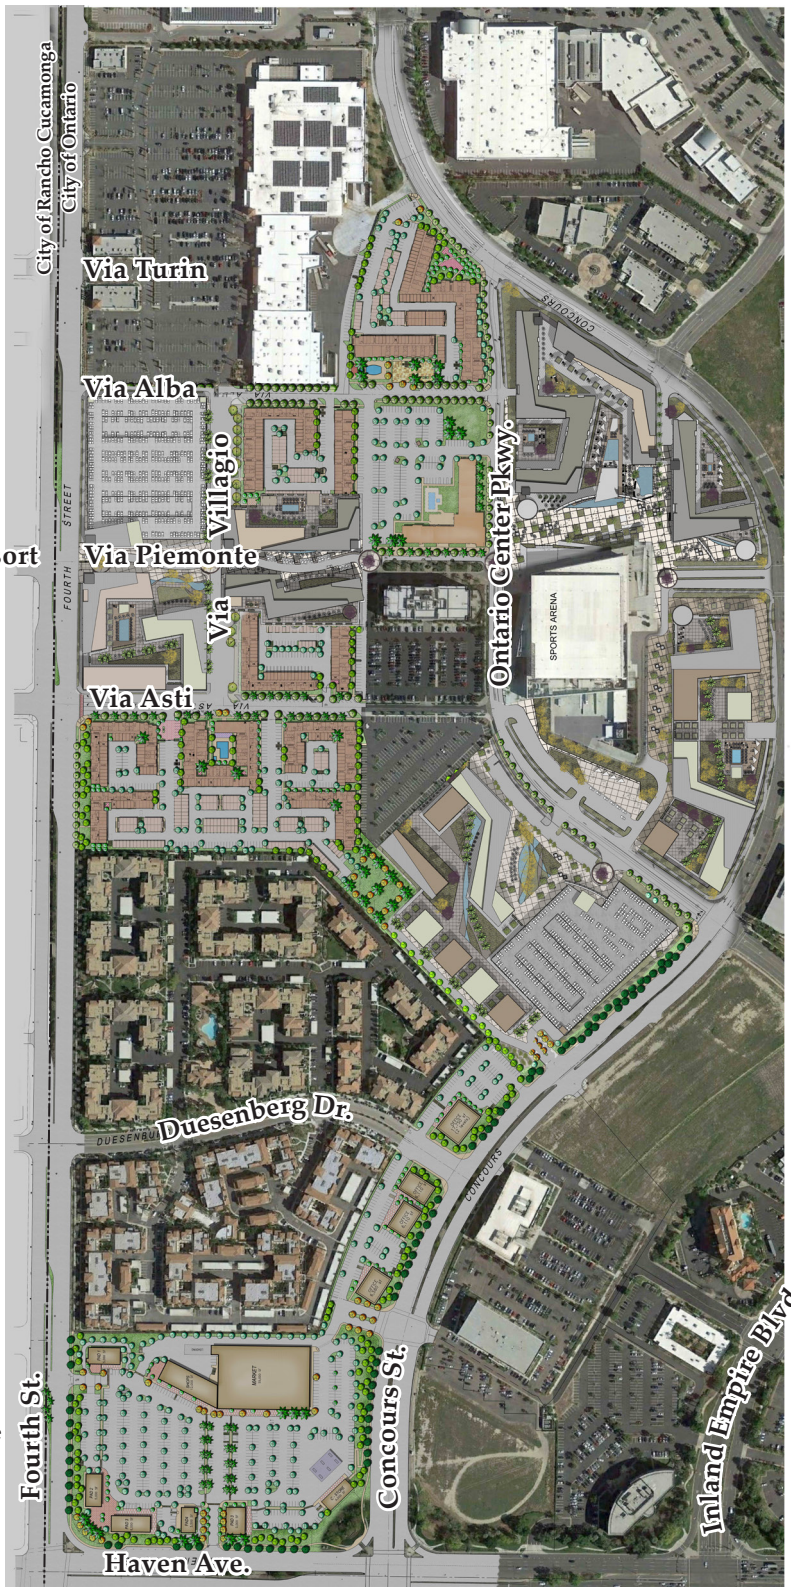
3.1 OVERVIEW

The design concept is based on the existing grid-like pattern of streets and blocks, to be developed ~~at the intersection of two private drives, Via Villagio and Via Piemonte~~ along Via Piemonte as the main corridor. ~~Oriented in an east-west alignment, Via Villagio will connect the proposed residential development, with the major retail and specialty shop sites to the east. Along the northerly side of Via Villagio, and at the four sides of the intersection with Via Piemonte, will be ground-level retail and restaurant uses, and may include offices on the second floors. Along the southerly side of Via Villagio, residential units will be constructed.~~ Via Piemonte will offer a series of retail spaces on the ground floor and residential uses above with a variety of landscape and hardscape features with a focus on pedestrian oriented areas. The building mass and placement along Via Piemonte will be used to create interesting spaces, which may include courtyard spaces, open plazas, outdoor seating and dining areas. The mixed use spaces along Via Piemonte will connect Fourth Street to an entertainment center surrounding the Arena. Parking is provided for all retail/restaurant and office uses, with separate secured parking to be provided for residents, refer to Figure 3.1: Design Concept. On street parking will be provided for guests of residents.

The north-south Via Piemonte is aligned between the ~~Citizens Business Bank~~ Arena~~,~~ and connects to Fourth Street at the northerly boundary. The intersection at Fourth Street will be widened and include a signalized intersection. The intersection of Via Villagio at Via Piemonte establishes a main activity node and focal plaza area, around which retail and restaurant uses will be constructed.

Site design and architectural themes between the residential and non-residential ~~reflect a blending of contemporary urban Southern California design and Mediterranean influences~~ reflect a contemporary urban Southern California design and include~~. These architectural and design influences act as~~ visual cues encouraging perception of a cohesive Piemonte development.

Supporting the urban setting, land use associations and configurations within the Piemonte Overlay provide for a mix of office, hotel, commercial, and high-



Note: The site design represented is conceptual in nature, and exemplifies one possible design scenario that has been developed in accordance with the design criteria of the Piemonte Overlay and may not represent ultimate building layout.

NTS

Figure 3.1: Design Concept

density residential uses, interconnected by pedestrian and vehicle corridors, with interspersed activity areas.

3.2 ALLOWED USES

Uses allowed within the Piemonte Overlay as a whole, and within each Specific Land Use are the same uses listed under the CR (Regional Commercial) zoning district in Table 5.02-1 (Land Use Matrix) of the Ontario Development Code, for permitted, conditionally permitted, administratively permitted, and prohibited, with the following exceptions:

- High Density Residential uses are permitted in Subareas 2 and 3.
- A gas station with a convenience store and a car wash is permitted in Subarea 1.
- Within the Residential Subareas, second floor individual offices above the separate, stand-alone garage buildings are allowed. The offices would be accessible via stairs, and would be rented only to existing residents of the same Subarea where the garage is situated. There would be a total of 3 to 6 offices, each about 14 feet x 14 feet. No other amenities, including bathrooms, would be included on the second floor. The offices would be rented to residents desiring an office (home occupation) separate from their apartment home. To limit traffic and parking needs, office tenants would not be allowed to entertain, consult with, or host clients or other third parties at their office.
- One office building is permitted facing 4th Street in Subarea 13; all remaining use are required to be ~~Entertainment/Retail~~ Mixed-use uses. ~~Entertainment/Retail~~ Mixed-use includes the following types of uses:
    - Multiple-family Residential
    - Food and beverage, experiential-oriented retail.
    - Craft sit-down and community table eateries.
    - Brewpubs, beer gardens, taverns, bars, clubs, wine bars distilleries.
    - Live music, or nightlife.
    - Outdoor patio dining and bar service.

- Temporary Alcohol zones permitting transport of alcoholic beverages from one establishment to another within the zone may be established with an Administrative Use Permit granted pursuant to Section 4.03.105 of the Ontario Development Code.
- Dining and entertainment destinations.
- Special street events; including but not limited to farmers' markets and holiday events.
- Loft or general offices permitted on upper floors.
- Related retail uses that support or complement the intent of entertainment commercial including small components of general and service retail, including up to one drive-through and up to three quick service retail (QSR) establishments that could be located within a single building not to exceed 10,000 square feet may be located in Subarea 13 along the eastern edge. One freestanding bank building is permitted.
- The following uses may be considered Retail Entertainment uses; however, they are also allowed in the other Commercial Land Use areas:

Primary Objectives:

- Bakery
- Banking
- Brewpub/Bars
- Candy Shop
- Cheese/Charcuterie Shop
- Coffee Shop
- Entertainment/Amusement
- Fast Food – for QSR
- Food or Beverage Specialty
- Ice Cream
- Produce/Farmers Markets
- Restaurant – Family and with Liquor

Secondary or Ancillary Objectives:

- Apparel – Activewear/Specialty (yoga, etc.)
- Art – Dealers and Supplies
- Books – Store or Library
- Boutique Fitness – such as ~~Barry's~~ Bootcamp, ~~Orange Theory~~, Spin, etc.
- Florist
- Gift Specialties (Stationary/ Office Supplies)
- Jewelry
- Museums
- Salon – Blowdry Bar/Barbershop
- Sound Recording Facilities

- Sporting Goods – Outdoor
  Sports Specialty
- Tobacco/Cigars

- Uses are permitted to operate for 24 hours a day, subject to CUP and/or ABC requirements.
- Notwithstanding anything to the contrary in this Overlay, any store, restaurant or other establishment which includes a vehicular drive-through (whether covered or not) shall be permitted in SA 1 or SA 13 (and only along the eastern edge of SA13). In the northwest corner of SA6, one building including a QSR or a bank will be permitted; in the event the bank~~,~~ includes an ATM/drive-through facility, such ATM/drive-through shall be located on the ~~eastern~~ western or southern sides of the building and shall be sufficiently shielded from adjacent residential units such that any noise, light or use is mitigated to imperceptible levels within the residential units.
- ~~Further, notwithstanding anything to the contrary in this Overlay, no building shall be situated at the southwest corner of SA 6 and no building shall be situated at the southeast corner of SA 13 without the prior written consent of the owner or owners of SA 7 and SA 12 in their sole and absolute discretion. A building shall be deemed to be situated at either corner for purposes of the preceding sentence if any outer wall of the building itself (but not retaining wall, perimeter wall, or other wall not supporting the building) is located within 30 feet of the property lines making up such corner.~~

3.3 GENERAL DEVELOPMENT STANDARDS

Unless otherwise noted herein, Table 3.1: Piemonte Development Requirements lists the requirements applicable throughout the Piemonte Overlay.

3.3.1 Setbacks

Reflecting the urban design, buildings may extend up to public access/utility easement limits and prescribed setbacks, except as otherwise provided for herein. Precise building setbacks will be a function of final site and building design plans, and will be determined through City's review processes.

3.3.2 Landscaping and Open Space

All required setbacks from streets shall be permanently landscaped in an attractive manner with sidewalks, trees, shrubs, groundcover, and other supplementary materials. Low walls are permitted in the streetscape area. Please refer also to related discussions presented in Section 3.8.2 Landscape/Streetscape Development Regulations.

Table 3.1: Piemonte Development Requirements

	Commercial & ~~Entertainment/~~ Retail Mixed-use	Office	Special Use/Hotel	Residential
Minimum Setbacks - Buildings				
Public Streets (measured from P/L)

	Private	50 SF; 6' minimum dimension ~~N/A~~	N/A	N/A	50 SF; 6′ minimum dimension
	Total Open Space	200 SF ~~N/A~~	N/A	N/A	265 SF
Residential Storage Space***		160 CF ~~N/A~~	N/A	N/A	160 CF

+ Average 15' building setback.
* Includes club, business center, fitness facilities, and roof decks.
** Include building setback areas and can be adjacent to residential units.
***Adequate lockable private storage space shall be provided within a garage or storage building, or a space directly accessible from the dwelling. Exterior closets accessed from patios or balconies may be used if screened from public view.

3.3.3 Maximum Building Height

There is no maximum building height except that all buildings shall comply with the height limits set forth in the ONT ALUCP. Furthermore, northern portions of the project area are located within the ONT ALUCP High Terrain Zone where buildings are limited to 70 feet in height. Refer to ONT ALUCP for more information regarding height criteria and policies.

3.3.4 Open Space

Common Residential Open Space will be provided as identified Table 3.1: Piemonte Development Requirements. Please refer to related discussions presented under the SPA topical heading of "Landscape/Streetscape." Active open spaces shall be provided that include a pool and spa, clubhouse, dog

park, and roof-top amenity deck and comply with the minimum requirements for common recreation amenities stipulated in Ontario Development Code Table 6.01-5, except as otherwise stated in Table 3.1: Piemonte Development Requirements of this document.

3.3.5 Parking

Livability of a community can be greatly impacted by the type and availability of parking. In urban settings, parking can be uncoupled from individual units for practical design and financial reasons, enabling an environment that promotes pedestrian access over vehicular storage. Parking may be "un-coupled" from a use where a parking demand study validates the approach, enabling development of creative development that focuses on living, mobility and access over parking storage. There is the potential for reciprocal parking between Piemonte Overlay uses and the adjacent ~~Citizens Business Bank~~ Arena.

All on-site, off-site, and on-street parking will count toward a development's required parking calculations; all on-street parking used to meet vehicle parking requirements shall be shown on plans during the development review and/or Tentative Map approval process, and may only be allocated to a single parcel or development (if comprised of multiple parcels). Residential parking spaces may be located up to 250 feet from the assigned unit.

All development is highly encouraged to leverage transit, multi-modal, and shared parking opportunities to reduce required parking demand. Parking reductions may be achieved through shared parking, or other strategies that reduce the amount of area devoted to parking and to increase the use of alternative forms of mobility, as validated by a Parking Analysis Study as provided in Section 6.03.020 Reduction in the Required Number of Parking Spaces of the Ontario Development Code.

3.3.5.1 Minimum Parking Requirements

Off-site parking and loading facilities for each of the Piemonte Overlay Land Use Subareas shall be provided pursuant to the requirements of Ontario Development Code Division 6.03 (Off-Street Parking and Loading), except that parking facilities for residential uses shall be provided as follows:

- Studio Unit – 1.0 space per unit.
- One bedroom unit – 1.0 space per unit.
- Two bedroom unit – 1.75 spaces per unit.
- Three or more bedroom unit – 2.0 spaces per unit.
- Residential guest parking for Subareas 8, 11, 16 and 17 - 0.0 space per unit.
- Residential guest parking for all other Subareas – 0.2 space per unit. Guest parking shall be accommodated within the host lot/building, in common parking areas along abutting private drives, or on adjacent private drives.

3.3.5.2 Parking Supply and Design

Parking spaces, lots, and facilities shall optimize the unique development opportunity in the Piemonte Overlay and design ways to creatively integrate parking spaces, lots and facilities into development projects through elements such as architectural design, amenities, and multi-purpose features. Parking supply and design shall comply with the development standards of Ontario Development Code Division 6.03 (Off-Street Parking and Loading) and the take into account the following:

- A parking management plan shall be submitted for Planning Director approval, prior to issuance of building permits. This plan shall justify the mix and sizing of compact and tandem spaces, shall indicate how the residential parking will be restricted to avoid overflow into the commercial parking area, and shall ensure that tandem parking spaces will be assigned to residents of the same dwellings.
- Parking spaces shall not obstruct access to building entrances, trash storage areas or loading areas.

3.3.5.3 Parking Structure Design Guidelines

Parking structures shall be designed to be compatible with the surrounding develoment and incorporate architectural features that create visual interest, distinction, and enhances the development project's identity. These guidelines are applicable to all parking structures with the Piemonte Overlay.

General:

- Below-grade parking is encouraged with garage entries placed at the rear or sides of the project whenever possible. Garage entries should be recessed as much as possible from the building facade.
- Where full below-grade parking is not feasible, consider placing some of the parking below grade (e.g., one or two floors) to reduce the size and bulk of the above-grade parking.
- Automated mechanical parking systems may be considered. Benefits such as smaller space requirements, lower lighting needs and reduced ventilation requirements will factor into the deci-sion. A Parking Management Plan will be required for approved mechanized parking systems.

Site Development shall take into account the following:

- Above-grade parking structures will be expected to be located away from major street frontages unless it can be demonstrated that other locations are not viable.
- Vehicular entries for parking structures should be placed on the street on which it will have the least negative impact.
- The layout of a parking garage should take into account and be integrated with existing traffic circulation patterns of surrounding streets and/ or internal site circulation systems. Entrances and exits should be located to minimize vehicles entering or exiting onto residential streets or busy intersections.
- Pedestrian circulation should be delineated and separated from automobile circulation. The use of landscaping, walkways and decorative hardscape is encouraged to emphasize pedestrian areas.

- Pedestrian routes from the parking structure lobby to the principal buildings served should provide an aesthetic transition compatible with the quality of the building.
- Trash enclosures should not be placed adjacent to points of pedestrian or vehicular access. Any trash enclosure located within the footprint of the parking structure should be enclosed on four sides.
- Locate and design vehicle entries so that they do not dominate the streetscape. Recess the garage vehicular entry portion of the facade or extend portions of the structure over the garage entry to help subordinate its impact.
- Subordinate the garage entrance to the pedestrian entrance in terms of size, prominence on the streetscape, location and design emphasis.
- Whenever possible, avoid vehicular entries along major pedestrian routes.
- Provide sufficient vehicle queuing space on-site to avoid backups onto public thoroughfares. Pay particular attention to stacking and queuing space if there are entry gates or other impediments to smooth traffic flow.
- Locate vehicular parking structure entries on a clear path and sequence from a building or drop off area, if one exists.
- Minimize the visibility of parking structures from the public realm. Avoid corner locations whenever possible.
- Parking structures shall meet the minimum setback and landscape standards of Section 3.3 General Development Standards, of this document.
- All appurtenances (i.e., transformers, ventilation shafts, etc.) should be located outside of any required setback and should be screened from public view.

Landscaping:

- The edges of any garage structure and vents into the garage visible above grade should be screened with evergreen plant materials. Earth berms and

other techniques to tie the garage structure into the surrounding grade level should be considered.

- Architectural treatments, artwork, lattices and other design features are encouraged for use on parking structures where blank walls occur. The design features should cover a minimum of 60% of the blank wall.
- If lattice is used, the material should be decorative and durable to enable vines to attach themselves for support.
- Water conservation should be an important consideration when selecting a plant palette. Plant materials should consistent with the landscape requirements of Section 2.5 Landscape Concept, of this document. An automatic irrigation system should be designed to provide deep watering for trees, shrubs and vines along with moisture sen¬sors to monitor and minimize water usage.

Parking Structure(s) Layout:

- Vehicle circulation within the parking structure should be continuous and uninterrupted at all levels. Dead-end parking aisles are not an ac¬ceptable solution to parking circulation unless all parking is designated as Reserved Parking. Where dead end aisles are unavoidable (e.g., for guest parking within a sloped ramp garage) provisions should be made for dedicated No Parking areas at the end of the aisle for easy turn around.
- Interior pedestrian paths should be visible to drivers and delineated to differentiate them from vehicle travel aisles.
- Maximum vehicle ramp grade the California Building Code requirements.
- Elevator and stair shafts, mechanical rooms and similar visual disruptions should be located to minimize the blockage of views between drivers and pedestrians.
- Pedestrian access should be designed to safely avoid pedestrian entry and exit of the garage via vehicular ramps and provide a minimum four (4)-foot wide pedestrian sidewalk along the side of every vehicular access driveway.

- Internal garage layouts should make provisions for car sharing priority spaces and electrical charg¬ing stations.
- Stall width and depth and aisle width should gen¬erally be in accordance with the City of Ontario Development Code Off-Street Parking Requirements (Chapter 6.0, Division 6.03).
- Parking structures should provide a minimum floor to ceiling height of eight (8) feet exclusive of structural elements and appurtenances. Ad¬ditional height will be required per California Building Code for disabled access.
- Tandem parking and mechanical lifts may be considered only when consistent with parking requirements of Section 3.3.5 Parking of this document.
- Avoid garage vehicular exit locations where the glare of headlights on departing cars would have adverse impact on uses across the street.

Architectural Designs and Details:

- The design of all parking structures should be more than a rectangular utilitarian box composed of concrete or steel beams and columns. Variation in forms and detail along with high quality facing materials are expected where viewable by project users and the general public.
- Special attention should be given to emphasizing the pedestrian entries of parking garages with special materials, landscaping, paving, architectural details and public art.
- Parking structures with frontages on public streets will receive additional design review scrutiny and will be expected to include high quality materials and finishes on those facades. The incorporation of brick, stone and precast concrete are pre¬ferred choices. The integration of metal panels or metal mesh screens may be considered.
- Exterior elevations should incorporate design components and materials utilized and compat¬ible with the primary building(s) within the Piemonte area.

Lighting:

- Parking garages should utilize full spectrum light¬ing to increase safety and comfort. The placement of fixtures should be designed to minimize light pollution from the garage.
- Utilize shielded fixtures to minimize light pollu¬tion and glare from both within and outside the garage.
- Design lighting levels for the unique circum¬stances and location of the garage. Higher levels are recommended for remote areas subject to security considerations (e.g., stairways, elevators and pedestrian access points.
- Interior walls and ceilings should be painted a light color to improve illumination.
- All mechanical equipment and piping should be painted to match the interior of the structure.

Security:

- For public safety, non-gated secured parking structures should provide natural surveillance by providing high visibility into the structure from adjacent activity and public areas.
- Locate and design elevators and stairways to allow internal and external visibility.

3.3.6 Structured Wiring

Residential (single-family and multi-family), commercial and industrial developments shall adhere to the City's Structured Wiring ordinance. An integrated structured wiring system (low-voltage wiring) provides infrastructure for today's technology applications and the framework for the future technology advances. Requirements and benefits of a structured wiring system include:

- Allows for uniform receipt and distribution of technology services.
- Ensures scalability of wiring for future technology advances.
- Provides consistent and identical wiring protocols throughout developments.

- Enables the property infrastructure to interface efficiently with broadband networks for highest bandwidth capacity.
- Adoption of these standards will minimize retrofitting required to ensure new property owners are capable of the latest technologies and services.

3.4 COMMERCIAL AND ~~ENTERTAINMENT/RETAIL~~ MIXED-USE DESIGN GUIDELINES

These two Land Use areas continue certain defining architectural elements evidenced elsewhere within the Piemonte Overlay e.g., archways, pitched roofs, articulated cornices, and accent elements. These elements will be incorporated and interpreted within the Commercial and Entertainment/Retail Land Uses, thereby establishing thematic design tie-ins with other Piemonte land uses, while providing flexibility to accommodate established corporate architectural features, building elevations, and footprints of nationally-recognized major tenants. These Land Uses will also incorporate other unifying thematic features and elements of the Piemonte Overlay including but not limited to: landscaping, streetscape, lighting, and signs.

Commercial, ~~Entertainment/Retail~~ Mixed-use, and Office building form and massing play a critical role in framing urban environments. Buildings should incorporate design and construction methods that add a human scale to the building massing and three dimensional detailing that casts shadows and creates visual interest on the facade.

- Buildings shall be oriented toward the street, where feasible, and designed to promote a pedestrian-friendly environment.
- Buildings may also be oriented away from the street, to frame interior courts, pedestrian walks and parking areas.
- Shadow patterns of adjacent buildings should be studied during the conceptual design phase so as to limit obstructed solar access.
- Blank walls facing Haven Avenue, Fourth Street, Concours Street and Ontario Center Parkway shall be avoided.

- Adjacent to the Via Villagio and Via Piemonte, building facades should consider a pedestrian orientation. This includes variation in massing, roof forms, ~~and~~ wall planes, and surface articulation. It is expected that the highest level of articulation will occur at front entries.
- Primary building entrances shall be clearly defined, visible and inviting. Building entrances shall incorporate one or more of the following:
    - Change in wall plane including recessed doors, archways, or enhanced trim around openings.
    - A projecting element above the entrance, such as an awning, shade device or architectural design feature.
- Loading and delivery areas should be clearly marked with directional signage and located to the side or rear of the structure.
    - Loading docks and service bays shall be a minimum of 20~~'~~ feet from any public street.
    - Service and delivery areas should be placed away from Haven Avenue, Fourth Street, Concours Street and Ontario Center Parkway.
    - Loading or unloading of trucks is prohibited between 10 PM and 7 AM unless it can be demonstrated that such activities would not exceed the noise limits of the Development Code.
- Trash enclosures should be designed using similar materials and colors as the surrounding buildings within the development. They shall be sited where least visible to the public and shall be roofed to prevent exposure to wind and rainfall. Where feasible, trash enclosures should be combined among parcels and tenants and pedestrian access should be provided.
- Work areas, equipment, and outdoor storage shall be screened from public view or be designed to complement the architecture.
- Buildings and on-site circulation systems shall be coordinated to minimize pedestrian and vehicle conflicts.
- Fire Department sprinkler assemblies shall be designed into the building or site plan, such that the assemblies are not in the public right-of-way or obstruct vehicle or pedestrian circulation.

3.4.1 Architectural Guidelines

The architectural styles for the Commercial, ~~Entertainment/Retail~~ Mixed-use and Office areas include architectural styles complementary to the existing buildings within the OCSP and the new residential buildings. These architectural styles include:

- Contemporary.
- Main Street.
- Mediterranean.
- Agrarian Industrial.

Additional styles may be proposed; however, they must follow the same principles and attention to detail as the specific vernaculars listed here.

3.4.2 Contemporary Style Guidelines

The Contemporary Style guidelines promote cutting edge architectural design appropriate to residential uses by using intersecting linear planes, flat roofs, cubic forms, wide overhangs, stacked stones, and the integration of landscape with the buildings. Exterior building materials may include stucco, concrete

horizontal or vertical siding, curtain walls, brick or stone veneers, glazing, architectural panels, and metal accents.

Mixed-use projects present a prime opportunity to create a distinctive development that would cater to high levels of pedestrian activity, entertainment venues, multi-family units, dining, passive and active recreation, botique retail, etc. Utilizing contemporary style architecture would allow design creativity in how the mixed-use spaces could be integrated together, such as placing retail on the ground floor retail and groupings of residential buildings with irregular angles and orientation on the upper floors. Color variations on building exteriors could be implemented to complement layers in building facades and architectural features to create visual interest and appropriate scale.

Table 3.2: Commercial Contemporary Style Guidelines

Element	Standards*	Permitted Enhancements
Roof Components	• Flat roof with or without ledges • Simple unadorned OR detailed parapet walls	• Accent roof features as appropriate • Signature towers OR vertical projections can extend above roof line • Cantilevered projections • Curved or arched roof
Architectural Components	• Utilitarian and "edgy" • Simple, clean forms	• Projections OR wall planes articulate facade
Wall Materials	• Stucco, metal, concrete OR cementitious siding • Contrasting wall materials and textures	• Asymmetrical facade • Horizontal OR vertical elements • Brick OR stone veneer • Metal accents • Concrete • Sunshades • Glass • Architectural panels
Trim & Details	• Color blocking as appropriate	• Metal awnings OR overhangs
Windows	• Aluminum store front OR curtain wall • Variety of window patterns	• Larger window modules • Long ribbons of windows sometimes wrapping around corners

* All of the standard characteristics shall be incorporated into the design of any building using this architectural style. Variations shall be subject to review and approval by the City.

3.4.3 Main Street Style

In the 19th century, typical Main Street architecture was built as a single building or in groups of buildings, with party walls. Brick store fronts could extend up to a block in length. These buildings varied in height from one to three or more stories. In urban settings, this style was often occupied by a business on the ground floor and offices, apartments or owner's residence above. Typically the building had a tripartite organization of base, middle and top. Entrances were located on- or off-center. The lower level was dominated by large windows framed by the building's corners and the panel of brick between floors. The upper levels sometimes included single or double bay windows, brick friezes, panels and decorative cornices. Other options include the use of corniced parapets, continuous sills or decorative lintels and string or belt courses dividing the wall laterally. The cornice functioned as a cap under which other elements were arranged and balanced.

Table 3.3: Main Street Style Guidelines

Elements	Standards*	Permitted Enhancements
Architectural Components	• Simple box, multi-story 'storefront' form with accent elements at entries • Recessed doorways, tower elements OR applied architectural accents at entries • Tripartite organization of base middle and top through use of horizontal belt course, change in material or massing offset	• Multiple building heights created by varied parapets, towers, vertical projections at corners and cornice design • Balconies • Colonnade • Raised stoop • Decorative pilasters • Horizontal modulation of about 25'
Roof Components	• Flat roof with parapet • Roof pitches not applicable • Accent roof forms OR projecting awnings encouraged	• Decorative cornice detail that unified the facade OR provides variety
Wall Materials	• Stucco with accent materials (siding, brick veneer, metal, scored stucco in accent color, etc.) • Neutral and accented colors appropriate to the materials used	
Trim & Details	• Awning OR projecting feature accenting overall design	• Features borrowed from traditional American Main Streets, appropriate to scale and massing of building
Windows	• Vertical, may be single OR multi-paned on upper stories, often grouped • Large single-paned OR vertical multi-paned on ground floor	• Projecting OR angled awnings • Pedimented windows at ground level • Transoms • Storefronts may have bulkheads

* All of the standard characteristics shall be incorporated into the design of any building using this architectural style. Variations shall be subject to review and approval by the City.

3.4.4 Mediterranean Style Guidelines

The Mediterranean style is a good example of a transplanted style developed in a climate zone similar to the Southern California climate. This old-world prototype has been refined, adapted and embellished into a truly eclectic classic style. The shallow pitched hipped roof, often with decorative brackets, identifies this style.

Table 3.4: Mediterranean Style Guidelines

Elements	Standards*	Permitted Enhancements
Architectural Components	• Simple box, multi-story 'storefront' form with accent elements at entries • Precast surrounds	• Medallions • Niches • Decorative Vents
Roof Components	• Flat roof with parapets or mansards and cornice elements OR hip ancillary roofs • "S" concrete tile if applicable	• Closed/shaped eave with corbels at accent elements
Wall Materials	• Stucco finish	• Brick OR stone accents
Trim & Details	• Awning OR projecting feature accenting overall design such as arcades, towers and loggias	• Horizontal belt course • Cast stone surrounds, precast trim • Base trim • Tile accents • Wrought iron grilles
Windows	• Arched, round top, OR pedimented accent windows at selected locations	• Paneled OR louvered shutters

* All of the standard characteristics shall be incorporated into the design of any building using this architectural style. Variations shall be subject to review and approval by the City.

3.4.5 Agrarian Industrial Style Guidelines

The Agrarian Industrial style has grown out of the early colonial development in the 1700s. As the American Frontier moved westward, the Agrarian style evolved according to availability of materials and technological advancements. Modern day architects have adapted this style to have an industrial twist with standing seam metal roofs and asymmetry. Roof ornamentation is a characteristic detail consisting of cupolas or ~~weather vanes~~weathervanes.

Table 3.5: Agrarian Industrial Style Guidelines

Elements	Standards*	Permitted Enhancements
Architectural Components	• Simple box, multi-story 'storefront' form with accent elements at entries	• Protruding wood headers, decorative, exposed rafter tails • Wood posts with brackets
Roof Components	• Flat roof with parapets OR mansards OR gable OR shed roofs	• Wrought iron details, • Standing seam metal roofs • Couplas
Wall Materials	• Stucco finish	• Brick OR stone accents • Siding
Trim & Details	• Siding accents	• Siding accents
Windows		• Dormer window accents • Shutters • Divided lites

* All of the standard characteristics shall be incorporated into the design of any building using this architectural style. Variations shall be subject to review and approval by the City.

3.5 OFFICE DESIGN GUIDELINES

Architectural concepts developed for free-standing office buildings will reflect modern interpretations of classic design elements. For example, office buildings will evidence classical orders of architecture including pilasters, entablatures, and pedestals. Building features and elements are typically more massive and grand at lower levels, transitioning to smaller expressions at the upper levels, with attention to details such as cornices, multi-mullioned windows, and articulated moldings. The overall building organization and visual presentation may be symmetrical with axial entryways or non-symmetrical.

Figure 3.2: Conceptual "Class "A" Office Building Elevation

In general, office uses are recognized as autonomous occupancies and will not necessarily reflect architectural features or design elements evidenced elsewhere within the Piemonte Overlay. However, office land uses will be thematically tied to other land uses by common site features such as landscaping, lighting, streetscaping, and sign elements.

Site features within the Office Land Use area will evidence materials and material contrasts employed elsewhere in the Overlay. Walkways, plazas, and other surface treatments evidencing flora recalling the Piemonte region could provide additional visual cues tying office land uses to other areas of the Overlay. Landscaping within the Office Land Use area may continue Italian-influenced planting schemes and landscape arrangements employed throughout the Piemonte site. For example, at the pedestrian level, plantings in planting beds, raised containers, and pots may be provided. Light fixtures on the building faces, walkway light bollards, and street lights, as well as street furniture selections within office properties will heighten this theme.

It is also noted that prominent signs proposed along Ontario Center Parkway and Concours Street will identify and announce the Piemonte site, and by visual inference, will include all adjacent properties northerly of these roadways, including proposed office land uses. Signs for individual office uses may also employ signature design elements common to other areas and land uses within the Piemonte site.

The more massive Class "A" office building concept to be implemented is presented in Figure 3.2: Conceptual "Class "A" Office Building Elevation. These major office structures will be located adjacent to Ontario Center Parkway. Other, one-and-two-story office buildings will be located to the west and east, proximate to Concours Street. At a reduced scale, one-and-two story offices will interpret the Class "A" office design elements described above.

Figure 3.3: Photographs of Existing Office Buildings in the OCSP

3.6 SPECIAL USE/HOTEL DESIGN GUIDELINES

One hotel is allowed within the Piemonte Overlay located at the northeast corner of Ontario Center Parkway and Via Piemonte, immediately north of the Arena in Subarea 10. The hotel ~~will be~~ is constructed as an autonomous free-standing occupancy. The hotel architecture ~~will~~ incorporates modern designs and materials selections similar to those employed for office uses. The hotel is thematically tied to the other land uses by such site features as common landscaping treatments, streetscape elements, and signage.

Site features within the Special Use/Hotel Land Use area include materials and material contrasts employed elsewhere in the Overlay. Landscaping within the Special Use/~~hotel~~Hotel Land Use area continues southern Italian-influenced planting schemes and arrangements. For example, at the pedestrian level, generous plantings in both planting beds and raised containers and pots will include aromatics such as rosemary.

Additionally, at key locations and entrances, arbors and monument statements identify the hotel property as part of the Piemonte at Ontario Center. Walkways, plazas, and other surface treatments evidencing the themes of grapes and flora recalling Italy's Piemonte region provide additional visual cues which tie hotel land use to other areas.

It is also noted that prominent signs proposed along Ontario Center Parkway and Concours Street identify and announce the Piemonte Overlay, and by visual inference, will include the adjacent hotel property northerly of these roadways. Signs for hotel use may also employ signature design elements common to other areas and land uses within the Piemonte Overlay.

3.7 RESIDENTIAL GUIDELINES

3.7.1 Site Planning Criteria

The following site planning criteria should be treated as design guidelines for parcel site planning and community placemaking.

3.7.1.1. Planning for Active Spaces

- Building massing, design, and setbacks shall reinforce a pedestrian-scale for the street scene without generating unusable pockets or dead spaces.
- Buildings are encouraged to be built to the minimum setback line to create a continuous street edge.
- Buildings should be oriented toward streets, pedestrian pathways and/or active spaces.
- Where building design undulates, spaces along the pedestrian realm should be large enough to foster visual interest, but not too deep to disrupt the continuity of the street.
- Coordination between parcels is encouraged for building scale, massing, architecture, and pedestrian amenities.
- Open spaces and community facilities should be visible from adjacent dwellings to help promote site safety.

3.7.1.2 Privacy

Privacy is an important consideration in residential and mixed use site planning. Innovative site planning and design techniques should be used to preserve privacy while promoting social opportunities. In particular, windows of units should be located to minimize visual intrusion on neighbors' bedroom windows. Thoughtful and innovative techniques, including landscaping, should be incorporated where appropriate to provide privacy to residents.

3.7.1.3 Drive Aisle Treatments

Drive aisle areas have evolved from purely functional space to a space that residents experience daily, and may include front doors and garage access. Design of these areas shall address the functional and aesthetic features to create a pleasant experience for residents. At least three of the following shall be implemented along the parking areas:

- Massing offsets (layered wall planes, recesses or cantilevers) of at least 6 inches.
- Window trim, colors, and selected details from the front elevation.
- Pedestrian gates.
- Enhanced garage door patterns or finishes.
- Variety of garage doors using color or design elements.

Fire Department connections, sprinkler post indicator valves, fire hydrants, and standpipes will be installed and screened as required by NFPA 13, 24, and City of Ontario standards.

3.7.1.4 Trash Enclosures

- Refuse and recyclable materials storage areas shall be enclosed consistent with paragraph 6.01.010.F.4 Refuse Storage Areas of the Ontario Development Code, except that trash enclosures may be attached to structures.
- All refuse/recyclable materials areas, mechanical devices, and utility area screening shall be finished using materials, vocabulary, and details compatible with the surrounding architecture.
- Gates shall be view-obstructing and constructed of decorative tubular steel, painted to match or complement the adjacent buildings.
- All refuse/recyclable material enclosures shall be constructed with a solid roof to prevent exposure to wind and rainfall.

3.7.2 Residential Building Form and Massing

Building form and massing play a critical role in framing urban environments. Buildings should incorporate design and construction methods that add a human scale to the building massing and three dimensional detailing that casts shadows and creates visual interest on the facade.

- The highest level of articulation shall occur on the elevations facing the street or drive.
- All elevations shall include wall plane offsets to add visual interest consistent with the following:
    - Massing offsets (layered wall planes, recesses or cantilevers) of at least 6 inches.
    - Window trim, colors, and selected details from the front elevation.
- The overall composition of massing, scale, material, color, and design detail is more important than the level of articulation.
- Prominent vertical or horizontal building features may be used to accentuate key elements and provide variation in wall planes.
- Projections, overhangs, and recesses should be used to enhance shadow, articulation, and scale of primary edges.
- Architectural elements that create shadow, relief, and sheltered pedestrian areas, such as balconies, trellises, recesses, overhangs, awnings, stoops, and porches are encouraged.

3.7.2.1 Roofs

Roof forms contribute to the overall building design and have a large impact on the mass, scale, and design of the community where visible from the street level where visible.

- Roof design shall incorporate variation in roof forms such as an aesthetic combination of changes in plane, form, ridgelines, and/or heights appropriate to the architectural style.
- Roof forms, material, and fascia elements shall be consistent with the overall

design vocabulary of the building and should appear authentic.

- Variety in pitch (sculpted).
- Roof vents should be painted to match or contrast the color of the roof material.
- Fascia design should be complementary to the architectural vernacular.
- Skylights, if used, shall be designed as an integral part of the roof; "bubble" skylights are not permitted. Skylight framing materials should be bronze anodized or colored to match the adjacent roof materials.

3.7.2.2 Parapets

If parapets are used, one or more of the following detail treatments should be included:

- Pre-cast or simulated pre-cast elements.
- Contiguous banding or projecting cornice.
- Dentils.
- Caps.
- Corner details.

3.7.2.3 Materials and Detailing

Architectural detailing of building facades is a key feature of quality design. Special attention is required in the treatment of entries (doors, vestibules, porches, courtyards) using enhanced trim or details to emphasize these as primary focal points. Articulated or unique window treatments further enhance wall surfaces, can provide shade and wind protection, and contribute to the character of the neighborhood.

- All building elements, such as materials and color, detail elements (porches, balconies, courtyards, awnings, surface treatments, and materials), and functional elements (garage door lights, exterior stairs, guardrails, gutters, downspouts, screen walls, electrical enclosures, or similar features) should be integral to the buildings design, consistent with the architectural vernacular of the building, and complement the surrounding neighborhood.

- Construct buildings using quality materials to create a community of character and long-term value. A variety of materials and textures shall be incorporated within the design theme of the community.
- Durable, quality materials designed to appear as an integral part of the design shall be used.
- Material changes should occur at intersecting planes, preferably at inside corners of walls or other meaningful locations where architecture elements intersect.
- Garage doors should have varied door patterns, colors or finishes.

3.7.2.4 Functional Elements

- All roof-mounted equipment shall be screened from ground level view through the use of parapets or other effective architectural elements.
- Ground mounted equipment and meters shall be visually concealed and designed to not detract from the architecture of a building.
    - Air conditioning units shall be screened by walls or landscaping a minimum of 6 inches taller than the equipment and located away from project amenities, except when located in courts and lanes with limited or no screening.
    - Where possible, group equipment.
    - Electrical meters should be ganged and located behind doors.
    - Natural gas meters should be grouped.
- Mechanical devices such as exhaust fans, vents, pipes, gutters, and downspouts shall be painted to match adjacent surface, or colored to match accent colors.

3.7.2.5 Color Palette and Application

The color and materials palette should be selected with the design objectives of avoiding monotony, provide depth and interest with a variety of colorful schemes, and promoting visual diversity.

- Colors should complement the architectural style and overall color scheme

of the building.

- Selected finish materials should be appropriate in their use and application, be durable, and of high quality.
- Color blocking, or the use of multiple colors, should be used only where appropriate to the architectural style.
    - Changes should occur at logical termination points, generally at inside corners.
    - Field color used at the base of the building should continue down to the foundation or finished grade.
- Accent colors should be used on architectural features and ornamentation elements.
- Grout colors should harmonize and blend with the colors found in the stone rather than contrast with it.
- All exposed woodwork, beams, posts, railings, etc. should be colored to match the fascia.
- Trim colors on window trim and recesses should be complementary but discernible from the building color.

3.7.3 Contemporary Architectural Style

All residential buildings shall have a fresh and Contemporary style suited to the more urban setting within the OCSP area. Based heavily on the modern remodeling of warehouse spaces to contemporary and "hip" loft or flat spaces, this style is suited for dense residential buildings in neighborhoods that blend business, industry, and living in a single environment.

The Contemporary style includes simple and clean forms detailed with materials, projections and windows for indoor/outdoor living. The style emphasizes interlocking volumes with a collage of colors and materials. Architectural elements such as awnings, balconies, and trellises can be appended to the volumes, allowing indoor/outdoor spaces to be created. Vertical and horizontal elements provide interest to the residential structures. The roofs may be flat with parapets, sloped, or a combination of both. Windows should be placed in areas to overlook common areas and increase surveillance for these areas. Refer to Table 3.6: Residential Contemporary Style Guidelines.

Contemporary Elements:

- Plan form is more cubic, expressed in bold, simplified forms.
- Roofs are typically shielded by parapets and may have accent roof features such as curves, gables, hips or sheds.
- Wall materials typically consist of stucco, metal, brick, stone and/or siding; it is recommended that design be comprised of at least two different surface materials.
- Projections to articulate facades are typical and may include building wall planes, awnings, overhangs, canopies, window trim or accent roof forms.
- Braces in conjunction with projections are typical.
- Windows are typically a primary feature of the elevation; design sometimes includes groupings, unique size or shape or oversized and symmetrical mullions.
- Handrails and guardrails enhance the elevations.
- Color blocking is typical.

Table 3.6: Residential Contemporary Style Guidelines

Element	Standards*	Permitted Enhancements
Roof Components	• Flat roof with or without ledges OR shallow pitched roofs with broad low facing gables and hips • Simple unadorned OR detailed parapet walls • Concrete flat tiles • Wide eave overhangs OR no overhangs	• Accent roof features as appropriate • Signature towers OR vertical projections can extend above roof line • Varied roof heights • Shed roof • Cantilevered projections • Roof decks
Architectural Components	• Utilitarian and "edgy" • Simple, clean forms	• Projections OR wall planes articulate facade
Wall Materials	• Stucco, metal OR cementitious siding • Contrasting wall materials and textures	• Projections OR horizontal banding between floors • Asymmetrical facade • Horizontal OR vertical elements • Brick OR stone veneer • Metal accents • Concrete • Sunshades • Glass
Trim & Details	• Color blocking as appropriate	• Metal awnings OR overhangs • Metal, cable, glass OR panel balcony railings
Windows	• Variety of window patterns • Minimal trim	• Simple industrial dark window trim • Larger window modules • Long ribbons of windows sometimes wrapping around corners • Nontraditional window shapes and placements • Glass blocks • Round windows • Bay windows
Entries	• Understated	

* All of the standard characteristics shall be incorporated into the design of any building using this architectural style. Variations shall be subject to review and approval by the City.

3.8 LANDSCAPE

3.8.1 Landscape/Streetscape Design Guidelines

The Piemonte Overlay landscape concept merges the vineyard influences of the Piemonte region of northern Italy with contemporary low~~-water~~ water-use plant material. ~~Skyline palms act as "way-finding" features and provide appropriate scale to this vertical urban environment. Pedestrian-scaled canopy shade trees, as well as bold colors and foliage textures of the understory plant material, enhance the streetscape walking experience. This understory~~ Landscape patterns and street furniture create a harmonious, functional environment. Tall trees, such as towering palms, eucalyptus, and other drought tolerant trees, act as "way-finding" features and provide appropriate scale to the vertical urban environment. Broad, spreading canopy trees enhance and add variety to the streetscape walking experience will be rich in varieties of ornamental grass, succulents, and flower groundcovers creating this semi-arid and environmentally sustainable landscape environment.

Plant materials will be derived from an arid environmentally sustainable palette, including Eucalyptus, Olives, Oaks, and Palms. Areas of low water-~~using~~use shrubs, groundcovers and ornamental grass shall also be employed where appropriate. Other major components of the Piemonte landscape/streetscape concept include pedestrian paths and sidewalks linking the Piemonte Overlay with surrounding areas. Refer to Figure 3.4: Characteristic Landscape Features.

Lighting will be employed throughout to highlight pedestrian areas, reinforce architectural character, and enhance safety and security. Thematic lights and light standards along major streets and within parking areas will act as defining and cohesive design elements, identifying properties as components of the Piemonte Overlay.

Other characteristic and defining design elements of the landscape/streetscape concept will include distinctive monumented entries, pedestrian amenities, and

Figure 3.4: Characteristic Landscape Features

detailed accents such as potted plants. Enhanced paving and embossed/engraved surface treatments will be provided at key locations reinforcing a sense of place.

Characteristic examples of hardscape features to be provided within the Piemonte site are illustrated in Figure 3.5: Characteristic Streetscape Features. Figure 3.6: Landscape Section Location Diagram identifies locations which provide illustrative examples of landscape/hardscape features. Subsequently, Figures 3-8 through 3-10 illustrate integration and application of these features within the Piemonte Overlay.

Entry Statements

Figure 3.9: Piemonte Overlay Entry Hierarchy identifies the locations and hierarchy of Overlay entries (Existing Primary, Secondary, and Tertiary and proposed project entries). Figures 3-11 through 3-13 illustrate the entry design concepts to be implemented at each type of entry. Sufficient area on both sides of entry roadways should be reserved to allow for construction of entry statement features and associated landscaping. To these ends, 400 square feet in a roughly square configuration shall be reserved at each Primary entry intersection corner (800 square feet total, 400 square feet allocated to each intersection corner); 300 square feet in a roughly square configuration shall be reserved at Secondary entry intersection corner (600 square feet total, 300 square feet allocated to each intersection corner); and 200 square feet in a roughly square configuration shall be reserved at each Tertiary entry intersection corner (400 square feet total, 200 square feet allocated to each intersection corner). The entry designs will be submitted at the time of the development application.

OCSP Entry Treatments

Figure 3.9: Piemonte Overlay Entry Hierarchy also identifies the location of primary and secondary entries to the OCSP, which entries are shared intersections with the Piemonte Overlay at Ontario Center. At these locations, the Piemonte Overlay will integrate and complete entry statements and intersection treatments consistent with current requirements of the OCSP. Schematic designs and dimensional criteria for these OCSP entry treatments are presented in Figure 3.13: Existing OCSP Entry Statement. Please refer also to related discussions presented in Section 3.8.4 Signs.

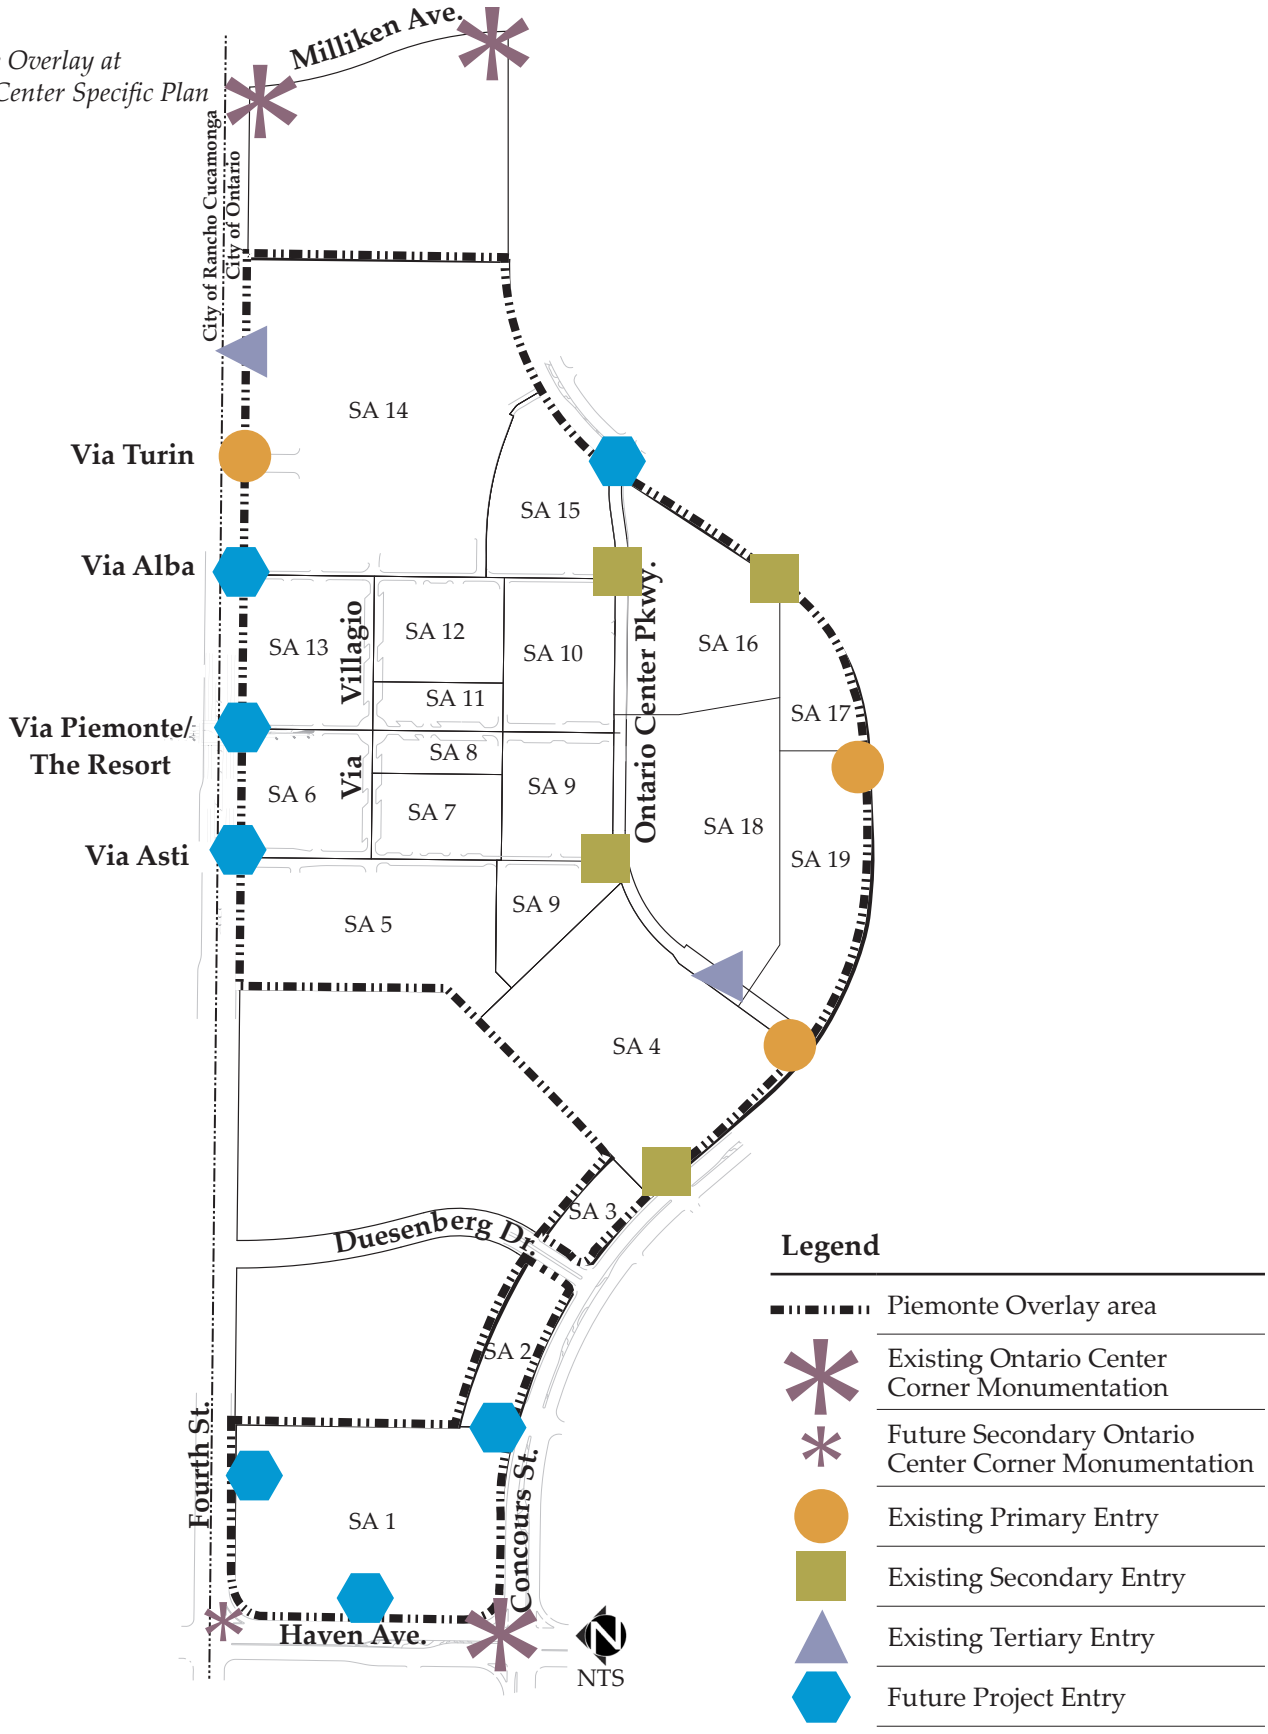

Figure 3.9: Piemonte Overlay Entry Hierarchy

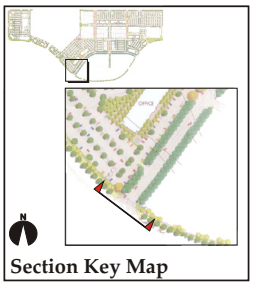

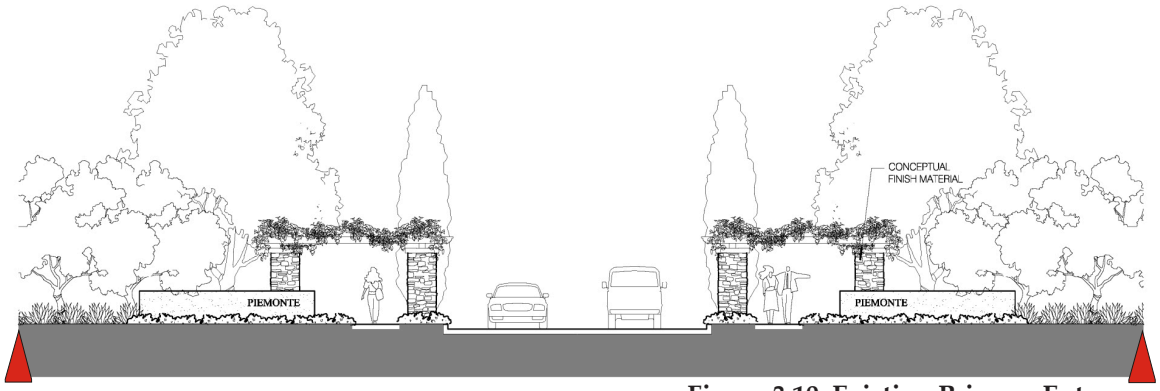

Figure 3.10: Existing Primary Entrance

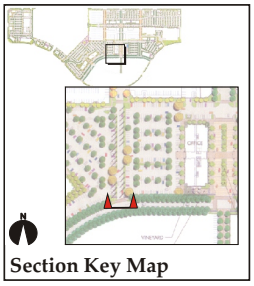

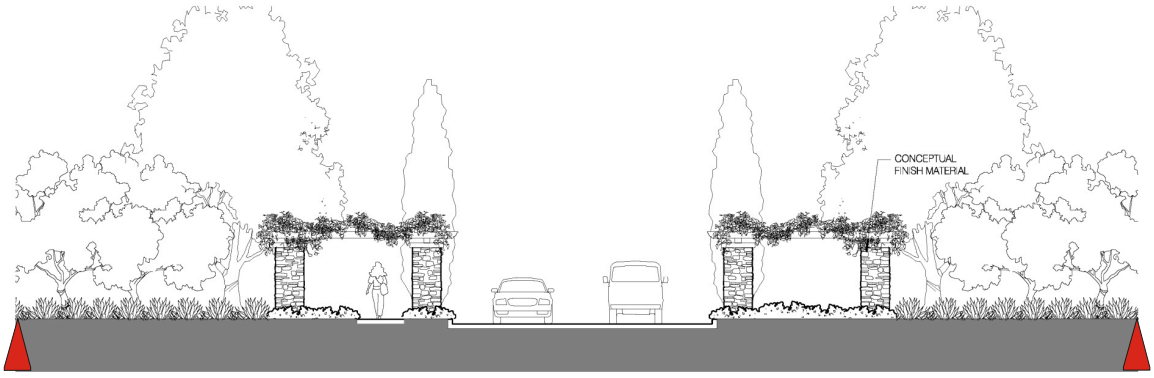

Figure 3.11: Existing Secondary Entrance

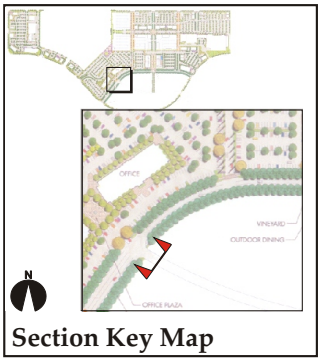

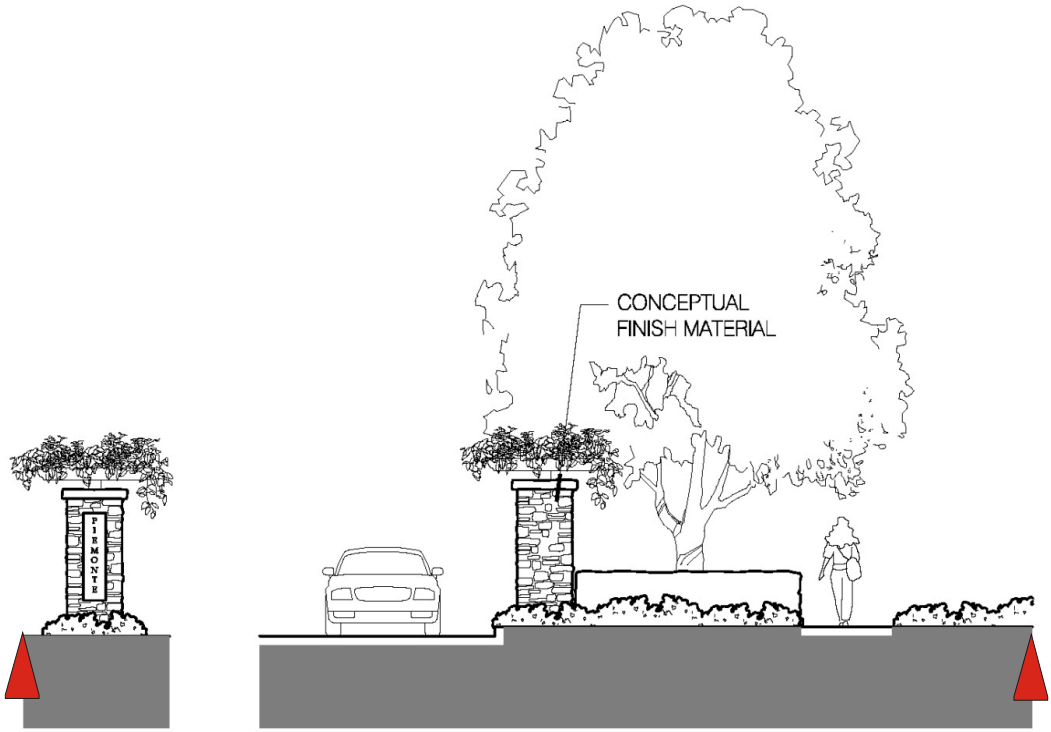

Figure 3.12: Existing Tertiary Entrance

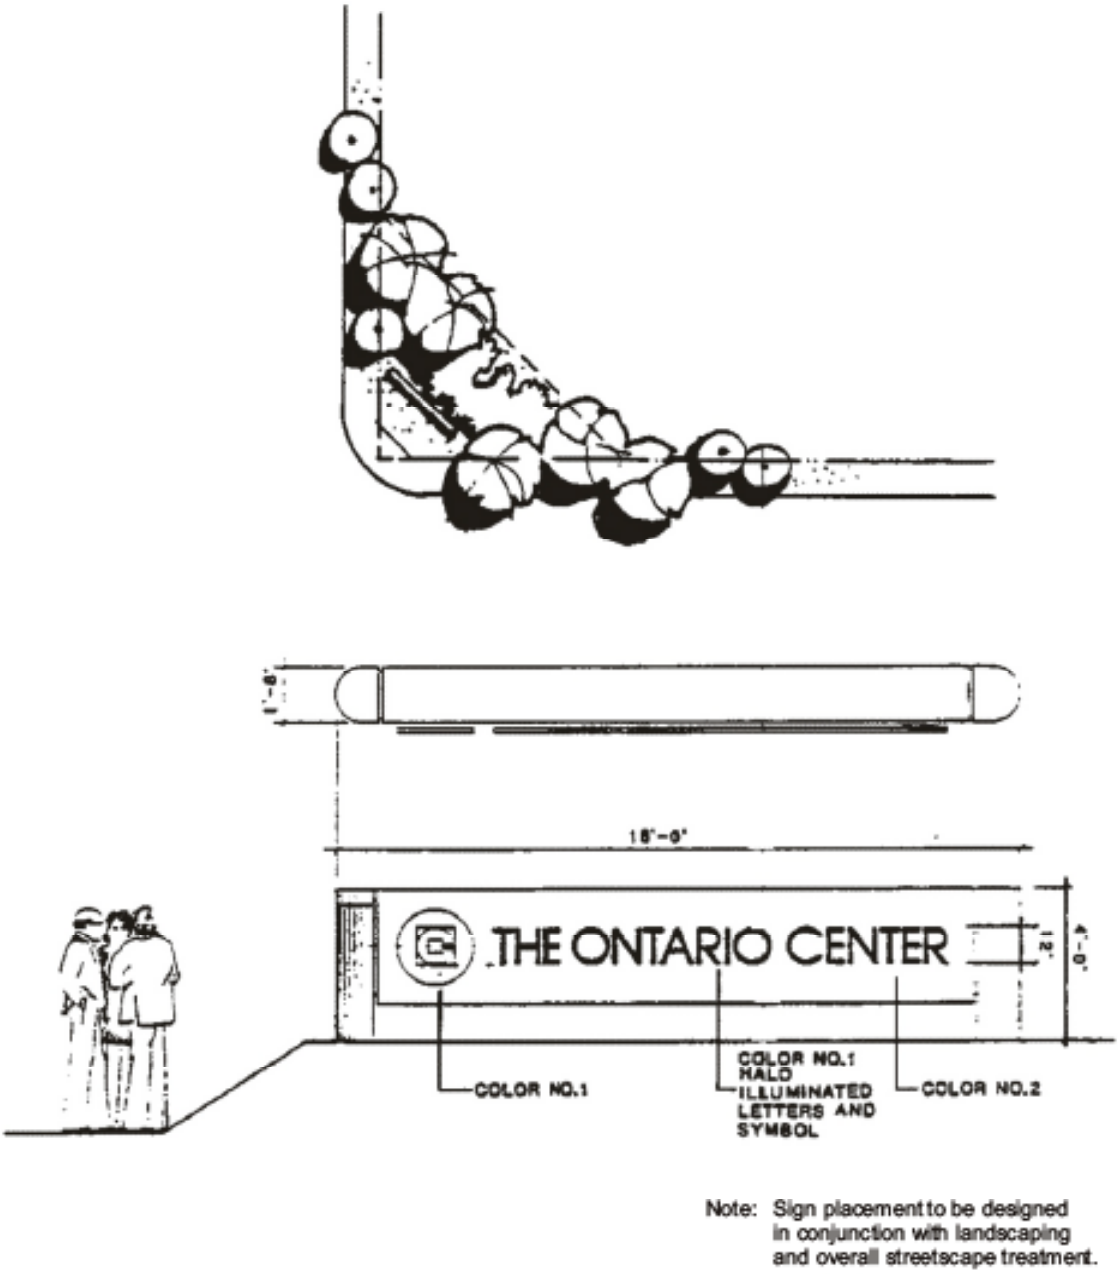

Figure 3.13: Existing OCSP Entry Statement

3.8.2 Landscape/Streetscape Development Regulations

3.8.2.1 General Landscape and Planting Requirements

General landscape/streetscape development regulations presented below are representative of area-wide requirements of the OCSP and shall guide the selection and installation of landscape improvements within the Overlay:

- Shrubs shall be 5 gallon minimum.
- All street trees shall be planted and staked per City of Ontario Standards. All trees receive separate tree bubbler irrigation.
- Trees shall be planted in minimum sizes and ratios presented in Table 3.7: Piemonte Overlay Tree Planting Schedule.

Table 3.7: Piemonte Overlay Tree Planting Schedule

Minimum Tree Size Mix	
Minimum Percent Mix of Required Trees	**Size**
10%	48-inch box or larger
15%	36-inch box
25%	24-inch box
50%	15-gallon
Minimum Tree Species Mix	
Number of Trees Proposed	**Number of Tree Species Required**
20 or fewer	2
21 to 30	3
31 to 40	4
More than 40	5

Tree planting ratios for major streets shall be:

- Primary tree species: 40 percent
- Secondary tree species: 60 percent
- Trees in parkways and medians shall be at an average ratio of 4 trees per 100 linear feet of frontage unless otherwise specified.

Planting for major street medians and parkway shall be~~,~~ ground cover, ornamental grasses and shrubs. In addition to the above requirements, 15 percent of the median area shall be devoted to cobble treatment. Exceptions to the above requirements may be granted by the City.

Staking and guying of all trees shall be in accord with City standards. Where appropriate, vines or suitable shrubs shall be used throughout the Piemonte Overlay for graffiti deterrence. Replacement of dead or broken plant material shall be the responsibility of the property owner. All landscaped areas within the Overlay shall be maintained to City standards. All landscape and irrigation plans shall be submitted to, and approved by, the City. Changes in the landscape, irrigation plans, or plant materials may be substituted as necessary by the City.

3.8.2.2 Public Streetscape

Each public street along the perimeter of the Overlay has a set of designated primary trees, complemented by a range of subordinate (or secondary) tree plantings. The previous Figures 3-9 and Figure 3.8n: Via Turin Private Streetscape Section and Plan and Figures 3-11 and Figure 3.8l: Via Alba - Middle Section (South of Via Villagio) Private Streetscape Section and Plan schematically present how the streetscape was implemented along these streets. Significant elements identified within these Figures include a meandering sidewalk, bordered on both sides by shrubs, groundcover, ornamental grass, and primary and secondary trees. Ornamental grass and trees will be located between the sidewalk and street pavement. Trees, shrubbery and groundcover will be located behind the sidewalk. Refer to Appendix E for the Applicable OCSP Planting Matrix for these streets.

3.8.2.3 Private Streetscape

Each private drive within the Piemonte Overlay also has designated primary and secondary tree plantings refer to Table 3.8: Private Street Planting Matrix and Table 3.9: Internal Trees for the species allowed for each drive.

Table 3.8: Private Street Planting Matrix

Species		Primary Entrance Statement	Secondary Entrance Statement	Via Asti	Via Piemonte	Via Alba	Via Villagio
Latin name	Common name						
Citrus species	NCN			X		X	
Cupressus sempervirens	Italian Cypress	X	X			X	
Olea europaea	Fruitless Olive			X	X		X
Quercus suber	Cork Oak			X	X		
Phoenix canariensis	Canary Island Date Palm				X		X
Phoenix dactylifera	Date Palm				X		
Pinus canariensis	Canary Island Pine					X	
Pittosporum undulatum	Victorian Box			X		X	
Platanus acerifolia	London Plane			X			X
Washingtonia filiferia	California Fan Palm	X	X	X		X	X

Table 3.9: Internal Trees

Latin name	Common name
Trees	
Arbutus 'Marina'	Strawberry Tree
Bambusa oldhamii	Clumping Giant Timber Bamboo
Bauhinia purpurea	Orchid Tree
Cercidium hybrid 'Desert Museum'	Hybrid Palo Verde
Citrus sinensis	Orange Tree
Eucalyptus citriodora	Lemon Scented Gum
Jacaranda mimosifolia	Jacaranda
Koelreuteria paniculata	Golden Rain Tree
Lagerstroemia indica	Crape Myrtle
Magnolia grandiflora 'D.D. Blanchard'	Southern Magnolia
Magnolia grandiflora 'Little Gem'	Southern Magnolia
Michelia champaca 'Alba'	White Fragrant Himalayan Champaca
Olea europaea	Olive
Pinus caneriensis	Canary Island Pine
Pyrus calleryana 'Chanticleer'	Chanticleer Pear
Rhus lancea	African Sumac
Strelitzia nicholai	Giant Bird-of-Paradise
Tristania conferta	Brisbane Box
Palms	
Archontophoenix cunninghamiana	King Palm
Brahea armata var. Clara	Droopy Mexican Blue Fan Palm
Chamaerops humilis	Mediterranean Fan Palm
Cycas revoluta	Sago Palm
Syagrus romanzoffianum	Queen Palm

3.8.2.4 Plant Palette/Planting Matrix

Table 3.10: Shrub Plant Palette for Parkways and Streetscapes and Table 3.11: Shrub Plant Palette for Internal Courtyards and Landscape Areas Not Adjacent to Streetscapes lists environmentally sustainable plant materials are also allowed within the Overlay to reinforce the architectural and land use planning themes. Plant varieties as indicated above will be employed in varying combinations throughout the Overlay.

Table 3.10: Shrub Plant Palette for Parkways and Streetscapes

Latin name	Common name
Acacia cognata 'Cousin Itt'	Little River Wattle
Agapanthus africanus	Lily-of-the-Nile
Agave 'Blue Flame'	Blue Flame Agave
Aloe arborescens	Tree Aloe
Aloe bainesii (barberae)	N.C.N.
Aloe vera	Medicinal Aloe
Buxus microphylla japonica	Japanese Boxwood
Callistemon viminalis 'LittleJohn'	Dwarf Bottlebrush
Carex species	Blue Sedge
Carissa grandiflora 'Green Carpet'	Natal Plum
Citrus Kumquat Hybrid 'Tavares'	Kumquat
Cordyline australis 'Red Star'	Red Grass Palm
Dianella tasmanica 'Silver Streak'	Silver Streak Flax Lily
Feijoa sellowiana	Pineapple Guava
Hemerocallis 'Dwarf Red'	Day Lily
Ilex crenata 'Sky Pencil'	Sky Pencil Ilex
Juncus patens	California Gray Rush
Juniperus scopulorum 'Skyrocket'	Skyrocket Juniper
Leucodendron 'Jester'	Sunshine Conebrush
Leucophyllum langmaniae 'Lynn's Legacy'	Lynn's Legacy Texas Ranger
Leymus condensatus 'Canyon Prince'	Canyon Prince Wild Rye
Ligustrum japonicum 'Texanum'	Wax Leaf Privet
Lomandra longifolia 'LM300'	Breeze Dwarf Mat Rush
Moraea bicolor	Fortnight Lily
Olea europaea 'Montra' P.P.#6266	Little Ollie Dwarf Olive
Pelargonium hortorum	Common Geranium
Pennisetum 'Fairy Tails'	Fairy Tails Fountain Grass
Penstemon 'Firebird'	Beard Tongue
Pittosporum Species	Tobira
Podocarpus elongatus 'Monmal'	Icee Blue Yellow-Wood
Rhaphiolepis species	Indian Hawthorne
Rosa f. 'Trumpeter'	Trumpeter Rose
Rosa x 'Noare'	Flower Carpet Red Groundcover Rose
Strelizia reginae	Bird-of-Paradise
Tecoma stans 'Sierra Apricot'	Sierra Apricot

Table 3.11: Shrub Plant Palette for Internal Courtyards and Landscape Areas Not Adjacent to Streetscapes

Latin name	Common name
Acacia cognata 'Cousin Itt'	Little River Wattle
Agapanthus africanus	Lily-of-the-Nile
Aloe arborescens	Tree Aloe
Aloe bainesii (barberae)	N.C.N.
Aloe vera	Medicinal Aloe
Buxus microphylla japonica	Japanese Boxwood
Callistemon viminalis 'LittleJohn'	Dwarf Bottlebrush
Carex species	Blue Sedge
Carissa grandiflora 'Green Carpet'	Natal Plum
Citrus Kumquat Hybrid 'Tavares'	Kumquat
Cordyline australis 'Red Star'	Red Grass Palm
Dianella tasmanica 'Silver Streak'	Silver Streak Flax Lily
Feijoa sellowiana	Pineapple Guava
Hemerocallis 'Dwarf Red'	Day Lily
Ilex crenata 'Sky Pencil'	Sky Pencil Ilex
Juncus patens	California Gray Rush
Juniperus scopulorum 'Skyrocket'	Skyrocket Juniper
Leucodendron 'Jester'	Sunshine Conebrush
Leucophyllum langmaniae 'Lynn's Legacy'	Lynn's Legacy Texas Ranger
Leymus condensatus 'Canyon Prince'	Canyon Prince Wild Rye
Ligustrum japonicum 'Texanum'	Wax Leaf Privet
Lomandra longifolia 'LM300'	Breeze Dwarf Mat Rush
Moraea bicolor	Fortnight Lily
Olea europaea 'Montra' P.P.#6266	Little Ollie Dwarf Olive
Pelargonium hortorum	Common Geranium
Pennisetum 'Fairy Tails'	Fairy Tails Fountain Grass
Penstemon 'Firebird'	Beard Tongue
Pittosporum Species	Tobira
Podocarpus elongatus 'Monmal'	Icee Blue Yellow-Wood
Rhaphiolepis species	Indian Hawthorne
Rosa f. 'Trumpeter'	Trumpeter Rose
Rosa x 'Noare'	Flower Carpet Red Groundcover Rose
Strelizia reginae	Bird-of-Paradise
Tecoma stans 'Sierra Apricot'	Sierra Apricot

3.8.2.5 Other Elements

Design and development standards applicable to other features represented within the Overlay area are discussed below.

Parking Lot/Streetscape Interface

As provided for under the OCSP to implement the informal landscape concept proposed along the major arterials within the Piemonte Overlay parking setbacks within the Overlay may be averaged.

Limited Use Areas

Standard limited use areas shall be maintained within the Piemonte Overlay as required by the City Engineering Department. Limited use areas restrict development and obstructions proximate to intersections, thereby establishing adequate site distances and promoting pedestrian and vehicular safety.

Retaining Walls

It is anticipated that certain areas of the Piemonte will require construction of expansive retaining walls which will be exposed to public view. Screenwalls may also be introduced where protection from intrusive views may be warranted. The following standards will be observed for expansive walls constructed within the Overlay:

- Visual impact of walls should be minimized by limiting wall heights to five (5) feet whenever possible.
- Walls will be stepped to allow for screen planting whenever possible.

Landscape Grading

Landscaped areas within the Overlay area will be graded as swales to the maximum extent practicable in order to maximize conservation of irrigation water and natural rainfall run-off.

3.8.3 Piemonte Open Space and Urban Recreational Opportunities

The Piemonte Overlay has a unique opportunity to provide an amazing active open space amenity, due to the connection and adjacency to the ~~Citizens Business Bank~~ Arena. Several of the private streets have been designed so they can easily be closed off to vehicular traffic, thereby creating a pedestrian open air mall.

Special events and festivals, along with farmer's markets, would benefit from this flexible urban activity. Most useful, however, would be pre- and post-game celebrations extending up from the ~~Citizens Business Bank~~ Arena. Physically expanding the connection to the restaurants and retail component, which will be directly located east and south of the Arena and ~~just~~ one block to the north, will not only create an economic benefit, but more importantly foster a social connection ~~of "like-minded" people~~among event attendess and other visitors; as well as create a hub of activity.

3.8.4 Signs

The following discussions identify visual attributes of, and define the standards for, signs within the Piemonte Overlay. The intent is to permit flexibility of design consistent with the proposed mix of land uses, and to provide a cohesive system of signs that are visually coordinated and aesthetically pleasing.

Various signs and monumentation within the Piemonte Overlay will provide identity and reinforce the land use plan and architectural design of the proposal. Sign design and details will relate to the architectural character, support the overall design concept, and reflect the proposed varied architectural styles.

The Sign Design Guidelines and Sign Regulations presented below constitute the basis of the Master Sign Program for the Piemonte Overlay, which Program is subject to review and approval by the City as provided in Chapter 4. The Master Sign Program will illustrate and demonstrate thematic integration of signs within the overall design, as well as internal compatibility of signs with each other, and with other elements. Further, as verified by the City through the review

processes, all signage will comply with applicable provisions of the Manual on Uniform Traffic Control Devices (MUCTD).

The Master Sign Program will be developed concurrent with design of each individual Project. As a minimum, a draft of the Master Sign Program will be provided to the City for review prior to issuance of the first building permit within the applicable project site, with final approval of the Master Sign Program to be accomplished prior to issuance of the first Certificate of Occupancy. Signs proposed for individual development projects within the Piemonte Overlay will be reviewed by the Planning Department/City for consistency with the Piemonte Sign Program.

3.8.4.1 Sign Design Guidelines

The following Sign Design Guidelines will establish and reinforce the identity of the Overlay, and provide a cohesive informational and directional graphic system. The detailing and style of signs shall relate to the architectural themes proposed, and shall support the Piemonte development concept while contributing to the overall ambience.

Thematic Character

Interesting and colorful signs will serve to attract patrons and facilitate desired circulation within the Piemonte. Signs will also establish and reinforce the development character within the Piemonte Overlay. The goals of the Piemonte sign guidelines are to:

- Foster variety in signs, including variety of size, design, placement, detail, shape and color.
- Encourage the use of design elements which interpret and incorporate thematic architectural elements.

To achieve these goals, the following guidelines will be followed in the design and implementation of signs within the Piemonte Overlay:

- Signs shall exhibit a varied mix of designs, colors, shapes, materials, and

fabrication technologies to reinforce the architectural themes. For example, modern office buildings within the Overlay will introduce signs evidencing modern designs, and which interpret architectural styles materials and styles of the buildings they (the signs) identify. The use of certain common sign colors, design elements, and/or language (e.g., "XYZ Business at Piemonte"), will lend to a cohesive sense of the Piemonte Overlay.

- Monument entry signs shall be integrated into cohesive landscape treatments.

Sign Categories

The following general categories of signs will be implemented in the Piemonte Overlay.

Perimeter Identity Signs

- **Perimeter Monumentation.** Entry and perimeter statements identifying the overall property and corporate identifications as applicable, consisting of vertical or horizontal monument signs which are integrated into landscape features.
- **Perimeter and Tenant Identification Signs.** Signs and identification statements denoting the Piemonte Overlay, as well as illuminated logos and tenant images which are integrated into building facades and roof edges.
- **Perimeter Directional Signs.** Directional signs located on the perimeter of Piemonte Overlay.

Internal Directional/Informational Signs

- **Site Circulation Signs.** Signs which facilitate pedestrian and vehicle circulation and assist drivers to identify areas within the Overlay while reinforcing the overall Overlay. The character of these signs will reflect the varied architectural themes employed within Overlay.
- **Interior Banners.** System of pole-mounted banners for identification purposes. It is anticipated that banners would be employed primarily in the more informal settings of the Commercial areas.

- **Regulatory Signs.** Regulatory signs will be provided consistent with City requirements. To the extent feasible, these signs will continue and interpret the Overlay architectural and landscape/streetscape themes.

Tenant Signs

Tenant signs will reflect individual occupancies, as determined by specific user requirements, including but not limited to: corporate logos, colors, and sign configurations. As a component of the City's development review process, tenant signs will be evaluated for consistency with these guidelines.

Digital Advertising Signs

Digitial Advertising Signs are allowed within the plaza area east of the Arena building, in the general area between Subareas 16 and 18, and Subareas 17 and 19. The signs will be a series of LED Billboard Screens and located in highly visible, high traffic, outdoor plaza and pedestrian corridor. The Digital Adversiting Signs may display products, brands, and businesses associated with the commercial uses in the development as well as offsite advertisements, City sponsored events, and public service announcements. An approved Master Sign Program shall be required in accordance with the Ontario Development Code to establish development standards for design, sign area, location, and use.

3.2.8.2 Sign Regulations

Sign regulations are organized to address the two (2) primary categories of signs within the Piemonte as described above: Perimeter Identity Signs and Internal Informational/Directional Signs. Individual tenant improvements signs will be addressed as a component of City's review processes for individual development proposals within the Piemonte Overlay. Of primary concern are the visual attributes of internal signs, and public perception of the signs as seen from off-site vantages.

Perimeter Identity Signs

The purpose of the Perimeter Identity Signs is to provide identification of the Piemonte Overlay at the edges and entrances and primary tenants. The character and details of these signs will interpret and reinforce general architectural themes of the Piemonte Overlay and will incorporate elements consistent with the design expressions common to prevailing architectural style(s). Perimeter Identity Signs shall be implemented consistent with the following guidelines:

Perimeter Entry Monumentation

Entry monumentation will be provided at each of the Overlay's perimeter entrances. (Please refer to the SPA topical discussion of Entry Statements). Monument signs provided at the development entrances will incorporate and reflect architectural themes exhibited by structures within the Piemonte Overlay. These signs may incorporate corporate identifiers, electronic graphics or similar visual displays. Detailed dimensions and locations of perimeter entry monument signs will be as provided for within the Piemonte Sign Program.

Perimeter Project and Tenant Identification

Perimeter and tenant identification statements will consist of horizontal or vertical monuments integrated into landscaping features along perimeter roadways. Content may include the development name and logo and names and logos of major tenants. Detailed dimensions and locations of perimeter and tenant identification monument signs will be as provided for within the Piemonte Sign Program.

Perimeter Directional Signs

Perimeter directional signs will typically be fabricated metal panels on posts, or panels mounted to lighting standards. Dimensions and general locations of perimeter directional signs will be as provided for within the Piemonte Sign Program.

Internal Informational/Directional Signs

Internal Informational/Directional Signs shall be limited to the following:

- **Vehicular Circulation**. Directional signs associated with on-site roadways and traffic circulation system.
- **Pedestrian Circulation**. Directional signs associated with on-site pedestrian walkways and corridors.
- **Interior Banners**. Banners or similar informal signs may be implemented throughout the Piemonte as a means of introducing color, variety, and as a unifying thematic element.
- **Parking Zone Markers**. Signs mounted on permanent poles to identify parking areas.

Other Regulatory Signs

Other regulatory signs, e.g., traffic controls signs, access control signs, will be provided throughout the Piemonte Overlay consistent with City or other applicable agency requirements.

Internal informational/directional signs will reflect the varied architectural themes and styles that are proposed throughout the Project. With the exception of signs mandated by City or other ordinances, dimensions and area of all Internal Informational/Directional Signs shall be as provided for within the Piemonte Sign Program.

3.8.5 Lighting

3.8.5.1 Lighting Design Guidelines

Lighting themes and fixtures will lend a varied ambience to the nighttime appearance of the Piemonte Overlay, while providing illumination that is consistent with customary municipal safety standards. A combination of light fixtures will be used to illuminate surfaces such as roadways, parking areas and walkways, as well as landscape areas and building facades. The overall effect to be achieved is a balanced composition of lighting elements consisting of warm color light for architecture and cool color light for landscaping. The utilization of varying shades of white light will bring out the most desirable color characteristics of each.

Illumination for roadways will be provided by decorative poles that are compatible with the architectural character of the Piemonte Overlay and its surroundings. Light sources will be energy-efficient fixtures selected for their durability and reliability. Finishes will be complementary to architectural and landscaping components.

Parking areas will receive "cut-off" luminaries that shield against light trespass. The fixtures will be pole-mounted and shall include optics which will allow all appropriate areas to receive an average light level of approximately 1.5 foot candles. Fixtures will be energy-efficient LED or other code compliant lights.

Facade lighting will consist of energy-efficient LED, metal halide, fluorescent, and incandescent sources. The goal will be to accent architectural building details, and to create a unified appearance for all structures. Layers of light from multiple sources will help to control contrasts and to enhance 3-dimensional perspectives.

Low level path lighting and illuminated bollards will be used to accent walkways, plazas, paseos and other pedestrian access areas. Fluorescent sources are most desirable for this type of lighting.

Metal halide and fluorescent fixtures are the primary light source that will be used to highlight planting and trees. The intent is to bring out the green of tree canopies as well as the vibrant colors of seasonal plants at grade level.

Project signs may be internally or externally illuminated, consistent with provisions of the Piemonte Sign Program.

3.8.5.2 Lighting Development Standards

All lighting along public roadways will comply with applicable City and OCSP requirements (as modified by this Overlay). Lighting and light fixtures within the Piemonte Overlay shall conform to the following standards:

- The use of lighting should be integrally designed as part of the built environment and should reflect a balance for the lighting needs with the contextual ambient light level and surrounding nighttime characteristics of the community.
- Lighting designs should be designed to minimize glare, light trespass, energy conservation, and to maintain dark skies.
- Full cut-off fixtures, mounting heights, and shielding should be utilized to effectively control glare and light trespass where possible.
- Lighting standards should support the overall intended theme of the Project.
- Lighting should be both aesthetically pleasing as well as functional.
- Lighting should meet all code requirements to properly achieve appropriate coverage.
- Lighting should provide a sense of safety and security for all site users.

All lighting within the Piemonte Overlay will be implemented and operated in conformance with Section 6.01.015.~~E~~N.13 of the Ontario Development Code.

4.0 ADMINISTRATION

4.1 INTRODUCTION

Approval of the Piemonte Overlay Specific Plan Amendment (~~2016~~2022) indicates acceptance by the City of Ontario City Council of the general framework for the development of the Piemonte Overlay property. Part of that framework establishes specific development standards that constitute the zoning regulations for the Piemonte Overlay. The provisions contained herein regulate development within the Specific Plan area, and provide the process for review and approval of development projects within the Overlay area.

4.2 SEVERABILITY

If any portion of this Specific Plan Overlay document is declared to be invalid or ineffective in whole or in part, such decision shall not affect the validity of the remaining portions thereof. The legislative body hereby declares that they would have enacted these regulations and each portion thereof irrespective of the fact that any one or more portions be declared invalid or ineffective.

4.3 MINOR MODIFICATIONS TO THE OVERLAY

The City recognizes that modifications to the text and exhibits of this document may be needed over time. The following minor modifications to this document may be process as Specific Plan Minor Amendments, pursuant to Ontario Development Code Section 4.02.080 ~~do not require formal Specific Plan Amendment and are subject to review and approval by the Planning Director~~; the reviewing authority ~~Director~~ however shall have the discretion to defer any such request for modification to the Planning Commission or City Council.

- Expansions or reductions of the net acreage covered within a Subarea.
- A decrease in development intensity/density (non-residential square footage, lodging rooms, and/or residential units).

- Modification of design criteria such as architectural details, landscape treatments, plant matrices, fencing, lighting, and entry treatments.
- Implementation of alternative landscape materials, wall materials, wall alignment, entry monument design, and streetscape design that are generally consistent with the conceptual design guidelines contained within this Overlay.
- Modifications to Architectural Design Guidelines, such as variation of materials within a particular architectural style and variations in materials and colors.
- Modifications to Signage requirements.
- Final infrastructure facility sizing and precise location of dry utilities, water, sewer, and storm drainage improvements when directed by the City Engineer.
- Roadway alignment when the changes are warranted. Revisions to exhibits which do not substantially change the intent of the Specific Plan.
- Modification and deletions to the list of allowed uses.
- Specific modifications of a similar nature to those listed above which are deemed minor by the Planning Director, which are in keeping with the intent of this Specific Plan and which are in conformance with the City of Ontario General Plan.

4.4 AMENDMENTS TO THE OVERLAY

Amendments to the Overlay may be requested by the applicant or the City pursuant to Section 65453(a) of the Government Code. Amendments shall be processed pursuant to the provisions of the Government Code for Specific Plan Amendments and Section 4.01.035 Specific Plans and Amendments of the Ontario Development Code.

In the event the proposed amendment requires supplemental environmental analysis pursuant to the California Environmental Quality Act (CEQA), the applicant(s) are responsible for preparing the necessary CEQA documentation.

4.5 SUBDIVISION MAPS

Approval of subdivision ~~(parcel)~~ maps may occur concurrently or subsequent to the adoption of the Overlay. All tentative and final subdivision maps shall be reviewed and approved pursuant to Division 2.02, Application Filing and Processing, and Division 6.08, Subdivisions, of the Ontario Development Code and consistent with the applicable provisions of the Land Use, Infrastructure, Development Regulations, and Design Guidelines adopted as part of the Overlay.

4.6 DEVELOPMENT REVIEW PROCESS

Development proposals within the Piemonte Overlay area are subject to review and approval by the City of Ontario through the City's review processes discussed below.

4.6.1 Development Plans

Development proposals shall be submitted to the City for consideration, pursuant to the provisions of the Development Code Division 2.02 and Division 4.02. Development Plans shall be substantially consistent with the Overlay and associated exhibits. Applications and appeals related to Development Plan Review shall conform to requirements of the Ontario Development Code.

Through the Development Plan review process, development of individual proposals will be evaluated for consistency with the land uses, facilities configurations, and Design Guidelines and Development Regulations established under the Overlay. Development Plan review will consider and evaluate such details as building architecture, design, location and orientation, development intensity, and circulation/site access.

4.6.2 Development Capacity Conversion

Any conversion of remaining development capacity shall be processed at the same time as the applicable development plan.

4.7 CONDITIONAL USE PERMIT

Conditional Use Permits shall be required in accordance with Table 5.02-1: Land Use Matrix of the Ontario Development Code ~~for any use in Subareas 6, 8, 11, and 13~~. Conditional uses shall be processed pursuant to the requirements of Section 4.02.015 Conditional Use Permits of the Ontario Development Code. Conditional Use Permits adjacent to residential uses shall consider and address the following residential/commercial interface issues during the review process:

1. Parking
   - Guest
   - Personal spaces being used
2. Traffic
   - Blocked streets
   - Arena/restaurant events
3. Noise
   - People
   - Traffic/Motorcycles
   - Horns
   - Music
   - Arguments
4. Late Night Activities
   - Every night until 2 am
5. Security
   - Unwanted element
   - Sheer number of people in area
   - Strangers
6. Lack of Privacy
   - Walking
   - Jogging
   - Dog Walking

7. Trash Pickup
    - Early morning noise
8. Deliveries
    - Large trucks
    - Times of day
9. Lighting
    - Overall light – amount of light
    - Lights shining in windows
10. Odors/Smell/Health
    - Kitchens/food
    - Flies and bugs
    - Rats and rodents
11. View/Appearance
    - Back of house
    - Loading areas
    - Wash out areas
12. Physical Damage
    - Walls
    - Buildings
    - Gates
    - Landscape

4.8 APPEALS

An appeal from any determination, decision, or requirement of staff, City, or Planning Commission shall conform to the appeal procedures established by Division 2.04 Appeals of the Ontario Development Code.

~~SECTION~~ 5.0 GENERAL PLAN CONSISTENCY

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of Specific Plans as an implementation tool for elements contained in the local General Plan. Specific Plans must demonstrate consistency ~~I~~in regulations, guidelines, and programs with the goals and policies set forth in the General Plan.

The Piemonte Overlay has been prepared in conformance with the goals and policies of The Ontario Plan (TOP) Policy Plan (General Plan). The policy analysis in this Chapter describes the manner in which the Overlay complies with TOP Goals and Polices applicable to the development.

Policy Plan Goals and Policies	Overlay Consistency
LAND USE ELEMENT	
GOAL LU 1: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.	
LU 1-1 Strategic Growth. We concentrate growth in strategic locations that help create place and identify, maximizes available and planned infrastructure, and foster the development of transit.	The Overlay area is located within the Ontario Center Specific Plan (OCSP) identified in The Ontario Plan and will rely on available infrastructure. The Overlay will adhere to current approved City of Ontario Infrastructure Master Plans.
LU 1-2 Sustainable Community Strategy. We integrate state, regional and local Sustainable Community/Smart Growth principles into the development and entitlement process.	Sustainable Community/Smart Growth principles are incorporated into Land Use Plan. Pedestrian sidewalks connect the mix of land uses within the OCSP. The project will contain many energy efficient features.
LU 1-3 Adequate Capacity. We require adequate infrastructure and services for all development.	The Overlay is located in an area where planned infrastructure and public facilities have been constructed to ensure that adequate roadways and public utilities including sewer, water and drainage facilities along with parks and other public facilities are provided to serve the Overlay area.
LU 1-4 Mobility. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on multi-modal transportation opportunities. (Link to Mobility Element Policy M 3-3)	The mix of residential and commercial land uses within the Overlay are within walkable distance reducing the reliance on the automobile..
LU 1-5 Jobs-Housing Balance. We coordinate land use, infrastructure, and transportation planning and analysis with regional, county and other local agencies to further regional and subregional goals for jobs-housing balance. (Link to Community Economics Element Policy CE1-1)	N/A
LU 1-6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario. (Link to Complete Community Section of Community Economics Element)	The Overlay plans for a complete infill community with a mix of residential, commercial, and offices where residents can live, work, shop and recreate at adjacent areas.

Policy Plan Goals and Policies	Overlay Consistency
LU 1-7 Revenues and Costs. We require future amendments to our Land Use Plan to be accompanied by analyses of fiscal impacts. (Link to Community Economics Policy CE3-2)	N/A
GOAL LU 2: Compatibility between a wide range of uses.	
LU 2-1 Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.	All development will be reviewed through the City's Development Plan process. Parking demand is carefully reviewed to minimize impacts on adjacent properties.
LU 2-2 Buffers. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. (Link to Community Design)	N/A
LU 2-3 Hazardous Uses. We regulate the development of industrial and similar uses that use, store, produce or transport toxic substances, air emissions, other pollutants or hazardous materials. (Link to Hazardous Materials & Waste including Policies S6-4 and S6-5)	N/A
LU 2-4 Regulation of Nuisances. We regulate the location, concentration and operations of potential nuisances.	N/A
LU 2-5 Regulation of Uses. We regulate the location, concentration and operations of uses that have impacts on surrounding land uses.	All development will be reviewed through the City's Development Plan and/or applicable CUP process.
LU 2-6 Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.	The Overlay provides for an aesthetically pleasing streetscape concept.
LU 2-7 Inter-jurisdictional Coordination. We maintain an ongoing liaison with IEUA, LAWA, Caltrans, Public Utilities Commission, the railroads and other agencies to help minimize impacts and improve the operations and aesthetics of their facilities.	N/A
LU 2-8 Transitional Areas. We require development in transitional areas to protect the quality of life of current residents.	N/A
LU 2-9 Methane Gas Sites. We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	N/A

Policy Plan Goals and Policies	Overlay Consistency
GOAL LU3: Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.	
LU 3-1 Development Standards. We maintain clear development standards which allow flexibility to achieve our Vision.	The Overlay will set forth clear development standards compatible with the City's vision.
LU 3-2 Design Incentives. We offer design incentives to help projects achieve the Vision. (Link to Community Design)	N/A
LU 3-3 Land Use Flexibility. We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity.	~~N/A~~ The Overlay will be classified as mixed use to allow for flexible land use that will improve livability around the area by creating a pedestrian driven community, through open spaces, plazas, and entertainment.
Goal LU 4: Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.	
LU 4-1 Commitment to Vision. We are committed to achieving our Vision but realize that it may take time and several interim steps to get there.	~~N/A~~ The Overlay master plan is designed to be developed in a series of phases to achieve the Vission around the Piemonte Overlay.
LU 4-2 Interim Development. We allow development in growth areas that is not immediately reflective of our ultimate Vision provided it can be modified or replaced when circumstances are right. We will not allow development that impedes, precludes or compromises our ability to achieve our Vision. (Link to Community Economics Policy CE2-3)	~~N/A~~ The Overlay development allows for areas to be utilized as temporary uses if it will facility and assist towards achieving the ultimate vision. Some areas can be used as immediate parking areas that can later be developed to achieve and accomodate the required parking.
LU 4-3 Infrastructure Timing. We require that the necessary infrastructure and services be in place prior to or concurrently with development.	Necessary infrastructure and services will be in place at occupancy.
GOAL LU5: Integrated airport facilities that minimize negative impacts to the community and maximize economic benefits.	
LU 5-1 Coordination with Airport Authorities. We collaborate with FAA, Caltrans Division of Aeronautics, airport owners, neighboring jurisdictions, and other shareholders in the preparation, update and maintenance of airport-related plans.	N/A
LU 5-2 Airport Planning Consistency. We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations and/or adopted master plans and land use compatibility plans for the ONT and Chino Airport.	N/A

Policy Plan Goals and Policies	Overlay Consistency
LU 5-3 Airport Impacts. We work with agencies to maximize resources to mitigate the impacts and hazards related to airport operations.	N/A
LU 5-4 ONT Growth Forecast. We support and promote an ONT that accommodates 30 million annual passengers and 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated	N/A
LU 5-5 Airport Compatibility Planning for ONT. We create and maintain the Airport Land Use Compatibility Plan for ONT.	N/A
LU 5-6 Alternative Process. We fulfill our responsibilities and comply with state law with regard to the Alternative Process for proper airport land use compatibility planning.	N/A
LU 5-7 ALUCP Consistency and Land Use Regulations. We comply with state law that requires general plans, specific plans and all new development to be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.	The Overlay is located within the Airport Influence Areas of Ontario International Airport. Section 2.1.2 notifies the reader to refer to the ONT ALUCP.
LU 5-8 Chino Airport. We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.	N/A

HOUSING ELEMENT

Goal H1: Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity

H 1-1 Housing Rehabilitation. We support the rehabilitation, maintenance, and improvement of single-family, multiple-family, and mobile homes through code compliance, removal of blight where necessary, and provision of rehabilitation assistance where feasible.	N/A
H 1-2 Neighborhood Conditions. We direct efforts to improve the long-term sustainability of neighborhoods through comprehensive planning, provision of neighborhood amenities, rehabilitation and maintenance of housing, and community building efforts.	Our mixed-use project combines residential and commercial uses which will help vitalize an underutilized area.

Policy Plan Goals and Policies	Overlay Consistency
H 1-3 Community Amenities. We shall provide adequate public services, infrastructure, open space, parking and traffic management, pedestrian, bicycle and equestrian routes and public safety for neighborhoods consistent with City master plans and neighborhood plans.	~~N/A~~ The Overlay allows for plaza areas to be publicly accessible community amenities and encourages engagement with the adjacent commercial ues.
H 1-4 Historical Preservation. We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.	N/A
H 1-5 Neighborhood Identity. We strengthen neighborhood identity through creating parks and recreational outlets, sponsoring neighborhood events and encouraging resident participation in the planning and improvement of their neighborhoods.	N/A
GOAL H_2: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.	
H 2-1 Corridor Housing. We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally and aesthetically suited to corridors.	The design guidelines and development standards provide for development suited for adjacency to corridors. The proposed high density housing is also suitable for the adjacent Haven and Fourth Streets high traffic corridors.
2-2 Historic Downtown. We foster a vibrant historic downtown through facilitating a wide range of housing types and affordability levels for households of all ages, housing preferences, and income levels.	N/A
H 2-3 Ontario Airport Metro Center. We foster a vibrant, urban, intense and highly amenitized community in the Ontario Airport Metro Center Area through a mix of residential, entertainment, retail and office-oriented uses.	~~N/A~~ The Overlay allows for a mix of residential, entertainment, retail and potentially office-oriented uses centered around the Arena.
H 2-4 New Model Colony. We support a premier lifestyle community in the New Model Colony distinguished by diverse housing, highest design quality, and cohesive and highly amenitized neighborhoods.	N/A
H 2-5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices and other best practices.	The Overlay has its own design guidelines to achieve architectural excellence.

Policy Plan Goals and Policies	Overlay Consistency
H 2-6 Infill Development. We support the revitalization of neighborhoods through the construction of higher-density residential developments on underutilized residential and commercial sites.	The Overlay allows for development on underutilized residential and commercial sites, including high density residential developments.
Goal H3: A City regulatory environment that balances the need for creativity and excellence in residential design, flexibility and predictability in the project approval process, and the provision of an adequate supply and prices of housing.	
H 3-1 Incentives. We maintain incentive programs that can be offered to projects that provide benefits to the community such as exceptional design quality, economic advantages, environmental sustainability, or other benefits that would otherwise be unrealized.	N/A
H 3-2 Flexible Standards. We allow flexibility in the application of residential and mixed-use development standards in order to gain benefits such as exceptional design quality, economic advantages, sustainability, or other benefits that would otherwise be unrealized.	This Overlay provides flexibility in design to allow the most exceptional design quality.
H 3-3 Development Review. We maintain a residential development review process that provides certainty and transparency for project stakeholders and the public, yet allows for the appropriate review to facilitate quality housing development.	N/A
H 3-4 Financial Incentives. We consider financial incentives to facilitate and encourage the production, rehabilitation or improvement of housing, or provision of services where such activity furthers housing and community-wide goals.	N/A
GOAL H4: Increased opportunities for low and moderate income households and families to afford and maintain quality ownership and rental housing opportunities, including move-up opportunities.	
H 4-1 Preservation of Affordable Apartments. We strive to facilitate the preservation of the affordability of publicly assisted apartments for lower income households through financial assistance, technical assistance, rehabilitation, and collaborative partnerships.	N/A
H 4-2 Homeownership Opportunities. We increase and expand homeownership rates for lower and moderate income households by offering financial assistance, low-interest loans and educational resources, and by working in collaboration with partnerships.	N/A

Policy Plan Goals and Policies	Overlay Consistency
H 4-3 Rental Assistance. We support the provision of rental assistance for individuals and families earning extremely low, very low, and low income with funding from the state and federal government.	N/A
H 4-4: Mixed-income Housing. We encourage the integration of affordable housing in the New Model Colony, Ontario Airport Metro Center Area, and existing neighborhoods.	The Overlay provides for apartment living. The proposed rent range will include rents affordable to more moderate income residents.
H 4-5 Collaborative Partnerships. We support collaborative partnerships of nonprofit organizations, affordable housing developers, major employers, and for-profit developers to produce affordable housing.	N/A
H 4-6 Fair Housing. We further fair housing by prohibiting discrimination in the housing market and providing education, support, and enforcement services to address discriminatory practices	N/A
Goal H5: A full range of housing types and community services that meet the special housing needs for all individuals and families in Ontario, regardless of income level, age or other status.	
H 5-1 Senior Housing. We support the development of accessible and affordable senior housing and provide financial assistance for seniors to maintain and improve their homes.	N/A
H 5-2 Family Housing. We support the development of larger rental apartments that are appropriate for families with children, including, as feasible, the provision of services, recreation and other amenities.	~~N/A~~ The Overlay allows residential two- and three-bedroom apartments that will have access to children friendly amenities.
H 5-3 Disabled People. We increase the supply of permanent, affordable and accessible housing for people with disabilities, and provide assistance to allow them to maintain and improve their homes	~~N/A~~ Residential development in the Overlay project area will comply with ADA standards.
H 5-4 Homeless People. We partner with non-profit partners to provide emergency shelters, transitional housing, permanent supportive housing, and supportive services for people who are homeless.	N/A
H 5-5 Supportive Services. We financially support organizations, as feasible, that provide support services that meet the needs of those with special needs and further the greatest level of independence.	N/A

Policy Plan Goals and Policies	Overlay Consistency
H 5-6 Partnerships. We collaborate with non-profit organizations, private developers, employers, government agencies and other interested parties to develop affordable housing and provide support services.	N/A
PARKS AND RECREATION ELEMENT	
Goal PR1: A system of safe and accessible parks that meets the needs of the community.	
PR 1-1 Access to Parks. We strive to provide a park and/or recreational facility within walking distances (1/4 mile) of every residence.	All residents will have access to a range of on-site amenities including plazas, gathering areas, playgrounds, pools and gyms.
PR 1-2 Adjacency to Schools. We examine locating parks adjacent to school sites to promote joint-use opportunities.	N/A
PR 1-3 Funding. We shall seek outside, one-time sources of funding for capital improvements and reserve ongoing City funds primarily for operations and maintenance.	N/A
PR 1-4 Joint-use Opportunities. In areas where there is a need but no City recreational facility, we explore joint-use opportunities. (e.g., school sites).	N/A
PR 1-5 Acreage Standard. We strive to provide 5 acres of parkland (public and private) per 1,000 residents.	Park fees will be paid at the time of building permits to assist the City in its park efforts.
PR 1-6 Private Parks. We expect development to provide a minimum of 2 acres of developed private park space per 1,000 residents.	Park fees will be paid at the time of building permits.
PR 1-7 Special Needs/Universal Design. We attempt to provide recreational opportunities at parks for people of all ages and abilities.	N/A
PR 1-8 Renovation. We examine renovating existing facilities prior to building replacement facilities.	N/A
PR 1-9 Phased Development. We require parks be built in new communities before a significant proportion of residents move in.	Park fees will be paid at the time of building permits.
PR 1-10 Master Plans for Individual Park Facilities. We require an individual park master plan for parks in excess of 10 acres.	N/A

Policy Plan Goals and Policies	Overlay Consistency
PR 1-11 Environmental Function of Parks. We require new parks to meet environmental management objectives.	N/A
PR 1-12 Trails. We promote connections between parks and local trails including those managed by other public agencies.	N/A
PR 1-13 Equestrian Trails. We require the design, construction and maintenance of equestrian trails in Rural Residential designated areas.	N/A
PR 1-14 Multi-family Residential Developments. We require that new multi-family residential developments of five or more units provide recreational facilities or open space, in addition to paying adopted impact fees.	The Overlay requires that all multi-family developments within the Overlay provide private recreational areas for residents of the development in addition to the payment of park fees at the time of building permits.
PR 1-15 Trail Connectivity. We strengthen and improve equestrian, bike and multipurpose trail connections within the City and work to improve trail connections into adjacent jurisdictions.	N/A
PR 1-16 Equestrian Master Plan. We use Homer Briggs Park as the primary focal point for the development of a Master Plan of Equestrian Trails in the Rural Residential area.	N/A

ENVIRONMENTAL RESOURCES ELEMENT

GOAL ER1: A reliable and cost effective system that permits the City to manage its diverse water resources and needs.

ER 1-1 Local Water Supply. We increase local water supplies to reduce our dependence on imported water.	N/A
ER 1-2 Matching Supply to Use. We match water supply and quality to the appropriate use.	N/A
ER 1-3 Conservation. We require conservation strategies that reduce water usage.	All Overlay development will meet CALGreen low flow fixture requirements. All irrigation systems will be designed per State and/ or the City of Ontario's Water Conservation Ordinance and utilize the existing reclaimed water infrastructure system. Landscaped areas within the Overlay area will be graded as swales to the maximum extent practicable in order to maximize conservation of irrigation water and natural rainfall run-off.

Policy Plan Goals and Policies	Overlay Consistency
ER 1-4 Supply-Demand Balance. We require that available water supply and demands be balanced.	N/A
ER 1-5 Groundwater Management. We protect groundwater quality by incorporating strategies that prevent pollution, require remediation where necessary, capture and treat urban run-off, and recharge the aquifer.	The Overlay development will comply with all applicable regulations in regards to protecting groundwater quality.
ER 1-6 Urban Run-off Quantity. We encourage the use of low impact development strategies to intercept run-off, slow the discharge rate, increase infiltration and ultimately reduce discharge volumes to traditional storm drain systems.	Overlay development shall be designed to retain and in-filter, harvest and use or biotreat the Design Capture Volume of surface run-off, on-site, to comply with the current requirements of the San Bernardino County NPDES Stormwater Program's Water Quality Management (WQMP) for new development projects.
ER 1-7 Urban Run-off Quality. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	Overlay Development is obligated to minimize the impacts of urban run-off, through the implementation of on-site and off-site Low Impact Development (LID) Site Design Best Management Practices (BMPs) which retain/ in-filter, harvest and use, or biotreat the average 2-year, 24-hour storm run-off volume (85th percentile storm event) from the project, consistent with Regional Water Quality Control Board regulations as part of the County-wide NPDES Permit.
ER 1-8 Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	The project is obligated to comply with wastewater discharge and collection requirements adopted by the Regional Water Quality Control Board.
Goal ER2: A cost effective, integrated waste management system that meets or exceeds state and federal recycling and waste diversion mandates.	
ER 2-1 Waste Diversion. We shall meet or exceed AB 939 requirements.	All development will comply with City construction waste diversion requirements.
ER 2-2 Hazardous and Electronic Wastes. We prohibit the disposal of hazardous and electronic waste into the municipal waste stream pursuant to state law.	N/A
ER 2-3 Purchase Products Made from Recycled Materials. We purchase recycled-content products where it is cost effective	N/A

Policy Plan Goals and Policies	Overlay Consistency
GOAL ER3: Cost-effective and reliable energy system sustained through a combination of low impact building, site and neighborhood energy conservation and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.	
ER 3-1 Conservation Strategy. We require conservation as the first strategy to be employed to meet applicable energy-saving standards.	All development within the Overlay will meet California's stringent CALGreen and Energy Codes.
ER 3-2 Green Development- Communities. We require the use of best practices identified in green community rating systems to guide the planning and development of all new communities.	The Overlay contains a broad mix of land uses, and density as identified in the best practices of several rating systems.
ER 3-3 Building and Site Design. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar and natural ventilation.	All development within the Overlay will meet California's stringent CALGreen and Energy Codes.
ER 3-4 Green Development– Public Buildings. We require all new and substantially renovated City buildings in excess of 10,000 square feet achieve a LEED Silver Certification standard, as determined by the U.S. Green Building Council.	N/A
ER 3-5 Fuel Efficient and Alternative Energy Vehicles and Equipment. We purchase and use vehicles and equipment that are fuel efficient and meet or surpass state emissions requirements and/or use renewable sources of energy	N/A
ER 3-6 Generation. Renewable Sources. We promote the use of renewable energy sources to serve public and private sector development.	N/A
GOAL ER4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.	
ER 4-1 Land Use. We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.	The Overlay provides for compact mix of uses that improves the regional jobs-housing balance.
ER 4-2 Sensitive Land Uses. We prohibit the future siting of sensitive land uses, within the distances defined by the California Air Resources Board for specific source categories, without sufficient mitigation.	N/A

Policy Plan Goals and Policies	Overlay Consistency
ER 4-3 Greenhouse Gases (GHG) Emissions Reductions. We will reduce GHG emissions in accordance with regional, state and federal regulations.	The Overlay complies with regional, state and federal regulations.
ER 4-4 Indoor Air Quality. We will comply with State Green Building Codes relative to indoor air quality.	Overlay development will be required to comply with all State laws in regards to indoor air quality.
ER 4-5 Transportation. We promote mass transit and non-motorized mobility options (e.g. walking, biking) to reduce air pollutant emissions.	~~N/A~~ Overlay development includes a variety of pedestrian and bicycle paths that is consistent with a walkable master plan.
ER4-6 Particulate Matter. We support efforts to reduce particulate matter to meet State and Federal Clean Air Standards.	N/A
ER4-7 Other Agency Collaboration. We collaborate with other agencies within the South Coast Air Basin to improve regional air quality at the emission source.	N/A
ER 4-8 Tree Planting. We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality.	Where possible, healthy existing street trees will be protected. Additional trees will be planted within the Overlay per the landscape standards and requirements.
Goal ER5 Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.	
ER 5-1 Habitat Conservation Areas. We support the protection of biological resources through the establishment, restoration and conservation of high quality habitat areas.	N/A
ER 5-2 Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.	N/A
ER 5-3 Right to Farm. We support the right of existing farms to continue their operations within the New Model Colony.	N/A
ER 5-4 Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	N/A
ER 5-5 Mining Operations. We prohibit future mining operations where the resource extraction activities are incompatible with existing or proposed adjacent land uses.	N/A

Policy Plan Goals and Policies	Overlay Consistency
COMMUNITY ECONOMICS ELEMENT	
GOAL CE1: A complete community that provides for all incomes and stages of life.	
CE 1-1 Jobs-Housing Balance. We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.	~~N/A~~ The Overlay allows for mixed land uses of commercial, office, and residential to promote job growth in the area.
CE 1-2 Jobs and Workforce Skills. We use our economic development resources to: 1) attract jobs suited for the skills and education of current and future City residents; 2) work with regional partners to provide opportunities for the labor force to improve its skills and education; and 3) attract businesses that increase Ontario's stake and participation in growing sectors of the regional and global economy. (Link to Social Resource Policy SR2-2)	N/A
CE 1-3 Regional Approach to Workforce Development. We work with our partners to provide workforce training and development services throughout the region recognizing that Ontario employers rely on workers living outside of the City.	N/A
CE 1-4 Business Retention and Expansion. We continuously improve two-way communication with the Ontario business community and emphasize customer service to existing businesses as part of our competitive advantage.	N/A
CE 1-5 Business Attraction. We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.	N/A
CE 1-6 Diversity of Housing. We collaborate with residents, housing providers and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to support our workforce, attract business and foster a balanced community.	The Overlay provides smaller ~~1- and 2~~ studio to 3-bedroom apartments that will serve a diversity of households and incomes.
CE 1-7 Retail Goods and Services. We seek to ensure a mix of retail businesses that provide the full continuum of goods and services for the community.	The Overlay allows for ~~and~~ an exciting mix of retail businesses.

Policy Plan Goals and Policies	Overlay Consistency
CE 1-8 Regional Attraction. We encourage the development and programming of regional, cultural, and entertainment destinations in Ontario. (Link to Social Resources Entertainment and Culture Policy SR5-4)	~~N/A~~ The Overlay vision encourages a regional entertainment destination around the Arena.
CE 1-9 Regional Leadership. We provide leadership for public, quasi-public, and private-sector partners that help Ontario and its residents and businesses realize our goals and achieve our Vision.	N/A
CE 1-10 Life-Long Education. We work with our partners who provide life-long learning to ensure that our residents and workforce have access to education at all stages of life. (Link to Social Resources-Education SR2-1)	N/A
CE 1-11 Socioeconomic Trends. We continuously monitor, plan for, and respond to changing socioeconomic trends.	N/A
CE 1-12 Circulation. We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles. (Link to Mobility Public Transit)	Existing bus routes are located on adjacent streets to the Overlay, allowing residents and patrons of commercial development easy access to alternative means of transportation.
CE 1-13 Safety and Security. We invest in public safety and communicate our successes because the perception and reality of safety and security are necessary prerequisites for private investment and economic growth. (Link to Safety Element)	N/A
GOAL CE2: A City of distinctive neighborhoods, districts, and corridors, where people choose to be.	
CE 2-1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community. (Link to Community Design Element)	The Overlay sets forth criteria for creating high-quality places and development. In particular, residential development expressed in a contemporary architectural vernacular will be unique to Ontario.
CE 2-2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional and sustainable places that will compete well with their competition within the region.	The Overlay provides standards and guidelines to create unique, functional and sustainable places.

Policy Plan Goals and Policies	Overlay Consistency
CE 2-3 Interim Development. We require interim development that does not reflect the long-term Vision, be limited in scale of development so that the investment can be sufficiently amortized to make Vision-compatible redevelopment financially feasible.	N/A
CE 2-4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.	The Overlay provides a framework for high quality architecture and urban design.
CE 2-5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values. (Link to Community Design Policy CD5-1)	There is an existing Piemonte at Ontario Center Property Owners Association that maintains the private drives.
CE 2-6 Public Maintenance. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property. (Link to Community Design Policy CD 5-1)	N/A
Goal CE3 Decision-making deliberations that incorporate the full short-term and long-term economic and fiscal implications of proposed City Council actions.	
CE 3-1 Fiscal Impact Disclosure. We require requests for City Council action to disclose the full fiscal impacts, including direct and indirect costs.	N/A
CE 3-2 General Plan Amendments. We require those proposing General Plan amendments to disclose reasonably foreseeable impacts through a fiscal analysis.	N/A
CE 3-3 Long-Term Funding Disclosure. We require those requesting City support or funding for projects or programs to disclose if and how they can be continued without further City support.	N/A
CE 3-4 Improving Fiscal Decision-Making. We periodically assess the accuracy of projections for staff time and City resources and use the assessment results to improve our fiscal decision-making process.	N/A
CE 3-5 Sustainable Development. We recognize impacts to municipal finances as an element of sustainability, and we require claims of sustainability to assess fiscal impacts.	N/A

Policy Plan Goals and Policies	Overlay Consistency
CE 3-6 Fully Funded Liability. We require long-term liabilities, such as retiree medical benefits, employee accrued leave balances and self insured liability claims, to be fully funded to ensure sound, long-term fiscal health.	N/A
CE 3-7 Programmatically Balanced Budget. We require that the annual budget include appropriations allocated in a manner to meet the goal of the programmatically balanced budget.	N/A
CE 3-8 Budget Margins. We require that the adopted budget for revenue and expenditures reflect sufficient budget margins to minimize negative impacts to City services due to economic uncertainties.	N/A
CE 3-9 Complete Comparative Context. We require that our annual budget process provide the complete comparative context for proposed new and increased funding so decision makers can fully understand the trade-offs among budget choices.	N/A
SAFETY ELEMENT	
Goal S1: Minimized risk of injury, loss of life, property damage and economic and social disruption caused by earthquake-induced and other geologic hazards.	
S 1-1: Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.	All habitable buildings within the Overlay will be required to meet the California Building Code.
S 1-2 Entitlement and Permitting Process. We follow state guidelines and the California Building Code to determine when development proposals must conduct geotechnical and geological investigations.	All habitable buildings within the Overlay will be required to meet the California Building Code.
S 1-3 Continual Update of Technical Information. We maintain up-to-date California Geological Survey seismic hazard maps.	N/A
S 1-4 Seismically Vulnerable Structures. We conform to state law regarding unreinforced masonry structures.	N/A

Policy Plan Goals and Policies	Overlay Consistency
GOAL S2 Minimized risk of injury, loss of life, property damage and economic and social disruption caused by flooding and inundation hazards.	
S 2-1 Entitlement and Permitting Process. We follow State guidelines and building code to determine when development proposals require hydrological studies prepared by a State-certified engineer to assess the impact that the new development will have on the flooding potential of existing development down-gradient.	N/A
S 2-2 Flood Insurance. We will limit development in flood plains and participate in the National Flood Insurance Program.	N/A
S 2-3 Facilities that Use Hazardous Materials. We comply with state and federal law and do not permit facilities using, storing, or otherwise involved with substantial quantities of on-site hazardous materials to be located in the 100 year flood zone unless all standards of elevation, flood proofing and storage have been implemented to the satisfaction of the Building Department.	N/A
S 2-4 Prohibited Land Uses. We prohibit the development of new essential and critical facilities in the 100-year floodplain.	N/A
S 2-5 Storm Drain System. We maintain and improve the storm drain system to minimize flooding. (Link to Environmental Resources)	N/A
S 2-6 Use of Flood Control Facilities. We encourage joint use of flood control facilities as open space or other types of recreational facilities.	N/A
Goal S3: Reduced risk of death, injury, property damage and economic loss due to fires, accidents and normal everyday occurrences through prompt and capable emergency response.	
S 3-1 Prevention Services. We proactively mitigate or reduce the negative effects of fire, hazardous materials release, and structural collapse by implementing the adopted Fire Code.	All buildings and site design will comply with the California Fire Code.
S 3-2 Community Outreach. We provide education to local schools and community groups to promote personal and public safety.	N/A

Policy Plan Goals and Policies	Overlay Consistency
S 3-3 Fire and Emergency Medical Services. We maintain sufficient fire stations, equipment and staffing to respond effectively to emergencies.	N/A
S 3-4 Special Team Services. We maintain effective special rescue services.	N/A
S 3-5 Emergency Communication Services. We maintain a 9-1-1 emergency communication and dispatch center.	N/A
S 3-6 Interagency Cooperation. In order to back up and supplement our capabilities to respond to emergencies, we participate in the California Fire Rescue and Mutual Aid Plan.	N/A
S 3-7 Water Supply and System Redundancy. We monitor our water system to manage firefighting water supplies.	N/A
S 3-8: Fire Prevention through Environmental Design. We require new development to incorporate fire prevention consideration in the design of streetscapes, sites, open space and buildings. (Link to Community Design Element)	All development within the Overlay incorporates fire prevention considerations in the design of streetscapes, sites, open spaces and buildings and will be verified for compliance during the review process.
S 3-9 Resource Allocation. We analyze fire data to evaluate the effectiveness of our fire prevention and reduction strategies and allocate resources accordingly.	N/A
Goal S4 An environment where noise does not adversely affect the public's health, safety, and welfare.	
S 4-1 Noise Mitigation. We utilize the City's Noise Ordinance, building codes and subdivision and development codes to mitigate noise impacts.	~~N/A~~ All habitable buildins withing the Overlay will be required to meet the City's Noise Ordinance, California Building Code and subdivision and develoment codes to mitigate noise impact.
S 4-2 Coordination with Transportation Authorities. We collaborate with airport owners, FAA, Caltrans, SANBAG, SCAG, neighboring jurisdictions, and other transportation providers in the preparation and maintenance of, and updates to transportation-related plans to minimize noise impacts and provide appropriate mitigation measures.	N/A

Policy Plan Goals and Policies	Overlay Consistency
S 4-3 Airport Noise Mitigation. We aggressively pursue funding and utilize programs to reduce effects of aircraft noise in impacted areas of our community. (Link to Land Use Element and Quiet Home Program)	N/A
S 4-4 Truck Traffic. We manage truck traffic to minimize noise impacts on sensitive land uses. (Link to Mobility Element)	N/A
S 4-5 Roadway Design. We design streets and highways to minimize noise impacts.	N/A
S 4-6 Airport Noise Compatibility. We utilize information from Airport Land Use Compatibility Plans to prevent the construction of new noise sensitive land uses within airport noise impact zones.	The Overlay complies with the ALUCP for Ontario International Airport.
Goal S5: Reduced risk of injury, property damage and economic loss resulting from windstorms and wind- related hazards.	
S 5-1 Backup Power in Critical Facilities. We require backup power be maintained in critical facilities.	N/A
S 5-2 Dust Control Measures. We require the implementation of Best Management Practices for dust control at all excavation and grading project.	Construction within the Overlay will comply with all mitigation measures identified in the project EIR with regard to dust control.
S 5-3 Grading in High Winds. We prohibit excavation and grading during strong wind conditions, as defined by the Building Code.	The Overlay complies with the Building Code.
Goal S6 Reduced potential for hazardous materials exposure and contamination.	
S 6-1 Disclosure and Notification. We enforce disclosure laws that require all users, producers, and transporters of hazardous materials and wastes to clearly identify the materials that they store, use or transport.	N/A
S 6-2 Response to Hazardous Materials Releases. We respond to hazardous materials incidents and coordinate these services with other jurisdictions.	N/A
S 6-3 Safer Alternatives. We minimize our use of hazardous materials by choosing non-toxic alternatives that do not pose a threat to the environment.	N/A

Policy Plan Goals and Policies	Overlay Consistency
S 6-4 Safe Storage and Maintenance Practices. We require that the users of hazardous materials be adequately prepared to prevent and mitigate hazardous materials releases.	N/A
S 6-5 Location of Hazardous Material Facilities. We regulate facilities that will be involved in the production, use, storage or disposal of hazardous materials, pursuant to federal, state, county, and local regulations, so that impacts to the environment and sensitive land uses are mitigated.	N/A
S 6-6 Location of Sensitive Land Uses. We prohibit new sensitive land uses from locating within airport Safety Zones and near existing sites that use, store, or generate large quantities of hazardous materials. (Link to Land Use Element)	N/A
S 6-7 Household Hazardous Waste. We support the proper disposal of household hazardous substances.	N/A
S 6-8 Mitigation and Remediation of Groundwater Contamination. We actively participate in local and regional efforts directed at both mitigating environmental exposure to contaminated groundwater and taking action to clean up contaminated groundwater once exposure occurs.	N/A
S 6-9 Remediation of Methane. We require development to assess and mitigate the presence of methane, per regulatory standards and guidelines.	N/A
Goal S7: Neighborhoods and commercial and industrial districts that are kept safe through a multi-faceted approach of prevention, suppression, community involvement and a system of continuous monitoring.	
S 7-1 Police Unit Response. We respond to calls for service in a timely manner.	N/A
S 7-2 Community Oriented Problem Solving (C.O.P.S.). We support and maintain the mission of COPS to identify and resolve community problems.	N/A
S 7-3 Prevention Services. We provide crime prevention programs targeted to youth, parents, seniors, businesses, and neighborhoods.	N/A

Policy Plan Goals and Policies	Overlay Consistency
S 7-4: Crime Prevention through Environmental Design (CPTED). We require new development to incorporate CPTED in the design of streetscapes, sites, open spaces and buildings.	All new development will be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Police Department and that may require the development to incorporate CPTED in the design of streetscapes, sites, and buildings.
S 7-5 Interdepartmental Coordination. We utilize all City departments to help reduce crime and promote public safety.	N/A
S 7-6 Partnerships. We partner with other local, state and federal law enforcement agencies and private security providers to enhance law enforcement service to Ontario.	N/A
S 7-7 Resource Allocation. We analyze crime data to evaluate the effectiveness of crime prevention and reduction strategies and allocate resources accordingly.	N/A
MOBILITY ELEMENT	
GOAL M1: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.	
M 1-1: Roadway Design and Maintenance. We require our roadways to: • Comply with federal, state and local design and safety standards. • Meet the needs of multiple transportation modes and users. • Handle the capacity envisioned in the Functional Roadway Classification Plan. • Maintain a peak hour Level of Service (LOS) E or better at all intersections. • Be compatible with the streetscape and surrounding land uses. • Be maintained in accordance with best practices and our Right-of-Way Management Plan.	The Overlay complies with federal, state and local design and safety standards. It is consistent with the requirements of the City's Functional Roadway Classification Plan.
M 1-2: Mitigation of Impacts. We require development to mitigate its traffic impacts.	All development will implement all traffic mitigation measures, standard conditions and project design features identified in the project EIR.

Policy Plan Goals and Policies	Overlay Consistency
M 1-3 Roadway Improvements. We work with Caltrans, SANBAG and others to identify, fund and implement needed improvements to roadways identified in the Functional Roadway Classification Plan.	N/A
M 1-4 Adjacent Jurisdictions. We work with neighboring jurisdictions to meet our level of service standards at the City limits.	Street improvements along 4th Street will have been approved by the City of Rancho Cucamonga.
GOAL M_2: A system of trails and corridors that facilitate and encourage bicycling and walking.	
M 2-1 Bikeway Plan. We maintain our Multipurpose Trails & Bikeway Corridor Plan to create a comprehensive system of on- and off-street bikeways that connect residential areas, businesses, schools, parks, and other key destination points.	Existing bike lanes on public streets will remain.
M 2-1 Bikeway Plan. We maintain our Multipurpose Trails & Bikeway Corridor Plan to create a comprehensive system of on- and off-street bikeways that connect residential areas, businesses, schools, parks, and other key destination points.	N/A
M 2-3: Pedestrian Walkways. We require walkways that promote safe and convenient travel between residential areas, businesses, schools, parks, recreation areas, and other key destination points. (Link to Community Design CD 3-1)	Pedestrian walkways~~, as shown in the roadway plans and sections, exist~~ are planned throughout the Overlay area, promoting safe and convenient travel between destination points.
M 2-4 Network Opportunities. We explore opportunities to expand the pedestrian and bicycle networks. This includes consideration of utility easements, levees, drainage corridors, road right-of-ways, medians and other potential options.	N/A
GOAL M_3: A public transit system that is a viable alternative to automobile travel and meets the basic transportation needs of the transit dependent.	
M 3-1 Transit Partners. We maintain a proactive working partnership with transit providers to ensure that adequate public transit service is available.	N/A
M 3-2 Transit Facilities at New Development. We require new development to provide transit facilities, such as bus shelters, transit bays and turnouts, as necessary.	Transit facilities are located on adjacent or nearby streets.

Policy Plan Goals and Policies	Overlay Consistency
M 3-3 Transit-Oriented Development. We may provide additional development-related incentives to those inherent in the Land Use Plan for projects that promote transit use.	N/A
M 3-4 Bus Rapid Transit (BRT) Corridors. We work with regional transit agencies to implement BRT service to target destinations and along corridors, as shown in the Transit Plan.	N/A
M 3-5 Light Rail. We support extension of the Metro Rail Gold Line to Ontario, and will work to secure station locations adjacent to the Meredith site and at the proposed multimodal transit center.	N/A
M 3-6 Metrolink Expansion. We advocate expansion of Metrolink service to include the Downtown and the multimodal transit center.	N/A
M 3-7 High Speed Rail. We encourage the development of high-speed rail systems that would enhance regional mobility in Southern California and serve the City of Ontario.	N/A
M 3-8 Feeder Systems. We work with regional transit agencies to secure convenient feeder service from the Metrolink station and the proposed multimodal transit center to employment centers in Ontario.	N/A
M 3-9 Ontario Airport Metro Center Circulator. We will explore development of a convenient mobility system, including but not limited to shuttle service, people mover, and shared car system, for the Ontario Airport Metro Center.	N/A
M 3-10 Multimodal Transit Center. We intend to ensure the development of a multimodal transit center near LAONT airport to serve as a transit hub for local buses, BRT, the Gold Line, high-speed rail, the proposed Ontario Airport Metro Center circulator and other future transit modes.	N/A
M 3-11 Transit and Community Facilities. We require the future development of community-wide serving facilities to be sited in transit-ready areas that can be served and made accessible by public transit. Conversely, we plan (and coordinate with other transit agencies to plan) future transit routes to serve existing community facilities.	N/A

Policy Plan Goals and Policies	Overlay Consistency
Goal M4 An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts	
M 4-1 Truck Routes. We designate and maintain a network of City truck routes that provide for the effective transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown in the Truck Routes Plan.	N/A
M 4-2 Regional Participation. We work with regional and subregional transportation agencies to plan and implement goods movement strategies, including those that improve mobility, deliver goods efficiently and minimize negative environmental impacts (Link to Environmental Resources Policy ER4-3)	N/A
M 4-3 Railroad Grade Separations. We eliminate at-grade rail crossings identified on the Functional Roadway Classification Plan.	N/A
M 4-4 Environmental Considerations. We support efforts to reduce/eliminate the negative environmental impacts of goods movement.	N/A
M 4-5 Air Cargo. We support and promote a LAONT airport that accommodates 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.	N/A
Goal M5 A proactive leadership role to help identify and facilitate implementation of strategies that address regional transportation challenges.	
M 5-1 Regional Leadership. We maintain a leadership role to help identify and implement potential solutions to long-term regional transportation problems.	N/A
M 5-2 Land Use Compatibility with Regional Transportation Facilities. We work with LAWA, railroads, Caltrans, SANBAG, and other transportation agencies to minimize impacts.	N/A
Goal LU5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.	
LU 5-1 Coordination with Airport Authorities. We collaborate with FAA, Caltrans Division of Aeronautics, airport owners, neighboring jurisdictions, and other shareholders in the preparation, update and maintenance of airport-related plans.	N/A

Policy Plan Goals and Policies	Overlay Consistency
LU 5-2 Airport Planning Consistency. We coordinate with airport authorities to ensure The Ontario Plan is consistent with state law, federal regulations and/or adopted master plans and land use compatibility plans for the ONT and Chino Airport.	N/A
LU 5-3 Airport Impacts. We work with agencies to maximize resources to mitigate the impacts and hazards related to airport operations.	N/A
LU 5-4 ONT Growth Forecast. We support and promote an ONT that accommodates 30 million annual passengers and 1.6 million tons of cargo per year, as long as the impacts associated with that level of operations are planned for and mitigated.	N/A
LU 5-5 Airport Compatibility Planning for ONT. We create and maintain the Airport Land Use Compatibility Plan for ONT.	N/A
LU 5-6 Alternative Process. We fulfill our responsibilities and comply with state law with regard to the Alternative Process for proper airport land use compatibility planning.	N/A
LU 5-7 ALUCP Consistency with Land Use Regulations. We comply with state law that requires general plans, specific plans and all new development be consistent with the policies and criteria set forth within an Airport Land Use Compatibility Plan for any public use airport.	N/A The Overlay is located within the Airport Influence Areas of Ontario International Airport. Section 2.1.2. notifies the reader to refer to ONT ALUCP.
LU 5-8 Chino Airport. We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.	N/A
COMMUNITY DESIGN ELEMENT	
GOAL CD1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.	
CD1-1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing the diverse character of our existing viable neighborhoods.	N/A
CD 1-2 Growth Areas. We require development in growth areas to be distinctive and unique places within which there are cohesive design themes.	The Design Guidelines set forth a clear and cohesive design theme by providing a set of unique design criteria for site planning, architectural styles, landscaping, and walls and fences.

Policy Plan Goals and Policies	Overlay Consistency
CD 1-3 Neighborhood Improvement. We require viable existing residential and non-residential neighborhoods to be preserved, protected, and enhanced in accordance with our land use policies.	N/A
CD 1-4 Transportation Corridors. We will enhance our major transportation corridors within the City through landscape, hardscape, signage and lighting.	N/A
CD 1-5 View Corridors. We require all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.	Haven Avenue provides view of the San Gabriel Mountains.
GOAL CD_2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and district.	
CD 2-1: Quality Architecture. We encourage all development projects to convey visual interest and character through: • building volume, massing, and height to provide appropriate scale and proportion; • a true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and • exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.	The Design Guidelines set forth a clear and cohesive design theme by providing a set of unique design criteria for architecture, landscaping, and walls and fences.

Policy Plan Goals and Policies	Overlay Consistency
CD 2-2 Neighborhood Design. We create distinct residential neighborhoods that are functional, have a sense of community, emphasize livability and social interaction, and are uniquely identifiable places through such elements as: • a pattern of smaller, walkable blocks that promote access, activity and safety; • variable setbacks and parcel sizes to accommodate a diversity of housing types; • traffic calming measures to slow traffic and promote walkability while maintaining acceptable fire protection and traffic flows; • floor plans that encourage views onto the street and de-emphasize the visual and physical dominance of garages (introducing the front porch as the "outdoor living room"}, as appropriate; and • landscaped parkways, with sidewalks separated from the curb.	The Design Guidelines provide for distinct residential neighborhoods that are functional, have a sense of community, emphasize livability and social interaction, and are uniquely identifiable places.
CD 2-3 Commercial Centers. We desire commercial centers to be distinctive, pedestrian friendly, functional and vibrant with a range of businesses, places to gather, and connectivity to the neighborhoods they serve.	The Design Guidelines set forth a clear and cohesive design theme for pedestrian-friendly, vibrant retail areas.
CD 2-4 Mixed Use, Urban Office and Transit Serving Areas. We require mixed use, urban office and transit serving areas to be designed and developed as pedestrian oriented "villages" that promote a vibrant, comfortable and functional environment.	The Design Guidelines set forth a clear and cohesive design theme for pedestrian-friendly, vibrant retail areas.
CD 2-5: Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right of way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	The Circulation Plan is designed to accommodate pedestrians, bicycles and autos.

Policy Plan Goals and Policies	Overlay Consistency
CD 2-6: Connectivity. We promote development of local street patterns and pedestrian networks that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means: local street patterns that provide access between subdivisions and within neighborhoods and discourage through traffic; a local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials; and neighborhoods, centers, public schools, and parks that are linked by pedestrian greenways open space networks. These may also be used to establish clear boundaries between distinct neighborhoods and/or centers.	The Circulation Plan is designed for connectivity that unifies neighborhoods and promotes walkability.
CD 2-7: Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.	All buildings will meet or exceed California's stringent CALGreen and California Energy Codes reducing energy demand.
CD 2-8: Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintenance of visibility and accessibility, and use of lighting.	The Overlay encourages "eyes on the street" for neighborhood safety and security.
CD 2-9: Landscape Design. We encourage durable landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	The Overlay landscape enhances the aesthetics of structures, creates and defines public and private spaces, and provides shade.
CD 2-10 Surface Parking Areas. We require parking areas visible to or used by the public to be landscaped in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field.	The Overlay contains guidelines for surface parking areas.

Policy Plan Goals and Policies	Overlay Consistency
CD 2-11: Entry Statements. We encourage the inclusion of amenities, signage and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	The Overlay contains guidelines for neighborhood entries and monumentation.
CD 2-12: Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	The Overlay contains guidelines for neighborhood entries and monumentation.
CD 2-13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.	N/A
CD 2-14 Availability of Information. We provide easy access to information for developers, builders and the public about design quality, construction quality, and sustainable building practices.	N/A
CD 2-15 Leverage Professional and Trade Organizations. We support excellence in design and construction quality through collaboration with trade and professional organizations that provide expertise, resources and programs for developers, builders and the public.	N/A
GOAL CD3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing, and safe during all hours.	
CD 3-1 Design. We require that pedestrian, vehicular, bicycle and equestrian circulation on both public and private property be coordinated and designed to maximize safety, comfort and aesthetics. (Link to Bicycle and Pedestrians Section of the Mobility Element and Policies M2-3 and M2-4)	The Overlay is designed for pedestrian accessibility throughout the community through a network of on-street sidewalks, plazas, and other open space designs. Bicycle corridors are located on Haven Avenue, and Fourth Street and on Inland Empire Boulevard to the south of the Overlay.

Policy Plan Goals and Policies	Overlay Consistency
CD 3-2 Connectivity Between Streets, Sidewalks, Walkways and Plazas. We require landscaping and paving be used to optimize visual connectivity between streets, sidewalks, walkways and plazas for pedestrians.	Landscaping and paving are used to maintain a visual connectivity between streets, sidewalks, and walkways for pedestrians.
CD 3-3 Building Entrances. We require all building entrances to be accessible and visible from adjacent streets, sidewalks or public open spaces. (Link to Safety Element Policy S 7-4)	The Overlay guidelines for doors and entries promote the interface between public and private spaces.
CD 3-4 Ground Floor Usage of Commercial Buildings. We create lively pedestrian streetscapes by requiring the location of uses, such as shopping, galleries, restaurants, etc., on ground floors adjacent to sidewalks.	The Overlay allows for lively pedestrian streetscapes.
CD 3-5 Paving. We require sidewalks and road surfaces to be of a type and quality that contributes to the appearance and utility of streets and public spaces.	Sidewalks and landscaping contribute to the appearance of streets and public spaces.
CD 3-6 Landscaping. We utilize landscaping to enhance the aesthetics, functionality and sustainability of streetscapes, outdoor spaces and buildings.	The landscape guidelines enhance the streetscapes and outdoor spaces.
CD 3-7 Transit Stops. We require transit stops be well lit, safe, appealing to and accessible by pedestrians.	N/A
Goal CD4: Historic buildings, streets, landscapes and neighborhoods, as well as the story of Ontario's people, businesses, and social and community organizations, that have been preserved and serve as a focal point for civic pride and identity.	
CD 4-1 Cultural Resource Management. We update and maintain an inventory of historic sites and buildings, professional collections, artifacts, manuscripts, photographs, documents, maps and other archives.	N/A
CD 4-2 Collaboration with Property Owners and Developers. We educate and collaborate with property owners and developers to implement strategies and best practices that preserve the character of our historic buildings, streetscapes and unique neighborhoods.	N/A
CD 4-3 Collaboration with Outside Agencies. We pursue opportunities to team with other agencies, local organizations and non-profits in order to preserve and promote Ontario's heritage.	N/A

Policy Plan Goals and Policies	Overlay Consistency
CD 4-4 Incentives. We use the Mills Act and other federal, state, regional and local programs to assist property owners with the preservation of select properties and structures.	N/A
CD 4-5 Adaptive Reuse. We actively promote and support the adaptive reuse of historic sites and buildings to preserve and maintain their viability.	N/A
CD 4-6 Promotion of Public Involvement in Preservation. We engage in programs to publicize and promote the City's and the public's involvement in preservation efforts.	N/A
CD 4-7 Public Outreach. We provide opportunities for our residents to research and learn about the history of Ontario through the Planning Department, Museum of History and Art, Ontario and the Robert E. Ellingwood Model Colony History Room.	N/A
GOAL CD5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages public and private investments.	
CD 5-1 Maintenance of Buildings and Property. We require all public and privately owned buildings and property (including trails and easements) to be properly and consistently maintained.	There is an existing Piemonte at Ontario Center Property Owners Association that maintains the private drives.
CD 5-2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.	There is an existing Piemonte at Ontario Center Property Owners Association that maintains the private drives.
CD 5-3 Improvements to Property & Infrastructure. We provide programs to improve property and infrastructure.	N/A
CD 5-4 Neighborhood Involvement. We encourage active community involvement to implement programs aimed at the beautification and improvement of neighborhoods.	N/A
SOCIAL SERVICES ELEMENT	
Goal SR1: A community where residents have access to information, services and goods that improve their health and well being.	
SR 1-1 Partnering for Healthcare. We work with healthcare providers, and local, regional, state and federal agencies to attract and retain a diversity of affordable, quality healthcare and facilities for the entire community.	N/A

Policy Plan Goals and Policies	Overlay Consistency
SR 1-2 Nutrition Choices. We support the promotion of healthy nutritional food choices in the community.	N/A
SR 1-3 Health Education. We promote health education, including disease prevention, mental health, nutrition and physical fitness.	N/A
SR 1-4 Physical Activity. We encourage activities and community design that improve the physical fitness of our community members.	N/A
Goal SR2: A range of educational and training opportunities for residents and workers of all ages and abilities that improves their life choices and provides a skilled workforce for our businesses.	
SR 2-1 Educational Partners. We partner with educational institutions throughout the region in order to expand the range and quality of educational offerings available to the community.	N/A
SR 2-2 Workforce Training. We will work with industrial organizations, businesses and educational institutions to create opportunities for workforce training.	N/A
SR 2-3 Joint Use of Facilities. We partner with public and private educational institutions to jointly use facilities for both City and educational purposes.	N/A
SR 2-4 Access to Schools. We work with local and regional partners to improve the safety in and around schools and to improve access for citizens of all ages and abilities to schools and community services, such as after school and other programs.	N/A
SR 2-5 School Facilities. We plan and coordinate with school districts for designing and locating school facilities to meet the City's goals, such as for health, walkability, and safety and to minimize impacts to existing neighborhoods.	N/A
Goal SR3: A range of community and leisure programs and activities provided by public, private and non-profit organizations that meet the needs of the community's varied interests, age groups and abilities.	
SR 3-1 Partnerships. We partner with local and regional agencies, non-profit organizations and the private sector to provide a comprehensive range of community activities and events to citizens.	N/A

Policy Plan Goals and Policies	Overlay Consistency
SR 3-2 Needs Assessment. We track the needs and priorities for community services and look for ways to meet demands and avoid duplication of offerings.	N/A
SR 3-3 Program Outreach. We promote information about leisure activities, classes, special events and other services and activities to our community.	N/A
SR 3-4 Community Events. We plan and actively participate in regularly scheduled community events and seasonal or yearly citywide events.	N/A
SR 3-5 Community Activities as Crime Deterrents. We promote and participate in community activities as part of our crime prevention efforts. (Link to Safety Element Policy S7-3)	N/A
Goal SR4: City libraries that connect community members of all ages and abilities to a broad range of programs, communication and informational resources.	
SR 4-1 Community Needs. We identify and monitor community needs for library services, technologies and facilities, and tailor them to effectively meet those needs.	N/A
SR 4-2 Interagency Coordination. We leverage relationships with outside agencies, educational institutions and neighboring jurisdictions to share library resources to the benefit of Ontario residents.	N/A
SR 4-3 Library Outreach. We outreach to the community to increase the patronage of the library.	N/A
SR 4-4 Coordination with Other Community Services. We coordinate library programs with other recreational and community programs and facilities.	N/A
SR 4-5 Focal Points of the Community. We design and program Ontario's libraries as focal points for community engagement, including public outreach and community events.	N/A

Policy Plan Goals and Policies	Overlay Consistency
SR 4-6 Robert E. Ellingwood Model Colony History Room. We work with the Museum of History and Art, Ontario in order to collect, preserve and display artifacts and images from Ontario's heritage and connect the City's past to the present through the History Room.	N/A
Goal SR5: Local heritage, entertainment and cultural experiences that enrich the lives of Ontario's residents, workers, and visitors and serve to attract residents and businesses to the City.	
SR 5-1 Provision of Entertainment and Culture. We support a range of entertainment and cultural experiences such as public art, exhibitions and performances.	N/A The Overlay allows for an entertainment district surrouding the Arena and would include a series of open plazas to encourage the possibility for public art, exhibitions and performances.
SR 5-2 Local Heritage Education. We partner with educational providers to promote culture and heritage. (Link to Historic Preservation Section of Community Design Element)	N/A
SR 5-3 Public Art. We encourage public art in buildings, parks, open spaces and other public and private spaces.	N/A
SR 5-4 Private-Public Sector Events. We partner with private and nonprofit sectors to provide and promote participation in cultural activities including fairs, festivals and other events geared to neighborhoods, the City as a whole and the region.	N/A
SR 5-5 Promotion of Ontario Artists and Musicians. We promote awareness of entertainment and culture produced in Ontario.	N/A

APPENDIX A - LEGAL DESCRIPTION

NO. OF PARCELS: 32
1 REMAINDER PARCEL
GROSS ACREAGE = 119.83
NET ACREAGE = 117.36

PARCEL MAP NO. 17550

IN THE CITY OF ONTARIO, COUNTY OF SAN BERNARDINO,
STATE OF CALIFORNIA

BEING A SUBDIVISION OF ALL OF PARCEL 2 OF PARCEL MAP NO. 16056, AS PER MAP FILED IN BOOK 199, PAGES 96 AND 97 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, AND ALL OF LOTS 1, 4, 5, AND ALL OF THE REMAINDER OF TRACT MAP NO. 16666, AS PER MAP FILED IN BOOK 302, PAGES 55 AND 56 OF MAPS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

LENNY GUYETT P.L.S. 7993
FEBRUARY 15, 2006

OWNER'S STATEMENT

WE HEREBY STATE THAT WE ARE ALL AND THE ONLY PARTIES HAVING ANY RECORD TITLE INTEREST IN THE LAND SUBDIVIDED AS SHOWN ON THE ANNEXED MAP, AND WE HEREBY CONSENT TO THE PREPARATION AND RECORDATION OF THIS PARCEL MAP.

WE HEREBY RESERVE FOR OURSELVES, OUR SUCCESSORS AND ASSIGNS A PRIVATE EASEMENT FOR STREET, PRIVATE UTILITY, AND MAINTENANCE PURPOSES IN, OVER, UNDER, AND ACROSS PRIVATE STREETS VIA ASTI, VIA PIEMONTE, VIA ALBA, VIA VILLAGIO, AND VIA TURIN AS SHOWN ON THE ANNEXED MAP.

WE HEREBY DEDICATE TO THE CITY OF ONTARIO FOR PUBLIC STREET AND UTILITY PURPOSES, ONTARIO CENTER PARKWAY AS SHOWN ON THE ANNEXED MAP.

WE HEREBY DEDICATE TO THE CITY OF ONTARIO A 10 FOOT EASEMENT FOR PEDESTRIAN ACCESS PURPOSES, TO BE MAINTAINED BY THE PROPERTY OWNERS, AS SHOWN ON THE ANNEXED MAP.

WE HEREBY DEDICATE TO THE CITY OF ONTARIO A 10.5 FOOT EASEMENT FOR PEDESTRIAN ACCESS AND PUBLIC UTILITY PURPOSES, TO BE MAINTAINED BY THE PROPERTY OWNERS, AS SHOWN ON THE ANNEXED MAP.

WE HEREBY DEDICATE TO THE CITY OF ONTARIO A PUBLIC EASEMENT FOR EMERGENCY ACCESS, AND PUBLIC UTILITY PURPOSES IN, OVER, UNDER, AND ACROSS PRIVATE STREETS VIA ASTI, VIA PIEMONTE, VIA ALBA, VIA VILLAGIO, AND VIA TURIN AS SHOWN ON THE ANNEXED MAP.

THE CITY OF ONTARIO, A CALIFORNIA MUNICIPAL CORPORATION

MY COMMISSION EXPIRES

ABANDONMENT NOTE

PURSUANT TO SECTION 66499.20-1/2 OF THE SUBDIVISION MAP ACT, THE FILING OF THIS MAP CONSTITUTES ABANDONMENT OF THAT CERTAIN EASEMENT FOR STREET AND HIGHWAY PURPOSES IN FAVOR OF THE CITY OF ONTARIO AS SHOWN ON TRACT MAP NO. 16666 IN BOOK 302, PAGES 55 AND 56 OF MAPS.

SIGNATURE OMISSION

THE SIGNATURE OF THE CITY OF ONTARIO, THE OWNER OF AN EASEMENT STORM DRAIN PURPOSES, DISCLOSED BY INSTRUMENT NO. 1989-210122, RECORDS OF SAN BERNARDINO COUNTY HAVE BEEN OMITTED UNDER THE PROVISIONS OF SECTION 66436 OF THE SUBDIVISION MAP ACT OF THE STATE OF CALIFORNIA. ITS INTEREST CANNOT RIPEN INTO A FEE.

SURVEYOR'S STATEMENT

I, LENNY GUYETT, HEREBY STATE THAT I AM A LICENSED LAND SURVEYOR OF THE STATE OF CALIFORNIA AND THAT THIS MAP, CONSISTING OF FOURTEEN SHEETS, IS A TRUE AND COMPLETE REPRESENTATION OF A SURVEY MADE BY ME OR UNDER MY DIRECTION IN MARCH 2005 AT THE REQUEST OF PANATTONI DEVELOPMENT, AND THAT ALL THE MONUMENTS SHOWN HEREON ARE OF THE CHARACTER AND OCCUPY THE POSITIONS INDICATED, OR WILL BE SET IN SUCH POSITIONS WITHIN ONE YEAR OF THE RECORDATION OF THIS MAP, IN COMPLIANCE WITH SECTION 66495 AND 66496 OF THE SUBDIVISION MAP ACT, AND ARE OR WILL BE SUFFICIENT TO ENABLE THE SURVEY TO BE RETRACED. I HEREBY STATE THAT THIS PARCEL MAP SUBSTANTIALLY CONFORMS TO THE APPROVED OR CONDITIONALLY APPROVED TENTATIVE MAP, IF ANY.

APPENDIX D - 2006 OVERLAY LAND USE ALLOCATION & MAXIMUM DEVELOPMENT INTENSITY ANALYZED FOR TRAFFIC GENERATION

The 2006 traffic analysis for the Piemonte at Ontario Center Project Addendum to the Ontario Center EIR (Applied Planning Inc., February 2006) used the anticipated development shown in Table D.1: 2006 Piemonte Overlay Intensity Allocation by Subarea for Traffic Analysis to determine the remaining traffic capacity for the Overlay area. That traffic analysis used lower numbers that were permitted by the 2006 Overlay. However, it also concluded that the 2006 Piemonte Overlay only used 28% of the daily trips, 29% of the peak daily evening trips and 92% of the peak morning trips.

Table D.1: 2006 Piemonte Overlay Intensity Allocation by Subarea for Traffic Analysis

APPENDIX E - PIEMONTE TRIP GENERATION COMPARISON AND THE PIEMONTE/EMPIRE LAKES 4TH STREET ACCESS CONFIGURATION - FEHR & PEERS MEMORANDUM (DATED JUNE 8, 2016)

Fehr & Peers completed a draft Transportation Impact Study (TIS) for the proposed Empire Lakes project in the City of Rancho Cucamonga. That study documented potential transportation impacts associated with the proposed project.

Since completing that study, we have completed a trip generation estimate for the Piemonte Site based on their most recent site plan that will be submitted to the City of Ontario. We also completed additional work in support of designing the 4th Street access to both the Piemonte Site and the Empire Lakes site. The purpose of this memorandum is to document the methodology, recommendations, and results of the project access assessment.

Piemonte Trip Generation Estimates

Piemonte Trip Generation As Approved

As part of the Empire Lakes traffic study, the portion of the Piemonte Site that has not yet been developed was estimated using information from the Piemonte at Ontario Center Project Addendum to the Ontario Center EIR (Applied Planning Inc., February 2006). Table E-1: Piemonte Trip Generation – As Currently Approved summarizes the trip generation estimate used in the Empire Lakes traffic study:

Table E-1: Piemonte Trip Generation – As ~~Currently~~ Approved in 2006

Use	Daily	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Total Net Piemonte (From Study)	29,800	1,284	812	2,096	1,124	1,471	2,595
Parcel 1 (Constructed)	4,990	71	46	117	150	162	312

Parcel 2 (Constructed)	3,182	69	54	123	99	104	203
Parcel 10 (Constructed)	1,107	154	21	175	29	140	169
Undeveloped Piemonte	**20,521**	**990**	**691**	**1,681**	**846**	**1,065**	**1,911**

Source: Piemonte at Ontario Center Project Addendum to the Ontario Center EIR (Applied Planning Inc., February 2006).

As shown in Table E-1: Piemonte Trip Generation – As Currently Approved, the portion of Piemonte that is not yet developed is estimated to generate 20,521 daily trips, 1,681 AM peak hour trips, and 1,911 PM peak hour trips. These trips were utilized in the Empire Lakes traffic study.

Piemonte Trip Generation As Currently Proposed

The site concept for the Piemonte site provided by Lewis Operating Companies (dated March 11, 2016) is attached. Using this site plan, Fehr & Peers estimated the trip generation for the project site as shown in Table E-2: Piemonte Trip Generation – As ~~Currently~~ Proposed in 2016 on the following page.

As shown in Table E-2: Piemonte Trip Generation – As ~~Currently~~ Proposed in 2016, with the proposed site plan the undeveloped portion of Piemonte would be projected to generate 13,905 daily trips, 957 AM peak hour trips, and 1,357 PM peak hour trips.

Table E-3: Piemonte Trip Generation Comparison of 2006 and 2016 Data compares the as-approved trip generation to the currently proposed trip generation. As shown in the table, the undeveloped portion of Piemonte, as currently proposed, is anticipated to generate 6,616 fewer daily trips, 724 fewer AM peak hour trips, and 554 fewer PM peak hour trips.

Given that the currently proposed development in Piemonte is less than what was approved, the assumptions in the Empire Lakes traffic study is considered conservative as part of this effort.

Table E-2: Piemonte Trip Generation – As ~~Currently~~ Proposed in 2016

Use	Daily	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Lewis and Lincoln Proposed Uses							
Zone 1 - Retail	3,822	53	33	86	159	173	332
Zone 2 - Office	552	69	9	78	13	62	75
Zone 3 - Residential	1,915	29	118	147	116	63	179
Zone 4 - Residential	1,144	18	70	88	69	38	107
Zone 4 - Retail	3,565	50	30	80	149	161	310
Zone 5 - Residential	765	12	47	59	46	25	71
Total Gross Trip Generation Proposed	**11,763**	**231**	**307**	**538**	**552**	**522**	**1,074**
Internalization (Consistent with Previous Study) 17% Daily, 12% AM Peak Hour, 18% PM Peak Hour	**-2,000**	**-28**	**-37**	**-65**	**-99**	**-94**	**-193**
Total Trip Generation	**9,763**	**203**	**270**	**473**	**453**	**428**	**881**
Parcel 6 Trip Generation (from previous study)	1,928	81	52	133	74	65	139
Parcel 13 Trip Generation (from previous study)	2,214	309	42	351	57	280	337
Total New Trips In Piemonte	**13,905**	**593**	**364**	**957**	**584**	**773**	**1,357**

Source: Fehr & Peers, 2016. Site Plan provided by Lewis Operating Companies (March 2016). Note: Parcel 6 and Parcel 13 are not included in the Lewis Site Plan and trip generation from the previous Applied Planning dated February 2006 study is used.

Table E-3: Piemonte Trip Generation Comparison of 2006 and 2016 Data

Use	Daily	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Undeveloped Piemonte (as approved)	20,521	990	691	1,681	846	1,065	1,911
Undeveloped Piemonte (as proposed)	13,905	593	364	957	584	773	1,357
Net Difference	**-6,616**	**-397**	**-327**	**-724**	**-262**	**-292**	-554

4Th Street Access Methodology

Given the proximity of up-stream and down-stream intersections to the proposed site access, micro-simulation was utilized to evaluate traffic operations. Micro-simulation utilizes driver behavior parameters to simulate how driver decisions affect traffic operations. Additionally, micro-simulation has the ability to evaluate how vehicles queues can extend over space and time and account for the operational effects associated with those queues.

To evaluate the network, Fehr & Peers utilized the SimTraffic 8.0 software which is consistent with the Highway Capacity Manual methodology (Transportation Research Board, 2010). Assumptions utilized in this assessment specific to this software are documented below:

- Lane configurations utilized are based on the proposed design shown in Attachment A
- Signal timing information began with existing timing data provided by the City and were optimized for the corridor related to signal timing splits and timing offsets
- A base saturation flow rate of 1,900 vehicles per hour per lane
- A peak hour factor of 0.95 was applied
- A total of 20 simulations were completed with different random seeds
- The results are based on the average of all 20 runs as there were no "outliers" in the simulation results
- The simulation results were utilized to assist in designing the intersection for both level of service and to accommodate expected queues
- Fehr & Peers updated the trip assignment information to/from the Piemonte to reflect the trip generation information noted above based on the locations of land use provided on the attached site plan.

Please note that the analysis for site access focused on the forecasts developed for the cumulative scenario. This provides the highest volume of traffic and is considered the most appropriate scenario for sizing infrastructure.

4Th Street Access Analysis Results

The level of service (LOS) was calculated for both the 4th Street/Cleveland Avenue and 4th Street/The Vine study intersections to evaluate traffic operations. LOS is a qualitative measure of traffic operating conditions whereby a letter grade, from A (the best) to F (the worst), is assigned. These grades represent the perspective of drivers and are an indication of the comfort and convenience associated with driving. Table E-4: Intersection HCM LOS Criteria describes the LOS thresholds for signalized intersections identified in the HCM. Table E-5: Cumulative Plus Project Conditions Intersection LOS (2016) summarizes the AM and PM peak hour level of service results for the two study intersections. Table E-6: Cumulative Plus Project Left-Turn Queues (2016) summarizes the queues at the intersections.

Table E-4: Intersection HCM LOS Criteria

LOS	Description	Signalized Delay (Seconds)
A	Operations with very low delay occurring with favorable progression and/or short cycle length.	< 10.0
B	Operations with low delay occurring with good progression and/or short cycle lengths.	> 10.0 to 20.0
C	Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	> 20.0 to 35.0
D	Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	> 35.0 to 55.0
E	Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences.	> 55.0 to 80.0
F	Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	> 80.0

Source: Highway Capacity Manual (Transportation Research Board, 2010).

Table E-5: Cumulative Plus Project Conditions Intersection LOS (2016)

Intersection		Traffic Control	Peak Hour	Delay	LOS
19	4th Street/Cleveland Avenue	Signal	AM	16.0	B
			PM	20.8	C
20	4th Street/The Vine (Project Access)	Signal	AM	14.8	B
			PM	16.7	B

Notes:

1. Delay is calculated using SimTraffic Micro-Simulation using HCM 2010 Methodology

Source: Fehr & Peers, 2016

Table E-6: Cumulative Plus Project Left-Turn Queues (2016)

Location	AM	PM
4th Street/Cleveland Avenue Intersection		
Eastbound Left-Turn (225′)	225′	77′
Westbound Left-Turn (142′ Storage)	140′	133′
4th Street/The Vine Intersection		
Eastbound Left-Turn[1] (310′ Storage)	106′	257′
Westbound Left-Turn[1] (250′ Storage)	191′	206′

Notes:

Queues reported from Synchro and represent the 95th-percentile queue.

Bold indicates where queue exceeds available storage.

1. Proposed Configuration has dual lanes. Total queue in both lanes reported

Source: Fehr & Peers, 2016

As shown in Table E-5: Cumulative Plus Project Conditions Intersection LOS (2016), both study intersections are projected to operate at acceptable levels of service during both peak hours. Additionally, as shown in Table E-6: Cumulative Plus Project Left-Turn Queues (2016), the queues are accommodated in the proposed turn pockets.

APPENDIX F - TOYOTA ARENA MIXED-USE DEVELOPMENT TRAFFIC IMPACT ANALYSIS - RK Engineering Group (September 17, 2021)

RK Engineering Group, Inc. completed a draft Transportation Impact Analysis (TIA) for the proposed mixed-use development . That study documented potential transportation impacts associated with the proposed project.

The purpose of this memorandum is to document the methodology, recommendations, and results of the project access assessment.

Mixed-Use Trip Generation Estimates

The mixed-use development capacity and trip generation associated with the 2022 Piemonte Overlay Specific Plan Amendment has been analyzed. Table F-1: OCSP Trip Generation Cmoparison with Proposed Mixed-Use Land Uses (SA 8, 11, 16 & 17) summarizes the trip generation estimate used in the traffic analysis:

Table F-1: OCSP Trip Generation Comparison with Proposed Mixed-use Land Uses (SA 8, 11, 16 & 17)

	Daily	AM Peak Hour	PM Peak Hour
Allowable trips per OCSP	98,837	1,961	7,556
Total Net Adept-Piemonte Trips	5,691	300	458
Trip Generation Difference Between OCSP and proposed Overlay Amendment	93,146	1,661	7,098
Percent of Trips Use by proposed Overlay Amendment	6.1%	18%	6.4%

The Traffic Impact Analysis compared the proposed Mixed-use Land use trip generation to the available trip counts allowed under the Ontario Center Specific Plan. In summary, the OCSP has a remaining trip capacity of 98,837 daily trips, and the proposed Mixed-use is anticipated to generate a net trip count of 5,691, which is well within the remaining capacity established for the OCSP area. In addition, the peak hour trip counts for the proposed Mixed-use land uses, 300

trips in the AM and 458 trips in the PM, are also within the peek hour Allowable trips per OCSP.

CEQA Vehicle Miles Traveled Analysis

Development projects within the Piemonte Overlay are subject to a Vehicle Miles Traveled (VMT) analysis, purupsant to the recommendations and practices described in Planning Commission Resolution No. PC20-021.

According to City guidelines, land use projects located within a Transit Priority Area (TPA) and have the following project characteristics are presumed to have a less than significant impact absent substantial evidence to the contrary:

- Has a Floor Area Ratio of 0.75 or higher;
- Includes no more parking for residents, customers or employees than the City Development Code mandades;
- Is consisten with the Sustainable Communitys Strategy (SCS) as determined by the City with input from SCAG or SBCTA; and
- If there are existing affordable residential units, replaces those residential units with at least as many similarly affordable units and not with a smaller number of moderate or hight-income residential units.

Certain areas within the Piemonte Overlay are within the TPA and may qualify to be presumed to have a less than significant impact.

APPENDIX ~~F~~G - OCSP PLANTING MATRIX

Table ~~F~~G.1: Applicable OCSP Planting Matrix

Species (*Latin name* - Common name)	Concours Street	Fourth Street	Haven Avenue	Primary Entrance Statement	Secondary Entrance Statement
TREES (P = Primary Tree, S = Secondary Tree)					
Acacia saligna – Willow Acacia		S			
Arbutus unedo – Strawberry Tree					X

DEVELOPMENT ADVISORY BOARD MEETING
February 7, 2021

ENVIRONMENTAL ASSESSMENT, TENTATIVE PARCEL MAP, AND DEVELOPMENT PLAN REVIEW FOR FILE NOS. PMTT21-009 AND PDEV21-017: A Tentative Parcel Map for condominium purposes (File No. PMTT21-009 (TPM 20394)), subdividing 0.86-acre of land into a single lot to establish 22 commercial airspace condominium units, and a Development Plan (File No. PDEV21-017) to construct two commercial buildings totaling 30,971 square feet, located at 125 West Emporia Street, within the MU-1/LUA-2N (Downtown Mixed-Use/Arts District – North) and the EA (Euclid Avenue Overlay) zoning districts. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-Fill Development Projects) of the CEQA Guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APN: 1049-059-14) **submitted by RWSS Development LLC. Planning Commission action is required.**
Action: The Development Advisory Board adopted a decision recommending the Planning Commission approve the Tentative Parcel Map and the Development Plan, subject to conditions.

ENVIRONMENTAL ASSESSMENT, DEVELOPMENT PLAN, AND CONDITIONAL USE PERMIT REVIEW FOR FILE NOS. PDEV21-021 AND PCUP21-009: A Development Plan (File No. PDEV21-021) to construct a 4-story, 128-room Extended Stay/Residence Inn Hotel, in conjunction with a Conditional Use Permit (File No. PCUP21-009) to establish and operate the hotel use on 1.83 acres of land located at 5060 East Fourth Street, within the Freeway Commercial land use district of The Exchange Specific Plan. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-Fill Development Projects) of the CEQA guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APN: 0238-012-30) **submitted by Roger Barbosa. Planning Commission action is required.**
Action: The Development Advisory Board adopted a decision recommending the Planning Commission approve the Development Plan and the Conditional Use Permit, subject to conditions.

ZONING ADMINISTRATOR MEETING
February 7, 2021

Meeting Cancelled

CITY COUNCIL/HOUSING AUTHORITY MEETING
February 1, 2021

ENVIRONMENTAL ASSESSMENT AND ZONE CHANGE REVIEW FOR FILE NO. PZC21-001: A Zone Change (File No. PZC21-001) amending the zoning designation on 2.77 acres located at 1948

South Bon View Avenue, from IL (Light Industrial) to IG (General Industrial). Staff has prepared an Addendum to The Ontario Plan Environmental Impact Report (State Clearinghouse No. 2008101140), certified by the City Council on January 27, 2010. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APN: 1050-441-05) **submitted by Bon View Land 10, LLC & BV Investments 10, LLC. Planning Commission recommended approval of this project on December 20, 2021 with a 6 – 0 vote.**
Action: The City Council approved and waived further reading of the ordinance approving the Zone Change.

CITY COUNCIL/HOUSING AUTHORITY MEETING
February 15, 2022

No Planning Department Items Scheduled

PLANNING/HISTORIC PRESERVATION COMMISSION MEETING
February 22, 2022

ENVIRONMENTAL ASSESSMENT, PLANNED UNIT DEVELOPMENT, TENTATIVE PARCEL MAP, DEVELOPMENT PLAN, AND CERTIFICATE OF APPROPRIATENESS REVIEW FOR FILE NOS. PUD22-001, PMTT21-009, PDEV21-017, AND PHP21-021: A request for the following entitlements: [1] a Planned Unit Development (File No. PUD22-001) to establish development standards, design guidelines, and infrastructure requirements for the Project site; [2] a Tentative Parcel Map (File No. PMTT21-009 (TPM 20394)) to subdivide a 0.86-acre property into a single lot to establish 22 commercial airspace condominium units; [3] a Development Plan (File No. PDEV21-017) to construct two commercial buildings totaling 33,787 square feet; and [4] a Certificate of Appropriateness (File No. PHP21-021) to allow for the construction of the proposed Project within the Euclid Avenue Overlay Zoning District. The Project Site is located at 125 West Emporia Street, within the MU-1/LUA-2N (Downtown Mixed-Use/Arts District – North) and EA (Euclid Avenue Overlay) zoning districts. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-Fill Development Projects) of the CEQA Guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APN: 1049-059-14) **submitted by RWSS Development LLC. City Council action is required.**
Action: The Planning/Historic Preservation Commission adopted a resolution recommending the City Council approve the Planned Unit Development and resolutions approving the Tentative Parcel Map, Development Plan, and Certificate of Appropriateness, subject to conditions and contingent upon the City Council approval of the Planned Unit Development.

ENVIRONMENTAL ASSESSMENT, DEVELOPMENT PLAN, AND CONDITIONAL USE PERMIT REVIEW FOR FILE NOS. PDEV21-021 AND PCUP21-009: A Development Plan (File No. PDEV21-021) to construct a

4-story, 128-room Extended Stay/Residence Inn Hotel, in conjunction with a Conditional Use Permit (File No. PCUP21-009) to establish and operate the hotel use on 1.83 acres of land located at 5060 East Fourth Street, within the Freeway Commercial land use district of The Exchange Specific Plan. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-Fill Development Projects) of the CEQA guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APN: 0238-012-30) **submitted by Roger Barbosa. City Council action is required.**
Action: The Planning Commission adopted a resolution recommending the City Council approve the Conditional Use Permit and adopted a resolution approving the Development Plan, subject to conditions and contingent upon the City Council approval of the Conditional Use Permit.

DEVELOPMENT ADVISORY BOARD MEETING
February 23, 2022

Meeting Cancelled

ZONING ADMINISTRATOR MEETING
February 23, 2022

ENVIRONMENTAL ASSESSMENT AND CONDITIONAL USE PERMIT REVIEW FOR FILE NO. PCUP21-016: A Conditional Use Permit to establish: [1] a Type 52 ABC License (Veteran's Club) for the sale of beer, wine, and distilled spirits for consumption on the licensed premises only to bona fide members of the licensed organization, their bona fide guests, and bona fide members of other veterans organizations; and [2] a Type 58 ABC License (Caterer's Permit) to cater alcoholic beverages off-site, for the American Legion Post No. 112, within an existing 4,081-square-foot building, on 0.76 acres of land located at 1400 South Vineyard Avenue, Suite A, within the IG (General Industrial) zoning district. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15301 (Class 1, Existing Facilities) of the CEQA Guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan (ALUCP); (APN: 0113-415-17) **submitted by American Legion Post No. 112.**
Action: The Zoning Administrator adopted a decision approving the Conditional Use Permit, subject to conditions.

Monthly Activity Report: New Applications

Month of February 2022

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

PADV22-001: **Submitted by Tom Grahn**
