CITY OF ONTARIO
DEVELOPMENT ADVISORY BOARD

AGENDA

June 17, 2024

▶ **All documents for public review are on file in the Planning Department located in City Hall at 303 East "B" St., Ontario, CA 91764 and on the city's website at ontarioca.gov/Agendas/DAB**

MEETING WILL BE HELD AT 1:30 PM IN ONTARIO CITY COUNCIL CHAMBERS LOCATED AT 303 East "B" St.

Scott Ochoa, City Manager
Scott Murphy, Executive Director, Community Development Agency
Jennifer McLain Hiramoto, Executive Director, Economic Development
James Caro, Building Official
Henry Noh, Planning Director
Khoi Do, City Engineer
Chief Michael Lorenz, Police Department
Fire Marshal Paul Ehrman, Fire Department
Scott Burton, Utilities General Manager
Angela Magana, Community Improvement Manager

PUBLIC COMMENTS

Citizens wishing to address the Development Advisory Board on any matter that is not on the agenda may do so at this time. Please state your name and address clearly for the record and limit your remarks to three minutes.

Please note that while the Development Advisory Board values your comments, the members cannot respond nor take action until such time as the matter may appear on the forthcoming agenda.

AGENDA ITEMS

For each of the items listed below the public will be provided an opportunity to speak. The chairperson will open the public hearing. At that time the applicant will be allowed three (3) minutes to make a presentation on the case. Members of the public will then be allowed three (3) minutes each to speak. The Development Advisory Board may ask the speakers questions relative to the case and the testimony provided. The question period will not count against your time limit. After all persons have spoken, the applicant will be allowed three minutes to summarize or rebut any public testimony. The chairperson will then close the public hearing portion of the hearing and deliberate the matter.

CONSENT CALENDAR ITEMS

A. MINUTES APPROVAL

Development Advisory Board Minutes of June 3, 2024, approved as written.

PUBLIC HEARING ITEMS

B. ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT PLAN REVIEW FOR FILE NO. PDEV23-033: A public hearing to consider a Development Plan to construct one industrial building totaling 221,658 square feet on 11.31 acres of land located on the southwest corner of Campus Avenue and Phillips Street, within the IL (Light Industrial) zoning district. Staff is recommending the adoption of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the City Council on August 16, 2022, in conjunction with File No. PGPA20-002. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan; (APNs: 1049-482-01, 1049-482-02, 1049-482-03 and 1049-482-04) **submitted by California Acquisition, LLC.**

1. **CEQA Determination**

   Motion to Approve/Deny an Addendum to an EIR

2. **File No. PDEV23-033** (Development Plan)

   Motion to Approve / Deny

C. ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT PLAN REVIEW FOR FILE NO. PDEV23-035: A hearing to consider a Development Plan (File No. PDEV23-035) to construct 265 dwellings consisting of 83 detached cluster dwellings, 126 row-town multifamily dwellings, and 56 single family detached dwellings on approximately 23.2 acres of land located south of Riverside Drive, north of Chino Avenue and west of Archibald Avenue, within Neighborhoods 2A, 2B and 2C of the Countryside Specific Plan. The environmental impacts of this project were previously reviewed in conjunction with an Amendment to the Countryside Specific Plan (File No. PSPA22-002), for which an Addendum to the Countryside Specific Plan Environmental Impact Report (State Clearinghouse No. 2004071001) was adopted by the City Council on June 20, 2023. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan; (APNs: 0218-111-60 and 0218-111-61) **submitted by Lennar Homes. Planning Commission action is required.**

1. **CEQA Determination**

   No action necessary – use of previous Addendum to an EIR

2. **File No. PDEV23-035** (Development Plan)

   Motion to recommend Approval/Denial

If you wish to appeal a decision of the **Development Advisory Board**, you must do so within ten (10) days of the **Development Advisory Board** action. Please contact the **Planning Department** for information regarding the appeal process.

If you challenge any action of the **Development Advisory Board** in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the **Development Advisory Board** at, or prior to, the public hearing.

The next **Development Advisory Board** meets on **July 1, 2024**.

I, Gwen Berendsen, Administrative Assistant of the City of Ontario, or my designee, hereby certify that a true, accurate copy of the foregoing agenda was posted on or before **June 13, 2024**, at least 72 hours prior to the meeting per Government Code Section 54954.2 at 303 East "B" Street, Ontario.

Gwen Berendsen

Administrative Assistant

CITY OF ONTARIO

Development Advisory Board

Minutes

June 3, 2024

BOARD MEMBERS PRESENT

Henry Noh, Chairman, Planning Department
James Caro, Building Department
Elda Zavala, Community Improvement
Charity Hernandez, Economic Development Agency
Khoi Do, Engineering Department
Paul Ehrman, Fire Department
Christy Stevens, Municipal Utilities Company
Heather Lugo, Police Department

BOARD MEMBERS ABSENT

None

STAFF MEMBERS PRESENT

David Eoff IV, Planning Department
Rafael Torres, Planning Department
Karen Khukoyan, Economic Development

PUBLIC COMMENTS

No person from the public wished to speak.

CONSENT CALENDAR ITEMS

A. **APPROVAL OF MINUTES:** Motion to approve the minutes of the May 6, 2024, meeting of the Development Advisory Board was made by Mr. Do; seconded by Ms. Stevens; and approved unanimously by those present (8-0).

PUBLIC HEARING ITEMS

B. **ENVIRONMENTAL ASSESSMENT AND DEVELOPMENT PLAN REVIEW FOR FILE NO. PDEV21-006:** A public hearing to consider a Development Plan (File No. PDEV21-006) to construct 62 multiple-family residential units (5th Street Apartments) on 2.4-acres of land, located at 1466 East Fifth Street, within the HDR-45 (High Density Residential – 25.1 to 45.0 du/ac) zoning district. The project is categorically exempt from the requirements of the California Environmental Quality Act (CEQA) pursuant to Section 15332 (Class 32, In-Fill Development Projects) of the CEQA Guidelines. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of

the Ontario International Airport Land Use Compatibility Plan; (APNs: 108-511-16 and 108-511-17) **submitted by Fifth Avenue Developments, LLC. Planning Commission action is required.**

Mr. Noh opened the public hearing.

Ray Wong a partner with Fifth Avenue Developments was present.

Mr. Noh asked if Mr. Wong had reviewed and agreed with the conditions of approval.

Mr. Wong stated yes, he had reviewed and agreed with the conditions of approval.

As there was no one else wishing to speak on this item, Mr. Noh closed the public hearing.

Motion to recommend approval of **File No. PDEV21-006,** subject to the conditions of approval, was made by Mr. Do; seconded by Mr. Caro; and approved unanimously by those present (8-0).

There being no further business, the meeting was adjourned to the next meeting on June 17, 2024.

Respectfully submitted,

Gwen Berendsen

Gwen Berendsen
Recording Secretary

CITY OF ONTARIO PLANNING DEPARTMENT

DEVELOPMENT ADVISORY BOARD AGENDA REPORT

June 17, 2024

303 East B Street, Ontario, California 91764 /Phone: 909.395.2036 / Email: PlanningDirector@OntarioCA.gov

FILE NO: PDEV23-033

SUBJECT: A public hearing to consider the adoption of an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) and approval of a Development Plan to construct one industrial building totaling 221,658 square feet on 11.31 acres of land located on the southwest corner of Campus Avenue and Phillips Street, within the IL (Light Industrial) zoning district. (APNs: 1049-482-01, 1049-482-02, 1049-482-03 and 1049-482-04). **Submitted by California Acquisition, LLC.**

PROPERTY OWNER: JAR Commercial Investments LLC

RECOMMENDED ACTION: That the Development Advisory Board adopt an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) and approve File No. PDEV23-033, pursuant to the facts and reasons contained in the Agenda Report and attached Decisions and subject to the conditions of approval appended to the attached Decision, as "Attachment A."

BACKGROUND: On September 23, 2023, the Applicant submitted an application for a Development Plan (File No. PDEV23-033) to demolish the existing structures on the project site and construct one industrial building totaling 221,658 square feet.

PROJECT SETTING: The Project site consists of 11.31 acres of land located at the southwest corner of Campus Avenue and Phillips Street, within the IL (Light Industrial) zoning district, which is depicted in Exhibit A: Project Location Map. The Project site is currently utilized as a lumber storage yard that has been operating since 1989. The site includes a 32,534-square-foot lumber storage warehouse building that is located on the northeastern portion of the site, while the remaining site is utilized for outdoor lumber storage and staging. The Project site has an active Union Pacific Railroad (UPRR) rail line located along the western and southern property lines. The rail lines, which continue north and east of the Project Site and serve the surrounding businesses, will remain in place. The Project site also includes a privately owned rail spur located east of the rail line that serves the existing lumber yard and is proposed to be removed.

The Project site is surrounded by residential land uses to the west, north and east and industrial uses to the east and south. The existing surrounding land uses, zoning, and Policy Plan (general plan) and specific plan land use designations are summarized in Table 1: Surrounding Zoning & Land Uses (see Technical Appendix).

PROJECT ANALYSIS:

(1) Development Plan (File No. PDEV23-033)

(a) Site Design/Building Layout — The proposed project includes the construction of a 221,658 square-foot industrial building that has a 0.45 floor area ratio ("FAR") (see Exhibit B—Site Plan, attached). The rectangular-shaped building is centrally located on the western half of the site, with the front of the building facing Campus Avenue and two office entries located at the northeast and southeast corners of the building. The building is setback approximately 20 to 40 feet from the north property line (Phillips Street), approximately 70 to 90 feet from the south property line (interior property line), approximately 81 feet from the west property line (interior property line), and approximately 160 feet from the east property line (Campus Avenue). There are two vehicle off-street parking areas located on the northeast and southeast corners of the site adjacent to the building office entries, serving employees and visitors (see Exhibit B—Site Plan, attached).

A yard area, designed for tractor-trailer parking, truck maneuvering, loading activities, and outdoor staging, is centrally located to the east of the proposed building between the two parking areas. The yard area will be screened from public view by a 14-foot-high concrete tilt-up wall that will match the architecture of the building.

The Development Code requires a minimum 30-foot building setback for industrial buildings that share an interior property line with residential land uses. The proposed Project exceeds the required building setback and provides an approximate 81-foot building setback along the western property line (interior property line adjacent to residential). The 80-foot setback includes a 35-foot wide UPRR rail easement, a 20-foot-wide landscape planter, a 20-foot-wide emergency vehicle access driveway and a 6-foot-wide landscape planter adjacent to the proposed building. The proposed landscape planters allow for the planting of larger evergreen trees between the residential properties and the proposed industrial building to soften and screen views of the building year-round.

(b) Site Access/Circulation — There are two points of access to the Project site from Campus Avenue at the northeast and southeast corners. These access points will be shared by both standard vehicles and tractor-trailers accessing the yard and parking areas (see Exhibit B—Site Plan, attached). To eliminate potential truck traffic on Phillips Street through existing residential neighborhoods, trucks exiting Campus Avenue will be required to travel north or south on Campus Avenue.

Internal circulation is provided by a 26-foot wide north-south drive aisle adjacent to the eastern portion of the building, connecting the two parking areas and tractor trailer yard. A 20-foot-wide emergency drive aisle is provided to the south and west of the building that connects to the southeast parking lot providing adequate maneuvering and access for emergency vehicles around the building and throughout the Project site.

(c) Parking — The Project requires 121 off-street vehicle parking spaces and 7 trailer parking spaces as specified in the Development Code. The Project will provide 121

off-street parking spaces and 29 trailer parking spaces, which meets and exceeds the minimum parking required for the Project. The off-street parking calculations for the Project are summarized in Table 3: Parking Summary.

(d) Architecture — The proposed building is of concrete tilt-up construction and integrates a contemporary architectural design theme, incorporating enhanced elements and treatments at office entries and along street facing elevations (see Exhibit D — Elevations, attached). Architectural elements for all buildings include smooth-painted concrete in white and grey tones, Formliner, Dekton Consentino panels, horizontal and vertical reveals, storefronts with black anodized aluminum mullions and blue glazing, metal canopies, 2nd story windows with canopies, and recessed panel sections with contrasting colors. The mechanical equipment will be roof-mounted and architecturally screened from public view by the parapet walls. Staff believes that the proposed Project illustrates the type of high-quality architecture promoted by the Development Code. This is exemplified through the use of:

- Articulation in the building footprint, incorporating a combination of recessed and popped-out wall areas;
- Articulation in the building parapet/roof line, which serves to accentuate the building's entries and breaks up large expanses of building wall; and
- Variations in building massing.

(e) Landscaping — The Project provides landscaping along Campus Avenue, Phillips Street, the western perimeter of the site, and throughout the off-street parking areas. The Development Code requires that the Project provide a minimum 15 percent landscape coverage, and 16 percent has been provided, exceeding the minimum requirements. Moreover, a combination of 15-gallon, 24-inch, 36-inch, and 48-inch box accent and shade trees will be provided throughout the Project site, in addition to a variety of shrubs and groundcovers that are low water usage and drought tolerant. Additionally, the Project includes right-of-way improvements (sidewalk and parkway) and street trees. The proposed on-site and off-site landscape improvements will assist in creating a walkable, safe area for pedestrians to access the Project site (see Exhibit C— Landscape Plan, attached). Also, the Project will incorporate an employee break area, with benches, tables, and shade trees.

(f) Signage — All Project signage is required to comply with sign regulations provided in Ontario Development Code Division 8.1. Prior to the issuance of a Building Permit for the installation of any new on-site signage, the Applicant is required to submit Sign Plans for Planning Department review and approval.

(g) Utilities (drainage, sewer) — Public utilities (water and sewer) are available to serve the Project. Furthermore, the Applicant has submitted a Preliminary Water Quality Management Plan ("PWQMP"), which establishes the Project's compliance with storm water discharge/water quality requirements. The PWQMP includes site design measures that capture runoff and pollutant transport by minimizing impervious surfaces and maximizes low impact development ("LID") best management practices ("BMPs"),

such as retention and infiltration, biotreatment, and evapotranspiration. The PWQMP proposes the use of underground storm water retention chambers to receive, retain, and treat storm water runoff located within the tractor-trailer yard storage area. Any overflow drainage will be conveyed to the public street by way of parkway drains and culverts.

PUBLIC NOTIFICATION: The subject application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, notices were mailed to all owners of real property and residents located within a minimum of 500 feet of the exterior boundaries of the property that is the subject of the hearing, as shown on the records of the County Assessor.

On-site posting was provided pursuant to Code Section 2.03.010.C.4, which consisted of one large, 6-foot-tall, freestanding public notification sign located on the northeast corner of Campus Avenue and Philips Street. The sign was posted ten (10) calendar days prior to the Development hearing date.

NEIGHBORHOOD MEETING: The Planning Department held a community meeting on February 29, 2024 between 6:00 PM to 7:00 PM at the Ontario Senior Center to discuss the proposed development. Planning and Engineering staff, translators and the applicant were in attendance during the community meeting. The Planning Department received 2 phone calls prior to the meeting from property owners with general questions about the proposed project and use. A total of 3 residents attended the meeting, and the following questions and concerns were raised and responded to at the meeting:

- Residents were concerned about truck traffic traveling through adjacent residential streets. Staff explained that access to the project would be taken from Campus Avenue only and project access would not be taken from Phillips Street. Staff also discussed citywide truck routes and the projects path of travel to those designated truck routes.

- Residents requested that the project allow for on-street residential parking along Phillips Street. Staff explained that the request would be evaluated for further consideration and potentially require the applicant to provide no truck parking signs along Phillips Street, however no parking would be allowed along Campus Avenue.

- Residents inquired about the long-term removal of railroad tracks and right of way improvements located along Monterey Avenue. Staff explained that the project's street improvements did not include Monterey Avenue and the railroad easements and tracks would remain in place as part of the proposed project, however areas within the Project site would be improved.

- Residents inquired about the status of the ONT Part 150 program and if the City or ONT were still purchasing residential properties within the immediate area for airport purposes. Staff explained that the ONT Part 150 acquisition and residential

noise insulation program was funded by the FAA and funding was no longer available, resulting in the program no longer being active.

CORRESPONDENCE: As of the preparation of this Agenda Report, the Planning Department staff has not received any written or verbal communications from the owners or occupants of properties surrounding the Project site or from the public in general, regarding the subject application.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject application and recommend conditions of approval to be imposed upon the application. At the time of the Agenda Report preparation, recommended conditions of approval were provided and are appended to the attached Decision as "Attachment A."

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the Development Advisory Board has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Development Advisory Board, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (general plan), and City Council Priorities components of The Ontario Plan ("TOP"). More specifically, the goals and policies of TOP that are furthered by the proposed project are as follows:

(1) City Council Goals.

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner

(2) Governance.

Decision Making:

- Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

(3) Policy Plan (General Plan)

Land Use Element:

- Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

Community Economics Element:

- CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

- CE-2.2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.

- CE-2.4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

- CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Safety Element:

- Goal S-1 Seismic & Geologic Hazards: Minimized risk of injury, loss of life, property damage, and economic and social disruption caused by earthquake-induced and other geologic hazards.

- S-1.1 Implementation of Regulations and Standards. We require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.

Community Design Element:

- CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:

- Building volume, massing, and height to provide context-appropriate scale and proportion;
- A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and
- Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

➢ CD-2.8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.

➢ CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

➢ CD-2.10 Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:

- Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field;

➢ CD-2.12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.

➢ CD-2.13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

▪ Goal CD-5 Protection of Investment: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects the property values and encourages additional public and private investments.

➢ CD-5.1 Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

HOUSING ELEMENT COMPLIANCE: The project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the project site is not

one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

ENVIRONMENTAL REVIEW: Staff has prepared an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the City Council on August 16, 2022, in conjunction with File No. PGPA20-002. This application introduces no new significant environmental impacts, and all previously adopted mitigation measures are a condition of project approval.

DECISION NO.: [insert #]

FILE NO.: Addendum for PDEV23-033

DAB Hearing Date: June 17, 2024

SUBJECT: An Addendum to The Ontario Plan 2050 Supplemental Environmental (State Clearinghouse No. 2021070364) to construct one industrial building totaling 221,658 square feet in the IL (Light Industrial) zoning district. APN's: 1049-482-01, 1049-482-02, 1049-482-03 and 1049-482-04.

PART 1: RECITALS

WHEREAS, CALIFORNIA ACQUISITION, LLC (hereinafter referred to as "Applicant") has filed an Application for the approval of a Development Plan, File No. PDEV23-033, which consists of one industrial building totaling 221,658 square feet on 11.31 acres of land located on the southwest corner of Campus Avenue and Phillips Street, within the IL (Light Industrial) zoning district, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364) was certified on August 16, 2022 (hereinafter referred to as "Certified EIR"), in which development and use of the Project site was discussed; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Development Advisory Board (hereinafter referred to as "DAB") is the decision-making authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the Development Advisory Board has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent of supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum and related documents are on file in the City of Ontario Planning Department, located at 303 East B Street, Ontario, CA 91764, and are available for inspection by any interested person at that location and are, by this reference, incorporated into this Decision as if fully set forth herein; and

WHEREAS, City of Ontario Development Code Table 2.02-1 (Review Matrix) grants the DAB the responsibility and authority to review and act on the subject Application; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which the public notification of environmental actions shall be provided and hearing procedures to be followed, and all such notifications and procedures have been accomplished pursuant to Development Code requirements; and

WHEREAS, on June 17, 2024, the DAB of the City of Ontario conducted a hearing on the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the hearing and adoption of this Decision have occurred.

PART 2: THE DECISION

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED AND DECIDED by the Development Advisory Board of the City of Ontario as follows:

SECTION 1: Environmental Determination and Findings. As the decision-making body for the Project, the DAB has reviewed and considered the information contained in the Addendum, the initial study, and the administrative record for the Project, including all written and oral evidence provided during the comment period. Based upon the facts

and information contained in the Addendum, the initial study, and the administrative record, including all written and oral evidence presented to the DAB, the DAB finds as follows:

(1) The environmental impacts of the Project were reviewed in conjunction with an Addendum to The Ontario Plan 2050 Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), certified by the Ontario City Council on August 16, 2022 in conjunction with File No. PGPA20-002; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Development Advisory Board; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: Subsequent or Supplemental Environmental Review Not Required. Based on the EIR Addendum, all related information presented to the DAB, and the specific findings set forth in Section 1, above, the DAB finds that the preparation of a subsequent or supplemental Certified EIR is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: Housing Element Compliance. Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the DAB finds that based on the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

SECTION 4: Airport Land Use Compatibility Plan ("ALUCP") Compliance. The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the DAB has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the DAB, therefore, finds and

determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

SECTION 5: Development Advisory Board Action. The DAB does hereby find that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR and does hereby APPROVE the adoption of the EIR Addendum to the Certified EIR, included as Attachment A of this Decision.

SECTION 6: Indemnification. The Applicant shall agree to defend, indemnify, and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers, or employees to attack, set aside, void or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 7: Custodian of Records. The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario. The records are available for inspection by any interested person, upon request.

1.0 INTRODUCTION

This Addendum and California Environmental Quality Act (CEQA) Guidelines Section 15183 Evaluation Checklist has been prepared in accordance with CEQA, as amended, to make minor technical changes and additions to the Supplemental Environmental Impact Report for The Ontario Plan 2050 (referenced herein as the "approved project") prepared for the City of Ontario (TOP 2050 SEIR), certified August 17, 2022, and, as a separate method of CEQA compliance, to consider the eligibility of the 1300 S Campus Project for an exemption under CEQA for consistency with a community plan, general plan, or zoning. While much of the analysis herein applies to both the Addendum and the CEQA Guidelines Section 15183 Evaluation, they are two separate types of CEQA review, and each serve as a standalone means for CEQA compliance for the proposed project. This Addendum and CEQA Guidelines Section 15183 Evaluation Checklist focuses on the current project proposal (referenced herein as the "1300 S Campus Project"), which includes the development of a 221,658-square-foot warehouse with 27 dock doors and 121 parking spaces on a site located within the planning area at 1300 S Campus Avenue. Refer to the proposed project as described in Section 1.6, *Project Description*.

The proposed project would not result in new or substantially more severe significant environmental impacts compared with the environmental impacts disclosed in the certified TOP 2050 SEIR, nor are there any other circumstances that require the preparation of a subsequent or supplemental EIR. There are no impacts that are peculiar to the project or project site; there are no new significant effects that were not analyzed as significant effects in the TOP 2050 SEIR; there are no potentially significant off-site or cumulative impacts that were not discussed in the TOP 2050 SEIR; and the significant effects identified in the TOP 2050 SEIR would not be more severe than previously discussed as a result of substantial new information which was not known at the time the SEIR was certified.

1.1 PURPOSE OF AN ADDENDUM

CEQA, a Statewide environmental law contained in Public Resource Code (PRC) Sections 21000–21189.70.10, applies to public agency discretionary decisions which carry out, authorize, or approve actions that have the potential to adversely affect the environment. The CEQA Guidelines allow for updating and using a previously certified EIR or adopted Negative Declaration for projects that have changed or are different from the original project or conditions analyzed in the certified EIR or adopted Negative Declaration. In general, in cases where changes or additions occur with no new or substantially more severe significant environmental impacts, an addendum to a previously certified EIR or adopted Negative Declaration may be prepared, consistent with CEQA Guidelines Sections 15162 and 15164. This Addendum has been prepared in accordance with Section 21166 of CEQA and Sections 15162 and 15164 of the CEQA Guidelines.

Section 15164(a) of the CEQA Guidelines states that "the lead agency or a responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred." Pursuant to Section 15162(a) of the CEQA Guidelines, a Subsequent EIR or Negative Declaration is only required when:

> 1) *Substantial changes are proposed in the project which will require major revision of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;*

2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revision of the previous EIR or negative declaration due to the involvement of new significant environmental increase in the severity of previously identified significant effects; or

3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

(a) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

(b) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

(d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

If none of these circumstances are present, and only minor technical changes or additions are necessary to update the previously certified EIR or adopted Negative Declaration, an Addendum may be prepared, consistent with CEQA Guidelines Section 15164. CEQA Guidelines Section 15164 states:

(a) The lead agency or a responsible agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.

(b) An addendum to an adopted negative declaration may be prepared if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR or negative declaration have occurred.

(c) An addendum need not be circulated for public review but can be included in or attached to the final EIR or adopted negative declaration.

(d) The decision-making body shall consider the addendum with the final EIR or adopted negative declaration prior to making a decision on the project.

> *(e) A brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR, the lead agency's findings on the project, or elsewhere in the record. The explanation must be supported by substantial evidence.*

This Addendum to the TOP 2050 SEIR has been prepared because the 1300 S Campus Project would not result in any of the circumstances requiring a Subsequent or Supplemental EIR or Negative Declaration. Although the proposed project includes more specific details about buildout of the site than what was considered in the TOP 2050 SEIR, the proposed project modifications do not trigger the need for preparation of a Subsequent or Supplemental EIR under the criteria listed in CEQA Guidelines Sections 15162 and 15163, respectively and based on the substantial evidence within this Addendum.

Section 2.0, *Project Information*, and Section 3.0, *Environmental Analysis*, of this Addendum demonstrate that no substantial changes would result from the proposed project modifications nor have the existing conditions in the 1300 S Campus Project vicinity substantially changed such that major revisions to the TOP 2050 SEIR would be required. The proposed project would not result in a new significant environmental effect or a substantial increase in the severity of previously identified significant effects because the site is currently fully developed with industrial uses and would be redeveloped with similar uses under the proposed project.

In addition, based on the analysis in this Addendum, no substantial changes in circumstances per to CEQA Guidelines Section 15162(a)(2) have occurred since the certification of the TOP 2050 SEIR for the approved project that would result in new significant impacts or substantially increase the severity of significant impacts previously identified, since the background environmental conditions have not significantly changed since that time.

Furthermore, no new information, which was not known and could not have been known at the time of the TOP 2050 SEIR preparation, has been revealed that shows new or substantially greater significant impacts would result (CEQA Guidelines Section 15162[a][3]). There are no new or different mitigation measures or alternatives that would substantially reduce one or more significant impacts of the approved project but that are not adopted. The proposed modifications do not require adoption of any further mitigation measures or alternatives beyond those provided in the TOP 2050 SEIR (CEQA Guidelines Section 15162[a][3]).

This Addendum relies on the TOP 2050 SEIR and the related administrative record, in addition to the additional documentation included in this Addendum. This Addendum is to be included or attached to the TOP 2050 SEIR and is not to be considered as an independent or separate document. As this Addendum does not identify new or substantially greater significant environmental impacts, circulation for public review and comment is not required under CEQA Guidelines Section 15164(c).

1.2 PURPOSE OF A CEQA GUIDELINES SECTION 15183 EVALUATION CHECKLIST

Pursuant to Section 15168 of the CEQA Guidelines, a Program EIR may be prepared on a series of actions that can be characterized as one large project. Use of a Program EIR gives the Lead Agency an opportunity to consider broad policy alternatives and program-wide Mitigation Measures, as well as greater flexibility to address project-specific and cumulative environmental impacts on a comprehensive scale. As such, the TOP 2050 SEIR prepared for The Ontario Plan 2050 was prepared as a long-term planning document that embodies the community's vision for Ontario for the next 30 years and serves as the City's General Plan.

Article 12 (Special Situations) of the CEQA Guidelines identifies situations for which certain CEQA-compliance procedures may apply, including for projects consistent with a community plan, general plan, or zoning. Specifically, Section 15183(a) of the CEQA Guidelines states that:

> *"CEQA mandates that projects which are consistent with the development density established by existing zoning, community plan, or general plan policies for which an EIR was certified shall not require additional environmental review, except as might be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site. This streamlines the review of such projects and reduces the need to prepare repetitive environmental studies."*

Pursuant to Section 15183(c) of the CEQA Guidelines, "If an impact is not peculiar to the parcel or to the project, has been addressed as a significant effect in the prior EIR, or can be substantially mitigated by the imposition of uniformly applied development policies or standards…then an additional EIR need not be prepared for the project solely on the basis of that impact."

The project site is comprised of an approximately 11.31-acre existing wholesale lumber yard and distribution center situated on four lots (Assessor's Parcel Numbers 104-948-201, 104-948-202, 104-948-203 and 104948204) zoned Light Industrial with an Industrial land use designation within The Ontario Plan 2050 planning area. The Ontario Plan 2050 is a general plan with a certified EIR (the TOP 2050 SEIR) for the purposes of CEQA Guidelines Section 15183. Accordingly, in addition to serving as an Addendum to the TOP 2050 SEIR, the analysis contained herein evaluates whether the 1300 S Campus Project, which is consistent with the allowable uses and density of the general plan and zoning, would qualify for an exemption from CEQA pursuant to CEQA Guidelines Section 15183.

1.3 PROJECT LOCATION

The City of Ontario (City) is located in the southwestern portion of the County of San Bernardino; refer to Exhibit 1, *Regional Vicinity*. California State Route 83 (SR-83 or Euclid Avenue) and Interstate 15 (I-15) traverse the western and eastern portions of the City, respectively, in north-south orientations. I-10 and SR-60 traverse the northern and central portions of the City, respectively, in east-west orientations. As shown in Exhibit 2, *Project Vicinity*, the site comprises 11.31 acres located in the western portion of the City at the southwest corner of Phillips Street and S Campus Avenue (Assessor's Parcel Numbers 104-948-201, 104-948-202, 104-948-203 and 104948204). Regional access to the 1300 S Campus Project site is provided by SR-60, SR-83, and I-10. Local access to the site is provided by S Campus Avenue. The site is currently also served by Union Pacific Railroad, which operates a main line on the western side of the 1300 S Campus Project site, in addition to an adjacent privately-owned spur.

1.3.1 ENVIRONMENTAL SETTING

The project site is fully developed with an open-air wholesale lumber yard and distribution center. The northeastern portion of the 1300 S Campus Project site is occupied by an approximately 32,534-square-foot warehouse building that is primarily used for lumber storage and includes a small office area, and an approximately 300 square foot outhouse. The existing building was constructed in 2007, but the site has been used as a lumber yard since 1989.[1] Ornamental vegetation is present at the 1300 S Campus Project site, primarily along S Campus Avenue. An active rail line exists along the site's western and southern

[1] Enercon Services, Inc., *Phase I Environmental Site Assessment 1300 South Campus Avenue, Ontario, California*, July 12, 2023.

perimeters operated by the Union Pacific Railroad, with a privately owned rail spur coming farther onto the property on the western side to serve the existing lumber yard.

According to the Geotechnical Exploration, the site's topography is generally flat with an approximate elevation of 910 feet above mean sea level and naturally drains from the north to south.

GENERAL PLAN LAND USE DESIGNATION AND ZONING

The project site is zoned IL (Light Industrial) and has an IND (Industrial) land use designation per The Ontario Plan 2050.[2] The IND designation allows for a variety of light industrial uses, including warehousing/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting retail and professional office uses. The designation also accommodates activities that could potentially generate impacts, such as noise, dust, or other nuisances.

SURROUNDING LAND USES AND ZONING

The surrounding area supports a mixture of residential and industrial land uses. Specifically, land uses surrounding the 1300 S Campus Project site include:

- *North*: The project site is bounded to the north by Phillips Street with single-family residential uses across the street to the north. Residential uses to the north have an LDR (Low Density Residential) TOP land use designation and are within an IND overlay.

- *East*: The project site is bounded to the east by S Campus Avenue, with industrial uses (Dependable Highway Express Ontario, BestPack Packaging Systems) across the street, and single-family residential uses across the street to the northeast. Industrial uses to the east have IND TOP land use designation, and residential uses are designated LDR with an IND overlay.

- *South*: The project site is bounded to the south by the Union Pacific Railroad rail spur, with industrial uses (PRC Composites) beyond. These uses have a TOP land use designation IND.

- *West*: The project site is bounded to the west by the Union Pacific Railroad rail spur, with single-family residential uses beyond. Uses to the west have an LDR TOP land use designation.

1.4 PROJECT BACKGROUND

1.4.1 CERTIFIED TOP 2050 SEIR

In 2010, a Final EIR was prepared and certified for The Ontario Plan, which is the City's dynamic framework for sustained, comprehensive leadership in building Ontario's community. The City later updated The Ontario Plan to shape the Ontario community through the year 2050, currently known as The Ontario Plan 2050. In 2022, a Final SEIR was prepared and certified for The Ontario Plan 2050 to reflect potential environmental consequences associated with updates to The Ontario Plan. The TOP 2050 SEIR determined that potentially significant environmental impacts would occur in the following areas: air quality, cultural resources, geology and soils (paleontological resources), noise, transportation, and tribal

[2] City of Ontario, *The Ontario Plan 2050 Land Use Element Figures*, https://experience.arcgis.com/experience/99e7a1effa0242218701ac06ca387f9b?data_id=dataSource_6-183fd8bf967-layer-57-18574b30078-layer-22%3A33759, accessed August 8, 2023.

cultural resources. The TOP 2050 SEIR determined that mitigation measures would reduce impacts to paleontological resources and tribal cultural resources to less than significant levels. However, even with the implementation of mitigation measures, impacts relative to air quality, cultural resources, noise, and transportation would remain significant and unavoidable. As such, the City, as the lead agency, adopted a Statement of Overriding Considerations explaining the specific reasons why the social, economic, legal, technical, and/or other beneficial aspects of The Ontario Plan 2050 outweigh the significant and unavoidable impacts to the environment associated with implementation of the approved project.

1.4.2 RELATIONSHIP TO THE TOP 2050 SEIR

As discussed in Section 1.4, *Project Background*, The Ontario Plan 2050 was adopted by the City of Ontario in 2022 and serves as an update to TOP 2010 to guide the City's development and conservation through the year 2050. The TOP 2050 SEIR did not explicitly consider development or redevelopment of any specific sites, but rather more generally considered buildout of the City in accordance with the land use designations identified in The Ontario Plan 2050. In doing so, the TOP 2050 SEIR assumed additional growth of nonresidential uses that amount to 105,426,379 square feet beyond the existing conditions described in the TOP 2050 SEIR and 1,092,508 square feet beyond the TOP 2010 buildout estimates.[3]

The project site is zoned IL (Light Industrial) and has an IND (Industrial) land use designation per The Ontario Plan 2050. The IL zoning designation allows for development of a wide range of manufacturing and assembly activities, storage and warehousing activities, and other similar uses developed at a maximum intensity FAR of 0.55. The IND land use designation provides for a "Variety of light industrial uses, including warehousing/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting retail and professional office uses" and also has a maximum FAR of 0.55.[4] The 1300 S Campus Project consists of replacing an existing warehousing use (wholesale lumber yard) with a similar warehouse use and, thus, would continue the existing use of the site, as considered in the TOP 2050 SEIR, albeit with an expanded building footprint. Moreover, the 1300 S Campus Project is consistent with the allowable uses and density of The Ontario Plan 2050 and, thus, consistent with the land uses and buildout projections analyzed in the TOP 2050 SEIR. In addition to being consistent with the approved project analyzed in the TOP 2050 SEIR, the 1300 S Campus Project is consistent with The Ontario Plan 2050, as further evaluated in Section 3.11 of this Addendum. Therefore, the 1300 S Campus Project is within the scope of the approved project description that was evaluated in the TOP 2050 SEIR.

CEQA Guidelines Section 15168(c) describes the process for use of a Program EIR with Later Activities. CEQA Guidelines Section 15168(c)(4) states that where the later activities involve site specific operations, the lead agency should use a written checklist to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were within the scope of the program EIR (i.e., the TOP 2050 SEIR). Per CEQA Guidelines Section 15168(c)(2), if the lead agency finds that, pursuant to Section 15162, no subsequent EIR would be required, the agency can approve the activity as being within the scope of the approved project covered by the program EIR, and no new environmental document is required. Chapter 3 of this Addendum provides a written checklist that documents, along with the appended supporting technical studies, that the environmental effects of the 1300 S Campus Project are

[3] PlaceWorks, *The Ontario Plan 2050 Final Supplemental Environmental Impact Report*, Table 3-4 Comparison of Approved TOP to TOP 2050, August 2022.

4 PlaceWorks, *The Ontario Plan 2050 Final Supplemental Environmental Impact Report*, Table 3-2 (Land Use Designations in the City of Ontario), August 2022.

within the scope of the TOP 2050 SEIR pursuant to CEQA Guidelines Section 15168, and that no supplemental or subsequent EIR is required to review the proposed project.

1.5 DOCUMENTS INCORPORATED BY REFERENCE

The following documents were utilized during preparation of this Addendum and are incorporated into this document by reference. The documents are available for review at the City of Ontario's website (https://www.ontarioca.gov/Planning) and at the City's Planning Department located in Ontario City Hall at 303 E B Street, Ontario, CA 91764.

- *The Ontario Plan 2050* (adopted August 16, 2022). The Ontario Plan was originally adopted on January 27, 2010 and was updated by The Ontario Plan 2050 in 2022. The Ontario Plan 2050 states long-term goals, principles, and policies for achieving the City's Vision. It guides growth and development to achieve optimum results from the City's physical, economic, environmental, and human resources. The Ontario Plan 2050 includes the following elements: Land Use, Housing, Mobility, Safety, Environmental Resources, Parks and Recreation, Community Economics, Community Design, and Social Resources.

- *The Ontario Plan 2050 Supplemental Environmental Impact Report* (certified August 16, 2022). The Ontario Plan 2050 Supplemental Environmental Impact Report is intended to provide decision-makers and the public with information concerning the environmental effects of implementation of The Ontario Plan 2050. The TOP 2050 SEIR includes background data, analyzes potential environmental impacts, identifies Plan policies and implementation plans that serve as mitigation, and identifies additional mitigation measures to reduce potentially significant effects due to implementation of The Ontario General Plan 2050. The TOP 2050 SEIR determined that implementation of The Ontario Plan 2050 would result in significant unavoidable environmental impacts in the following topic areas: Air Quality, Cultural Resources, Noise, and Transportation.

- *Ontario Municipal Code* (current through Ordinance 3260, passed September 19, 2023). The Ontario Municipal Code provides regulations for governmental operations, development, infrastructure, public health and safety, and business operations within the City. Municipal Code Title 9, *Development Code* (Ontario Development Code), is established to assist the implementation of Federal and State planning, zoning, development, subdivision, and environmental laws, and the Ontario Plan, and guide the orderly development of the City in a manner that promotes and protects the public health, safety, comfort, convenience, prosperity, and welfare of its inhabitants.

1.6 PROJECT DESCRIPTION

1.6.1 PROJECT COMPONENTS

CONCEPTUAL SITE PLAN

The proposed project analyzed within this Addendum evaluates the demolition of existing on-site uses, including a privately owned rail spur, and the development and operation of a 221,658-square-foot warehouse building, including 216,658 square feet of warehouse space and 5,000 square feet of office

space. The proposed warehouse would have a maximum building height of 45 feet, and a maximum floor area ratio of 0.45. Exterior finishes would include a smooth concrete tilt-up finish painted in white and shades of gray with exterior accents including gray formliner, Dekton consentino panels, charcoal adonized metal eye brow/canopies, and medium performance blue reflected glazing windows with black anodized mullion. A total of 27 dock doors would be provided along the eastern side of the building. Primary access would be provided via two entryways along the eastern side of the building along S. Campus Avenue, with emergency access off of Phillips Street. A total of 121 parking spaces and 30 trailer stalls would be provided; refer to Exhibit 3, *Conceptual Site Plan*. The project is proposed to operate 24 hours a day, seven days a week, with loading and unloading conducted entirely within the enclosed warehouse building.

Careful consideration has been given to designing the site plan with sensitivity to the residences located to the west. An approximately 82-foot buffer is provided between the residential property line and the 1300 S Campus Project's building. Within the buffer area, the 1300 S Campus Project will leave unchanged the main rail line operated by the Union Pacific Railroad, located within its own 35-foot wide parcel. Adjacent to the railroad parcel, the 1300 S Campus Project will provide an approximately 20-foot wide landscape buffer. The project will also remove the privately-owned rail spur that currently services the existing lumber yard. East of the 20-foot landscaped area, the 1300 S Campus Project is required to provide a 20-foot wide emergency access road (which will not be used for project operations, but only for fire/emergency purposes), and then an additional seven-foot wide landscaped area adjacent to the 1300 S Campus Project building will be provided. The project's truck court has been located on the east side of the building, facing away from the western residences and toward S. Campus Avenue, thereby allowing the building to serve as a noise barrier blocking truck activities from the western residences. No project activities beyond routine landscaping are proposed on the western side of the 1300 S Campus Project site.

SITE ACCESS AND PARKING

Primary access to the 1300 S Campus Project site would be provided from two proposed driveways on Campus Avenue to the east. A third driveway off of Phillips Street would be for emergency access only. The emergency vehicle access driveway would extend along the western side of the proposed warehouse building and connect to a paved parking area proposed in the southern portion of the site.

As proposed, the proposed project would provide a total of 121 parking spaces, which meets the City's parking requirement. As shown in Exhibit 3, parking would be provided in the northeastern and southeastern portions of the site. Of the 121 parking spaces, 29 would be electric vehicle capable (EV capable). Further, the 1300 S Campus Project would provide 30 trailer stalls along the eastern perimeter of the site.

LANDSCAPING

Ornamental landscaping would be installed throughout the site in accordance with the requirements of the Ontario Development Code Division 6.05, *Landscaping*. Planting materials would include a variety of shrubs and groundcover, and a tree mix in large landscape planters. Landscape planters would accommodate larger specimen trees to screen the proposed building. In total, 109 trees would be planted on-site, and 19 street trees would be planted. The area of landscaping would total approximately 16 percent of the total site area.

UTILITIES AND SERVICES

The following utilities and services would serve the 1300 S Campus Project site:

- *Water*. Water supply would be provided by the Ontario Municipal Utilities Company.
- *Sewer*. The Ontario Municipal Utilities Company provides wastewater treatment to the City and would provide service to the site.
- *Drainage*. Storm drains are maintained by the Ontario Municipal Utilities Company.
- *Electricity and Natural Gas*. Southern California Edison (SCE) would provide electricity services to the 1300 S Campus Project site via buried conduit. The project would not require natural gas utilities.

1.6.2 PHASING/CONSTRUCTION

Project construction is anticipated to occur over 15 months in a single phase beginning in August 2024 and ending in October 2025. Proposed activities include site demolition, grading, paving, construction, and painting. Proposed grading would include approximately 19,000 cubic yards of cut, and approximately 19,000 cubic yards of fill; the site is expected to balance, with no soil export or import.

All on-site construction activities would be staged on-site. There is the possibility of partial lane closures to allow for connections to off-site utilities; any partial closures would be conducted in accordance with a traffic control plan reviewed and approved by the City. All construction materials would be stored on-site. Access to the 1300 S Campus Project site during the construction phase would be provided at the northwestern and southeastern corners of the site, off of Phillips Street and S Campus Avenue, respectively.

The majority of the 1300 S Campus Project's construction activities would occur within the City's allowable construction hours. However, a limited number of concrete pours (which cannot be interrupted) may occur overnight and will comply with the City's allowed noise levels for construction activity permitted outside of regular hours.

1.6.3 SUSTAINABILITY FEATURES

The project will incorporate a number of sustainability features, which include the following:

- All off-road construction equipment greater than 50 horsepower will meet a minimum California Air Resources Board (CARB) Tier 4-interim engine standard.
- Rooftop solar sufficient to meet 100% of the electricity demand of the warehouse building.
- Charging stations at 10% of planned employee vehicle parking spaces.
- To prepare for future transition to electric trucks, installation of conduits for charging stations for zero emission trucks.

- The building will be designed and constructed in accordance with the Leadership in Energy and Environmental Design (LEED) green building certification standards.
- To support urban cooling, planting of one tree per parking space and use of high-reflectivity pavement for all hardscaped areas.
- Electrical appliances such as water heaters; natural gas will not be used on-site.
- Bicycle parking at a greater ratio than required, of 1 bicycle parking space per 20 vehicle parking spaces.
- Water-efficient faucets and on-demand water circulators for sinks.
- Drought tolerant landscaping with drip irrigation or weather-based irrigation controller.
- Compliance with Ontario's *Community Climate Action Plan* Table 5, *Screening Table for Implementing GHG Performance Standards for Warehouse Non-residential Development*; refer to Appendix B, *Screening Table for Implementing GHG Performance Standards*.

1.7 DISCRETIONARY ACTIONS

The City of Ontario is the Lead Agency under CEQA and has discretionary authority over the proposed project. As currently proposed, the proposed project would require the discretionary approval of a Development Plan and the ministerial approval of a Lot Line Adjustment. The proposed project would also require administrative approvals from the City for issuance of grading, building, and occupancy permits, and connection permits from utility providers. In addition, the project may require a Parkway Tree Removal permit from the City of Ontario for removal of parkway trees along South Campus Avenue and Phillips Street.

2.0 PROJECT INFORMATION

1.	**Project Title:** 1300 S Campus Project
2.	**Lead Agency Name and Address:** City of Ontario 303 E B Street Ontario, CA 91764
3.	**Contact Person and Phone Number:** Lorena Mejia, Senior Planner 909-395-2276
4.	**Project Location:** The proposed project is located in the western portion of the City of Ontario, at 1300 S Campus Avenue at the southwest corner of the intersection of Phillips Street and S Campus Avenue.
5.	**Project Sponsor's Name and Address:** California Acquisition, LLC 3101 Ocean Park Blvd Ste 100 PMB 60 Santa Monica, CA 90405
6.	**General Plan Designation:** IND (Industrial)
7.	**Zoning:** IL (Light Industrial)
8.	**Description of the Project:** Refer to Section 1.6, *Project Description*.
9.	**Surrounding Land Uses and Setting:** The surrounding area supports a mixture of industrial and residential land uses, a portion of which have an industrial overlay designation; refer to Section 1.3.1, *Environmental Setting*.
10.	**Other public agencies whose approval is required (e.g., permits, financing approval or participation agreement).** • California Regional Water Quality Board - Santa Ana (Storm Water Pollution Prevention Plan and National Pollutant Discharge Elimination System General Construction Permit)

3.0 ENVIRONMENTAL ANALYSIS

This section describes the environmental impacts of the 1300 S Campus Project as compared to those identified in the TOP 2050 SEIR and discusses any substantial changes to circumstances since the TOP 2050 SEIR was certified. The issue areas evaluated in this document include the following, pursuant to Appendix G of the CEQA Guidelines:

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfire
- Mandatory Findings of Significance

A summary of impacts of the adopted approved project (i.e., The Ontario Plan 2050) and the mitigation measures imposed is provided along with an analysis of the potential impacts resulting from the 1300 S Campus Project and whether those impacts substantially exceed those discussed in the certified TOP 2050 SEIR.

This page intentionally left blank.

3.1 AESTHETICS

This section corresponds with the TOP 2050 SEIR Section 5.1, *Aesthetics*.

Except as provided in Public Resources Code Section 21099, would the project:

a) Have a substantial adverse effect on a scenic vista?

***Approved Project**:* Based on the TOP 2050 SEIR, land use changes as a result of new development under the approved project would not deter views of the San Gabriel Mountains, which are the dominant scenic resource in the City of Ontario. Regulations such as the City's Municipal Code would ensure that increased development would not significantly impact scenic vistas. Additionally, development within the low-lying areas of the City would not have the potential to alter scenic views provided by the backdrop of the San Gabriel Mountains as the peaks rise to 7,000 feet above mean sea level. Therefore, the TOP 2050 SEIR determined that the approved project would not result in significant impacts to scenic views or any scenic vista, such as the San Gabriel Mountains. Impacts were determined to be less than significant in this regard.

1300 S Campus Project: The 1300 S Campus Project would involve the demolition of the existing on-site lumber yard uses to redevelop the site with a warehouse facility. Consistent with the approved project, the warehouse would be sited in a low-lying area of the City and would not have the potential to alter scenic views of the San Gabriel Mountains. As with the approved project, the 1300 S Campus Project would comply with the City's Municipal Code, including height limits and other development standards, which would ensure that project implementation would not impact scenic vistas. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway?

Approved Project: As detailed in the TOP 2050 SEIR, the Euclid Corridor and the Mission Boulevard Corridor are the primary scenic corridors in Ontario. However, there are no State-designated scenic highways through or in the vicinity of the City. The closest designated State scenic highway is a portion of State Route 142 in Chino Hills, approximately five miles west of the Ontario city limit. Therefore, the TOP 2050 SEIR determined that the approved project would not disturb any scenic resources, including trees, rock outcroppings or unique landmark features, and there would be no impact on State scenic highways.

1300 S Campus Project: The 1300 S Campus Project would involve the demolition of the existing on-site lumber yard uses to redevelop the site with a warehouse facility. As no State-designated scenic highways through or in the vicinity of the City, the 1300 S Campus Project would not impact scenic resources within a State scenic highway. The project site is also not along the Euclid Avenue or Mission Boulevard view corridors. No impact would occur in this regard.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: No Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Approved Project: Based on the TOP 2050 SEIR, all future development would be required to adhere to the City's Development Code, which includes general development requirements for development density, screening and setback, signing, landscaping, lighting, height limitations, and other aspects related to the aesthetic of the City. In addition, the approved project includes goals and policies to ensure that new development would be compatible with the existing community (Policy LU-2.6) and would be of quality design (Policies CD-2.1 through CD-2.9). Additionally, the Community Design Element includes policies to ensure that the urban environment is appealing (Policies CD-3.2, CD-3.3, and CD-3.5) and to preserve the historic neighborhood character (Policy CD-4.2). Adherence to the Land Use Element and Community Design Element policies described above would reduce visual impacts. Because The Ontario Plan is the overriding planning document for the City, and because it is intended to improve consistency with existing regulations and conditions, the TOP 2050 SEIR determined that the approved project would have a less than significant impact with respect to policies or regulations governing scenic quality. Impacts were determined to be less than significant in this regard.

1300 S Campus Project: The 1300 S Campus Project involves the development and operation of a 221,658-square-foot warehouse building that would be consistent with the City's development standards. The proposed warehouse would be of similar scale to, and visually compatible with, surrounding industrial uses to the south and east. The proposed building would have a 20-foot front setback and a 10-foot side setback. The proposed warehouse would have a maximum building height of 45 feet, and a maximum floor area ratio of 0.45. The TOP 2050 SEIR assumed a 0.55 FAR Buildout Scenario for all industrial properties. As the 1300 S Campus Project is below the FAR buildout scenario assumed in the TOP 2050 SEIR, impacts related to scenic quality would be less than those considered in the TOP 2050 SEIR and less than significant.

Further, ornamental landscaping would be installed throughout the site in accordance with the requirements of the Ontario Development Code Division 6.05, *Landscaping*. Planting materials would include a variety of shrubs and groundcover, and a tree mix in large landscape planters. Landscape planters would accommodate larger specimen trees to screen the proposed building. In total, 109 trees would be planted on-site, and 19 street trees would be planted. The area of landscaping would total approximately 16 percent of the total site area. As a result, implementation of the 1300 S Campus Project would not conflict with applicable zoning or other regulations governing scenic quality. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?

Approved Project: As detailed in the TOP 2050 SEIR, new development under the approved project would generate new sources of light and glare through increased urbanization and densification of the city, affecting day or nighttime views. Sources of light include nighttime street and building illumination, security lighting, nighttime traffic, and lighting associated with construction activities. Lighting introduced to undeveloped and open space areas has the potential to impact visual quality of the nighttime sky. However, the City of Ontario Development Code contains standards addressing lighting through its design policies. Adherence to the design standards of the City of Ontario Development Code would ensure that light and glare from new developments would be minimized and that significant impacts would not occur. Impacts were determined to be less than significant in this regard.

1300 S Campus Project: The 1300 S Campus Project would involve the demolition of the existing on-site lumber yard uses to redevelop the site with a warehouse facility. The project site is currently developed with a wholesale lumber yard and distribution center which has exterior lighting. The project would replace existing sources of light and introduce new sources of light from new building lighting, exterior lighting, interior lights shining through building windows, and headlights from nighttime vehicular trips generated by the 1300 S Campus Project. The 1300 S Campus Project may slightly increase lighting compared to the existing site condition; however, new landscaping would be provided throughout the 1300 S Campus Project site that would limit impacts from new sources of light and glare. Project activity areas would be oriented away from residential uses to minimize potential impacts due to light and glare. Exterior finishes would include a smooth concrete tilt-up finish painted in white and shades of gray with exterior accents including gray formliner, Dekton consentino panels, charcoal adonized metal eye brow/canopies, and medium performance blue reflected glazing windows with black anodized mullion. Such finishes and materials are not associated with substantial glare (as opposed to mirrored or polished surfaces, glass curtain walls, or parabolic surfaces). Moreover, the 1300 S Campus Project would be required to demonstrate compliance with the design standards of the City of Ontario Development Code. Adherence to the design standards of the City of Ontario Development Code would ensure that light and glare from new developments would be minimized and that significant impacts would not occur. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

This page intentionally left blank.

3.2 AGRICULTURE AND FORESTRY RESOURCES

This section corresponds with the TOP 2050 SEIR Section 5.2, *Agricultural and Forestry Resources.*

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the State's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Approved Project: According to the TOP 2050 SEIR, the City of Ontario no longer has land designated for agricultural use as a result of implementation of The Ontario Plan. Because the City of Ontario's land use plan no longer designates agricultural land uses in the City, development under The Ontario Plan 2050 would not, itself, plan for the conversion of Prime Farmland, Unique Farmland, and Farmland of Statewide Importance to nonagricultural uses. Therefore, the TOP 2050 SEIR determined the approved project would have no impact on land zoned for the purpose of agricultural uses.

1300 S Campus Project: The 1300 S Campus Project is zoned IL (Light Industrial) and has an IND (Industrial) land use designation per The Ontario Plan 2050. It is categorized as Urban and Built-Up Land by the California Department of Conservation.[5] The 1300 S Campus Project would not convert Prime, Statewide Important, Unique, or Locally Important Farmland into non-agricultural use pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency. Thus, no impact would occur in this regard.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: No Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Approved Project: Based on the TOP 2050 SEIR, buildout of The Ontario Plan 2050 would most likely require the cancellation or nonrenewal of the existing Williamson Act contracts within the City. However, because buildout of The Ontario Plan would have resulted in the cancellation or nonrenewal of Williamson Act contracts, new developments under The Ontario Plan 2050 would not result in further impacts to

[5] California Department of Conservation, *Important Farmland Finder Map*, https://www.conservation.ca.gov/dlrp/fmmp, accessed September 1, 2023

Williamson Act lands. Therefore, the TOP 2050 SEIR determined that a less than significant impact would occur.

1300 S Campus Project: The 1300 S Campus Project would not conflict with existing zoning for agricultural use, as the site is currently zoned IL and has an IND land use designation per The Ontario Plan 2050. The IND designation allows for a variety of light industrial uses, including warehousing/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting retail and professional office uses. The site is also not protected under a Williamson Act contract. Thus, implementation of the 1300 S Campus Project would not conflict with existing zoning for agricultural use, or a Williamson Act contract. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

c) Conflict with existing zoning for, or cause rezoning, of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

Approved Project: Based on the TOP 2050 SEIR, there are no land use designations or zoning for forest land, timberland, or timberland production land in the City of Ontario, and native habitats and vegetation communities are virtually absent throughout Ontario, therefore, there is no land that would be considered forest land. The TOP 2050 SEIR determined that no impact would occur in this regard.

1300 S Campus Project: The 1300 S Campus Project involves development within an urbanized portion of the City. There is no forest land or timberlands on-site. Thus, similar to the approved project, implementation of the 1300 S Campus Project would not conflict with existing zoning for, or cause rezoning of, forest land, timberland, or timberland zoned Timberland Production and would not result in loss or conversion of forest land. Thus, no impact would occur in this regard.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: No Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

Approved Project: Based on the TOP 2050 SEIR, there is no forest land in the City of Ontario, as defined in Impact 3.2(c), above. Therefore, the approved project would not result in the loss of forest land or the conversion of forest land to non-forest use. The TOP 2050 SEIR determined that no impact would occur.

1300 S Campus Project: Refer to Impact 3.2(c), above. Development of the 1300 S Campus Project would not result in greater impacts in this regard than previously analyzed in the TOP 2050 SEIR. Thus, no impact would occur in this regard.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: No Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Approved Project: Based on the TOP 2050 SEIR, implementation of the approved project would not result in the conversion of farmlands or forest lands since the City of Ontario's land use plan no longer designates agricultural land uses in the City, development under the approved project would not, itself, plan for the conversion of farmland or forestland to non-agricultural or non-forest uses. Impacts were determined to be less than significant.

1300 S Campus Project: The 1300 S Campus Project would not convert farmland or forest land since it is located within an area of the City not presently utilized as farmland or forest land. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

This page intentionally left blank.

3.3 AIR QUALITY

This section corresponds with the TOP 2050 SEIR Section 5.3, *Air Quality.*

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:

a) Conflict with or obstruct implementation of the applicable air quality plan?

Approved Project: The two principal criteria used by the TOP 2050 SEIR for determining conformance with an air quality management plan (AQMP) are:

1. Whether the project would exceed the assumptions in the AQMP.

2. Whether the project would result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of air quality standards.

The Southern California Association of Governments (SCAG) is the South Coast Air Quality Management District's (SCAQMD) partner in the preparation of the AQMP, providing the latest economic and demographic forecasts and developing transportation measures. Regional population, housing, and employment projections developed by SCAG are based, in part, on general plan land use designations. These projections form the foundation for the emissions inventory of the AQMP.

The TOP 2050 SEIR determined that the approved project would be consistent with the AQMP under the first criteria. However, air pollutant emissions associated with buildout of the approved project would cumulatively contribute to the nonattainment designations in the South Coast Air Basin (Basin). Therefore, the TOP 2050 SEIR concluded that the approved project would be inconsistent with the AQMP. Incorporation of Mitigation Measures 3-2 and AQ-1 into future development projects for the operation phase would reduce criteria air pollutant emissions associated with buildout of the approved project. Additionally, goals and policies in the approved project would promote increased capacity for alternative transportation modes. However, due to the magnitude of residential units that would be developed under the approved project to accommodate the RHNA, no additional mitigation measures are available that would reduce impacts, and the TOP 2050 SEIR determined that impacts would be significant and unavoidable in this regard. The TOP 2050 SEIR notes, however, that identification of this program-level impact does not preclude the finding of less-than-significant impacts for subsequent projects analyzed at the project level.

1300 S Campus Project: In December 2022, the SCAQMD released the *Final 2022 AQMP* (2022 AQMP). The 2022 AQMP pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including *the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy* (2020-2045 RTP/SCS), updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans. The SCAQMD considers projects that are consistent with the AQMP, which is intended to bring the Basin into attainment for all criteria pollutants, to also have less than significant cumulative impacts.

With respect to the first AQMP consistency criterion, SCAQMD methodologies require that an air quality analysis for a project include forecasts of project emissions in relation to contributing to air quality violations and delay of attainment. As evaluated in Impact 3.3(b) below, the 1300 S Campus Project's

regional and localized construction and operational-source emissions would not exceed applicable significance thresholds. As such, a less than significant impact is expected.

Concerning the second consistency criterion, the 1300 S Campus Project would involve the demolition of the existing on-site lumber yard uses to redevelop the site with a warehouse facility. As described in Section 3.11, *Land Use and Planning*, the 1300 S Campus Project site is zoned IL and has an IND land use designation per The Ontario Plan 2050. The IND designation allows for a variety of light industrial uses, including warehousing/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting retail and professional office uses. The IL zoning district accommodates lighter manufacturing and assembly activities, storage, and warehousing activities, and other similar uses developed at a maximum intensity of 0.55 FAR. As currently proposed, the 1300 S Campus Project would be consistent with the site's land use and zoning designations, with a maximum FAR of 0.45. Thus, the 1300 S Campus Project would be within the scope of the environmental analysis of the approved project.

In addition, the 1300 S Campus Project would include a number of sustainability features, such as requiring all off-road construction equipment greater than 50 horsepower meeting California Air Resources Board (CARB) Tier 4 standards, including rooftop solar sufficient to meet 100 percent of the warehouse's electrical demand, as well as charging stations and the infrastructure to install future charging stations for zero-emission trucks. Refer to Section 1.6.3, *Sustainability Features*, for a complete list of the 1300 S Campus Project's sustainability features.

As discussed in Section 4.14, *Population and Housing*, the 1300 S Campus Project would not induce substantial unplanned population growth in the area. As the SCAQMD has incorporated these same land use and population projections into the 2022 AQMP, the 1300 S Campus Project would be consistent with the projections included in the 2022 AQMP and would be consistent with the second criterion. No new or more severe impacts would occur in this regard.

Certified TOP 2050 SEIR Mitigation Measures: Certified TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 require preparation of a technical assessment evaluating potential project construction-related air quality impacts in conformance with SCAQMD requirements. Refer to Appendix A, *Air Quality and Energy Assessment*, and Appendix C, *Health Risk Assessment* for a copy of these reports. The Air Quality and Energy Assessment and the Health Risk Assessment determined construction-related criteria air pollutants do not have the potential to exceed SCAQMD's criteria of significance. As such, the Air Quality and Energy Assessment and Health Risk Assessment demonstrate that the emission reduction measures in TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 are not required and no additional air emission reduction measures are required.

3-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project construction-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Building Department shall require that all new construction projects incorporate feasible mitigation measures to reduce air quality emissions. Potential measures shall be incorporated as conditions of approval for a project and may include:

- Require fugitive dust control measures that exceed South Coast Air Quality Management District's Rule 403, such as:

- Requiring use of nontoxic soil stabilizers to reduce wind erosion.
- Applying water every four hours to active soil disturbing activities.
- Tarping and/or maintaining a minimum of 24 inches of freeboard on trucks hauling dirt, sand, soil, or other loose materials.

- Using construction equipment rated by the United States Environmental Protection Agency as having Tier 4 interim or higher exhaust emission limits.
- Ensuring construction equipment is properly serviced and maintained to the manufacturer's standards.
- Limiting nonessential idling of construction equipment to no more than five consecutive minutes.
- Using Super-Compliant VOC paints for coating of architectural surfaces whenever possible. A list of Super-Compliant architectural coating manufactures can be found on the South Coast Air Quality Management District's website at: http://www.aqmd.gov/prdas/brochures/SuperCompliant_AIM.pdf.

These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Planning Department.

AQ-1 Prior to discretionary approval by the City of Ontario for development projects subject to CEQA (California Environmental Quality Act) review (i.e., nonexempt projects), project applicants shall prepare and submit a technical assessment evaluating potential project operation-phase-related air quality impacts to the City of Ontario Planning Department for review and approval. The evaluation shall be prepared in conformance with South Coast Air Quality Management District (South Coast AQMD) methodology in assessing air quality impacts. If operation-related air pollutants are determined to have the potential to exceed the South Coast AQMD–adopted thresholds of significance, the City of Ontario Planning Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities. The identified measures shall be included as part of the conditions of approval. Possible mitigation measures to reduce long-term emissions could include, but are not limited to the following:

- For site-specific development that requires refrigerated vehicles, the construction documents shall demonstrate an adequate number of electrical service connections at loading docks for plug-in of the anticipated number of refrigerated trailers to reduce idling time and emissions.
- Applicants for manufacturing and light industrial uses shall consider energy storage and combined heat and power in appropriate applications to optimize renewable energy generation systems and avoid peak energy use.
- Site-specific developments with truck delivery and loading areas and truck parking spaces shall include signage as a reminder to limit idling of vehicles while parked for loading/unloading in accordance with California Air Resources Board Rule 2845 (13 CCR Chapter 10 sec. 2485).

- Provide changing/shower facilities as specified in Section A5.106.4.3 of CALGreen (Nonresidential Voluntary Measures).

- Provide bicycle parking facilities per Section A4.106.9 of CALGreen (Residential Voluntary Measures).

- Provide preferential parking spaces for low-emitting, fuel-efficient, and carpool/van vehicles per Section A5.106.5.1 of CALGreen (Nonresidential Voluntary Measures).

- Provide facilities to support electric charging stations per Section A5.106.5.3 and Section A5.106.8.2 of CALGreen (Nonresidential Voluntary Measures; Residential Voluntary Measures).

- Applicant-provided appliances shall be Energy Star–certified appliances or appliances of equivalent energy efficiency (e.g., dishwashers, refrigerators, clothes washers, and dryers). Installation of Energy Star– certified or equivalent appliances shall be verified by the City during plan check.

Mitigation Measures: As discussed above, the technical assessments for the Project (Appendix A, *Air Quality and Energy Assessment*, and Appendix C, *Health Risk Assessment*) prepared pursuant to TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 confirm the emission reduction measures in TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 are not required. No additional mitigation measures are required.

Level of Significance: Less than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. As discussed above, the TOP 2050 SEIR determined that program-level impacts with regard to an air quality management plan under The Ontario Plan 2050 would be significant and unavoidable but did not preclude the finding of less than significant impacts for subsequent projects analyzed at the project level. The 1300 S Campus Project would result in less than significant impacts related to an air quality management plan; refer to the "1300 S Campus Project" discussion above.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard?

Approved Project: Both the State and the Federal government have established health-based ambient air quality standards (California ambient air quality standards [CAAQS] and the national ambient air quality standards [NAAQS], respectively) for seven air pollutants (known as 'criteria pollutants'). These pollutants include ozone (O_3), carbon monoxide (CO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), inhalable particulate matter with a diameter of 10 microns or less (PM_{10}), fine particulate matter with a diameter of 2.5 microns or less ($PM_{2.5}$), and lead (Pb). The State has also established ambient air quality standards (AAQS) for additional pollutants. The AAQS are designed to protect the health and welfare of the populace within a reasonable margin of safety. Where the State and Federal standards differ, California AAQS are more stringent than the national AAQS.

According to the TOP 2050 SEIR, due to the scale of development activity associated under the approved project, the short-term emissions would likely exceed the SCAQMD regional significance thresholds. Construction activities under the approved project would also temporarily increase PM10, PM2.5, VOC,

NO_X, SO_X, and CO regional emissions in the Basin. While individual projects accommodated under the approved project may not exceed the SCAQMD regional significance thresholds, the likely scale and extent of construction activities associated with the approved project likely continue to exceed the relevant SCAQMD thresholds for some projects.

In addition, buildout of the approved project would generate an increase in long-term emissions that exceed the daily SCAQMD thresholds for VOC. Emissions of VOC are a precursor to O_3, meaning emissions of VOC that exceed the SCAQMD regional significance thresholds would contribute to the O_3 nonattainment designation of the Basin. Mitigation Measures 3-1 and AQ-1 and the goals and policies of the approved project would reduce air pollutant emissions to the extent feasible; however, the TOP 2050 SEIR determined that impacts would be significant and unavoidable in this regard. The TOP 2050 SEIR notes, however, that identification of this program-level impact does not preclude the finding of less-than-significant impacts for subsequent projects analyzed at the project level.

1300 S Campus Project: In conformance with TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1, the 1300 S Campus Project's air quality effects were analyzed in the *1300 S Campus Drive Health Risk Assessment* and the *1300 S Campus Drive Air Quality and Energy Assessment*, prepared by Urban Crossroads, dated August 29, 2023; refer to Appendix A and Appendix C.[6,7] The results of these analysis are included below.

The South Coast Air Basin, in which the 1300 S Campus Project site is located, is designated as nonattainment for O_3, PM_{10}, and $PM_{2.5}$ for the CAAQS and nonattainment for O_3 and $PM_{2.5}$ for the NAAQS. Table 3.3-1, *Project Localized Construction Impacts* identifies the localized emission at the nearest receptor location in the vicinity of the 1300 S Campus Project. Table 3.3-2, *Project Regional Construction Impacts* identifies the maximum emissions due to construction of the 1300 S Campus Project. As shown, emissions resulting from the construction would not exceed the numerical screening criteria for localized significant impacts established by the SCAQMD for any criteria pollutant. Thus, the 1300 S Campus Project construction-source emissions would be considered less than significant.

6 Urban Crossroads, *1300 S Campus Drive Health Risk Assessment*, August 29, 2023.

7 Urban Crossroads, *1300 S Campus Drive Air Quality and Energy Assessment*, August 29, 2023.

Table 3.3-1: Project Localized Construction Impacts

On-Site Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Demolition				
Maximum Daily Emissions	**24.89**	**21.74**	**2.06**	**1.13**

Screening Criteria Exceeded?	NO	NO	NO	NO
Grading				
Maximum Daily Emissions	**34.29**	**30.17**	**3.84**	**2.28**
SCAQMD Localized Screening Criteria	237	1,873	13	8
Screening Criteria Exceeded?	**NO**	**NO**	**NO**	**NO**
Refer to Appendix A, Urban Crossroads, *1300 S Campus Drive Air Quality and Energy Assessment* Table 7. August 29, 2023.				

Table 3.3-2: Project Regional Construction Impacts

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM10	PM2.5
Summer						
2024	2.14	41.23	80.89	0.13	11.00	5.01
2025	47.81	8.38	14.92	0.02	0.66	0.26
Winter						
2024	2.69	38.71	72.74	0.11	4.51	1.77
2025	2.48	26.29	47.00	0.07	1.96	0.71
Maximum Daily Emissions	**47.81**	**41.23**	**80.89**	**0.13**	**11.00**	**5.01**
SCAQMD Regional Threshold	75	100	550	150	150	55
Threshold Exceeded?	NO	NO	NO	NO	NO	NO
[1]PM_{10} and $PM_{2.5}$ source emissions reflect 3x daily watering per SCAQMD Rule 403 for fugitive dust.						
Refer to Appendix A, Urban Crossroads, 1300 S Campus Drive Air Quality and Energy Assessment Table 3. August 29, 2023.						

Table 3.3-3, *Project Localized Operational Emissions*, shows the estimated localized pollutant emissions resulting from the 1300 S Campus Project during operation of the warehouse. Table 3.3-4, *Total Project Regional Operational Emissions*, shows the estimated pollutant emissions resulting from the 1300 S Campus Project during operation of the warehouse. As shown in Table 3.3-3 and Table 3.3-4, the 1300 S Campus Project's long-term operational emissions would not exceed SCAQMD's criteria pollutant thresholds. Thus, the 1300 S Campus Project would result in a less than significant impact related to long-term air quality emissions.

Table 3.3-3: Project Localized Operational Emissions

Emissions	NO_X	CO	PM_{10}	$^{PM}2.5$
Summer	2.04	28.97	0.14	0.07
Winter	2.03	19.58	0.12	0.06
Maximum Daily Emissions	**2.04**	**28.97**	**0.14**	**0.07**

SCAQMD Regional Threshold	55	55	550	150	150	55
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**
Refer to Appendix A, Urban Crossroads, *1300 S Campus Drive Air Quality and Energy Assessment* - Table 4. August 29, 2023.						

Overall, given that the 1300 S Campus Project would not exceed the numerical thresholds of significance established by the SCAQMD for construction and operation emissions, impacts in regard to construction and operational criteria pollutant emissions would be less than significant. No new or more severe impacts would occur in this regard.

Certified TOP 2050 SEIR Mitigation Measures: TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 require preparation of a technical assessment evaluating potential project construction and operational air quality impacts in conformance with SCAQMD requirements. Refer to Impact 3.3(a) above and Appendix A and Appendix C for a copy of these reports.

Mitigation Measures: As discussed above, the technical assessments for the Project (Appendix A and Appendix C) prepared pursuant to TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 confirm the emission reduction measures in TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 are not required. No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. As discussed above, the TOP 2050 SEIR determined that program-level impacts with regard to criteria pollutant emissions under The Ontario Plan 2050 would be significant and unavoidable but did not preclude the finding of less than significant impacts for subsequent projects analyzed at the project level. The 1300 S Campus Project would result in less than significant impacts related to a cumulative increase in pollutants; refer to the "1300 S Campus Project" discussion above.

c) Expose sensitive receptors to substantial pollutant concentrations?

Approved Project: Sensitive receptors are defined as facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers. CARB has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65, children under 14, athletes, and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis.

The TOP 2050 SEIR determined that while individual projects accommodated under TOP 2050 may not exceed the SCAQMD regional significance thresholds, the likely scale and extent of construction activities associated with TOP 2050 would likely continue to exceed the relevant SCAQMD thresholds for some projects. The TOP 2050 SEIR also found that, while individual development projects would be required to achieve the incremental risk thresholds established by South Coast AQMD, implementation of TOP 2050 would generate TACs that could cumulatively contribute to elevated levels in the air basin. The TOP 2050 SEIR determined that impacts would be significant and unavoidable. The TOP 2050 SEIR notes, however, that identification of this program-level impact does not preclude the finding of less than significant impacts for subsequent projects analyzed at the project level.

1300 S Campus Project: A Health Risk Assessment was prepared to evaluate the potential health risk impacts to sensitive receptors (which are residents) and adjacent workers associated with the development of the 1300 S Campus Project, more specifically, health risk impacts as a result of exposure to Toxic Air Contaminants (TACs) including diesel particulate matter (DPM) as a result of heavy-duty diesel trucks accessing the site; refer to Appendix C. The SCAQMD CEQA level thresholds for TAC emissions created by a project were utilized to analyze the TAC impacts from existing sources to the proposed warehouse uses. According to the SCAQMD CEQA Handbook, any project that has the potential to expose the public to TACs in excess of the following thresholds would be considered to have a significant air quality impact:

- If the Maximum Incremental Cancer Risk is 10 in one million or greater; or
- TACs from the proposed project would result in a Hazard Index increase of 1.0 or greater.

According to the Health Risk Assessment, existing residential uses to the east would experience the greatest potential exposure to construction emissions. For the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to construction-source DPM emissions is estimated at 1.61 in one million, which is less than the SCAQMD significance threshold of 10 in one million. During project operations, the maximum incremental cancer risk attributable to operation-source DPM emissions is estimated at 0.98 in one million, which is less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks for both construction and operations were estimated to be less than 0.01, which would not exceed the applicable threshold of 1.0. As such, the 1300 S Campus Project would not cause a significant human health or cancer risk to adjacent land uses as a result of construction or operational activity.

According to Appendix C, for the maximally exposed individual worker (MEIW), the maximum incremental cancer risk impact is 0.12 in one million which is less than the SCAQMD's threshold of 10 in one million. Maximum non-cancer risks at this same location were estimated to be less than 0.01, which would not exceed the applicable significance threshold of 1.0. As such, the 1300 S Campus Project would not cause a significant human health or cancer risk to workers.

According to Appendix C, the maximally exposed individual school child (MEISC) is the school receptor that would experience the highest modeled concentrations of DPM, and thus the highest risk. At the MEISC, the maximum incremental cancer risk impact attributable to the 1300 S Campus Project is calculated to be 0.01 in one million, which is less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to the 1300 S Campus Project were calculated to be less than 0.01, which would not exceed the applicable significance threshold of 1.0. As such, the 1300 S Campus Project would not cause a significant human health or cancer risk to nearby school children.

As the 1300 S Campus Project would not result in a maximum incremental cancer risk of 10 in one million or greater, the 1300 S Campus Project would not expose sensitive receptors to substantial pollutant concentrations and impacts would be less than significant. No new or worsened impacts would occur in this regard.

Certified TOP 2050 SEIR Mitigation Measures: TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 require preparation of a technical assessment evaluating potential project construction and operational air quality impacts in conformance with SCAQMD requirements. Refer to Impact 3.3(a) above and Appendix A, Appendix B, and Appendix C for a copy of these reports.

Mitigation Measures: As discussed above, the technical assessments for the Project (Appendix A and Appendix C) prepared pursuant to TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 confirm the emission reduction measures in TOP 2050 SEIR Mitigation Measures 3-1 and AQ-1 are not required. No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. As discussed above, the TOP 2050 SEIR determined that program-level impacts with regard to TACs under The Ontario Plan 2050 would be significant and unavoidable but did not preclude the finding of less than significant impacts for subsequent projects analyzed at the project level. The 1300 S Campus Project would result in less than significant impacts related to sensitive receptors' exposure to substantial concentrations of pollutants; refer to the "1300 S Campus Project" discussion above.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Approved Project: The TOP 2050 SEIR concluded that buildout permitted under the approved project could include new sources of odors, such as compost facilities, landfills, solid-waste transfer stations, fiberglass manufacturing facilities, paint/coating operations (e.g., auto body shops), asphalt batch manufacturing plants, chemical manufacturing, and food manufacturing facilities. Areas where these types of uses could be developed under the approved project would be generally limited to the areas designated Industrial. Future environmental review would be required for these types of industrial projects, which would ensure that sensitive land uses are not exposed to objectionable odors. Industrial land uses would be required to comply with SCAQMD Rule 402. The TOP 2050 SEIR determined that impacts would be less than significant in this regard.

1300 S Campus Project:

Construction
Construction activities associated with the 1300 S Campus Project may generate detectable odors from heavy-duty equipment exhaust and architectural coatings. However, construction-related odors would be short-term in nature and cease upon project completion. In addition, the 1300 S Campus Project would be required to comply with the California Code of Regulations, Title 13, Sections 2449(d)(3) and 2485, which minimize the idling time of construction equipment either by requiring equipment to be shut off when not in use or limiting idling time to no more than five minutes. Compliance with these existing regulations would further reduce the detectable odors from heavy-duty equipment exhaust. The 1300 S Campus Project would also be required to comply with the SCAQMD Regulation XI, Rule 1113 – Architectural Coating, which would minimize odor impacts from ROG emissions during architectural coating. Any odor impacts to existing adjacent land uses would be short-term and negligible. As such, the 1300 S Campus Project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people. Impacts would remain less than significant in this regard.

Operation
Land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding.[8] The 1300 S Campus Project does not include any such uses identified by SCAQMD as being associated with odors. Through compliance with SCAQMD's Rule 402 regarding public nuisances, no new or worsened impacts related to odors would occur during ongoing operations of the 1300 S Campus Project.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

[8] South Coast Air Quality Management District, *CEQA Air Quality Handbook*. 1993.

3.4 BIOLOGICAL RESOURCES

This section corresponds with the TOP 2050 SEIR Section 5.4, *Biological Resources*. According to the TOP 2050 SEIR, multiple habitat assessments, focused surveys, and a jurisdictional delineation were prepared for the approved project.

Would the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Approved Project: As explained in the TOP 2050 SEIR, native habitats and vegetation communities are virtually absent throughout the City of Ontario, and no sensitive plant species have been observed in Ontario since 1992. Per the TOP 2050 SEIR, no Federal- or State-listed plant species are known or expected to occur, and the potential for sensitive plant species in the City is low because of the absence of suitable habitat, the high levels of development, and the history of land alteration and disturbance by agricultural activities. Several sensitive wildlife species have been recorded or are expected to appear in the City, mostly Ontario Ranch. The approved project includes policies to ensure that special-status species and habitat are protected through compliance with State and Federal regulations (e.g., Policies ER-5.1 and ER-5.2). Projects under the approved project that undergo independent CEQA review would be required to determine whether there is potential habitat on-site for sensitive species. If potential habitat were found on-site, focused surveys for those sensitive species potentially present would be required. If sensitive species were found, the project proponent would be required to consult with the California Department of Fish and Wildlife (CDFW) regarding impacts to sensitive species and ensuing mitigation. Mitigation for impacts to sensitive species is often in the form of acquisition or restoration of habitat, on-site or off-site, at a ratio to the area of impacted land that would be determined by the CDFW or the United States Fish and Wildlife Service (USFWS). For projects that are sited within critical habitat for a listed species and are proposed by Federal agencies or involve Federal permits or funding, the project proponent would be required to consult with the USFWS regarding impacts and mitigation.

While the approved project would increase land use intensity, it would not result in development of new, previously undeveloped areas of the City. Compliance with the requirements of the California and Federal Endangered Species Acts, including requirements of the USFWS regarding critical habitat; mitigation fees paid by projects in Ontario Ranch; and acquisition and management of habitat using those fees would reduce impacts on sensitive animal species from the implementation of the approved project. Therefore, the TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: The 1300 S Campus Project site does not contain natural habitat, as it is fully developed with a wholesale lumber yard and distribution center. However, the 1300 S Campus Project site contains shrubs and trees that could be utilized by nesting birds and raptors during the nesting bird season of February 1 through September 15, and the 1300 S Campus Project could impact active bird nests if vegetation is removed during the nesting season. Nesting birds are protected under the federal Migratory Bird Treaty Act (MBTA) and Section 3503 of the California Fish and Game Code. As with the approved project, the 1300 S Campus Project would be required to follow all State and Federal regulations pertaining to biological resources, including the MBTA and California Fish and Game Code. In compliance with such regulations, project construction activities involving trimming or removal of vegetation would occur outside of the nesting season, or preconstruction surveys for nesting birds would be conducted and any active nests would be required to be protected in accordance with such regulations. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Approved Project: The TOP 2050 SEIR determined that the City is almost completely developed with urban and agricultural uses, with no large open areas of native habitat. Available open space consists of agricultural fields, parks and golf courses, and scattered vacant lots. The approved project would not have substantial adverse impacts to surface water areas, or to riparian or aquatic vegetation in surface water areas or flood control channels. Detention basins would be designated Open Space–Non-recreation or Open Space–Parkland. Projects affecting riparian habitat would be required to mitigate potential impacts to riparian areas through the existing permitting process. Therefore, the TOP 2050 SEIR concluded that the approved project would not result in direct vegetation removal in surface water areas in the City; however, projects approved pursuant to the approved project could indirectly result in such removal. Projects that would result in impacts to surface water areas determined to be jurisdictional to the State would require CDFW approval pursuant to the Fish and Game Code (Section 1600 et. Seq.) in the form of Streambed Alteration Agreements. Such impacts would require mitigation, also subject to CDFW approval. The TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: The project site does not support riparian habitat or other sensitive natural communities, as the 1300 S Campus Project site is currently entirely developed with a wholesale lumber yard and distribution center. There is no riparian habitat on the 1300 S Campus Project site, and there is no natural habitat remaining on the 1300 S Campus Project site. The 1300 S Campus Project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

c) Have a substantial adverse effect on State or Federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Approved Project: The TOP 2050 SEIR determined that the approved project would not have a substantial adverse effect on Federally protected wetlands as defined by Section 404 of the Clean Water Act (including,

but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. Flood control channels and detention basins would be designated Open Space–Nonrecreation or Open Space–Parkland. Projects that have the potential to result in impacts to waters of the State and/or waters of the U.S. (including adjacent wetlands) would be subject to approval by CDFW; require a Section 404 permit under the Clean Water Act from the U.S. Army Corps of Engineers (USACE); and require mitigation in accordance with the applicable permits. The TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: The project site does not contain any wetlands or watercourses, as the 1300 S Campus Project site is currently entirely developed with a wholesale lumber yard and distribution center. There would be no direct removal, filling, or hydrological interruption of any wetlands. The 1300 S Campus Project would not have a substantial adverse effect on a State or Federally protected wetlands. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Approved Project: According to the TOP 2050 SEIR, no regional wildlife movement corridors have been identified in the City, most of which is ill-suited for the purposes of wildlife movement. The flood control channels and the Southern California Edison corridors could serve as local corridors for movement within the City and between the San Gabriel Mountains to the north and the Prado Basin to the south. The segments of flood control channels in the City would be designated Open Space–Non-recreation under TOP 2050 and would not be developed with other land uses. The SCE corridors would also be designated Open Space–Non-recreation. Therefore, implementation of TOP 2050 was not anticipated to substantially impair the use of flood control channels or SCE corridors in the City as wildlife movement corridors. The TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: The 1300 S Campus Project site is developed and surrounded by urban developed land uses, including fences and roadways. Thus, the site does not contain any wildlife corridors and does not support the dispersion or movement of fish or wildlife. The 1300 S Campus Project would not interfere with the movement of migratory fish or wildlife species or with wildlife corridors, or impede the use of native wildlife nursery sites. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Approved Project: The TOP 2050 SEIR did not analyze The Ontario Plan 2050's potential to conflict with local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. It did, however, analyze the approved project's potential to conflict with the requirements of the *Delhi Sands Flower Loving Fly (DSFLF) Habitat Conservation Plan (HCP)*; refer to Impact 3.4(f).

1300 S Campus Project: The 1300 S Campus Project would redevelop an already developed parcel within the City, and no natural habitat exists onsite. Further, the 1300 S Campus Project site is not located within or near the HCP area for DSFLF in the eastern portion of the City.

It is noted that the 1300 S Campus Project would require removal of existing onsite ornamental trees. The preservation, removal, and planting of parkway trees in the City is addressed in Title 10, Chapter 2 of the Ontario Municipal Code. "Parkway" trees are defined by the Ontario Municipal Code as those located within any public street right-of-way between the right-of-way boundary line and the curb line, and also the area enclosed within the curblines of a median divider. The removal or relocation of any parkway trees must receive prior authorization from the Public Works Agency of the City through a permitting process. The project may require a Parkway Tree Removal permit from the City of Ontario for removal of parkway trees along South Campus Avenue and Phillips Street. With issuance of a Parkway Tree Removal Permit, the 1300 S Campus Project would not conflict with any local policies or ordinances protecting biological resources. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No new additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan?

Approved Project: According to the TOP 2050 SEIR, the approved project would not grant specific entitlements for development and would not conflict with FESA requirements and USFWS regulations regarding critical habitat. There is one habitat conservation plan (HCP) in the City, a 19-acre area near the intersection of Greystone Drive and the eastern city boundary established to protect the DSFLF. Any project proposed for development within this HCP pursuant to TOP 2050 would be required to consult with the USFWS regarding project impacts on DSFLF and mitigation of any such impacts.

Furthermore, Policy ER-5.1 of the approved project would support efforts to conserve high-quality habitat for the DSFLF. Individual projects undergoing environmental review under CEQA would be required to determine whether there is a potential for habitat onsite for sensitive species. If sensitive species were found

on-site, the project proponent would be required to consult with the CDFW regarding impacts to sensitive species and ensuing mitigation. The TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: The 1300 S Campus Project site is not located within any established Habitat Conservation Plan, Natural Community Conservation Plan, or other approved type of habitat conservation plan. The 1300 S Campus Project is approximately 4.75 miles southwest of the sole HCP area in the City for DSFLF site. No habitat has been identified on site, including that for the DSFLF, as the only remaining vegetation on site is ornamental landscaping. Therefore, the 1300 S Campus Project would not be anticipated to conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

This page intentionally left blank.

3.5 CULTURAL RESOURCES

This section corresponds with the TOP 2050 SEIR Section 5.5, *Cultural Resources.*

Would the project:

a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

Approved Project: According to the TOP 2050 SEIR, policies of the approved project, State and Federal regulations, and the City's historic preservation ordinance would ensure that historical resources classified as Tier I or Tier II would not be impacted on a programmatic level. The Development Code establishes a tier system which identifies resources that have the highest preservation value in terms of their architectural and/or historical contribution to the City and methods to evaluate the significance of their loss in the case of major modification or demolition. The tier system also includes minimum mitigation measures and a mitigation fee structure for each tier. Tier I consists of properties that should not be demolished or significantly altered under any circumstances, regardless of their designation status. Tier II consists of properties where demolition of these properties should be avoided. Given this strong policy of the City and the programmatic nature of the approved project and the TOP 2050 SEIR, the TOP 2050 SEIR concluded that it is not reasonably foreseeable that any projects would be proposed and approved by the City that would 1) require the demolition of Tier II resources, and 2) for which a project alternative avoiding demolition would not be available for adoption instead of the proposed project. Thus, on a programmatic level, implementation of the approved project would not result in significant impacts to Tier II resources. Tier III consists of all properties that are Designated Historic Landmarks, are contributing structures in Designated Historic Districts, or are Eligible Historical Resources, as defined by the Development Code. Demolition of these properties should be avoided where possible, but may be appropriate under certain circumstances. If demolition occurs, the City requires historic resources to be documented and historic features to be salvaged, and requires a demolition mitigation fee. Therefore, the Development Code does not entirely prevent the substantial adverse change in the significance of Tier III resources.

Implementation of the approved project's land use plan could threaten historic resources classified as Tier III, especially within growth focus areas, and impacts would remain significant and unavoidable after mitigation. Historic resources in the City include historic districts (designated, proposed, and potential), historic landmarks or points of historical interest, and other buildings, structures, objects, and sites that appear eligible for listing on the National, California, or local historic registers.

The approved project is a regulatory document that sets the framework for future growth and development of the City and does not directly result in development. All development or redevelopment projects must be analyzed for conformance with the approved project, zoning requirements, and other applicable local and state requirements; comply with the requirements of CEQA; and obtain all necessary clearances and permits. Thus, adoption of the approved project in itself would not lead to demolition or material alteration of any of these historic resources. Identified historic structures and sites that are potentially eligible for future historic resources listing may be vulnerable to development accommodating the approved project. In addition, other buildings or structures that could meet the National Register criteria upon reaching 50 years of age might be impacted by development or redevelopment activity under the approved project.

As a result, historical resources categorized under the ordinance as Tier III could potentially be impacted with implementation of the approved project. Thus, according to the TOP 2050 SEIR, impacts would be significant and unavoidable. The approved project contained a mitigation measure (Mitigation Measure 5.5-1) that addressed the approved project's potential effects on historic resources. This mitigation measure requires the evaluation of historic or potentially historic resources in the City for historic significance

through the City's tier system prior to the issuance of plan or development approvals, and mitigation measures for all Tier III historic resources pursuant to the City's Development Code, including each historic resource must be fully documented, the payment of mitigation fees, an entitlement procedure for the proper demolition of a historic resource, and clear guidelines for demolition permits.

1300 S Campus Project: The 1300 S Campus Project is located on a previously developed parcel within the City. The existing structure on-site is not considered to be a Tier I, Tier II, or Tier III resource, as the existing structure was constructed in 2007. The structure is also not a designated landmark or located within an historic district. While impacts were deemed potentially significant with regard to the approved project, the 1300 S Campus Project does not feature any historic resources categorized as Tier I through III and would therefore not cause a substantial adverse change in the significance of a historic resource. Impacts would be less than significant, and no new or worsened impacts would occur in this regard.

Certified TOP 2050 SEIR Mitigation Measures: Mitigation Measure 5-1 applies to sites containing historic or potentially historic resources and major modification or demolition of Tier III resources. As the 1300 S Campus Project site is fully developed with modern uses and does not contain a Tier III historic resource, Mitigation Measure 5-1 is not applicable to the 1300 S Campus Project.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. As discussed above, the TOP 2050 SEIR determined that program-level impacts with regard to historic resources under The Ontario Plan 2050 would be significant and unavoidable but did not preclude the finding of less than significant impacts for subsequent projects analyzed at the project level. The 1300 S Campus Project would result in less than significant impacts related to historic resources; refer to the "1300 S Campus Project" discussion above.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

Approved Project: According to the TOP 2050 SEIR, the approved project would not directly affect archaeological resources. The approved project is a regulatory document that sets the framework for future growth and development but does not result in development in and of itself. However, long-term implementation of the approved project land use plan could allow development (e.g., new development, infill development, redevelopment, and revitalization/restoration), including grading, of known and unknown sensitive areas. Grading and construction activities of undeveloped areas or redevelopment that requires more intensive soil excavation than in the past could potentially cause the disturbance of archeological resources. Therefore, future development that would be accommodated by the approved project could potentially unearth previously unrecorded resources.

The Historic Preservation section of the approved project Community Design Element addresses the management of artifacts through Policy CD-4.1, *Cultural Resources Management*, and the collaboration and promotion of public involvement in preservation through Policies CD-4.2, Collaboration with Property Owners and Developers; Policy CD-4.6, *Promotion of Public Involvement in Preservation*; and Policy CD-4.7, *Public Outreach*.

Archaeological sites are also protected by a wide variety of state policies and regulations under the California Public Resources Code. Cultural resources are recognized as nonrenewable and therefore receive protection under the California Public Resources Code and CEQA. Review and protection of archaeological

resources are afforded by CEQA for individual development projects accommodating the approved project, subject to discretionary actions that are implemented in accordance with the City's land use plan.

According to CEQA, the lead agency is required to determine whether a development project may have a significant effect on archaeological resources (PRC Section 21083.2). If the lead agency determines that the project may have a significant effect on unique archaeological resources, the project-level CEQA document being prepared for the development project is required to address and mitigate the impacts of those resources. Because each individual development project under the approved project could impact archaeological resources, and because there is the potential for archaeological sensitivity to occur throughout the City, impacts may be significant on a project-by-project basis. However, projects would comply with federal and state regulations governing the treatment of archaeological resources and Mitigation Measure 5-2 would require preservation and curation of archaeological resources if uncovered during development. Thus, impacts to archaeological resources under the approved project were determined to be less than significant with mitigation.

1300 S Campus Project: The 1300 S Campus Project site has been previously disturbed from past uses that involve grading and building construction. Because the site has previously been disturbed, there is reduced potential for the 1300 S Campus Project to impact archeological resources. However, the 1300 S Campus Project may result in excavation where undiscovered archaeological resources could exist, including archaeological resources that are also tribal cultural resources. TOP 2050 SEIR Mitigation Measure 5-2 requires the retention of a qualified archaeologist during ground disturbing activities on properties where resources are identified and the preservation and curation of archaeological resources in the event that a resource is discovered during ground disturbing activities. With adherence to Mitigation Measure 5-2, impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures:

5-2 In areas of documented or inferred from evident archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. The mitigation plan shall include the following requirements:

a) Archaeologists and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.
b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.
c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including a catalog with museum numbers.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact with Mitigation.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

c) Disturb any human remains, including those interred outside of dedicated cemeteries?

Approved Project: Based on the TOP 2050 SEIR, grading activities in Ontario would comply with PRC Section 5079.98 so as not to disturb human remains. California Health and Safety Code, Section 7050.5 and PRC Section 5097.98 mandate the process to be followed in the event of an accidental discovery of any human remains in a location other than a dedicated cemetery. Specifically, the California Health and Safety Code requires that if human remains are discovered on a project site, disturbance of the site shall remain halted until the coroner has conducted an investigation into the circumstances, manner, and cause of any death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative, in the manner provided in PRC Section 5097.98. If the coroner determines that the remains are not subject to his or her authority and if the coroner recognizes or has reason to believe the human remains to be those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC). Although soil-disturbing activities associated with development in accordance with the approved project could result in the discovery of human remains, compliance with existing law would ensure that significant impacts to human remains would not occur. The TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: The 1300 S Campus Project site has been previously disturbed, as described above, and has not been previously used as a cemetery. It is not anticipated that implementation of the 1300 S Campus Project would result in the disturbance of human remains. However, in the unlikely event that human remains are encountered during earth removal or disturbance activities, the California Health and Safety Code Section 7050.5 requires that disturbance of the site shall halt until the coroner has conducted an investigation into the circumstances, manner, and cause of any death, and the recommendations concerning the treatment and disposition of the human remains have been made to the person responsible for the excavation or to his or her authorized representative. The Coroner would also be contacted pursuant to Sections 5097.98 and 5097.99 of the Public Resources Code relative to Native American remains. In the event the Coroner determines the human remains to be of Native American descent, the coroner has 24 hours to notify the NAHC. The NAHC would then be required to contact the most likely descendant of the deceased Native American, who would then serve as a consultant on how to proceed with the remains. Compliance with the established regulatory framework (i.e., California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98) would ensure any potential impacts involving disturbance of human remains would be less than significant. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

3.6 ENERGY

This section corresponds with the TOP 2050 SEIR Section 5.6, *Energy.*

Would the project:

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Approved Project: The TOP 2050 SEIR found that regulatory compliance (e.g., Building Energy Efficiency Standards, Title 24 California Green Building Standards Code (CALGreen), Renewable Portfolio Standards (RPS), and Corporate Average Fuel Economy (CAFE) standards) will increase building energy efficiency and vehicle fuel efficiency and reduce building energy demand and transportation-related fuel usage. Additionally, TOP 2050 includes policies related to land use and transportation planning and design, energy efficiency, public and active transit, and renewable energy generation that will contribute to minimizing building and transportation-related energy demands overall and demands on nonrenewable sources of energy. Implementation of proposed policies under the approved project and Community Climate Action Plan (CCAP) in conjunction with regulatory requirements would ensure that energy demand associated with growth under the approved project would not be inefficient, wasteful, or unnecessary. The TOP 2050 SEIR determined that impacts would be less than significant in this regard.

1300 S Campus Project:

CEQA Guidelines Appendix F is an advisory appendix that assists in determining whether a project will result in the inefficient, wasteful, and unnecessary consumption of energy. The analysis on Impact 3.6(a) considers Appendix F of the CEQA Guidelines, which includes the following considerations to determine whether this threshold of significance is met:

- The project's energy requirements and its energy use efficiencies by amount and fuel type for each stage of the project including construction, operation, maintenance and/or removal. If appropriate, the energy intensiveness of materials maybe discussed.
- The effects of the project on local and regional energy supplies and on requirements for additional capacity.
- The effects of the project on peak and base period demands for electricity and other forms of energy.
- The degree to which the project complies with existing energy standards.
- The effects of the project on energy resources.
- The project's projected transportation energy use requirements and its overall use of efficient transportation alternatives.

Pursuant to CEQA Guidelines Appendix F, the 1300 S Campus Project's energy effects were analyzed in the *1300 S Campus Drive Air Quality and Energy Assessment*, prepared by Urban Crossroads, dated August 29, 2023; refer to Appendix A. The results of this analysis are included below.

Construction

The *2023 National Construction Estimator* identifies a typical power cost per 1,000 sf of construction per month of $2.50, which was used to calculate the Project's total construction power cost. The total power cost of the on-site electricity usage during the construction of the 1300 S Campus Project is estimated to be approximately $8,547.23, while the total electricity usage from on-site construction related activities is estimated to be approximately 64,889 kilowatt hours (kWh).

Revised construction equipment activities would consume an estimated 42,284 gallons of diesel fuel, with construction worker fuel consumption being 8,947 gallons and construction vendor/hauling activities consuming 5,448 gallons. The 1300 S Campus Project construction would represent a "single-event" diesel fuel demand and would not require on-going or permanent commitment of diesel fuel resources for this purpose.

Construction equipment use of fuel would not be atypical for the type of construction proposed because there are no aspects of the 1300 S Campus Project's proposed construction process that are unusual or energy-intensive, and 1300 S Campus Project construction equipment would conform to the applicable CARB emissions standards, acting to promote equipment fuel efficiencies. In addition, the 1300 S Campus Project would include a number of sustainability features, such as requiring all off-road construction equipment greater than 50 horsepower meeting California Air Resources Board (CARB) Tier 4 standards, reducing the amount of energy used during construction. The warehouse would also be designed and constructed in accordance with the Leadership in Energy and Environmental Design (LEED) green building certification standards.

CCR Title 13, Title 13, Motor Vehicles, section 2449(d)(3) Idling, limits idling times of construction vehicles to no more than 5 minutes, thereby precluding unnecessary and wasteful consumption of fuel due to unproductive idling of construction equipment. Best Available Control Measures (BACMs) inform construction equipment operators of this requirement.

With regard to construction worker trips, the 2022 Integrated Energy Policy Report (IEPR) released by the California Energy Commission (CEC) has shown that fuel efficiencies are getting better within on and off-road vehicle engines due to more stringent government requirements. As supported by the preceding discussions, the 1300 S Campus Project's construction energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary.

Operation

Energy that would be consumed by 1300 S Campus Project-generated traffic is a function of total VMT and estimated vehicle fuel economies of vehicles accessing the site. The VMT per vehicle class can be determined by the vehicle fleet mix and the total VMT. As with worker and vendors trips, operational vehicle fuel efficiencies were estimated using information generated within EMFAC2021 developed by CARB. Operation of the 1300 S Campus Project would result in 1,753,090 annual VMT and an estimated annual fuel consumption of 173,608 gallons of fuel.

The 1300 S Campus Project proposes conventional industrial uses reflecting contemporary energy efficient/energy conserving designs and operational programs. The 1300 S Campus Project does not propose uses that are inherently energy intensive and the energy demands in total would be comparable to other industrial land use projects of similar scale and configuration. The 1300 S Campus Project would comply with the applicable Title 24 standards which would ensure that the 1300 S Campus Project energy demands would not be inefficient, wasteful, or otherwise unnecessary.

In addition, the 1300 S Campus Project includes a number of energy efficiency features, such as the inclusion of rooftop solar capable of meeting 100 percent of the warehouse's electrical demand, ensuring

that natural gas would not be utilized during project operations, the planting of one tree per parking space, and the use of high-reflectivity pavement for all hardscaped areas to support urban cooling; refer to Section 1.7.3, *Sustainability Features*, for the full text of these energy efficiency measures. Together, these features would reduce the 1300 S Campus Project's energy use during project operations.

The 1300 S Campus Project would not cause or result in the need for additional energy producing or transmission facilities. The 1300 S Campus Project would not engage in wasteful or inefficient uses of energy and aims to achieve energy conservations goals within the State of California. As supported by the preceding analyses, 1300 S Campus Project operations would not result in the inefficient, wasteful, or unnecessary consumption of energy.

As shown in Table 3.6-1, *1300 S Campus Project Net New Energy Demands – Comparison to Existing*, the 1300 S Campus Project would utilize less natural gas and more electricity than the existing use of the site.

Table 3.6-1: 1300 S Campus Project Net New Energy Demands – Comparison to Existing

Source	Natural Gas Demand (kBTU/year)	Electricity Demand (kWh/year)
1300 S Campus Project	0	1,058,115
Existing	624,197	151,651
Net Emissions (Proposed – Existing)	**-624,197**	**906,465**
Refer to Appendix A, *Air Quality and Energy Assessment*, Table 21 for assumptions used in this analysis.		

As supported by the preceding analyses, 1300 S Campus Project construction and operations would not result in the inefficient, wasteful, or unnecessary consumption of energy. The 1300 S Campus Project proposed uses are consistent with the land use designation and zoning identified for the project site. Electrical energy would be available for use during construction from existing power lines and connections, precluding the use of less-efficient generators. The 1300 S Campus Project therefore would not cause or result in the need for additional energy producing or transmission facilities. The 1300 S Campus Project would not engage in wasteful or inefficient uses of energy and aims to achieve energy conservations goals within the State of California.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Conflict with or obstruct a State or local plan for renewable energy or energy efficiency?

Approved Project: According to the TOP 2050 SEIR, the State's electricity grid is transitioning to renewable energy under California's RPS Program. Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas. In general, California has RPS requirements of 33 percent renewable energy by 2020 (SB X1-2), 40 percent by 2024 (SB 350), 50 percent by 2026 (SB 100),

60 percent by 2030 (SB 100), and 100 percent by 2045 (SB 100). SB 100 also establishes RPS requirements for publicly owned utilities that consist of 44 percent renewable energy by 2024, 52 percent by 2027, and 60 percent by 2030. The statewide RPS requirements do not directly apply to individual development projects, but to utilities and energy providers such as SCE, whose compliance with RPS requirements would contribute to the State of California objective of transitioning to renewable energy. The land uses accommodated under TOP 2050 would comply with the current and future iterations of the Building Energy Efficiency Standards and CALGreen.

In addition, the approved project includes Environmental Resources Element Policies ER-3.1, ER-3.2, ER-3.3, ER-3.4, ER-3.5, and ER-3.6 and Safety Element Policies S-9.1, S-9.2, and S-9.3, which would support the statewide goal of transitioning the electricity grid to renewable sources and employ best practices regarding energy-saving standards. Therefore, the TOP 2050 SEIR concluded that implementation of the approved project would not conflict with or obstruct implementation of California's RPS program. Impacts were determined to be less than significant.

1300 S Campus Project:

The 1300 S Campus Project would not conflict with any applicable State or local plans for renewable energy or energy efficiency. The 1300 S Campus Project proposes conventional industrial uses reflecting contemporary energy efficient/energy conserving designs and operational programs. The 1300 S Campus Project does not propose uses that are inherently energy intensive and the energy demands in total would be comparable to other industrial land use projects of similar scale and configuration.

The 1300 S Campus Project would comply with the City's Climate Action Plan (CCAP) Checklist and includes measures such as installation of photovoltaic solar power that would generate enough electricity to meet 100 percent of the electricity demand, building electrification, and urban cooling measures; refer to Appendix B, *Screening Table for Implementing GHG Performance Standards*. In addition, the 1300 S Campus Project includes a number of energy efficiency features, such as the inclusion of rooftop solar capable of meeting 100 percent of the warehouse's electrical demand, ensuring that natural gas would not be utilized during project operations, the planting of one tree per parking space, and the use of high-reflectivity pavement for all hardscaped areas to support urban cooling; refer to Section 1.6.3 for the full text of these energy efficiency measures. Together, these features would reduce the 1300 S Campus Project's energy use during project operations. The 1300 S Campus Project would comply with the applicable Title 24 standards which would ensure that the 1300 S Campus Project's energy demands would not be inefficient, wasteful, or otherwise unnecessary.

The existing building uses electricity for uses including heating, cooling, and ventilation of buildings; water heating; operation of electrical systems; lighting; and on-site equipment and appliances. The 1300 S Campus Project would comply with the most current Building Energy Efficiency Standards, including the California Code of Regulations (CCR) Title 24, Part 11: California Green Building Standards. The project would not result in wasteful, inefficient, or unnecessary consumption of energy resources and would not conflict with or obstruct a State or local plan for energy efficiency. No new or worsened impacts would occur in this regard.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

This page intentionally left blank.

3.7 GEOLOGY AND SOILS

This section corresponds with the TOP 2050 SEIR Section 5.7, *Cultural Resources* (paleontological resources) and Section VI, *Geology and Soils*.

Would the project:

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss injury, or death involving:

b) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Approved Project: According to the TOP 2050 SEIR, the City of Ontario is not within any Alquist-Priolo Earthquake Fault Zone. Of the faults listed, the southern section of the San Andreas Fault is estimated to be capable of generating the greatest magnitude earthquake, 8.0. The most intense peak horizontal ground acceleration that any of these faults is estimated to be capable of generating in Ontario is approximately 0.54 g by the Chino Fault, which passes approximately four miles from the southwestern City boundary. Projects considered for approval under the approved project would be required to comply with seismic safety provisions of the California Building Code (CBC). Such compliance would reduce hazards arising from ground shaking to a less than significant level.

1300 S Campus Project: The Geotechnical Exploration prepared for the 1300 S Campus Project on June 29, 2023 (included as Appendix D) indicates that the nearest fault (Red Hill – Etiwanda Avenue Fault) is approximately 3.6 miles to the north.[9] Therefore, the potential for fault rupture through the site is considered to be low. As with the approved project, the 1300 S Campus Project is not located within a Alquist-Priolo Earthquake Fault Zone.

Nonetheless, the 1300 S Campus Project would be required to comply with the requirements of the latest CBC, which includes specific design measures intended to maximize structural stability in the event of an earthquake. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

ii) Strong seismic ground shaking?

Approved Project: According to the TOP 2050 SEIR, while the approved project would result in an increase in land use intensity, it would not result in development of new, previously undeveloped areas of the City.

[9] Leighton Consulting, Inc., Geotechnical Exploration, Proposed Warehouse Development, 1300 South Campus Avenue, City Of Ontario, San Bernardino County, *California*, June 29, 2023.

The policies of the approved project, along with compliance with state regulations such as the CBC would ensure that the potential impacts from seismic-related hazards would be less than significant. According to the TOP 2050 SEIR, impacts were determined to be less than significant.

1300 S Campus Project: The site is located in a seismically active region. According to the Geotechnical Exploration, the principal seismic hazard that could affect the site is ground shaking resulting from an earthquake occurring along several major active or potentially active faults in southern California. The project would be designed in accordance with appropriate seismic design parameters intended to reduce seismic risk as defined by California Geological Survey (CGS) Chapter 2 of Special Publication 117A. While the potential for strong seismic ground shaking cannot be eliminated, adherence to CBC design requirements and other applicable standards and practices of earthquake resistant construction (i.e., CGS Special Publication 117A), as required by the City's Building Permit process, would reduce such risk to the extent feasible. Moreover, the 1300 S Campus Project would not exacerbate any impacts related to seismic ground shaking. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

iii) Seismic-related ground failure, including liquefaction?

Approved Project: Based on the TOP 2050 SEIR, the groundwater level beneath the City is greater than 50 feet below ground surface, meaning there is currently no potential for liquefaction. According to the TOP 2050 SEIR, impacts were determined to be less than significant.

1300 S Campus Project: Liquefaction is the loss of soil strength due to a buildup of excess pore-water pressure during strong and long-duration ground shaking. Liquefaction is associated primarily with loose (low density), saturated, relatively uniform fine- to medium-grained, clean cohesionless soils. As shaking action of an earthquake progresses, soil granules are rearranged, and the soil densifies within a short period. This rapid densification of soil results in a buildup of pore-water pressure. When the pore-water pressure approaches the total overburden pressure, soil shear strength reduces abruptly and temporarily behaves similar to a fluid. For liquefaction to occur there must be: (1) loose, clean granular soils, (2) shallow groundwater, and (3) strong, long-duration ground shaking.

According to the 1300 S Campus Project's Geotechnical Exploration, the 1300 S Campus Project site has been mapped outside of the zone of liquefaction susceptibility. Additionally, historical groundwater high has been estimated to be deeper than 200 feet below ground surface. As such, the site is not considered to be susceptible to liquefaction.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

iv) Landslides?

Approved Project: The TOP 2050 SEIR did not directly analyze the risk of landslides; however, the TOP 2050 SEIR concluded that adherence to state regulations, including the CBC, would result in less than significant impacts relative to geology and soil hazards.

1300 S Campus Project: The 1300 S Campus Project is located in the City of Ontario on flat terrain. According to the Geotechnical Exploration prepared for the 1300 S Campus Project, ground elevations (El.) range roughly from El. 925 feet above mean sea level (msl) on the northwest corner to El. 910 feet msl on the southeast corner, with an overall descending gradient across the site from north to south. There would be no impact with regard to landslides.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: No Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Result in substantial soil erosion or the loss of topsoil?

Approved Project: While the approved project would result in increased land use intensity, the TOP 2050 SEIR determined it would not result in development of new, previously undeveloped areas of the City. After compliance with the safety provisions of the CBC, implementation of the approved project would have less than significant impacts from soil erosion. In addition, construction activities on project sites larger than one acre are required to prepare a Stormwater Pollution Prevention Plan (SWPPP) that details best management practices (BMPs) to reduce the potential for erosion during construction activities. Furthermore, the approved project includes Policies ER-1.6 (Urban Run-off Quantity), ER1.7 (Urban Run-Off Quality), S-5.1 (Dust Control Measures), and S-5.2 (Grading in High Winds) regarding erosion and loss of topsoil.

1300 S Campus Project: The 1300 S Campus Project involves the redevelopment of a previously-developed site. Adherence to City Policies ER-1.6, ER-1.7, S-5.1, and S-5.2 of the approved project address erosion and loss of topsoil through policies related to urban run-off quantity, urban run-off quality, dust control measures, and grading during periods of high winds. Further, the 1300 S Campus Project would comply with the safety provisions of the CBC, which would ensure that the 1300 S Campus Project would not result in substantial soil erosion or the loss of topsoil. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Approved Project: As stated in the TOP 2050 SEIR, while the approved project would result in increased land use intensity, it would not result in development of new, previously undeveloped areas of the City. After compliance with the safety provisions of the CBC, implementation of the approved project would have less than significant impacts with regard to unstable geologic units or soils.

1300 S Campus Project:

Lateral Spreading

Lateral spread is liquefaction-induced lateral ground movement, and a consideration in lateral spread analysis is to evaluate whether laterally continuous liquefiable layers exist. This site is not considered susceptible to liquefaction and is generally level without any significant slopes, therefore, lateral spreading is not an issue for this site.

Subsidence

According to the U.S. Geological Survey, land subsidence occurs when large amounts of groundwater have been withdrawn from certain types of rocks, such as fine-grained sediments. The rock compacts because the water is partly responsible for holding the ground up. When the water is withdrawn, the rocks falls in on itself. Events, other than the removal of groundwater, that can cause land subsidence include aquifer-system compaction, drainage of organic soils, underground mining, hydrocompaction, natural compaction, sinkholes, and thawing permafrost. According to the Geotechnical Evaluation, the potential for subsidence to affect the site is not expected to cause a significant impact based on field and laboratory data.

Refer to Impacts 3.7(a)(3), 3.7(a)(4), and 3.7(d) for a discussion concerning liquefaction, landslides, and collapse (from expansive soils), respectively. According to the 1300 S Campus Project's Geotechnical Exploration, the 1300 S Campus Project site is not susceptible to landslide, liquefaction, lateral spreading, or seismic settlement; refer to Impact 3.7(a). Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

c) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Approved Project: As stated in the TOP 2050 SEIR, while the approved project would result in increased land use intensity, it would not result in development of new, previously undeveloped areas of the City. In addition, near surface soils in the northern and central parts of the City are primarily granular, that is, silty sand, sand, and gravel; such sediments are usually non-expansive or have very low expansion potential. After compliance with the safety provisions of the CBC, implementation of the approved project would have less than significant impacts with regard to expansive soils.

1300 S Campus Project: Expansive soils contain significant amounts of clay particles that swell considerably when wetted and shrink when dried. Foundations constructed on these soils are subjected to large uplifting forces caused by the swelling. Without proper measures taken, heaving and cracking of building foundations and slabs-on-grade could result.

According to the 1300 S Campus Project's Geotechnical Exploration, the 1300 S Campus Project site is not susceptible to expansive soils, as the soil onsite is granular rather than clay heavy. Additionally, soil tests revealed onsite soils are anticipated to have very low expansion potential. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

Approved Project: Based on the TOP 2050 SEIR, wastewater from Ontario is treated at wastewater treatment facilities owned and operated by the Inland Empire Utilities Agency (IEUA). Use of septic tanks would be limited to existing septic tanks, and new septic tanks would be constricted to areas not in practical proximity to existing sewer mains, dependent on approval by the Santa Ana Regional Water Quality Control Board on a case-by-case basis. Impacts were determined to be less than significant.

1300 S Campus Project: The 1300 S Campus Project does not propose the construction of septic tanks or alternative wastewater disposal systems. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: No Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Approved Project: According to the TOP 2050 SEIR, long-term implementation of the approved project would allow development (e.g., new development, infill development, redevelopment, and revitalization/restoration), including grading, of sensitive areas. Grading and construction activities of undeveloped areas or redevelopment that requires more intensive soil excavation than in the past could potentially cause the disturbance of paleontological resources. Therefore, development under the approved project could potentially unearth previously unrecorded resources.

The approved project would result in an increase in land use intensity rather than development of new, previously undeveloped areas of the City which would require substantial landform modification. The potential to uncover undiscovered paleontological resources is high. To protect paleontological resources in areas of documented or inferred resources, the TOP 2050 SEIR includes Mitigation Measure 5-2 to require preparation of studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendations of a qualified cultural preservation expert. With implementation of Mitigation Measure 5-2, impacts were determined to be less than significant with mitigation.

1300 S Campus Project: The 1300 S Campus Project is located on a previously developed site. However, future development may potentially unearth previously unrecorded resources. Implementation of the 1300 S Campus Project would be required to adhere to City policies regarding the collaboration, promotion of public involvement in preservation, and public outreach (Policies CD-4.2, CD-4.6, and CD-4.7) of cultural resources. In addition, the 1300 S Campus Project would be required to adhere to Mitigation Measure 5-2 in the event previously undiscovered paleontological resources are identified during ground disturbing activities. With adherence to Mitigation Measure 5-2, impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: Refer to Mitigation Measure 5-2 in Section 3.5, *Cultural Resources*.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact with Mitigation Incorporated.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. The 1300 S Campus Project would result in less than significant impacts with implementation of the TOP 2050 mitigation measures related to paleontological resources; refer to the "1300 S Campus Project" discussion above.

3.8 GREENHOUSE GAS EMISSIONS

This section corresponds with the TOP 2050 SEIR Section 5.8, *Greenhouse Gas Emissions*.

Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Approved Project: The approved project included implementation of the Community Climate Action Plan (CCAP) update. The 2022 update to the CCAP draws upon strategies from the 2014 CCAP and the San Bernardino GHG Reduction Plan, with new strategies to address current State regulations and local issues of concern. The CCAP identifies GHG emissions reductions targets for the City of Ontario that would ensure consistency with the State GHG reduction goals of EO S-03-05 and substantial progress toward the State's carbon neutrality goals under EO B-55-18. The approved project also included policies that would reduce GHG associated with development projects:

- Land Use Element Policies LU-2.1 through LU-2.5 would regulate new development impacts on nearby sensitive land uses.

- Environmental Resources Element Policies ER-1.1 through ER-1.8 would reduce GHG emissions from water use and wastewater generation.
    - Policies ER-2.1 through ER-2.3 would reduce GHG emissions from solid waste disposal.
    - Policies ER-3.1 through ER-3.6 would ensure that new development is energy efficient.
    - Policies ER-4.1 through ER-4.9 would reduce air pollution from new development.

- Community Design Element Policy CD-2.7 would ensure that sustainability is considered in the design of new projects.

- Mobility Element Policies M-1.4 (complete streets), M-3.1 through M-3.11 (transit), and M-2.1 through M-2.4 (bicycle and pedestrian) would reduce VMT.

With implementation of the CCAP, the TOP 2050 SEIR concluded that the City would achieve the EO S-03-05 GHG emissions reduction targets, resulting in an 80 percent decrease in GHG emissions in the city by 2050 from existing conditions, and would make substantial progress toward the State's carbon neutrality goals under EO B-55-18. Therefore, the approved project, which includes the CCAP, would reduce GHG emissions impacts compared to existing projections. Impacts were identified as less than significant in this regard.

1300 S Campus Project: The 1300 S Campus Project would involve the demolition of the existing on-site lumber yard uses to redevelop the site with a warehouse facility. The following GHG-reducing project design features have been incorporated into the 1300 S Campus Project:

- Project features no natural gas infrastructure.
- Replacement of gas appliances with electric appliances.
- Installation of rooftop solar systems which would generate enough electricity to meet 100% of the annual warehouse electric demand.
- Planting of one tree per required parking space.
- Providing bicycle parking at a ratio of 1:20 of bicycle parking to employee vehicle parking.

- Site design allocates sufficient space for storage and collection of green waste, organic waste, and recyclables.
- Installation of water efficient faucets and showerheads.
- Installation of on-demand water circulators on commercial sinks or dishwashing equipment.
- Outdoor landscapes would be planted with drought-tolerant, low maintenance plants with a drip irrigation system/sprinkler irrigation system or with a weather-based irrigation controller.
- Installation of conduit for charging stations for zero emission trucks.
- Installation of EV charging stations at a rate of 10% of planned employee vehicle parking spaces.
- Use of high reflectivity pavement for all hardscaped areas, including parking areas, walking paths, and patios.

As described in Section 3.11, *Land Use and Planning*, the 1300 S Campus Project site is zoned IL and has an IND land use designation per The Ontario Plan 2050. The IND designation allows for a variety of light industrial uses, including warehousing/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting retail and professional office uses. The IL zoning district accommodates lighter manufacturing and assembly activities, storage, and warehousing activities, and other similar uses developed at a maximum intensity of 0.55 FAR. As currently proposed, the 1300 S Campus Project would be consistent with the site's land use and zoning designations.

As discussed in Section 4.14, *Population and Housing*, the 1300 S Campus Project would not induce substantial unplanned population growth in the area.

As the City has incorporated these same land use and population projections into the CCAP, and based on the GHG-reducing project design features identified above, the 1300 S Campus Project would be consistent with the CCAP and would result in less than significant GHG impacts. The CCAP is a qualified GHG reduction plan under CEQA Guidelines section 15183.5. As such, "If a proposed development within the City of Ontario is consistent with the emission reduction strategies included in the CCAP and the programs are developed as a result of the CCAP, the project would have a less-than-significant impact on climate change. A project-specific environmental document that relies on this 2022 CCAP for its cumulative impacts analysis must identify specific GHG reduction strategies applicable to the project and demonstrate the project's incorporation of the strategies."[10] The CCAP provides 'points' based on the number of sustainability features and other construction-or-operational features that would reduce a project's GHG emissions. As set forth in the CCAP, "Projects that achieve at least 100 points per applicable Screening Table will be consistent with the reduction quantities consistent with the 2022 CCAP. Consistent with CEQA Guidelines, such projects would be determined to have a less than significant individual and cumulative impact for GHG emissions."[11] According to Appendix B, *Screening Table for Implementing GHG Performance Standards*, the 1300 S Campus Project's sustainability features would total 114 points on the applicable screening table for a warehouse project. As the 1300 S Campus Project exceeds the CCAP's 100 point threshold, impacts would remain less than significant, and no new or worsened impacts would occur in this regard.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

[10] CCAP, p.21-22.

[11] CCAP, Greenhouse Gas Emissions Screening Tables March 2023, p. 8.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Approved Project: Development projects accommodated under the approved project are required to adhere to the programs and regulations identified by the Scoping Plan and implemented by State, regional, and local agencies to achieve the statewide GHG reduction goals of AB 32 and SB 32. Future development projects are required to comply with these State GHG emissions reduction measures because they are statewide strategies. For example, new buildings associated with land uses accommodated by implementing the approved project are required to meet the CALGreen and Building Energy Efficiency Standards in effect at the time when applying for building permits. Furthermore, as discussed above, the approved project included goals, policies, and programs that help reduce GHG emissions and therefore help achieve GHG reduction goals. Thus, the TOP 2050 SEIR determined that TOP 2050 would not obstruct implementation of the CARB Scoping Plan, and impacts would be less than significant.

1300 S Campus Project:

The 1300 S Campus Project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases. The 1300 S Campus Project would not exceed thresholds related to GHG emissions since it would exceed the CCAP's 100 point threshold; refer to Impact 3.8(a). In addition, the 1300 S Campus Project would comply with regulations imposed by the State and the SCAQMD that reduce GHG emissions. The regulations, plans, and policies adopted for the purpose of reducing GHG emissions that are directly applicable to the 1300 S Campus Project include the latest Title 24 Energy Efficiency Standards for Residential and Nonresidential Buildings and the Title 24 California Green Building Standards Code (CALGreen). The 1300 S Campus Project would be required to comply with the latest Title 24 Standard at the time of building permit issuance.

City of Ontario Community Climate Action Plan
Based on the GHG-reducing project design features identified in the discussion above for Impact 3.8(a), the 1300 S Campus Project would exceed the CCAP's 100 point threshold. Since the 1300 S Campus Project would exceed the CCAP's 100 point threshold, and since the same land use and population projections have been incorporated into the CCAP, the 1300 S Campus Project would be consistent with the CCAP and would result in less than significant GHG impacts. No new or more severe impacts would occur in this regard.

2020-2045 RTP/SCS

SCAG's RTP/SCS determines that land use strategies that focus on new housing and job growth in areas served by high quality transit and other opportunity areas would be consistent with a land use development pattern that supports and complements the proposed transportation network. The core vision in the 2020-2045 RTP/SCS is to better manage the existing transportation system through design management strategies, integrate land use decisions and technological advancements, create complete streets that are safe to all roadway users, preserve the transportation system, and expand transit and foster development in transit-oriented communities. The 2020-2045 RTP/SCS does not require that local general plans, specific plans, or zoning be consistent with the 2020-2045 RTP/SCS but provides incentives for consistency for governments and developers.

Table 3.8-2, *1300 S Campus Project Consistency with 2020-2045 RTP/SCS*, presents the 1300 S Campus Project's compliance with each reduction measure evaluated by SCAG's 2020-2045 RTP/SCS.

Table 3.8-2: 1300 S Campus Project Consistency with the 2020-2045 RTP/SCS

Reduction Strategy	Applicable Land Use Tools	Project Consistency Analysis
Focus Growth Near Destinations and Mobility Options		
• Emphasize land use patterns that facilitate multimodal access to work, educational and other destinations • Focus on a regional jobs/housing balance to reduce commute times and distances and expand job opportunities near transit and along center-focused main streets • Plan for growth near transit investments and support implementation of first/last mile strategies • Promote the redevelopment of underperforming retail developments and other outmoded nonresidential uses • Prioritize infill and redevelopment of underutilized land to accommodate new growth, increase amenities and connectivity in existing neighborhoods • Encourage design and transportation options that reduce the reliance on and number of solo car trips (this could include mixed uses or locating and orienting close to existing destinations) • Identify ways to "right size" parking requirements and promote alternative parking strategies (e.g. shared parking or smart parking)	**Center Focused Placemaking, Priority Growth Areas (PGA), Job Centers, High Quality Transit Areas (HQTAs), Transit Priority Areas (TPA), Neighborhood Mobility Areas (NMAs), Livable Corridors, Spheres of Influence (SOIs), Green Region, Urban Greening.**	***Consistent.*** The 1300 S Campus Project site is located within an area that is planned for industrial uses within an already-developed portion of the City with a mix of uses in the vicinity, including residential. The nearest bus stop is approximately 0.25-mile away to the east. Therefore, the 1300 S Campus Project would focus job growth near destinations, residential uses, and mobility options.
Promote Diverse Housing Choices		
• Preserve and rehabilitate affordable housing and prevent displacement • Identify funding opportunities for new workforce and affordable housing development • Create incentives and reduce regulatory barriers for building context sensitive accessory dwelling units to increase housing supply • Provide support to local jurisdictions to streamline and lessen barriers to housing development that supports reduction of greenhouse gas emissions	**PGA, Job Centers, HQTAs, NMA, TPAs, Livable Corridors, Green Region, Urban Greening.**	***Consistent.*** The 1300 S Campus Project would involve redevelopment of an existing industrial site. No housing would be displaced as a result of this project and the 1300 S Campus Project would provide job opportunities for residents living in the area. Therefore, the 1300 S Campus Project would be consistent with this reduction strategy.
Leverage Technology Innovations		
• Promote low emission technologies such as neighborhood electric vehicles, shared rides hailing, car sharing, bike sharing and scooters by providing supportive and safe infrastructure such as dedicated lanes, charging and parking/drop-off space. • Improve access to services through technology—such as telework and telemedicine as well as other incentives such as a "mobility wallet," an app-based system for storing transit and other multi-modal payments • Identify ways to incorporate "micro-power grids" in communities, for example solar energy, hydrogen fuel cell power storage and power generation	**HQTA, TPAs, NMA, Livable Corridors.**	***Consistent.*** The 1300 S Campus Project would include features such as EV charging stations and rooftop solar systems to leverage technological innovations and promote green development.
Support Implementation of Sustainability Policies		
• Pursue funding opportunities to support local sustainable development implementation projects that reduce greenhouse gas emissions • Support statewide legislation that reduces	**Center Focused Placemaking, Priority Growth Areas (PGA), Job Centers, High Quality Transit Areas (HQTAs), Transit Priority**	***Not Applicable.*** This strategy is directed at SCAG's actions to support local agencies in the implementation of sustainability

Reduction Strategy	Applicable Land Use Tools	Project Consistency Analysis
barriers to new construction and that incentivizes development near transit corridors and stations • Support local jurisdictions in the establishment of Enhanced Infrastructure Financing Districts (EIFDs), Community Revitalization and Investment Authorities (CRIAs), or other tax increment or value capture tools to finance sustainable infrastructure and development projects, including parks and open space • Work with local jurisdictions/communities to identify opportunities and assess barriers to implement sustainability strategies • Enhance partnerships with other planning organizations to promote resources and best practices in the SCAG region • Continue to support long range planning efforts by local jurisdictions • Provide educational opportunities to local decisions makers and staff on new tools, best practices and policies related to implementing the Sustainable Communities Strategy	**Areas (TPA), Neighborhood Mobility Areas (NMAs), Livable Corridors, Spheres of Influence (SOIs), Green Region, Urban Greening.**	policies. While not applicable at the project level, the proposed project implements sustainable development practices, including providing employment opportunities in proximity to bus stops, which would promote alternative modes of transportation, and implementing sustainable building practices pursuant to the CALGreen Code and 2022 Title 24 standards.
Promote a Green Region		
• Support development of local climate adaptation and hazard mitigation plans, as well as project implementation that improves community resiliency to climate change and natural hazards • Support local policies for renewable energy production, reduction of urban heat islands and carbon sequestration • Integrate local food production into the regional landscape • Promote more resource efficient development focused on conservation, recycling and reclamation • Preserve, enhance and restore regional wildlife connectivity • Reduce consumption of resource areas, including agricultural land • Identify ways to improve access to public park space	**Green Region, Urban Greening, Greenbelts and Community Separators.**	***Consistent.*** The 1300 S Campus Project involves the development of a warehouse on a disturbed lot and would therefore not interfere with regional wildlife connectivity or convert agricultural land. The project would be required to comply with CALGreen Code and 2022 Title 24 standards, which would help reduce energy consumption and reduce GHG emissions. Thus, the 1300 S Campus Project would support efficient development that reduces energy consumption and GHG emissions. The project would be consistent with this reduction strategy.
Source: Southern California Association of Governments, 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy – Connect SoCal, September 3, 2020.		

The implementation of SCAG's RTP/SCS will greatly reduce the regional GHG emissions from transportation, helping to achieve Statewide emissions reduction targets. The proposed 1300 S Campus Project is not regionally significant per CEQA Guidelines Section 15206 and, as such, would not conflict with the SCAG RTP/SCS targets since those targets were established and are applicable on a regional level. Therefore, implementation of the 1300 S Campus Project would not conflict with any applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases and impacts would be less than significant.

CONCLUSION

The 1300 S Campus Project would not have the potential to conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing emissions of GHGs. As such, mitigation is not

necessary to reduce the 1300 S Campus Project's GHG impacts, and impacts in this regard would be less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

3.9 HAZARDS AND HAZARDOUS MATERIALS

This section corresponds with the TOP 2050 SEIR Section 5.9, *Hazards and Hazardous Materials*.

Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Approved Project: According to the TOP 2050 SEIR, the City of Ontario has around 127 facilities or sites that generate, transport, treat, store, and/or dispose of hazardous waste, as recorded by the national RCRA Envirofacts Database. Additional hazardous waste transport, use, and/or disposal would occur with buildout of the approved project. However, current Federal and State regulations, City ordinances, and TOP 2050 policies would regulate the handling of hazardous substances to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. The approved project would also result in an increase in land use intensity rather than development of new, previously undeveloped areas of the City that would require substantial landform modification. Therefore, additional hazardous waste transport, use, and/or disposal that would occur upon the buildout of the approved project would be less than significant with adherence to the existing regulations. Thus, the TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project:

Construction

The 1300 S Campus Project would involve the demolition of the existing on-site lumber yard uses to redevelop the site with a warehouse facility. Standard construction BMPs would be observed which minimize the potential for hazards and ensure that any materials released are appropriately contained and remediated as required by local, State, and Federal law. Relative to operational impacts, substantial risks associated with hazardous materials are not typically associated with warehouse uses.

The 1300 S Campus Project could result in increased transport, use, storage, and disposal of hazardous materials in the project site, which could expose construction workers and the public to temporary hazards related to the transport, use, and maintenance of construction equipment and/or materials (i.e., oil, diesel fuel, and transmission fluids). These activities would be short term in nature, and the materials used would not be in such quantities or stored in such a manner as to pose a significant safety hazard. Construction activities associated with the 1300 S Campus Project would demonstrate compliance with the applicable laws and regulations governing the use, storage, and transportation of hazardous materials, ensuring that all potentially hazardous materials are used and handled in an appropriate manner.

With compliance with the existing State and local procedures that are intended to minimize potential health risks associated with their use or the accidental release of hazardous materials, impacts associated with the handling, storage, and transport of these hazardous materials during construction and operation of the 1300 S Campus Project would remain less than significant.

Operations

The end user of the proposed building is not known at this time, However, compliance with applicable laws and regulations governing the use, storage, and transportation of hazardous materials would ensure that any potentially hazardous materials are used and handled in an appropriate manner, and would minimize the

potential for safety impacts to occur. As such, impacts concerning the routine transport, use, or disposal of hazardous materials during project operations would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

a) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Approved Project: The approved project includes policies that address development on and around known hazardous waste sites. These policies include land use decisions with regard to hazardous uses, methane gas sites, response to hazardous materials releases, the regulation of the siting of hazardous material facilities, the prohibition of sensitive land uses near hazardous land uses, the mitigation and remediation of groundwater contamination, and the remediation of methane.

The approved project would result in an increase in land use intensity rather than development of previously undeveloped areas of the City that would require substantial landform modification. Therefore, buildout of the approved project would not expose people to substantial hazards from hazardous materials sites listed on environmental databases, as sensitive land uses (such as residential uses) would be prohibited from being sited near known hazardous land uses. Thus, the TOP 2050 SEIR determined that impacts would be less than significant with adherence to the policies of TOP 2050.

1300 S Campus Project:

Construction

During project construction, there is a possibility of accidental release of hazardous substances such as petroleum-based fuels or hydraulic fluids used for construction equipment. The level of risk associated with the accidental release of such hazardous substances is not considered significant due to the small volume and low concentration of hazardous materials utilized during construction. As required by various State laws, the construction contractor is required to use standard construction controls and safety procedures that would avoid and minimize the potential for accidental release of such substances into the environment. Standard construction practices would be observed such that any materials released are appropriately contained and remediated as required by local, State, and Federal law.

Construction activities could also result in accidental conditions involving existing on-site contamination. Based on the *Phase I Environmental Site Assessment* (Phase I ESA, included as Appendix E-1) prepared for the 1300 S Campus Project on July 12, 2023, no evidence or indication of recognized environmental conditions (RECs), historical-RECs (HRECs), controlled-RECs (CRECs), or conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property has been revealed, except for the following:

- **Onsite Railroad Spur**. Railroad spurs are known to be common sources of petroleum hydrocarbons in the subsurface due to releases from rail cars. They are also known to be common

sources of metals due to leaching from treated wood planks and ballast rock. Based on the presence of a railroad spur along the western and southern boundaries of the subject property since at least 1966, the potential releases from the railroad spur represent a REC.

- **Onsite Aboveground Storage Tank**. In 1992, a dual-compartment aboveground storage tank (AST) containing one 500-gallon gasoline compartment and one 1,500-gallon diesel compartment was installed in the southeast corner of the subject property for fueling distribution trucks. At the time of the site reconnaissance, only the diesel compartment was reportedly in use. Due to the use of the AST for refueling purposes for at least 30 years, the AST represents a REC.

- **Asbestos Containing Materials**. Based on the age of the subject property building (built in 2007), friable asbestos containing materials (ACMs) and lead based paint (LBP) are not likely present. However, non-friable materials such as mastics and roofing materials may be present. Prior to demolition, a comprehensive asbestos survey should be completed. If present, ACMs should be removed by a State-licensed abatement contractor prior to demolition.

- **Former Septic Tank and Cesspool**. Building permits indicate that a septic tank and cesspool were historically used on the southern portion of the subject property associated with the former dwellings. These features were reportedly backfilled in 1985. During redevelopment activities, the former septic tank and cesspool should be removed for geotechnical purposes.

Based on the conditions identified above, the Phase I ESA recommended completing a soil sampling investigation in the area of the AST and along the railroad spur to further investigate potential subsurface impacts from these features. The subsurface investigation (included as Appendix E-2) indicated that no petroleum hydrocarbons or volatile organic compounds were detected in the vicinity of the AST. No petroleum hydrocarbons or Title 22 metals were discovered along the railroad spur. In addition, an asbestos survey would be completed prior to demolition activities per the recommendation of the Phase I ESA and OSHA and SCAQMD requirements. Thus, with adherence to existing regulations, including the recommendations of the Phase I ESA, the 1300 S Campus Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accidental conditions involving the release of hazardous materials into the environment. Impacts would remain less than significant.

Operations

Refer to Impact 3.9(a) for a description of impacts related to 1300 S Campus Project operations. With adherence to existing regulations related to hazards and hazardous materials safety, impacts pertaining to the potential for accidental conditions during project operations would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Approved Project: The approved project includes policies such as Policy S-6.5 to prohibit uses that use or store hazardous materials in proximity to sensitive uses, such as schools. Therefore buildout of the approved project would not emit hazardous emissions or handle hazardous or acutely hazardous materials within one-quarter mile of an existing or proposed school. Thus, the TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: The nearest school to the 1300 S Campus Project site is De Anza Middle School, located approximately 900 feet southwest of the site. During operation of the 1300 S Campus Project, anticipated hazardous materials may include typical cleaning products and the occasional use of pesticides and herbicides for routine landscape maintenance. Compliance with applicable laws and regulations governing the use, storage, and transportation of hazardous materials would ensure that all potentially hazardous materials are used and handled in an appropriate manner, and would minimize the potential for safety impacts to occur. The 1300 S Campus Project would not emit hazardous emissions and would not handle any acutely hazardous materials, substances, or waste. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

c) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Approved Project: Based on the TOP 2050 SEIR, the City of Ontario has approximately 127 facilities or sites that generate, transport, treat, store, and/or dispose of hazardous waste, as recorded by the National Resource Conservation and Recovery Act (RCRA) Envirofacts Database. Development in accordance with the approved project would involve redevelopment and reuse of some sites listed as hazardous materials sites on environmental databases. Although the listings document the presence of hazardous materials, they do not document hazardous releases. According to the TOP 2050 SEIR, redevelopment of these sites could potentially expose future residents and workers to hazards from known hazardous materials on and near the sites.

An increase in the transport of hazardous waste from an increased demand for transport, use, and disposal within or outside the City could result in more accidents leading to the release of hazardous materials. An increase in the transport of hazardous materials as a result of the approved project would be limited to areas along interstates and rail lines, where commercial and industrial uses would be concentrated. Some transport of hazardous materials may occur near small commercial pockets proposed throughout various areas of the City. However, current Federal and State regulations, City ordinances, and The Ontario Plan 2050 policies would regulate the handling of hazardous substances to reduce potential releases; exposure; and risks of transporting, storing, treating, and disposing of hazardous materials and wastes. Thus, the TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: According to the Phase I ESA, the 1300 S Campus Project site is not included on a list of hazardous materials sites pursuant to Government Code Section 65962.5. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

d) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Approved Project: According to the TOP 2050 SEIR, all new developments surrounding the Ontario International Airport (ONT), or the Chino Airport (CNO) would be required to be consistent with the adopted airport land use compatibility plan (ALUCP), as well as all standards and recommendations of Part 77 of the Federal Aviation Administration (FAA), adopted through Ordinance 2758 of the Ontario Municipal Code. The TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: The 1300 S Campus Project would occur within the same area as analyzed within the TOP 2050 SEIR, and is located within the Ontario International Airport Influence Area (AIA) and located outside the Chino Airport Influence Area. The 1300 S Campus Project is located outside the ONT ALUCP Safety Zones; however, the project site is located within the Noise Impact Zone, Overflight Notification Zone, and Airspace Protection Zone. The project is located within the 65-70 dB CNEL Noise Impact Zone and the proposed Industrial warehouse is considered a compatible land use and consistent with the ONT ALUCP. The allowable building heights are between 130 to 150 feet and at 45 feet in height, the 1300 S Campus Project is within the established height limits of the ONT ALUCP Airspace Protection Zones. The project is consistent with the ONT ALUCP and impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

e) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Approved Project: The TOP 2050 SEIR determined that the approved project would not impair implementation of or physically interfere with an adopted emergency response plan or an emergency evacuation plan because no permanent public street or lane closures are proposed. Therefore, the TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project:

Construction

The 1300 S Campus Project would involve the demolition of the existing on-site lumber yard uses to redevelop the site with a warehouse facility. All construction activities would be staged on-site and all construction materials would be stored on-site. Access to the 1300 S Campus Project site during the construction phase would be provided at the northwestern and southeastern corners of the site, off of Phillips Street and S Campus Avenue, respectively. There is the possibility of temporary partial lane closures to allow for connections to off-site utilities; however, any partial closures would be conducted in accordance with a traffic control plan reviewed and approved by the City.

Operations

As indicated in Section 3.17, *Transportation*, the project does not propose changes to the City's circulation system, such as sharp curves or dangerous intersections, and would not introduce incompatible uses to area roadways (e.g., farm equipment). Roadway improvements are proposed to provide site access (two full access driveways and one emergency only driveway) and circulation. The proposed driveways and interior vehicular circulation are designed to meet the fire truck turning radii and fire access requirements and would not result in inadequate emergency access.

Therefore, 1300 S Campus Project implementation would not impair or interfere with any adopted emergency response plan or emergency evacuation plan. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

f) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Approved Project: According to the TOP 2050 SEIR, the City is outside of the State Responsibility Area (SRA) and does not contain areas subject to very high wildfire risk. However, the City recognized that although fuel load is light in Ontario and fire risk comes primarily from urban fire, there is some risk related to wildfires. The TOP 2050 SEIR determined that with compliance to building practices of CalFIRE, the California Fire Code, the County of San Bernardino Multi-Jurisdictional Hazard Mitigation Plan, and the City Local Hazard Mitigation Plan, development and infrastructure associated with the approved project would not exacerbate wildfire risk or result in post-wildfire hazards. Additionally, the approved project includes several policies intended to reduce wildfire hazards and prepare for potential wildfire events. Impacts were determined to be less than significant.

1300 S Campus Project: The 1300 S Campus Project site is not located within an SRA or a very high fire hazard severity zone (VHFHSZ). Therefore, the 1300 S Campus Project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

This page intentionally left blank.

3.10 HYDROLOGY AND WATER QUALITY

This section corresponds with the TOP 2050 SEIR, Section 5.10, *Hydrology and Water Quality*.

Would the project:

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

Approved Project: Per the TOP 2050 SEIR, compliance with the requirements of the State Water Resources Control Board (SWRCB) Construction General Permit and implementation of the SWPPP and erosion control plan throughout the construction phase of the approved project would address anticipated and expected pollutants of concern as a result of construction activities. The approved project would comply with all applicable water quality standards and waste discharge requirements. The TOP 2050 SEIR determined that the approved project would continue policies to reduce pollutants from entering the City's stormwater system, and future development projects associated with the approved project would be required to control pollutants in discharges of stormwater from post-construction activities through Water Quality Management Plan (WQMP) preparation and implementation. Therefore, water quality standards and waste discharge requirements would not be exceeded, and surface water and groundwater quality would not be degraded. Impacts were determined to be less than significant.

1300 S Campus Project:

Construction

Construction activities associated with the proposed development would be subject to the US Environmental Protection Agency's National Pollutant Discharge Elimination System (NPDES) program, which is administered by the SWRCB in California. Construction sites with 1 acre or more of soil disturbance are required to apply for coverage for discharges under the General Construction Permit by submitting a Notice of Intent (NOI) for coverage and developing a SWPPP, which would include a site plan showing existing and proposed buildings, lots, roadways, stormwater collection and discharge points, drainage patterns across the project, and general topography both before and after construction. The 1300 S Campus Project would disturb one or more acres and is therefore subject to compliance with NPDES requirements. The SWPPP must list BMPs to be implemented in order to minimize the impact of stormwater runoff and address construction site pollutants. With implementation of the SWPPP, impacts during construction would remain less than significant.

Operation

As the site is already covered by impervious surfaces, the 1300 S Campus Project would not increase the total amount of impervious surfaces. The 1300 S Campus Project would also feature a Low Impact Development (LID) site design. The LID site design would minimize impervious surfaces and provide infiltration of runoff into landscaped areas. The County's MS4 permit requires each development to infiltrate, harvest and use, evapotranspire, or bio-treat the runoff from a 2-year, 24-hour storm event. To meet these requirements, the 1300 S Campus project would be graded to ensure water flows away from the structure. At 16 percent of the 1300 S Campus Project site, the project's landscaping will also allow for the project's anticipated runoff. As such, impacts associated with operation of the project would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Approved Project: According to the TOP 2050 SEIR, with the implementation of City policies that promote LID and infiltration for new development projects and compliance with the Chino Basin Watermaster's safe yield restrictions, the potential for the approved project to substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin is considered less than significant. The Chino Groundwater Basin is adjudicated and is considered by the Department of Water Resources (DWR) to be a very low priority groundwater basin. Each water purveyor has an allotted amount of water that can be pumped from the basin so that the safe yield is not exceeded. The City has access to additional water supplies that can accommodate the proposed increase in growth with buildout of the approved project and would not interfere with sustainable management of the groundwater basin. Therefore, the TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: The 1300 S Campus Project would not deplete groundwater supplies. The City currently draws all of its groundwater supply from the Chino Groundwater Basin (Chino Basin). Based on the adjudication provisions in the Chino Basin, the City is able to produce groundwater without limitation, provided any amount produced in excess of the production rights is replenished. [12] As water supplies would be provided by the Ontario Municipal Utilities Company (OMUC), which adheres to the Basin's adjudication requirements, the 1300 S Campus Project would not result in a substantial depletion of groundwater supplies.

In addition, the site is not currently used for groundwater recharge purposes, as the site is already fully developed with a wholesale lumber yard and distribution center. The proposed warehouse would not alter the existing drainage patterns since the site was previously graded and paved for development. Site runoff would be collected by storm drains maintained by the OMUC. Thus, the 1300 S Campus Project would not substantially decrease groundwater supplies nor interfere substantially with groundwater recharge. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

[12] California Department of Natural Resources, *Adjugated Basin Viewer,* https://sgma.water.ca.gov/webgis/index.jsp?appid=adjbasin, accessed September 14, 2023.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would:

i) Result in substantial erosion or siltation on- or off-site?

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

iv) Impede or redirect flood flows?

Approved Project: According to the TOP 2050 SEIR, future developments associated with buildout of The Ontario Plan 2050 would be required to comply with the requirements in the State's Construction General Permit, including preparation of a notice of intent and SWPPP prior to the start of construction activities. The SWPPP would describe the BMPs to be implemented during construction activities to reduce erosion and siltation, including installation of on-site sediment basins to prevent off-site mitigation of erodible materials; implementation of dust control measures, such as silt fences and regular watering of open areas; and stabilization of construction entrances/exits. The TOP 2050 SEIR concluded that the approved project would not result in substantial erosion or siltation on- or off-site.

Additionally, BMPs outlined in SWPPPs would reduce flooding impacts due to runoff during construction, and BMPs included in WQMPs would reduce the potential for post-construction flooding impacts. The City's standard conditions of approval for new development also require the preparation of hydrology studies and drainage analyses that document the peak runoff rates from the developed site and evaluate the capacity of the storm drain system to accept these flow rates. Policies ER-1.6, ER-1.7, S-2.1, S-2.5 and S-2.6 of the approved project direct the City to incorporate strategies to capture, slow, or treat run-off and to reduce the flooding potential down-gradient of new development. These policies would reduce the potential for on- and off-site flooding during the operational phase of future development projects. The TOP 2050 SEIR determined that the approved project would not result in flooding on- or off-site.

Projects considered for approval under The Ontario Plan 2050 would be required to prepare project-specific hydrology and hydraulic studies in accordance with the San Bernardino County Hydrology Manual. In compliance with the MS4 Permit and San Bernardino County Stormwater Program, new development projects would also be mandated to install stormwater treatment BMPs that retain the 2-year, 24-hour rainfall event. Furthermore, Policy ER-1.6, would encourage the use of LID strategies to intercept runoff, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems. Through Policy S-2.5 of the approved project, the City would maintain and improve the storm drain system to minimize flooding, thus reducing the impacts of any increases in surface water flows that enter the storm drainage system. Because new development in the City would be required to prepare a hydrology study and drainage analysis in accordance with the San Bernardino County Hydrology Manual, the TOP 2050 SEIR determined that the approved project would not create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Impacts regarding runoff water were determined to be less than significant in this regard.

Based on the TOP 2050 SEIR, Policies S-2.1 through S-2.5 of the approved project would reduce impacts of potential developments within 100-year flood zones. Further, the Ontario Municipal Code, Chapter 13, *Flood Damage Prevention Program*, requires that a development permit be obtained prior to development in a special flood hazard area to ensure that the site is reasonably safe from flooding and flood hazards. The

City requires that all new structures in a special flood hazard area have elevations above the base flood elevation. The TOP 2050 SEIR determined that with implementation of existing policies, the approved project would not impede or redirect flood flows. Impacts were determined to be less than significant.

1300 S Campus Project: The 1300 S Campus Project involves the development and operation of a 221,658-square-foot warehouse building that would be consistent with the City's development standards. According to flood maps prepared by the Federal Emergency Management Agency (FEMA), the site is not located in an area subject to inundation by the 1-percent-annual-chance flood event.[13] While the overall site's grading will stay relatively flat, a larger portion of the site will be covered by structures. Under the 1300 S Campus Project, approximately 85 percent of the site would be developed with impervious surfaces. The site would be graded in such a way that all drainage would flow away from the building in a controlled manner. Existing regulations require an onsite storm drain system that would accommodate 2-year, 24-hour flows, in accordance with the San Bernardino County MS4 Permit. Redevelopment of the 1300 S Campus Project site would not create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems. Therefore, with implementation of existing policies, the 1300 S Campus Project would not impede or redirect flood flows, result in on- or off-site flooding, result in substantial erosion or siltation, or create or contribute runoff water. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Approved Project: According to the TOP 2050 SEIR, the western and southern portions of the City are in the dam inundation zone of San Antonio Dam. The dam is owned and operated by the USACE and functions as a flood control and debris dam for San Antonio Creek. Additionally, there are several debris basins in the surrounding areas that impact the northern and eastern parts of the City. The probability of dam failure is very low, and the City has never been impacted by a major dam failure. In addition, dam owners are required to maintain emergency action plans (EAPs) that include procedures for damage assessment and emergency warnings. An EAP identifies potential emergency conditions at a dam and specifies preplanned actions to help minimize property damage and loss of life should those conditions occur. EAPs contain procedures and information that instruct dam owners to issue early warning and notification messages to downstream emergency management authorities, such as the Ontario Fire Department. In addition, flooding would be minimal if any of the debris basins were to fail. Because the likelihood of catastrophic failure of the San Antonio Dam is very low and the City has EAP notification procedures, the TOP 2050 SEIR determined that impacts of release of pollutants due to dam inundation are considered less than significant.

Additionally, the TOP 2050 SEIR determined there are no large bodies of water that would result in a seiche during seismic activity. Additionally, the reservoirs/aboveground water tanks within the City are enclosed, thereby minimizing the possibility of a seiche. The approved project planning area is inland and

[13] Federal Emergency Management Agency, *Flood Insurance Rate Maps*, Panel 06071C8617J, https://msc.fema.gov/portal/home, accessed September 6, 2023.

approximately 30 miles from the ocean and is not at risk of flooding due to tsunamis. Therefore, the TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: Like the approved project, the 1300 S Campus Project is not subject to tsunami due to its elevation and distance (over 30 miles) from the Pacific Ocean, nor subject to risk of seiche as there are no open water bodies in the 1300 S Campus Project vicinity. Additionally, according to flood maps prepared by the Federal Emergency Management Agency (FEMA), the site is not located in an area subject to inundation by the 1 percent annual chance flood event.[14] The 1300 S Campus Project would not risk the release of pollutants due to inundation. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Approved Project: According to the TOP 2050 SEIR, the City's groundwater supplies are from the Chino Groundwater Basin, which is adjudicated and managed by the Chino Basin Watermaster. The Chino Basin is exempt from legislative requirements under the Sustainable Groundwater Management Act (SGMA) because it is an adjudicated basin and is not required to prepare a groundwater sustainability plan. Adjudicated basins have determined the safe yield for the basin and have assigned individual pumping allocations to limit groundwater production to the safe yield.

Adherence to the Statewide Construction General Permit, implementation of the SWPPP, and adherence to the City's Erosion and Sediment Control Plan requirements would ensure that surface and groundwater quality are not adversely impacted during construction. Projects approved under the approved project would be required to comply with the Santa Ana River Basin Plan and to control pollutants in discharges of stormwater from postconstruction activities under NPDES Permit No. CAS618036 through preparation of a WQMP identifying BMPs for prevention of stormwater pollution during the post-construction phase, including site-design, source-control, and/or treatment BMPs. Therefore, the TOP 2050 SEIR determined that impacts would be less than significant.

1300 S Campus Project: The 1300 S Campus Project site is located in the in the Santa Ana River Hydrologic Unit in the South Coast Hydrologic Region. The Santa Ana RWQCB oversees basin planning and water quality in the 1300 S Campus Project area. The Santa Ana RWQCB prepares the Water Quality Control Plan for the Santa Ana River Basin (Basin Plan) to protect local surface waters and groundwater basins. The Basin Plan designates beneficial uses of waters in the region and provides objectives to maintain or improve water quality in the region.

As indicated in Impact 3.10(b), the 1300 S Campus Project would not substantially deplete groundwater supplies or interfere with groundwater recharge. The 1300 S Campus Project would use water sourced from OMUC, which utilizes a variety of sources such as recycled water to reduce its dependency on groundwater.

[14] Ibid.

Compliance with the 1300 S Campus Project's WQMP BMPs and Ontario Municipal Code regulations would ensure the 1300 S Campus Project does not conflict with or obstruct implementation of the Basin Plan. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

3.11 LAND USE AND PLANNING

This section corresponds with the TOP 2050 SEIR Section 5.11, *Land Use and Planning*.

Would the project:

a) Physically divide an established community?

Approved Project: The TOP 2050 SEIR concluded that the changes in land use that would occur upon the implementation of the approved project would not result in the physical division of an established community. Additionally, the Land Use Element of the approved project contains policies and programs that encourage the preservation or enhancement of the existing community through infill development, open space opportunities, and development of compatible uses that would reduce the amount of conflict between contradicting land uses and enhance the existing character of the City. The Land Use and Housing Elements of the approved project have specific policies that encourage neighborhood identity and preservation. The approved project would avoid conflicting land uses and would not divide an established community. Impacts were determined to be less than significant in this regard.

1300 S Campus Project: The physical division of an established community is typically associated with construction of a linear feature, such as a major highway or railroad tracks, or removal of a means of access, such as a local road or bridge, which would impair mobility within an existing community or between a community and an outlying area. The 1300 S Campus Project would involve the demolition of the existing on-site lumber yard uses to redevelop the site with a warehouse facility. Consistent with the approved project, none of the 1300 S Campus Project components would constitute a barrier that would physically divide an established community. Access to and movement throughout the 1300 S Campus Project area and the City would not be physically impaired due to the 1300 S Campus Project. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Approved Project: The TOP 2050 SEIR concluded that the approved project would not result in significant land use impacts related to the Southern California Association of Government's (SCAG) Connect SoCal. A consistency determination analysis for the Ontario International Airport (ONT) was prepared by the City, submitted to the ONT-IAC Technical Advisory Committee, and found that the approved project is consistent with Airport Land Use Compatibility Plan (ALUCP) for ONT. According to the TOP 2050 SEIR, buildout of The Ontario Plan in the vicinity of the Chino Airport would be required to meet the conditions of the Chino Airport Authority and the 2011 Caltrans Airport Land Use Planning Handbook. Additionally, implementation of the approved project would result in a beneficial impact for land use compatibility near Chino Airport as a result of the change from residential and business park to warehouse/industrial land uses.

The approved project would ensure compatibility with ONT and Chino Airport. Impacts were determined to be less than significant in this regard.

1300 S Campus Project:

General Plan Consistency

The project site has an IND land use designation per The Ontario Plan 2050. The IND designation allows for a variety of light industrial uses, including warehousing/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting retail and professional office uses. The designation also accommodates activities that could potentially generate impacts, such as noise, dust, or other nuisances.

Table 3.11-1, *General Plan Land Use and Planning Consistency Analysis*, analyzes the project's consistency with applicable policies in the General Plan Land Use and Planning Element in place to avoid or mitigate an environmental effect. As indicated in Table 3.11-1, the 1300 S Campus Project would be consistent with applicable General Plan Land Use and Planning Element policies. Impacts would remain less than significant.

Table 3.11-1 General Plan Land Use and Planning Consistency Analysis

Relevant Policies	Consistency Analysis
Policy 2.2: Buffers. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur.	**Consistent.** Surrounding land uses include residential uses to the north, industrial uses to the east, industrial uses to the south, and residential uses to the west. The project site is also bounded to the south and west by Union Pacific Railroad rail spur. As shown on Exhibit 3, *Site Plan*, an approximately 82-foot buffer is provided between the residential property line and the 1300 S Campus Project's building. Within the buffer area, the 1300 S Campus Project will leave unchanged the main rail line operated by the Union Pacific Railroad, located within its own 35-foot wide parcel. Adjacent to and east of the railroad parcel, the 1300 S Campus Project will provide an approximately 20-foot wide landscape buffer. The project's truck court has been located on the east side of the building, facing away from the western residences and toward S. Campus Avenue, thereby allowing the building to serve as a noise barrier blocking truck activities from the western residences. No project activities beyond routine landscaping are proposed on the western side of the 1300 S Campus Project site. Ornamental landscaping would be installed throughout the site in accordance with the requirements of the Ontario Development Code Division 6.05, Landscaping. Planting materials would include a variety of shrubs and groundcover, and a tree mix in large landscape planters. Landscape planters would accommodate larger specimen trees to screen the proposed building. In total, 109 trees would be planted on-site, and 19 street trees would be planted. The area of landscaping would total approximately 16 percent of the total site area. As a result, 1300 S Campus Project implementation would be appropriately and sensitively buffered from its neighbors and the project would be consistent with Policy 2.2.
Policy 2.8: Transitional Areas. We require development in transitional areas to protect the quality of life of current residents.	**Consistent.** The proposed project has been designed to be sensitive to residential uses; refer to Response to Policy 2.2. Furthermore, the residences to the north are located in an industrial transition area, as designated by the IND (Industrial) overlay. As a result, the 1300 S Campus Project would protect the quality of life of current residents, and would be consistent with Land Use Policy 2.8.

Relevant Policies	Consistency Analysis
Policy 2.10: Sensitive Uses. We monitor and share information with the community about stationary and non-stationary emission sources. We encourage siting and design of facilities to minimize health and safety risks on existing and proposed sensitive uses, especially in environmental justice areas..	**Consistent.** As described in Section 3.3, *Air Quality*, the 1300 S Campus Project's regional and localized construction and operational-source emissions would not exceed applicable significance thresholds. The 1300 S Campus Project would redevelop the site with uses consistent with its zoning and land use designations, and has been designed to adequately buffer and screen project operations from residences. The 1300 S Campus Project would be consistent with Policy 2.10 in this regard. Further, the Project would replace an existing use generating emissions directly adjacent to residences. The site is currently fully developed with an open-air wholesale lumber yard and distribution center, including an approximately 32,534-square-foot warehouse building that is primarily used for lumber storage. A private railroad spur currently services the existing lumber yard. The proposed project would remove this rail spur and associated rail emissions, and move project activity to the east side of the building, thereby providing a greater buffer for residences to the west.
Policy 4.3: Infrastructure Timing. We require that the necessary infrastructure and services be in place prior to or concurrently with development.	**Consistent.** The 1300 S Campus Project involves the development and operation of a 221,658-square-foot warehouse building that would be consistent with the site's zoning and land use designations. As discussed in Section 3.19, *Utilities and Service Systems*, implementation of the 1300 S Campus Project is not anticipated to require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. The project would be adequately served by existing infrastructure, as the site is currently developed with a wholesale lumber yard and distribution center. As a result, the 1300 S Campus Project would be consistent with Policy 4.3.

Source: City of Ontario, *The Ontario Plan 2050*, Chapter 5 – Land Use and Planning, August 2022.

Zoning Code Consistency

The project site is zoned IL. The IL zoning district accommodates lighter manufacturing and assembly activities, storage, and warehousing activities, and other similar uses developed at a maximum intensity of 0.55 FAR. The zoning district is intended to serve as a buffer between residentially zoned areas and heavier industrial zoning districts. The 1300 S Campus Project would be consistent with the City's requirements for total building area, development setbacks, maximum height, parking, and landscaping. Thus, impacts would remain less than significant.

2020-2045 RTP/SCS

Table 3.8-2, *1300 S Campus Project Consistency with 2020-2045 RTP/SCS*, presents the 1300 S Campus Project's compliance with each reduction measure evaluated by SCAG's 2020-2045 RTP/SCS. As identified in Table 3.8-2, the 1300 S Campus Project is consistent with the reduction measures of the 2020-2045 RTP/SCS. The proposed 1300 S Campus Project is not regionally significant per CEQA Guidelines Section 15206 and, as such, would not conflict with the SCAG RTP/SCS.

Conclusion

No changes to the existing land use designation or zoning are required or proposed with the 1300 S Campus Project. The 1300 S Campus Project would redevelop the site with uses consistent with its zoning and land use designations. In addition, the 1300 S Campus project would not conflict with the SCAG 2020-2045 RTP/SCS. Thus, the 1300 S Campus project would not cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

3.12 MINERAL RESOURCES

This section corresponds with the TOP 2050 SEIR Section 5.12, *Mineral Resources*.

Would the project:

a) Result in the loss of availability of a known mineral resource of value to the region and the residents of the State?

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Approved Project: According to the TOP 2050 SEIR, there are two areas in Ontario that are designated Mineral Resource Zone 2 (MRZ-2), where significant mineral resources are known or are likely. The remainder of the City is designated MRZ-3, where the significance of mineral deposits is unknown. Development in an MRZ-3 area would not result in significant impacts because mineral resources of Statewide or local importance are not identified on the California Geological Survey's P-C maps.

Mineral Resource Sectors D-3 and D-5 have been completely developed, as have portions of D-2. The approved project would not change the existing land use designations for these areas. Additionally, the parts of the City that are designated MRZ-2 but are outside of Mineral Resource Sectors are developed with urban uses and would continue to be designated for urban uses by the approved project. Areas designated MRZ-2 outside of Mineral Resource Sectors are not available for extraction of mineral resources, and the approved project would not result in changes to the existing conditions of these areas. Further, the approved project includes Policy ER-5.5, which aims to protect mineral extraction activities that are compatible with adjacent development. Impacts were determined to be less than significant in this regard.

1300 S Campus Project: According to Figure 5.12-1, *Areas of Mineral Resource Significance*, of the TOP 2050 SEIR, the 1300 S Campus Project site is located within an area designated MRZ-3 and is not mapped within a Mineral Resource Sector. Existing conditions regarding mineral resources continue to be the same since preparation of the TOP 2050 SEIR. As the project site is currently entirely developed with a wholesale lumber yard and distribution center, the 1300 S Campus Project would not result in the loss of availability of a known mineral resource or mineral resource recovery site. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

This page intentionally left blank.

3.13 NOISE

This section corresponds with the TOP 2050 SEIR Section 5.13, *Noise*.

Would the project result in?

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Approved Project:

Construction Impacts

The City of Ontario does not have an established construction noise threshold; therefore, the Federal Transit Administration's criteria for temporary construction noise was used in the TOP 2050 SEIR. The FTA recommends a noise limit of 80 A-weighted decibels (dBA) equivalent continuous noise level (L_{eq}) at property lines of receiving noise-sensitive receivers. A significant construction noise impact would occur if construction noise would exceed 80 dBA L_{eq} at noise-sensitive receivers (e.g., residential).

According to the TOP 2050 SEIR, the approved project would result in an increase in land use intensity rather than development of new, previously undeveloped areas of the City that would require substantial landform modification. While specific project level data for individual developments for The Ontario Plan 2050 (such as construction equipment, duration, and phasing) are not available, construction could generate noise levels in excess of 80 dBA L_{eq} and generate noise disturbances for prolonged periods of time at noise-sensitive receivers. The Ontario Plan 2050 Policy S-4.1, *Noise Mitigation*, would help minimize the construction noise impacts through enforcement of the City's Noise Ordinance. This includes Municipal Code Chapter 29, Section 5-29.09, which limits construction, remodeling, digging, grading, demolition, or any other related building activity to between the hours of 7:00 am and 6:00 pm, Monday through Friday, and 9:00 am to 6:00 pm on weekends. Nevertheless, impacts associated with construction of The Ontario Plan 2050 were determined to be potentially significant. The TOP 2050 SEIR identified Mitigation Measure 12-4, which would require that construction activities associated with new development that occurs near sensitive receivers be evaluated for potential noise impacts and outlines several measures that construction contractors shall implement during construction activities. Even with implementation of Mitigation Measure 12-4, which would reduce potential impacts to the extent feasible, impacts associated with construction of the approved project were determined to be significant and unavoidable, due to the potential for proximity of construction activities to sensitive uses, the number of construction projects occurring simultaneously, and the potential duration of construction activities. The TOP 2050 SEIR notes, however, that identification of this program-level impact does not preclude the finding of less than significant impacts for subsequent projects analyzed at the project level.

Operational Impacts

According to the TOP 2050 SEIR, the approved project would result in an increase in residential, commercial, industrial, and overall development and growth in the City. Primary stationary noise sources would be from landscaping, maintenance activities, air handling units (residential and commercial), and loading and unloading activities at commercial business parks and smaller retail stores. The Ontario Plan 2050 would not result in new types of stationary noise sources than under The Ontario Plan. Furthermore, Safety Element Policy S-4.1, *Noise Mitigation*, of the approved project utilizes the City's Noise Ordinance,

building codes, and subdivision and development code regulations to reduce noise from future development projects.

Additionally, traffic noise increases with implementation of the approved project would be below tiered thresholds. The traffic noise contribution on State Street east of Vine Steet, Sultana Avenue, and Campus Avenue was determined to be negligible when compared to rail noise in this location. Additionally, TOP 2050 includes Safety Element Policies S-4.2, S-4.4, and S-4.5 that would minimize traffic noise impacts. Impacts associated with operation of The Ontario Plan 2050 were determined to be less than significant.

1300 S Campus Project: The following discussion is based on a *Noise and Vibration Analysis* prepared by Urban Crossroads in September 2023; refer to Appendix F, *Noise and Vibration Analysis*.

Noise Measurements

In order to quantify existing ambient noise levels in the 1300 S Campus Project study area, four 24-hour noise level measurements were conducted on August 9, 2023. The noise measurement locations were chosen based on the nearest sensitive receivers (single-family residences); refer to Exhibit 4, *Noise Measurement Locations*. The hourly measurements were taken during typical weekday conditions over a 24-hour period. Noise monitoring equipment used for the ambient noise survey consisted of a Piccolo Type 2 integrating sound level meter and dataloggers. The monitoring equipment complies with applicable requirements of the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013.

Table 3-13-1, *Noise Measurements*, identifies the hourly daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) noise levels at each noise level measurement location. The noise measurements are presented as average L_{eq}, which represents a steady state sound level containing the same total energy as a time varying signal over a given sample period.

Table 3.13-1 : Noise Measurements

Location[1]	Description	Energy average noise level (dBA L_{eq})[2]	
		Daytime	Nighttime
1	Located north of the project site near the residence at 607 E Phillips St.	61.1	60.7
2	Located east of the project site near the residence at 705 Woodlawn St.	67.8	66.8
3	Located west of the project site near the residence at 1377 S Monterey Avenue	61.5	61.9
4	Located west of the site near the residence at 1345 S Monterey Avenue	61.9	61.6
Notes: 1. See Exhibit 4 for the noise level measurement locations. 2. Energy (logarithmic) average levels. The long-term 24-hour measurement worksheets are included in Appendix 5.2 of Appendix F. "Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.			
Source: Urban Crossroads, September 27, 2023. Refer to Appendix F.			

Sensitive Receivers

The nearest sensitive receivers to the project site include single-family residences. The following analysis is focused on noise impacts at the nearest sensitive receivers, shown as R1 through R6 in Exhibit 5, *Sensitive Receiver Locations*. As shown, the nearest single-family residence is 31 feet to the west of the 1300 S Campus Project site.

Construction

Project construction for the 1300 S Campus Project would occur for a duration of approximately 15 months. Construction of the project would include the following stages: demolition, site preparation, grading, building construction, paving, and application of architectural coatings. The majority of the project's construction activities would occur within the City's allowable construction hours of 7:00 am and 6:00 pm, Monday through Friday, and 9:00 am to 6:00 pm on weekends; however, a limited number of concrete pours may occur overnight. Since neither the City nor the County have established construction noise level limits, an analysis of the 1300 S Campus Project's construction noise is based on thresholds included in the FTA *Transit Noise and Vibration Impact Assessment Manual*, dated September 2018.[15] The FTA considers daytime exterior construction noise levels of 80 A-weighted decibels (dBA) L_{eq} and nighttime exterior construction noise levels of 70 dBA L_{eq} as reasonable thresholds for noise sensitive residential land uses.

Daytime Construction Noise Impacts

To estimate project noise impacts during daytime construction activities, Urban Crossroads' Computer Aided Noise Abatement (CadnaA) computer program was used to summarize the noise level at each sensitive receiver and estimate the noise level contributions by noise source during each construction stage (refer to Exhibit 5 for the locations of sensitive receivers). The analysis assumes that the loudest construction equipment would operate at the same time during each construction stage. Table 3.13-2, *Construction Equipment Noise Level Summary*, shows the anticipated noise levels to be experienced by the nearest sensitive receivers during daytime construction activities associated at each stage of construction.

Table 3.13-2: Construction Equipment Noise Level Summary

Sensitive Receiver Location[1]	Construction Noise Levels (dBA L_{eq})						
	Demolition	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels[2]
R1	65.5	62.7	62.0	59.3	56.5	54.9	65.5
R2	63.6	60.8	60.1	57.4	54.6	53.0	63.6
R3	63.1	60.3	59.6	56.9	54.1	52.5	63.1
R4	67.7	64.9	64.2	61.5	58.7	57.1	67.7
R5	69.0	66.2	65.5	62.8	60.0	58.4	69.0
R6	68.7	65.9	65.2	62.5	59.7	58.1	68.7

[1] Sensitive receiver locations are shown on Exhibit 5.
[2] Construction noise level calculations are based on distance from the construction activity, which is measured from the project site boundary to the nearest receiver locations. CadnaA construction noise model inputs are included in Appendix 8.1 of Appendix F.

Source: Urban Crossroads, September 27, 2023. Refer to Appendix F.

As shown, anticipated noise levels associated with daytime construction activities are anticipated to range from 52.5 to 69.0 dBA L_{eq} at nearby sensitive receivers, which are below the FTA daytime exterior construction noise level of 80 dBA L_{eq} for sensitive residential land uses. Therefore, noise impacts associated with daytime project construction activities would be less than significant.

[15] Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.

Nighttime Construction Noise Impacts

Section 5-29.09(c) of the City's noise regulations allow an exception outside of the allowable construction hours for construction activities that comply with the noise limits set forth in Section 5-29.04, *Exterior Noise Standards*, of the Ontario Municipal Code. As noted above, while the majority of the project's construction activities would occur within the City's allowable construction hours, a limited number of concrete pours (which cannot be interrupted) may occur overnight. Pursuant to Ontario Municipal Code Section 5-29.04, an exterior noise level of 70 dBA L_{eq} would apply to the project site, which is consistent with the FTA nighttime exterior construction noise level used in the 1300 S Campus Project's Noise and Vibration Analysis.

Sources of noise associated with concrete pours may include concrete mixer truck movements and pouring activities, concrete paving equipment, rear mounted concrete mixer truck backup alarms, engine idling, air brakes, generators, and workers communicating/whistling. This analysis assumes that nighttime concrete pour activities would be phased and include the entire project site.

Table 3.13-3, *Nighttime Concrete Pour Noise Level Summary*, shows the anticipated noise levels that would be experienced by nearby sensitive receivers associated with nighttime construction pours. The analysis relies on a reference sound pressure level of 67.7 dBA L_{eq} at 50 feet per FTA guidance.

Table 3.13-3: Nighttime Concrete Pour Noise Level Summary

Sensitive Receiver Location[1]	Exterior Noise Levels[2]
R1	46.7
R2	45.0
R3	44.9
R4	47.3
R5	48.7
R6	48.3
[1] Sensitive receiver locations are shown on Exhibit 5. [2] Nighttime Concrete Pour noise model inputs are included in Appendix 8.2 of Appendix F.	
Source: Urban Crossroads, September 27, 2023. Refer to Appendix F.	

As shown, anticipated noise levels associated with nighttime construction pours are anticipated to range from 44.9 to 48.7 dBA L_{eq} at nearby sensitive receivers, which is below the FTA and City of Ontario nighttime exterior construction noise level of 70 dBA L_{eq} for sensitive residential land uses. Therefore, noise impacts associated with nighttime project construction activities would comply with the City's allowed noise levels for construction activity permitted outside of regular hours and are considered less than significant.

Operation

According to Section 5-29.04(a) of the City's Municipal Code, base ambient exterior noise levels may not exceed 65 dBA L_{eq} during daytime hours (7:00 a.m. to 10:00 p.m.) and may not exceed 45 dBA L_{eq} during nighttime hours (10:00 p.m. to 7:00 a.m.).

To present the potential worst-case noise conditions associated with operation of the project, the following analysis assumes that the project would be operational 24 hours per day, seven days per week. Project operations would primarily occur within the enclosed warehouse building, with the exception of traffic movement, parking, and loading and unloading of trucks on-site. On-site noise sources associated with operation of the 1300 S Campus Project are anticipated to include: loading dock activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements, and truck movements. To estimate project operational noise impacts associated with such sources, Urban Crossroads collected reference noise level measurements from similar types of activities. Using Urban Crossroads' CadnaA computer program, a summary of noise levels at each sensitive receiver and the partial noise level contributions by noise source were calculated (refer to Exhibit 5 for the locations of sensitive receivers). Noise levels that are anticipated to be experienced by nearby sensitive receivers were calculated for daytime operations of the project (7:00 a.m. to 10:00 p.m.) and nighttime operations (10:00 p.m. to 7:00 a.m.).

Table 3.13-4, *Operational Noise Level Compliance*, shows the anticipated daytime and nighttime project operational noise levels that would be experienced at each sensitive receiver location. Noise levels associated with operation of the 1300 S Campus Project would not exceed the City's daytime and nighttime base ambient exterior noise levels.

Table 3.13-4: Operational Noise Level Compliance

Sensitive Receiver Location[1]	Project Operational Noise Levels (dBA Leq)		Measurement Location	Noise Level Standards (dBA Leq)[2]	
	Daytime	Nighttime		Daytime	Nighttime
R1	37.8	36.5	L1	61.1	60.7
R2	48.9	48.7	L1	61.1	60.7
R3	48.9	48.8	L2	67.8	66.8
R4	33.7	33.6	L3	61.5	61.9
R5	27.2	26.6	L4	61.9	61.6

Source: Urban Crossroads, September 27, 2023. Refer to Appendix F.

The Federal Interagency Committee on Noise (FICON) developed guidance for assessing project-generated noise increases when accounting for ambient noise levels. Per FICON, in areas where the without project noise levels range from 60 to 65 dBA, a 3 dBA *barely perceptible* noise level increase appears to be appropriate for most people. When the without project noise levels already exceed 65 dBA, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact if the noise criteria for a given land use is exceeded, since it likely contributes to an existing noise exposure exceedance.[16]

As shown in Table 3.13-5, *Daytime Project Operational Noise Level Increases*, it is estimated that the 1300 S Campus Project would generate daytime operational noise level increases ranging from 0.0 to 0.3 dBA L_{eq} at the nearest receiver locations as compared to ambient noise conditions. As such, project daytime operations would not exceed significance criteria as established by FICON, and daytime operational noise level increases are considered less than significant.

[16] Federal Interagency Committee on Aviation Noise, *Federal Agency Review of Selected Airport Noise Analysis Issues*, August 1992.

Table 3.13-5: Daytime Project Operational Noise Level Increases

Sensitive Receiver Location[1]	Total Project Operational Noise Level	Measurement Location[2]	Reference Ambient Noise Levels[3]	Combined Project and Ambient[4]	Project Increase[5]	Increase Criteria[6]
R1	37.8	L1	61.1	61.1	0.0	3.0

Source: Urban Crossroads, September 27, 2023. Refer to Appendix F.

Similarly, as shown in Table 3.13-6, *Nighttime Project Operational Noise Level Increases*, it is estimated that the 1300 S Campus Project would generate nighttime operational noise level increases ranging from 0.0 to 0.3 dBA L_{eq} at the nearest receiver locations as compared to ambient noise conditions. As such, nighttime project operations would not exceed significance criteria as established by FICON, and nighttime operational noise level increases are considered less than significant.

Off-site Traffic Noise

Redevelopment of the 1300 S Campus Project site would result in additional traffic on adjacent roadways, thereby increasing vehicular noise in the vicinity of existing and proposed land uses. As determined by the California Department of Transportation (Caltrans) in the Technical Noise Supplement to the Traffic Noise

Analysis Protocol (September 2013), a doubling in roadway traffic volumes is required to generate any noticeable increase (3 dBA CNEL) in roadway noise levels.[17] According to the *Noise and Vibration Analysis*, the incremental project-related off-site traffic noise levels due to the 1300 S Campus Project trips are estimated to result in a less than 1 dBA CNEL increase. Therefore, the 1300 S Campus project-related traffic noise impacts would be less than significant.

Certified TOP 2050 SEIR Mitigation Measures: The TOP 2050 SEIR includes mitigation measures to reduce potential noise impacts. The following measure from the TOP 2050 SEIR is applicable to the 1300 S Campus Project:

12-4 Construction activities associated with new development that occurs near sensitive receivers shall be evaluated for potential noise impacts. Construction contractors shall implement the following measures for construction activities in the City of Ontario. Construction plans submitted to the City shall identify these measures on demolition, grading, and construction plans. The City of Ontario Planning and Building Departments shall verify that grading, demolition, and/or construction plans submitted include these notations prior to issuance of demolition, grading, and/or building permits.

- Construction activity is limited to the hours between 7:00 am and 6:00 pm Monday through Friday and 9:00 am to 6:00 pm Saturdays and Sundays, as prescribed in Municipal Code Section 5-29.09.[18]

- During the entire active construction period, equipment and trucks used for project construction shall use the best-available noise control techniques wherever feasible (e.g., improved mufflers, equipment re-design, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds).

- Impact tools (e.g., jack hammers and hoe rams) shall be hydraulically or electrically powered wherever possible. Where the use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used along with external noise jackets on the tools.

- Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.

- Stockpiling shall be located as far as feasible from nearby noise-sensitive receivers.

- Construction traffic shall be limited, to the extent feasible, to approved haul routes established by the City's Engineering Department

- At least 10 days prior to the start of construction activities, a sign shall be posted at the entrance(s) to the job site, clearly visible to the public, that includes permitted construction days and hours as well as the telephone numbers of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise or vibration complaint. If

[17] It takes a doubling of traffic in order to create a noticeable increase in traffic noise (i.e., 3 dBA) per the California Department of Transportation (Caltrans) *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, September 2013.

[18] Ontario Municipal Code Section 5-29.09(c) allows an exception for activities occurring outside of the allowable construction hours for projects that comply with the noise limits set forth in Section 5-29.04 of the Ontario Municipal Code. As discussed above, noise impacts associated with nighttime project construction activities (concrete pours) would comply with the City's allowed noise levels for construction activity permitted outside of regular hours and are considered less than significant. Concrete pours related to the 1300 S Campus Project would be exempted from the construction hour limits identified in Mitigation Measure 12-4 in this regard.

the authorized contractor's representative receives a complaint, he/she shall investigate, take appropriate corrective action, and report the action to the City.

- Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than 5 minutes.

- During the entire active construction period and to the extent feasible, the use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only. The construction manager shall use smart back-up alarms, which automatically adjust the alarm level based on the background noise level or switch off back-up alarms and replace with human spotters in compliance with all safety requirements and laws.

- Erect temporary noise barriers (at least as high as the exhaust of equipment and breaking line-of-sight between noise sources and sensitive receivers), as necessary and feasible, to maintain construction noise levels at or below the performance standard of 80 dBA Leq. Barriers shall be constructed with a solid material that has a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier and may be lined on the construction side with an acoustical blanket, curtain, or equivalent absorptive material.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact with Mitigation Incorporated.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. As discussed above, the TOP 2050 SEIR determined that impacts associated with construction of The Ontario Plan 2050 would be significant and unavoidable, due to the potential for proximity of construction activities to sensitive uses, the number of construction projects occurring simultaneously, and the potential duration of construction activities. The TOP 2050 SEIR notes, however, that identification of this program-level impact does not preclude the finding of less than significant impacts for subsequent projects analyzed at the project level. The 1300 S Campus Project would result in less than significant impacts with mitigation related to ambient noise levels; refer to the "1300 S Campus Project" discussion above.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Approved Project: According to the 2022 EIR, construction activity at projects within The Ontario Plan 2050 plan area would generate varying degrees of ground vibration, depending on the construction procedures and equipment. Operation of construction equipment generates vibrations that spread through the ground and diminish with distance from the source. The effect on buildings in the vicinity of the construction site varies depending on soil type, ground strata, and receiver building construction. The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibrations at moderate levels, to slight structural damage at the highest levels. Vibration from construction activities rarely reaches the levels that can damage structures but can achieve the audible and perceptible ranges in buildings close to the construction site. Specific project-level data for individual developments associated with buildout of the approved project are not available, and construction could generate excessive vibration at sensitive receiver locations. Vibration-related noise impacts from the approved project that would accommodate buildout of The Ontario Plan 2050 were identified as potentially significant.

Additionally, commercial and industrial operations associated with buildout of The Ontario Plan 2050 would generate varying degrees of ground vibration, depending on the operational procedures and equipment. The majority of industrial uses would not be immediately adjacent to vibration-sensitive uses, the use of heavy equipment associated with industrial activities would occur indoors, and no significant vibration impacts would occur from vibration generated by industrial uses. The TOP 2050 SEIR concluded that the operation of commercial and industrial uses associated with The Ontario Plan 2050 would be less than significant.

The TOP 2050 SEIR identified Mitigation Measure 12-2, which would require evaluation of potential vibration impacts associated with projects that involve vibration-intensive construction activities; however, due to the potential for proximity of construction activities to sensitive uses, the number of construction projects occurring simultaneously, and the potential duration of construction activities, impacts were identified as significant and unavoidable. The TOP 2050 SEIR notes, however, that identification of this program level impact does not preclude the finding of less than significant impacts for subsequent projects analyzed at the project level.

1300 S Campus Project:

In conformance with SEIR Mitigation Measure 12-2, a vibration analysis was conducted as part of Appendix F to assess and mitigate potential noise and vibration impacts of the 1300 S Campus Project.

Construction Vibration Impacts

Caltrans has published standard vibration damage thresholds to evaluate potential construction-related impacts at adjacent buildings. The nearest sensitive buildings adjacent to the project site are described as "older residential structures." Based on the Caltrans Transportation and Construction Vibration Manual, the maximum acceptable continuous vibration threshold for such structures is 0.3 peak particle velocity (PPV) measured in inches per second (in/sec). Expected project-related vibration levels at nearby receiver locations are illustrated in Table 3.13-7, *Project Construction Vibration Levels*.

Table 3.13-7: Project Construction Vibration Levels

Location[1]	Distance to Const. Activity (Feet)[2]	Typical Construction Vibration Levels PPV (in/sec)[3]						Thresholds PPV (in/sec)[4]
		Small bulldozer	Jack-hammer	Loaded Trucks	Large bulldozer	Vibratory Roller	Highest Vibration Level	
R1	89'	0.000	0.005	0.011	0.013	0.031	0.031	0.3
R2	79'	0.001	0.006	0.014	0.016	0.037	0.037	0.3
R3	174'	0.000	0.002	0.004	0.005	0.011	0.011	0.3
R4	33'	0.002	0.023	0.050	0.059	0.138	0.138	0.3
R5	31'	0.002	0.025	0.055	0.064	0.152	0.152	0.3
R6	32'	0.002	0.024	0.052	0.061	0.145	0.145	0.3

[1] Sensitive receiver locations are shown on Exhibit 5.
[2] Distance from receiver building facade to project construction boundary (project site boundary).
[3] Based on representative vibration levels included in the Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual.
[4] Caltrans Transportation and Construction Vibration Guidance Manual, April 2020, Table 19, p. 38.
"PPV" = Peak Particle Velocity

Source: Urban Crossroads, September 27, 2023. Refer to Appendix F.

As shown in Table 3.13-7, construction vibration velocity levels are estimated to range from 0.011 to 0.152 PPV (in/sec) at distances ranging from 31 feet to 174 feet from the project construction activities. As such, vibration levels for building damage would fall below the 0.3 PPV (in/sec) threshold at all noise sensitive receiver locations. Therefore, project construction activities would not create perceptible vibration impacts to the nearest sensitive receivers. No new or more severe impacts would occur in this regard.

Operational Vibration Impacts

Operation of the revised project would not include or require equipment, facilities, or activities that would result in perceptible groundborne vibration. According to the FTA, it is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads. Additionally, the 1300 S Campus Project's proposed truck court would be constructed on the eastern side of proposed warehouse building, thereby allowing the building to serve as a noise barrier between trucking activities and sensitive residential uses to the west of the site. With the exception of routine landscaping maintenance, no additional project activities are proposed on the western portion of the site. As such, project operations associated with the warehouse would not create perceptible vibration impacts to the nearest sensitive receivers.

Certified TOP 2050 SEIR Mitigation Measures: TOP 2050 SEIR Mitigation Measure 12-2 requires preparation of a vibration analysis to assess and mitigate potential noise and vibration impacts of the 1300 S Campus Project. Refer to Appendix F, *Noise and Vibration Analysis*, for a copy of this report. The Noise and Vibration Analysis determined that vibration levels will fall below maximum acceptable threshold levels. As such, the Noise and Vibration Analysis demonstrates that vibration reducing construction measures are not required.

12-2 Prior to issuance of a building permit, individual projects that involve vibration-intensive construction activities, such as pile drivers, jack hammers, and vibratory rollers near sensitive receptors shall be evaluated for potential vibration impacts. For construction within 135 feet of fragile structures, such as historical resources, within 100 feet of nonengineered timber and masonry buildings (e.g., most residential buildings), or within 75 feet of engineered concrete and masonry (no plaster); or a vibratory roller within 25 feet of any structure, the project applicant shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. This noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds (e.g., 0.12 inches per second [in/sec] peak particle velocity [PPV] for fragile or historical resources, 0.2 in/sec PPV for nonengineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses shall be used, such as drilling piles as opposed to pile driving and static rollers as opposed to vibratory rollers. If necessary, construction vibration monitoring shall be conducted to ensure vibration thresholds are not exceeded.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. As discussed above, the TOP 2050 SEIR determined that potential vibration impacts associated with construction of The Ontario Plan 2050 would be significant and unavoidable but that identification of this program-level impact does not preclude the finding of less than significant impacts for subsequent projects analyzed at the project level. The 1300 S Campus Project would result in less than significant impacts related to groundborne vibration and noise levels; refer to the "1300 S Campus Project" discussion above.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Approved Project: According to the TOP 2050 SEIR, based on ONT noise contours as identified in the ALUCP, future sensitive uses within an airport 65 dBA CNEL (the community noise equivalent level) or higher would be exposed to excessive noise levels from airport operations, and consequently, indoor, and exterior noise environments would be exposed to elevated noise levels from aircraft overflights. The noise contours for Chino Airport do not extend into the City. Future sensitive uses within an airport 65 dBA CNEL would be required to conduct a noise assessment and mitigate, as feasible, to achieve an interior noise level 45 dBA CNEL in any habitable room. Policies S-4.2 and S-4.3 of the approved project would help minimize airport noise impacts; however, impacts were identified as potentially significant. The TOP 2050 SEIR identified Mitigation Measure 12-1, which would require that an acoustical analysis be conducted for noise sensitive uses proposed within the 65 dBA CNEL noise contour. While interior noise levels are required to achieve the interior noise limits of the California State Building Code and California Noise Insulation Standards (Titles 21 and 24 of the California Code of Regulations), exterior noise levels may continue to exceed the noise compatibility criteria for the City. Impacts were identified as significant and unavoidable.

1300 S Campus Project: The project site is located approximately one mile southwest of ONT. The 1300 S Campus Project would occur within the same area as analyzed within the TOP 2050 SEIR. According to The Ontario Plan 2050 Figure 5.13-3, *Airport Noise Contours*, the 1300 S Campus Project is located within the Ontario International Airport Influence Area (AIA) and located outside the Chino Airport Influence Area. The 1300 S Campus Project is located outside the ONT ALUCP Safety Zones; however, the project is located within the 65-70 dB CNEL Noise Impact Zone. The 65-70 dB CNEL Noise Impact Zone identifies warehouses as an acceptable use for the Ontario International AIA. As such, the project is not considered a noise sensitive use and would be consistent with the ONT ALUCP. Impacts would be less than significant and TOP 2050 SEIR Mitigation Measure 12-1 would not apply.

Certified TOP 2050 SEIR Mitigation Measures: Because the 1300 S Campus Project is considered a compatible land use according to the ONT ALUCP, Mitigation Measure 12-1 does not apply to the 1300 S Campus Project.

Mitigation Measures: No mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. As discussed above, the TOP 2050 SEIR determined that impacts under The Ontario Plan 2050 would be significant and unavoidable; however, the 1300 S Campus Project would result in less than significant impacts related to excessive noise levels within the vicinity of an airport; refer to the "1300 S Campus Project" discussion above.

3.14 POPULATION AND HOUSING

This section corresponds with the TOP 2050 SEIR Section 5.14, *Population and Housing.*

Would the project:

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

***Approved Project*:** The TOP 2050 SEIR concluded that, although the increase in population, housing, and employment under the approved project would exceed Southern California Association of Governments' (SCAG) regional forecasts for the City, the approved project would improve the job-housing balance when compared to The Ontario Plan. Furthermore, the approved project accommodates future growth by providing for infrastructure and associated public services to accommodate the projected growth of the City. Additionally, the approved project is consistent with SCAG's Connect SoCal. Consequently, while buildout in accordance with the approved project's Land Use Plan would increase both population and employment in the City, impacts were determined be less than significant.

1300 S Campus Project: As discussed in Section 1.3.1, *Environmental Setting*, the 1300 S Campus Project site is fully developed with industrial uses. According to SCAG, the generation rate for employees required for operation of an industrial project in San Bernardino County is one employee for every 1,195 square feet of industrial space.[19] The northeastern portion of the project site is presently occupied by an approximately 32,534-square-foot warehouse building that is primarily used for lumber storage and includes a small office area, and an approximately 300-square-foot-outhouse. Thus, based on SCAG employment generation rates for industrial uses, existing onsite uses are estimated to support approximately 28 employees. This is a conservative estimate of employees from the existing use, as the lumber yard operations occur on the entire 11.31-acre site, not just within the existing buildings onsite.

The 1300 S Campus Project would demolish existing onsite uses and redevelop the site with a 221,658-square-foot warehouse building, generating approximately 186 employees. This would result in a net increase of an estimated 158 employees onsite.[20] Employees of the proposed operations are anticipated to be hired from the existing regional labor force. Further, as the 1300 S Campus Project consists of replacing an existing warehousing use (wholesale lumber yard) with a similar warehouse use, the project would continue the existing use of the site, as considered in the TOP 2050 SEIR, albeit with an expanded building footprint. Moreover, the 1300 S Campus Project is consistent with the allowable uses and density of the site's IL zoning and IND land use designation per The Ontario Plan 2050 and, thus, consistent with the land uses and buildout projections analyzed in the TOP 2050 SEIR. The project does not propose the construction of housing that may directly induce population growth in the area, nor the extension of roads or other infrastructure that may indirectly induce substantial unplanned population growth in the area. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

[19] The Natelson Company, Inc. *Employment Density Study Summary Report prepared for Southern California Association of Governments*, *Table II-B Derivation of Square Feet per Employee*, October 2001.

[20] The estimated net increase of 158 employees onsite is likely an overestimation, because the employment calculation for the existing use only considers the existing building square footage and does not account for outdoor lumber yard operations. Overestimating the net increase of employees generated by the Project provides for a conservative analysis in this document.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Approved Project: According to the TOP 2050 SEIR, land use changes under the approved project's Land Use Plan would increase opportunities for housing in the City—for example, by converting shopping centers to mixed-use and increasing residential density in existing residential areas and religious properties. The approved project's Land Use Plan would provide land use designations for a variety of housing types and provide for additional residential opportunities throughout the City. Additionally, the approved project includes several policies supporting an increase in the provision of housing and diversity of housing opportunities in the City, including Policies H-2.4, H-2.6, ER-4.1, and CE-1.6. Impacts were determined to be less than significant.

1300 S Campus Project: Similar to the approved project, the 1300 S Campus Project would not displace any residents or housing from the site. The project site is currently developed with industrial uses and does not contain housing. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

3.15 PUBLIC SERVICES

This section corresponds with the TOP 2050 SEIR Section 5.15, *Public Services*.

a) ***Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable serve ratios, response times or other performance objectives for any of the public services:***

i) ***Fire Protection?***

Approved Project: According to the TOP 2050 SEIR, correspondence with the Ontario Fire Department (OFD) determined that three additional fire stations would be needed to meet projected needs while maintaining response times and meeting the National Fire Protection Association's recommendations for levels of service. While the construction of future facilities could result in potential environmental impacts, future environmental review would occur once specific locations have been determined. Without a definitive location for the development of future facilities, the analysis of potential impacts was determined to be too speculative to conduct. Future projects would be reviewed by the City and the OFD on an individual basis and would be required to comply with requirements in effect at the time building permits are issued, including the payment of development impact fees that contribute to funding for additional staffing, facilities, and equipment. The Governance Manual of The Ontario Plan is meant to bring collaboration between City departments, programs, and other involved agencies to achieve the City's development goals in phases, working within the budget and infrastructure constraints of the City. Following this process, sufficient revenue would be available for necessary service improvements to provide for adequate fire facilities, equipment, and personnel upon buildout of the approved project, and impacts were determined to be less than significant.

1300 S Campus Project: The project site would continue to be serviced by OFD; the nearest fire station is OFD Station 2, located at 544 W Francis Street, Ontario, approximately one mile to the southwest of the project site. The 1300 S Campus Project would be consistent with the site's IL zoning designation and IND land use designation per The Ontario Plan 2050; refer to Section 3.11, *Land Use and Planning*. No changes to the existing land use designation or zoning are required or proposed with the 1300 S Campus Project. Further, as discussed in Section 3.14, *Population and Housing*, implementation of the 1300 S Campus Project is not anticipated to result in a substantial increase in population compared to existing conditions. Implementation of the 1300 S Campus Project would not require the construction of new or physically altered fire facilities and is not anticipated to result in an increase in service calls. Nonetheless, the 1300 S Campus Project would be subject to Ontario Municipal Code Chapter 4, *Fire Code*, which adopts by reference the *2022 Edition of the California Fire Code*, which includes site access requirements and fire safety precautions. As currently designed, the 1300 S Campus Project would include features such as fire-resistant construction materials, fire alarm/sprinkler systems, hydrants, and adequate fire access for emergency vehicles. The project would also provide a 20-foot side emergency access road off of Phillips Street and would be designated for fire/emergency purposes only; refer to Exhibit 3, *Conceptual Site Plan*. In addition, the City would collect one-time development impact fees, which are imposed on all new developments to pay fair share of costs in upgrading OFD's fire facilities, as needed. Payment of these fees would offset the 1300 S Campus Project's demand for fire services. The 1300 S Campus Project would not result in the need for new or physically altered fire facilities.

Therefore, in consideration of the above, the 1300 S Campus Project would not create a significant environmental effect related to a need for new or altered fire service. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR**.**

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Police Protection?

Approved Project: According to the TOP 2050 SEIR, correspondence with the Ontario Police Department (OPD) indicated that additional staffing would be needed as buildout of The Ontario Plan occurs. Future development under the approved project would be subject to development impact fees which pay for police services. Police services would receive adequate funding through the City's general fund to cover project needs, and the Governance Section of the approved project would encourage collaboration between City departments, programs, and other involved agencies to achieve the City's development goals in phases that are within the fiscal and infrastructure limitations of the City. The police services required to cover the new development and population growth for the City would be assessed and acquired appropriately based on the needs of the City. It is possible that buildout of the approved project would require additional facilities to support the OPD, the construction of which could result in potential environmental impacts. Such facilities would have to complete applicable environmental review under CEQA at that time, and locations and sizes of potential future facilities, if needed, is not known at this time. Without a definitive location for the development of future facilities, the analysis of potential impacts is too speculative to conduct. Future projects would also be reviewed by the City on an individual basis and required to comply with regulations in effect at the time building permits are issued. The need for additional structures and personnel would be financed through the City's development impact fee program, and the impacts of the approved project on police services would be less than significant.

1300 S Campus Project: The project site would continue to be serviced by the OPD, which is headquartered at 2500 S Archibald Avenue, Ontario, approximately 2.8 miles southeast of the project site. The 1300 S Campus Project is not anticipated to require additional police services, as the project site is already developed and within an area currently served by the OPD. As discussed in Section 3.14, implementation of the 1300 S Campus Project is not anticipated to result in a substantial increase in population in the City. The 1300 S Campus Project would be consistent with the site's IL zoning designation and IND land use designation per The Ontario Plan 2050; refer to Section 3.11. No changes to the existing land use designation or zoning are required or proposed with the 1300 S Campus Project. In addition, the City would collect one-time development impact fees, which are imposed on all new developments to offset the demand for police services. The 1300 S Campus Project would not result in the need for new or physically altered police facilities. Therefore, impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

c) Schools?

Approved Project: The TOP 2050 SEIR concluded that the majority of school districts within the City have existing capacity to accommodate the buildout and population increase of the approved project. Although the increased demand on school facilities would have the potential to impact one or more of the school districts that serve Ontario, payment of impact fees in compliance with Senate Bill (SB) 50 would reduce the impacts to an acceptable level. Impacts were determined to be less than significant.

1300 S Campus Project: As a proposed industrial development, the 1300 S Campus Project would not generate school-aged residents. Employees of the 1300 S Campus Project are anticipated to be hired from the existing regional labor force. Additionally, 1300 S Campus Project would be subject to development fees for school facilities pursuant to SB 50. With the payment of these development fees, impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

d) Parks?

Approved Project: The TOP 2050 SEIR addressed impacts to park services in Section 5.16, *Recreation*. Refer to Impact 3.16(a) below. Impacts were determined to be less than significant. Pursuant to CEQA Guidelines Section 15183, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

1300 S Campus Project: Refer to Impact 3.16(a) below. Impacts would remain less than significant.

Certified 2022 EIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

e) Other public facilities?

Approved Project: According to the TOP 2050 SEIR, buildout of the approved project would result in an increase in demand for library services in the City based on an increase in population. New facilities, books, and personnel would be necessary to maintain and reach adequate levels of service. Environmental impacts could result from the construction of future facilities; however, the location and size of potential future facilities is currently unknown, and each project would have to complete applicable environmental review under CEQA when it is determined. Future projects would also be reviewed by the City of Ontario on an individual basis and would be required to comply with requirements in effect at the time building permits

are issued (i.e., payment of development impact fees). Since adequate services would be provided and payment of development impact fees would offset the costs associated with library services, impacts on library services were determined to be less than significant.

1300 S Campus Project: Similar to the approved project, the 1300 S Campus Project would not require the expansion of public services such as libraries, as employees are anticipated to come from the existing workforce. The City would collect one-time development impact fees, which are imposed on all new developments to offset demand for public facilities. The proposed development would not significantly increase the demand of such services. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

3.16 RECREATION

This section corresponds with the TOP 2050 SEIR Section 5.16, *Recreation*.

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Approved Project: According to the TOP 2050 SEIR, buildout of the approved project would increase the demand for parks and increase existing park usage; however, the approved project provides land use opportunities for public parks to be developed in line with future development. The Parks and Recreation Element of The Ontario Plan contains relevant goals, policies, and programs that support a regular review of the City's parks and trails plans to keep pace with demographic trends and recreational needs of the City's residents (Policies PR-1.1 through PR-1.16). In addition, under the Parks and Recreation Element, Policy PR-1.5 strives to provide five acres of parkland per 1,000 residents, and Policy PR-1.6 provides a minimum of two acres of developed private park space per 1,000 residents in addition to the City's three acres per 1,000 persons standard. As a result, development of park facilities would keep pace with the anticipated increase in population from buildout of the approved project. Impacts were determined to be less than significant.

1300 S Campus Project: The 1300 S Campus Project would demolish existing onsite uses and redevelop the site with a 221,658-square-foot warehouse building, generating an estimated net increase of 158 employees; refer to Section 3.14, *Population and Housing*. No residential facilities are proposed, and as such, the 1300 S Campus Project would not result in an increase in residential population. Additionally, employees of the proposed development are anticipated to come from the existing regional labor force. While employees of the proposed facility may use nearby parks for breaks or recreation, such use would be a small fraction of the parks' overall usage and would not be at a level or intensity that could result in physical deterioration. The 1300 S Campus Project would not increase the use of existing neighborhood or regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Approved Project: According to the TOP 2050 SEIR, the approved project guides growth and development in the City and is not a development project. Buildout of the approved project would result in an additional 900 acres of parkland and 419 acres of park facilities in the City. As a result of these planned park facilities, the approved project may result in the construction of new or expansion of existing recreational facilities in the City. Existing Federal, State, and local regulations as well as goals, policies, and actions of the approved project would reduce potential adverse impacts to the environment that may result from buildout of the approved project, including expansion of parks, recreational facilities, and multiuse trails.

Furthermore, subsequent environmental review would be required for development of park projects under the approved project's Land Use Plan. Impacts were determined to be less than significant.

1300 S Campus Project: Refer to Impact 3.16(a) above. The 1300 S Campus Project would not generate a demand for recreational facilities that would warrant the development of new or expanded park facilities which might have an adverse physical effect on the environment. Further, the 1300 S Campus Project features do not include the construction of recreational facilities. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

3.17 TRANSPORTATION

This section corresponds with the TOP 2050 SEIR, Section 5.17, *Transportation.*

Would the project:

a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Approved Project: According to the TOP 2050 SEIR, the Public Transit Plan of The Ontario Plan 2050 is focused on providing efficient connectivity and integration via coordinated bus transfer centers and multimodal terminals. Elements of the Public Transit Plan include collaborating with regional transit agencies to provide for more extensive and frequent basic local bus service, higher-speed bus rapid transit corridors for longer trips, more Metrolink trains in all directions, convenient transfer centers, and future land use patterns that are more suitable for transit users. Additional alternative transportation elements include support for rail or high-speed rail systems and supporting feeder and distribution systems to move people to and from the rail stations. The approved project includes several policies to encourage and provide access to the regional transit network (Policies M-3.1 through M-3.11).

Additionally, the approved project would create a comprehensive system of on- and off-street bikeways that connect residential areas, businesses, schools, parks, and other destination points. The recommended strategies and approaches for transit and nonmotorized transportation would expand alternative transportation options in Ontario. The City's goal is to provide an off-street multipurpose pedestrian and bicycle trail system, a Class II on-street striped bicycle system, and a Class III on-street signed bicycle system. The Class III bikeways would be used to connect multipurpose trails and Class II bikeways. In addition, development of mixed-use areas would provide more walkable communities and would require infrastructure improvements that encourage both walking and bicycle trips. Furthermore, mixed-use developments would reduce the distance traveled between services and amenities, and higher density areas would better utilize public transit and nonmotorized transportation due to the critical mass required to make these viable options for people. Overall, integrating these two approaches to transit and nonmotorized transportation in conjunction with the development of mixed-use areas would contribute to reducing vehicle miles traveled (VMT) in Ontario. Further, the approved project includes several policies to enhance connectivity to the City's nonmotorized transportation network (Policies M-1.4 and M-2.1 through M-2.4). The TOP 2050 SEIR concluded that the approved project would not interfere with or obstruct the implementation and usage of nonmotorized transportation.

According to the TOP 2050 SEIR, The Ontario Plan 2050 is consistent with Connect SoCal. The goals of the *2020-2045 Regional Transportation Plan/Sustainable Communities Strategy* (2020-2045 RTP/SCS) focus on transit, transportation and mobility, and protection of the environment and health of residents. The Ontario Plan 2050 proposes several changes to the Mobility Element of The Ontario Plan that have the potential to affect infrastructure projects identified in the RTP. The TOP 2050 SEIR concluded that the approved project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Impacts were determined to be less than significant.

1300 S Campus Project: There are no bicycle facilities, public rail lines, or bus stops fronting the 1300 S Campus Project site that would be impacted by project construction or operation. According to The Ontario Plan 2050 Figure M-02, *Multipurpose Trails & Bikeways*, Class III bicycle lanes are planned along Phillips Street to the north and Class II bicycle lanes are planned along S Campus Avenue to the east. The project would not inhibit future implementation of the planned bicycle routes. The 1300 S Campus Project would

not impact existing bus routes. Construction parking and the construction laydown area would be on-site to avoid disruption on adjacent roadways. There is a possibility of partial lane closures during construction to allow for connections to off-site utilities; however, any partial closures would be conducted in accordance with a traffic control plan reviewed and approved by the City to ensure adequate circulation on surrounding local roadways is maintained during the construction phase. Short-term construction-related traffic would be limited and would be a compatible use on the local roadway network. There are currently sidewalks fronting the project site along Phillips Street to the north and S Campus Avenue to the east. The 1300 S Campus Project would construct new access driveways off of Phillips Street and S Campus Avenue; however, any potential interference to adjacent roadways and sidewalks would be short term during the construction of the project. The 1300 S Campus Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Impacts would remain less than significant.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?

Approved Project: According to the TOP 2050 SEIR, implementation of the approved project is anticipated to result in a significant transportation impact related to VMT, primarily due to the increase in population and increase in residential land use accommodated by The Ontario Plan 2050. The Ontario Plan 2050 includes goals and policies to offset VMT impacts by creating greater access to transit and enhanced alternative transportation modes. In addition, The Ontario Plan 2050 includes several policies that encourage reduced VMT through land use planning and design (Policies LU-1.1, LU-1.2, LU-1.4, CE-1.12, M-1.2, M-1.6, CD-2.5, CD-2.6, CD-2.16, CD-3.2, CD-3.3, and CD-3.5). Even with the additional goals, policies, and actions related to VMT reduction identified as part of the approved project, the impact of increased total VMT was not anticipated to be reduced to a less than significant level.

Because the VMT impacts are Citywide, mitigation measures to reduce VMT would need to focus on changing or improving the Citywide travel patterns, transportation network, or infrastructure. Given the uncertainty of the effectiveness of implementing these types of mitigation measures at a Citywide level and of their effectiveness at reducing Citywide VMT, the TOP 2050 SEIR determined that these measures are not considered feasible for the approved project. The TOP 2050 SEIR identified Mitigation Measure T-1, which would require future development projects consistent with The Ontario Plan 2050 to consider transportation demand management (TDM) measures consistent with those identified in the Mobility Element. TDM techniques include incentives to use transit; incentives to form carpools rather than drive alone; and making home, work, and shopping closer together to shorten travel distances. Even with implementation of Mitigation Measure T-1, impacts were determined to be significant and unavoidable.

1300 S Campus Project: The following discussion is based on a *Trip Generation Assessment* that was prepared to evaluate the 1300 S Campus Project's trip generation impacts (Appendix G), as well as a *Vehicle Miles Traveled (VMT) Screening Evaluation* that was prepared to evaluate the 1300 S Campus Project's impacts relative to VMT (Appendix H).

The City's adopted VMT methodologies and thresholds (City Guidelines) include standardized screening criteria for project-level VMT analysis that are used to identify when a proposed land use development

project is anticipated to result in a less than significant VMT impact, thus eliminating the need to prepare a more detailed VMT analysis. The City utilizes the San Bernardino County Transportation Authority VMT Screening Tool, which allows users to select an assessor's parcel number to determine if a project's location meets the screening criteria for land use projects identified in the City Guidelines. A land use project is presumed to have a less than significant VMT impact if it meets one of three screening criteria. Project consistency with the screening criteria is described as follows:

- **Low VMT Area Screening**: According to the City Guidelines, a project located in an already low VMT generating traffic analysis zone (TAZ) can be assumed to have a less than significant VMT impact. The City Guidelines identifies low VMT generating traffic analysis zones as those that generate VMT per service population (SP) at least 15 percent below the County of San Bernardino Baseline VMT per SP.

The project is located in TAZ 53647401, which has a VMT per SP of 25.1 as compared to the criteria 15 percent the County VMT per SP, or 28.4 VMT per SP. Therefore, the 1300 S Campus Project meets the Low VMT Area Screening criterion.

The 1300 S Campus Project meets the Low VMT Area Screening criterion and is therefore assumed per the City Guidelines to have a less than significant VMT impact. As such, no further VMT analysis is warranted or required. No new or worsened impacts would occur in this regard.

Certified TOP 2050 SEIR Mitigation Measures: TOP 2050 SEIR Mitigation Measure T-1 requires transportation demand management measures for projects that exceed the County's VMT significance threshold. As the 1300 S Campus Project meets the Low VMT Area Screening and is assumed to have a less than significant VMT impact, TOP 2050 SEIR Mitigation Measure T-1 would not apply.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. As discussed above, the TOP 2050 SEIR determined that program-level impacts with regard to VMT under The Ontario Plan 2050 would be significant and unavoidable but did not preclude the finding of less than significant impacts for subsequent projects analyzed at the project level. The 1300 S Campus Project would result in less than significant impacts related to VMT; refer to the "1300 S Campus Project" discussion above.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

d) Result in inadequate emergency access?

Approved Project: According to the TOP 2050 SEIR, there are substantial improvements in transportation infrastructure planned to accommodate the increase in population in the City in the event of an emergency. The City has adopted roadway classification standards in Policy M-1.1 that include roadway design standards as part of The Ontario Plan 2050, precluding the construction of any unsafe features. Additionally, a review of emergency access is included as part of the City's Design Review process. According to the City's *2018 Local Hazard Mitigation Plan*, interstate highways would serve as major emergency response and evacuation routes. Additionally, the Ontario Fire Department reviews development applications to ensure that adequate emergency accessibility is provided based on local and State guidance. Impacts were determined to be less than significant.

1300 S Campus Project:

Construction

Storage and staging of construction equipment and supplies would occur entirely on the 1300 S Campus Project site and would not interfere with emergency vehicle access to the site or adjacent areas. As stated above, there is a possibility of partial lane closures to allow for connections to off-site utilities; however, implementation of a required City-approved traffic control plan would ensure that impacts to local roadways do not result in inadequate emergency access to the 1300 S Campus Project site and surrounding areas. Implementation of the traffic control plan would ensure that no hazardous conditions are created that would interfere with public safety and/or emergency vehicle movement during project construction. Further, proposed construction activities would be subject to Section 503 of the California Fire Code (Title 24, California Code of Regulations, Part 9), which outlines requirements for fire apparatus access roads for facilities, buildings, or portions of buildings constructed in a jurisdiction. Pursuant to CEQA Guidelines Section 15183, For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

Operation

Primary access to the project site would be provided from two proposed driveways on Campus Avenue to the east. A third driveway off of Phillips Street to the north would be for emergency access only. Development plans would be reviewed and approved by the Ontario Fire Department and the City Public Works Department to ensure the project meets the emergency access requirements pursuant to Section 503 of the California Fire Code and to minimize potential hazards or effects on public safety. The project does not propose any roadway improvements that would result in sharp curves or dangerous intersections either on-site or off-site. The 1300 S Campus Project would not substantially increase hazards due to a geometric design feature, nor would it result in inadequate emergency access. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

3.18 TRIBAL CULTURAL RESOURCES

This section corresponds with the TOP 2050 SEIR, Section 5.18, *Tribal Cultural Resources*.

a) ***Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:***

i) ***Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or***

ii) ***A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.***

Approved Project: According to the TOP 2050 SEIR, the approved project is a regulatory document that sets the framework for future growth and development in the City and does not result in development in and of itself. However, future development as a result of the implementation of the approved project could include grading in portions of the City with sensitivity to tribal cultural resources. Grading and construction activities in undeveloped areas or redevelopment that requires deeper soil excavation than in the past could potentially disturb tribal cultural resources. Therefore, future development could potentially unearth previously unknown/unrecorded tribal cultural resources, and impacts were identified as potentially significant. The TOP 2050 SEIR identified Mitigation Measures 5-3 and 5-4, which would require City representatives to consult with a relevant tribe(s)' representatives upon receipt of an application for a proposed project subject to CEQA and would require a project applicant to notify designated tribes for a proposed project which a CEQA document defines cultural resource mitigation for potential tribal resources. Additionally, Mitigation Measures TCR-1 and TCR-2 would require preparation of an archaeological monitoring plan and proper treatment and disposition of any inadvertent finds of tribal cultural resources. Impacts were identified as less than significant with mitigation.

1300 S Campus Project: Since the 1300 S Campus Project does not require a Negative Declaration or EIR, AB 52 Tribal notification is not required. Regardless, the 1300 S Campus Project would be subject to the applicable provisions of Mitigation Measures 5-4, TCR-1, and TCR-2, as defined in the TOP 2050 SEIR. With adherence to these mitigation measures, impacts would remain less than significant with mitigation.

Certified TOP 2050 SEIR Mitigation Measures: The TOP 2050 SEIR includes mitigation measures to reduce potential impacts to tribal cultural resources. The following measures from the TOP 2050 SEIR are applicable to the 1300 S Campus Project:

5-4 Prior to the issuance of grading permits for a proposed project for which the CEQA document defines cultural resource mitigation for potential tribal resources, the project applicant shall contact the designated tribe(s) to notify them of the grading, excavation, and monitoring program. The applicant shall coordinate with the City of Ontario and the tribal representative(s) to develop mitigation measures that address the designation, responsibilities, and participation of tribal monitors during grading, excavation, and ground-disturbing activities; scheduling; terms of compensation; and treatment and final disposition of any cultural resources, sacred sites, and human

remains discovered on the site. The City of Ontario shall be the final arbiter of the conditions for projects within the City's jurisdiction.

TCR-1 Tribal Cultural Resources Monitoring. The project archaeologist, in consultation with interested tribes, the developer, and the City of Ontario, shall develop an archaeological monitoring plan (AMP) to address the details, timing, and responsibility of archaeological and cultural activities that will occur on the project site. Details in the AMP shall include:

1. Project-related ground disturbance (including, but not limited to, brush clearing, grading, trenching, etc.) and development scheduling;

2. The development of a rotating or simultaneous schedule in coordination with the developer and the project archeologist for designated Native American Tribal Monitors from the consulting tribes during grading, excavation and ground disturbing activities on the site: including the scheduling, safety requirements, duties, scope of work, and Native American Tribal Monitors' authority to stop and redirect grading activities in coordination with all project archaeologists (if the tribes cannot come to an agreement on the rotating or simultaneous schedule of tribal monitoring, the Native American Heritage Commission shall designate the schedule for the onsite Native American Tribal Monitor for the proposed project);

3. The protocols and stipulations that the developer, City, Tribes, and project archaeologist will follow in the event of inadvertent cultural resources discoveries, including any newly discovered cultural resource deposits that shall be subject to a cultural resources evaluation.

At least 30 days prior to application for a grading permit and before any brush clearance, grading, excavation, and/or ground disturbing activities on the site, the developer shall retain a tribal cultural monitor to monitor all ground-disturbing activities in an effort to identify any unknown archaeological resources.

Pursuant to the AMP, a tribal monitor from the consulting tribe shall be present during the initial grading activities. If tribal resources are found during grubbing activities, the tribal monitoring shall be present during site grading activities.

TCR-2 Treatment and Disposition of Cultural Resources. In the event that Native American cultural resources are inadvertently discovered during the course of any ground-disturbing activities, including but not limited to brush clearance, grading, trenching, etc., for the proposed project, the following procedures will be carried out for treatment and disposition of the discoveries:

1. Temporary Curation and Storage: During the course of construction, all discovered resources shall be temporarily curated in a secure location on-site or at the offices of the project archaeologist. The removal of any artifacts from the project site will need to be thoroughly inventoried with tribal monitor oversight of the process;

2. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and nonhuman remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Ontario with evidence of same:

   a. Accommodate the process for on-site reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the

future reburial area from any future impacts. Reburial shall not occur until all cataloging, basic analysis, other analyses as recommended by the project archaeologist and approved by consulting tribes, and basic recordation have been completed; all documentation should be at a level of standard professional practice to allow the writing of a report of professional quality;

b. A curation agreement with an appropriate qualified repository in San Bernardino County that meets federal standards per 36 CFR Part 79, and therefore the resource would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility in San Bernardino County, to be accompanied by payment of the fees necessary for permanent curation;

c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, materials shall be curated at the San Bernardino County Museum by default;

d. At the completion of grading, excavation, and ground-disturbing activities on the site, a Phase IV Monitoring Report shall be submitted to the City documenting monitoring activities conducted by the project archaeologist and Native Tribal Monitors within 60 days of completion of grading. This report shall document the impacts to the known resources on the property; describe how each mitigation measure was fulfilled; document the type of cultural resources recovered and the disposition of such resources; provide evidence of the required cultural sensitivity training for the construction staff held during the required pregrade meeting; and, in a confidential appendix, include the daily/weekly monitoring notes from the archaeologist. All reports produced will be submitted to the City, County Museum, and consulting tribes.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact with Mitigation.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. The 1300 S Campus Project would result in less than significant impacts with implementation of the TOP 2050 SEIR mitigation measures related to tribal cultural resources; refer to the "1300 S Campus Project" discussion above.

This page intentionally left blank.

3.19 UTILITIES AND SERVICE SYSTEMS

This section corresponds with the TOP 2050 SEIR Section 5.19, *Utilities and Service Systems*.

Would the project:

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Approved Project:

Water Supply and Wastewater

The TOP 2050 SEIR concluded that the City's wastewater collection system is adequate to convey the additional 2.55 million gallons per day (mgd) that would occur with implementation of the approved project. The City has indicated that the sewer infrastructure will be able to accommodate sewer flows associated with buildout of the approved project. With funding from sewer connection/usage fees and the Capital Improvements Plan budget, the City would continue to expand and improve the sewer infrastructure to accommodate new development and future growth.

Since the planned development in the City for the approved project would result in an increase in demand for potable and recycled water, the City and the Inland Empire Utilities Agency (IEUA) have made plans for infrastructure expansion and improvement. As part of the land development approval process, the City determines a project's fair-share costs and connection fees. Through the use of connection fees and agreements, the City maintains and expands its water distribution system as necessary and is able to ensure that new developments pay their fair-share costs. The City has the discretion to require water capacity studies associated with new development and redevelopment and currently requires site-specific studies to determine a project's impact throughout the water system. Therefore, the TOP 2050 SEIR concluded that there would be sufficient water supplies to meet buildout of The Ontario Plan 2050 and impacts would be less than significant.

Stormwater

According to the TOP 2050 SEIR, compliance with the City's policies and programs that ensure adequate infrastructure and the regulatory provisions in the MS4 permit that limit runoff from new development would ensure that implementation of TOP 2050 would not result in significant increases in runoff that would contribute to the construction or expansion of new storm drains beyond what is already planned. In addition, the City would continue to repair, rehabilitate, and upgrade the storm drain system through implementation of the Capital Improvement Program, and potential future development would be required to pay storm drainage fees per the City's Municipal Code. Therefore, impacts with respect to stormwater infrastructure were determined to be less than significant.

Electricity and Natural Gas

The TOP 2050 SEIR did not include a discussion on electricity and natural gas.

Telecommunication

The TOP 2050 SEIR did not include a discussion on telecommunications facilities.

1300 S Campus Project:

Water Supply and Wastewater

The Ontario Municipal Utilities Company provides water service to the City and would continue to serve the 1300 S Campus Project site. According to the TOP 2050 SEIR, there is sufficient supply to meet demand of buildout of The Ontario Plan 2050, and impacts were determined to be less than significant. The 1300 S Campus Project consists of replacing an existing warehousing use (wholesale lumber yard) with a similar warehouse use and, thus, would continue the existing use of the site, as considered in the TOP 2050 SEIR, albeit with an expanded building footprint. Moreover, the 1300 S Campus Project is consistent with the allowable uses and density of The Ontario Plan 2050 and, thus, consistent with the land uses and buildout projections analyzed in the TOP 2050 SEIR. Therefore, impacts of the 1300 S Campus Project related to water supply infrastructure are consistent with those contemplated and analyzed in the TOP 2050 SEIR. Impacts would remain less than significant.

Connections to local water and sewer mains would involve temporary and less than significant construction impacts that would occur in conjunction with other on-site improvements. No additional improvements are needed to either sewer lines or treatment facilities to serve the 1300 S Campus Project. Standard connection fees would address any incremental increase in demand from the 1300 S Campus Project. Therefore, the 1300 S Campus Project would result in less than significant impacts related to new or expanded water and wastewater treatment facilities.

Stormwater

The 1300 S Campus Project is designed to capture and infiltrate 50,000 cubic feet of stormwater runoff, which complies with local stormwater quality requirements. In larger storm events where the retention capacity is exceeded, storm runoff would flow to S Campus Avenue as it does in the current condition. The existing off-site drainage is able to accommodate the 1300 S Campus Project. As such, the 1300 S Campus Project would not result in the construction or expansion of off-site drainage system improvements. Impacts would remain less than significant.

Electricity and Natural Gas

Under current conditions, the 1300 S Campus Project site is served by existing SCE electric service lines within adjacent roadways. The proposed development would continue to be served by SCE. The 1300 S Campus Project would not require natural gas utilities. Impacts would remain less than significant.

Telecommunication

The City's telecommunications service is provided by private companies such as Verizon and AT&T. Telecommunication connections are provided by such companies on an as-needed basis. Given the existing telecommunication infrastructure in the area, the 1300 S Campus Project is not anticipated to require or result in the construction or expansion of telecommunications facilities in the City. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

Approved Project: According to the TOP 2050 SEIR, the City's *2020 Urban Water Management Plan* (UWMP) states that there are sufficient water supplies to meet projected demands in normal years, single dry years, and multiple dry years through 2045. Although the approved project at buildout is estimated to generate a 6 percent increase in water demand using conservative water demand factors, new State requirements (including SB 606, AB 1668, and SB 407) and City policies and code requirements would result in enhanced water efficiency and conservation. Applying these measures to the approved project water demand estimates would result in total water demand below the projections in the 2020 UWMP for year 2045. Therefore, there would be sufficient water supplies to meet the demand for buildout of the approved project. Impacts were determined to be less than significant.

1300 S Campus Project: The Ontario Municipal Utilities Company provides water service to the City and would serve the 1300 S Campus Project site. According to the TOP 2050 SEIR, the City receives its water supply from groundwater pumped from the Chino Basin; treated groundwater from the Chino Basin produced by the Chino Basin Desalter Authority; imported water from the Metropolitan Water District of Southern California; groundwater and/or surface water purchased from the San Antonio Water Company; and recycled water purchased from IEUA. The City has six booster pump stations and 17 groundwater wells with a total production of about 56 million gallons per day. The City provides an average supply of 33.14 mgd of water to its service area.

Similar to the approved project, the City's 2020 UWMP projects adequate supply to meet demand under the normal year, single dry year, and multiple dry year scenarios. The 1300 S Campus Project consists of replacing an existing warehousing use (wholesale lumber yard) with a similar warehouse use and, thus, would continue the existing use of the site, as considered in the TOP 2050 SEIR, albeit with an expanded building footprint. Moreover, the 1300 S Campus Project is consistent with the allowable uses and density of The Ontario Plan 2050 and, thus, consistent with the land uses and buildout projections analyzed in the TOP 2050 SEIR. Therefore, impacts of the 1300 S Campus Project related to water supply are consistent with those contemplated and analyzed in the TOP 2050 SEIR. Additionally, the 1300 S Campus Project would implement several sustainability features to conserve water, including water-efficient faucets, on-demand water circulation, and drought tolerant landscaping. As there are adequate forecast water supplies in the region for the 1300 S Campus Project, and no additional water supplies would be needed, impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Approved Project: According to the TOP 2050 SEIR, the IEUA has two wastewater treatment facilities that serve the City: RP-1 and RP-5. The TOP 2050 SEIR concluded that, even with future increases in population and wastewater flows in the service area, IEUA could continue to provide wastewater treatment to all its customers. Impacts were determined to be less than significant.

1300 S Campus Project: According to the TOP 2050 SEIR, facilities RP-1 and RP-5 have a current combined capacity of 60.3 mgd, which would increase to 66.5 mgd once the expansion project at RP-5 is completed. In 2020, RP-1 treated an average wastewater flow of 25 mgd, and RP-5 treated an average wastewater flow of 8 mgd. Therefore, these two facilities have a combined treatment rate of 33 mgd.

According to the IEUA, industrial uses are anticipated to generate 25 gallons of wastewater per day (gpd) per employee. As stated in Section 5.14, *Population and Housing*, the 1300 S Campus Project is anticipated to generate approximately 186 employees, which equates to approximately 4,650 gpd, or 0.005 mgd, of wastewater per day. As such, the combined remaining capacity of the RP-1 and RP-5 would be adequate to accommodate the 1300 S Campus Project. The 1300 S Campus Project would not result in inadequate wastewater treatment capacity. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

c) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

d) ***Comply with Federal, State, and local management and reduction statutes and regulations related to solid waste?***

Approved Project: According to the TOP 2050 SEIR, local landfills that may serve the approved project, including the Badlands Sanitary Landfill and El Sobrante Landfill, would easily accommodate the additional 151 tons per day from buildout of the approved project, which is about 2 percent of the landfills' excess capacity. Both landfills have closure dates beyond the year 2050. Additionally, in the future, other neighboring landfills would also be available to accept solid waste from the City, if needed. The latest update of the County of San Bernardino Countywide Integrated Waste Management Plan indicates that there is sufficient landfill capacity to meet the needs of the County for at least the next 15 years.

Furthermore, future development pursuant to the approved project would comply with Section 4.408 of the 2019 CALGreen building code, which requires that at least 65 percent of nonhazardous construction and demolition waste from nonresidential construction operations be recycled and/or salvaged for reuse.

Development would also comply with AB 341, which mandates recycling for commercial and multifamily residential land uses. Additionally, future businesses that generate organic waste in amounts over a certain threshold would be mandated to recycle organic matter in accordance with AB 1826. Therefore, solid waste facilities would be able to accommodate project-generated solid waste associated with the approved project. In addition, The Ontario Plan Policies ER-2.1, ER-2.2, and ER-2.3 describe waste diversion requirements, hazardous and electronic waste disposal, and purchasing of products made from recycled materials that would ensure that the City has a cost effective integrated waste management system that meets or exceeds State and Federal recycling and waste diversion mandates. With continued compliance with the applicable regulations, leading to increased recycling and waste diversion, anticipated rates of solid waste disposal from the approved project were determined to be less than significant.

1300 S Campus Project: The 1300 S Campus Project's additional solid waste stream would have a less than significant impact on regional landfill capacity. According to the TOP 2050 SEIR, based on the most recent CalRecycle data, over 98 percent of the solid waste collected from the City was taken to either Badlands Sanitary Landfill or El Sobrante Landfill, which have sufficient capacity to accommodate projected development of the City. As of December 2020, the Badlands Sanitary Landfill had a remaining capacity of 7,800,000 tons with a maximum daily permitted throughput of 5,000 tons per day. As of April 2018, the El Sobrante Landfill had a remaining capacity of 143,977,170 tons with a maximum daily permitted throughput of 16,054 tons per day.[21] Based on CalRecycle's waste generation rates for industrial development (8.83 pounds per employee per day), project operations are expected to generate approximately 0.82 tons per day, or approximately 299.7 tons per year.[22] This represents less than one percent of either landfill's maximum daily permitted throughput capacity. Further, compliance with County waste reduction programs and policies would reduce the volume of solid waste entering landfills.

Similar to the approved project, the 1300 S Campus Project must comply with all solid waste disposal regulations, including recycling requirements. All construction activities would be subject to conformance with relevant Federal, State, and local requirements related to solid waste disposal. Specifically, the 1300 S Campus Project would be required to demonstrate compliance with the California Integrated Waste Management Act of 1989 (AB 939), which requires all California cities to "reduce, recycle, and re-use solid waste generated in the State to the maximum extent feasible." The California Integrated Waste Management Act of 1989 requires that at least 50 percent of waste produced is recycled, reduced, or composted. The 1300 S Campus Project would also be required to demonstrate compliance with the Green Building Code, which includes design and construction measures that act to reduce construction-related waste though material conservation measures and other construction-related efficiency measures. Therefore, impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

3.20 WILDFIRE

This section corresponds with the TOP 2050 SEIR, Section 5.20, *Wildfire*.

If located in or near State responsibility areas or lands classified as very high fire hazard severity zones, would the project:

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Approved Project: According to the TOP 2050 SEIR, the City is outside of the State Responsibility Area (SRA) and does not contain areas subject to very high wildfire risk. Improvements in transportation infrastructure within the City would adequately accommodate population increases in the event of an emergency. Policy M-1.1 of the approved project includes roadway design standards to prevent the construction of unsafe features in the City. Additionally, development applications would be reviewed by the City and OFD to ensure proposed development provides adequate emergency accessibility. Implementation of the approved would not substantially impair an adopted emergency response plan or emergency evacuation plan. Impacts were determined to be less than significant.

1300 S Campus Project: According to the California Department of Forestry and Fire Protection (CalFIRE) Fire Hazard Severity Zone Viewer[23], 1300 S Campus Project is not located within an SRA or in or near lands classified as a Very High Fire Hazard Severity Zone (VHFHSZ). Additionally, according to the City's 2018 Local Hazard Mitigation Plan, interstate highways would serve as major emergency response and evacuation routes. The 1300 S Campus Project is not located along an interstate highway and would not include a feature that would impair access to adjacent roadways. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Approved Project: As stated above, the City is not located within an SRA and does not contain areas located within VHFHSZs. However, the City recognized that although fuel load is light in Ontario and fire risk comes primarily from urban fire, there is some risk related to wildfires. The TOP 2050 SEIR determined

[23] California Department of Forestry and Fire Protection, *Fire and Resource Assessment Program: FHSZ Viewer*, https://egis.fire.ca.gov/FHSZ/, accessed August 30, 2023.

that with compliance to building practices of CalFIRE, the California Fire Code, the County of San Bernardino Multi-Jurisdictional Hazard Mitigation Plan, the City Local Hazard Mitigation Plan, and the Fire Department, development and infrastructure associated with the approved project would not exacerbate wildfire risk or result in post-wildfire hazards, such as landslides, mudflows, or flooding. Additionally, the approved project includes several policies intended to reduce wildfire hazards and prepare for potential wildfire events. The approved project would not exacerbate wildfire risks or expose people or structures to significant risks that may occur following a wildfire. Impacts were determined to be less than significant.

1300 S Campus Project: As stated in Impact 3.20(a) above, the 1300 S Campus Project site is not located within an SRA or VHFHSZ. Therefore, the 1300 S Campus Project would not exacerbate wildfire risks or expose people or structures to significant risks that may occur following a wildfire, including downslope or downstream flooding or landslides. Additionally, the 1300 S Campus Project would not require the installation or maintenance of associated infrastructure within an SRA or VHFHSZ. Impacts would remain less than significant.

Certified TOP 2050 SEIR Mitigation Measures: No mitigation measures were required in the TOP 2050 SEIR.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project.

3.21 MANDATORY FINDINGS OF SIGNIFICANCE

Based on this Addendum, the 1300 S Campus Project would not result in the need to change the impact conclusions or mitigation measures described in the TOP 2050 SEIR. New circumstances or new information, including any new or revised environmental laws, regulations, or policies have not modified the impact conclusions of the TOP 2050 SEIR.

a) ***Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?***

Approved Project: The TOP 2050 SEIR in its entirety addresses and discloses the potential environmental effects associated with the development that could be facilitated within the approved project area, including direct, indirect, and cumulative impacts. The TOP 2050 SEIR discloses the potential environmental impacts, the level of significance prior to mitigation, approved project requirements that are required by law, feasible mitigation measures, and the level of significance after the incorporation of mitigation measures.

The "Biological Resources" section of the TOP 2050 SEIR (Section 5.4) addresses any impacts that might related to the reduction of fish or wildlife habitat, the reduction of fish or wildlife populations, and the reduction or restriction of the range of special-status species as a result of approved project implementation. The "Cultural Resources" section of the TOP 2050 SEIR (Section 5.5) addresses impacts related to California history and prehistory, historic resources, archaeological resources, and paleontological resources. Paleontological resources are also addressed in Section 5.7, *Geology and Soils*, of the TOP 2050 SEIR.

1300 S Campus Project: The 1300 S Campus Project would not result in impacts beyond those identified in the TOP 2050 SEIR and does not have the potential to degrade the environment, reduce the habitat of a fish or wildlife species, threaten plant or animal communities, reduce, or restrict endangered plant or animal species or eliminate important examples of major periods of California history or prehistory with compliance with the TOP 2050 SEIR mitigation measures. The project site is currently developed with industrial uses and would be redeveloped with industrial uses. The project does not propose to change existing land use designations or zoning districts in the approved project area.

The potentially significant environmental impacts resulting from implementation of the 1300 S Campus Project, specifically those relating to cultural and tribal cultural resources, would be avoided/mitigated through compliance with the established regulatory framework and adherence to the Mitigation Measures identified in the TOP 2050 SEIR, as discussed in Sections 3.5 and 3.18 of this Addendum. No new significant impacts to cultural or tribal cultural resources or substantial increase in the severity of previously identified significant impacts would occur with implementation of the 1300 S Campus Project.

Certified 2022 EIR Mitigation Measures: Refer to mitigation measures identified above.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact with Mitigation.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. The 1300 S Campus Project would result in less than significant impacts in relation to substantial degradation of the environment with implementation of the TOP 2050 SEIR mitigation measures; refer to the "1300 S Campus Project" discussion above.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Approved Project: According to the TOP 2050 SEIR, even with implementation of the mitigation measures identified in the TOP 2050 SEIR, impacts relative to air quality, cultural (historical) resources, noise, and transportation (VMT) would be cumulatively considerable.

1300 S Campus Project: The 1300 S Campus Project is not anticipated to result in impacts that are individually limited, but cumulatively considerable, and all impacts can be reduced to less than significant levels through implementation of the mitigation measures identified in the TOP 2050 SEIR. No new significant cumulative impacts would occur with implementation of the 1300 S Campus Project, nor would there be an increase in the severity of the significant cumulative impacts identified in the TOP 2050 SEIR.

Certified TOP 2050 SEIR Mitigation Measures: Refer to mitigation measures identified above.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact with Mitigation.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. As discussed above, the TOP 2050 SEIR determined that impacts relative to air quality, cultural (historical) resources, noise, and transportation (VMT) associated with implementation of The Ontario Plan 2050 would be cumulatively considerable. The TOP 2050 SEIR notes, however, that identification of this program-level impact does not preclude the finding of less than significant impacts for subsequent projects analyzed at the project level. The 1300 S Campus Project would result in less than significant cumulative impacts with implementation of the TOP 2050 SEIR mitigation measures; refer to Section 3.3, *Air Quality*, Section 3.5, *Cultural Resources*, Section 3.13, *Noise*, and Section 3.17, *Transportation*, above.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Approved Project: Construction-related activities are anticipated to have some relatively minor, temporary impacts which can be mitigated with implementation of measures included in the TOP 2050 SEIR. Potential long-term (operational) impacts would be reduced to less than significant levels through implementation of required TOP 2050 SEIR mitigation measures. Thus, the TOP 2050 SEIR determined that the approved project would not involve environmental effects which would cause substantial adverse effects on human beings, either directly or indirectly.

1300 S Campus Project: Following compliance with the established regulatory framework and the applicable TOP 2050 SEIR mitigation measures, no new significant impacts or substantial increase in the

severity of previously identified significant impacts would occur with implementation of the 1300 S Campus Project.

Certified 2022 EIR Mitigation Measures: Refer to mitigation measures identified above.

Mitigation Measures: No additional mitigation measures are required.

Level of Significance: Less Than Significant Impact with Mitigation.

CEQA Guidelines Section 15183 Evaluation: For the reasons outlined above, the 1300 S Campus Project would not result in impacts that are peculiar to the parcel or to the project. The 1300 S Campus Project would result in less than significant impacts related to substantial adverse effects on human beings with implementation of the TOP 2050 SEIR mitigation measures; refer to the "1300 S Campus Project" discussion above.

APPENDIX A
AIR QUALITY and ENERGY ASSESSMENT

MEMORANDUM

URBAN | CROSSROADS

DATE: August 29, 2023
TO: Heather Crossner, California Acquisitions, LLC
FROM: Haseeb Qureshi, Alyssa Barnett, Shannon Wong
JOB NO: 15297-04 AQ & EA Assesment

1300 S. CAMPUS DRIVE AIR QUALITY AND ENERGY ASSESSMENT

Heather Crossner,

Urban Crossroads, Inc. is pleased to provide the following Air Quality and Energy Assessment for the 1300 S. Campus Drive (**Project**), which is located in the City of Ontario.

PROJECT OVERVIEW

It is our understanding that the Project consists of a single 221,658 square foot warehouse building. The Project site is currently occupied by an existing warehouse that offers storage and reloading services. The Project is located west of Campus Avenue and south of Phillips Street in the City of Ontario as shown on Exhibit 1. A preliminary site plan for the proposed Project is shown in Exhibit 2. The proposed project is anticipated to be constructed and fully operational by the year 2025. Although construction-related criteria air pollutants do not have the potential to exceed the South Coast Air Quality Management District's (SCAQMD's) criteria of significance (see TOP EIR Mitigation Measure 3-1), the Applicant will require construction contractors to comply with a voluntary condition of approval that requires all off-road construction equipment > 50 horsepower (hp) to meet a minimum California Air Resources Board (CARB) Tier 4-interim engine standard. The modeled emissions for the project include this enforceable project design feature.

SUMMARY OF FINDINGS

Results of the assessment indicate that the Project would result in a less than significant impact with respect to air quality and energy and no mitigation is required.

EXHIBIT 1: LOCATION MAP

EXHIBIT 2: PRELIMINARY SITE PLAN

PROJECT AIR QUALITY IMPACTS

AIR QUALITY SETTING

SOUTH COAST AIR BASIN (SCAB)

The Project site is located in the SCAB within the jurisdiction of South Coast Air Quality Management District (SCAQMD) (1). The SCAQMD was created by the 1977 Lewis-Presley Air Quality Management Act, which merged four county air pollution control bodies into one regional district. Under the Act, the SCAQMD is responsible for bringing air quality in areas under its jurisdiction into conformity with federal and state air quality standards. As previously stated, the Project site is located within the SCAB, a 6,745-square mile subregion of the SCAQMD, which includes portions of Los Angeles, Riverside, and San Bernardino Counties, and all of Orange County.

The SCAB is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Los Angeles County portion of the Mojave Desert Air Basin is bounded by the San Gabriel Mountains to the south and west, the Los Angeles / Kern County border to the north, and the Los Angeles / San Bernardino County border to the east. The Riverside County portion of the Salton Sea Air Basin is bounded by the San Jacinto Mountains in the west and spans eastward up to the Palo Verde Valley.

Regional Climate

The regional climate has a substantial influence on air quality in the SCAB. In addition, the temperature, wind, humidity, precipitation, and amount of sunshine influence the air quality.

The annual average temperatures throughout the SCAB vary from the low to middle 60s degrees Fahrenheit (°F). Due to a decreased marine influence, the eastern portion of the SCAB shows greater variability in average annual minimum and maximum temperatures. January is the coldest month throughout the SCAB, with average minimum temperatures of 47°F in downtown Los Angeles and 36°F in San Bernardino. All portions of the SCAB have recorded maximum temperatures above 100°F.

Although the climate of the SCAB can be characterized as semi-arid, the air near the land surface is quite moist on most days because of the presence of a marine layer. This shallow layer of sea air is an important modifier of SCAB climate. Humidity restricts visibility in the SCAB, and the conversion of sulfur dioxide (SO_2) to sulfates (SO_4) is heightened in air with high relative humidity. The marine layer provides an environment for that conversion process, especially during the spring and summer months. The annual average relative humidity within the SCAB is 71 percent (%) along the coast and 59% inland. Since the ocean effect is dominant, periods of heavy early morning fog are frequent and low stratus clouds are a characteristic feature. These effects decrease with distance from the coast.

More than 90% of the SCAB's rainfall occurs from November through April. The annual average rainfall varies from approximately nine inches in Riverside to fourteen inches in downtown Los Angeles. Monthly and yearly rainfall totals are extremely variable. Summer rainfall usually consists of widely scattered thunderstorms near the coast and slightly heavier shower activity in the eastern portion of the SCAB with frequency being higher near the coast.

Due to its generally clear weather, about three-quarters of available sunshine is received in the SCAB. The remaining one-quarter is absorbed by clouds. The ultraviolet portion of this abundant radiation is a key factor in photochemical reactions. On the shortest day of the year there are approximately 10 hours of possible sunshine, and on the longest day of the year there are approximately 14½ hours of possible sunshine.

The importance of wind to air pollution is considerable. The direction and speed of the wind determines the horizontal dispersion and transport of the air pollutants. During the late autumn to early spring rainy season, the SCAB is subjected to wind flows associated with the traveling storms moving through the region from the northwest. This period also brings five to ten periods of strong, dry offshore winds, locally termed "Santa Anas" each year. During the dry season, which coincides with the months of maximum photochemical smog concentrations, the wind flow is bimodal, typified by a daytime onshore sea breeze and a nighttime offshore drainage wind. Summer wind flows are created by the pressure differences between the relatively cold ocean and the unevenly heated and cooled land surfaces that modify the general northwesterly wind circulation over southern California. Nighttime drainage begins with the radiational cooling of the mountain slopes. Heavy, cool air descends the slopes and flows through the mountain passes and canyons as it follows the lowering terrain toward the ocean. Another characteristic wind regime in the SCAB is the "Catalina Eddy," a low level cyclonic (counterclockwise) flow centered over Santa Catalina Island which results in an offshore flow to the southwest. On most spring and summer days, some indication of an eddy is apparent in coastal sections.

In the SCAB, there are two distinct temperature inversion structures that control vertical mixing of air pollution. During the summer, warm high-pressure descending (subsiding) air is undercut by a shallow layer of cool marine air. The boundary between these two layers of air is a persistent marine subsidence/inversion. This boundary prevents vertical mixing which effectively acts as an impervious lid to pollutants over the entire SCAB. The mixing height for the inversion structure is normally situated 1,000 to 1,500 feet above mean sea level.

A second inversion-type forms in conjunction with the drainage of cool air off the surrounding mountains at night followed by the seaward drift of this pool of cool air. The top of this layer forms a sharp boundary with the warmer air aloft and creates nocturnal radiation inversions. These inversions occur primarily in the winter when nights are longer and onshore flow is weakest. They are typically only a few hundred feet above mean sea level. These inversions effectively trap pollutants, such as nitrogen oxides (NO_X) and carbon monoxide (CO) from vehicles, as the pool of cool air drifts seaward. Winter is therefore a period of high levels of primary pollutants along the coastline.

Wind Patterns and Project Location

The distinctive climate of the Project area and the SCAB is determined by its terrain and geographical location. The SCAB is located in a coastal plain with connecting broad valleys and low hills, bounded by the Pacific Ocean in the southwest quadrant with high mountains forming the remainder of the perimeter.

Wind patterns across the south coastal region are characterized by westerly and southwesterly onshore winds during the day and easterly or northeasterly breezes at night. Winds are characteristically light although the speed is somewhat greater during the dry summer months than during the rainy winter season.

Criteria Pollutants

Both the U.S. Environmental Protection Agency (EPA) and the California Air Resources Board (CARB) have established ambient air quality standards for common pollutants. These ambient air quality standards are levels of contaminants representing safe levels that avoid specific adverse health effects associated with each pollutant. The ambient air quality standards cover what are called "criteria" pollutants because the health and other effects of each pollutant are described in criteria documents. The six criteria pollutants are ozone (O_3) (precursor emissions include NO_X and reactive organic gases (ROG), CO, particulate matter (PM), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), and lead. Areas that meet ambient air quality standards are classified as attainment areas, while areas that do not meet these standards are classified as nonattainment areas. The Riverside County portion of the SCAB is designated as a nonattainment area for the federal O_3 and $PM_{2.5}$ standards and is also a nonattainment area for the state standards for O_3, PM_{10}, and $PM_{2.5}$.

Sensitive Receptor Locations

Some people are especially sensitive to air pollution and are given special consideration when evaluating air quality impacts from projects. These groups of people include children, the elderly, and individuals with pre-existing respiratory or cardiovascular illness. Structures that house these persons or places where they gather are defined as "sensitive receptors". These structures typically include uses such as residences, hotels, and hospitals where an individual can remain for 24 hours. Consistent with the LST Methodology, the nearest land use where an individual could remain for 24 hours to the Project site has been used to determine construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$, since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time.

Receptors in the Project study area are described below. All distances are measured from the Project site boundary to the outdoor living areas (e.g., backyards) or at the building façade, whichever is closer to the Project site. Receptors in the Project study area are shown on Exhibit 2 under the Localized Construction Emissions section later in the report.

- Receptor R1 represents the existing residence at 607 E Phillips Street, approximately 89 feet north of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R1 is placed at the building façade.
- Receptor R2 represents the existing residence at 652 E Belmont Street, approximately 79 feet north of the Project site. R2 is placed in the private outdoor living areas (backyard) facing the Project site.
- Receptor R3 represents the existing residence at 705 Woodlawn Street, approximately 174 feet east of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R3 is placed at the building façade.
- Receptor R4 represents the existing residence at 1365 S Monterey Avenue, approximately 33 feet west of the Project site. R4 is placed in the private outdoor living areas (backyard) facing the Project site.

- Receptor R5 represents the existing residence at 1345 S Monterey Avenue, approximately 31 feet west of the Project site. R5 is placed in the private outdoor living areas (backyard) facing the Project site.
- Receptor R6 represents the existing residence at 1321 S Monterey Avenue, approximately 32 feet west of the Project site. R6 is placed in the private outdoor living areas (backyard) facing the Project site.
- Receptor R7 represents the northernmost building of the PRC Composites facility located at 1400 S Campus Avenue, approximately 30 feet south of the Project site.
- Receptor R8 represents the Dependable Highway Express facility located at 1351 S. Campus Avenue, approximately 130 feet east of the Project site.
- Receptor R9 represents De Anza Middle School located at 1450 S. Sultana Avenue, approximately 875 feet southwest of the Project site.

REGULATORY BACKGROUND

FEDERAL REGULATIONS

The EPA is responsible for setting and enforcing the national ambient air quality standards (NAAQS) for O_3, CO, NO_X, SO_2, PM_{10}, and lead (Pb) (2). The EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives, and emissions sources outside state waters (Outer Continental Shelf). The EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of CARB.

The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the NAAQS, and specifies future dates for achieving compliance (3). The CAA also mandates that each state submit and implement state implementation plans (SIPs) for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards will be met.

The 1990 amendments to the CAA that identify specific emission reduction goals for areas not meeting the NAAQS require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions) (4) (5). Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants O_3, NO_2, SO_2, PM_{10}, CO, $PM_{2.5}$, and Pb. The NAAQS were amended in July 1997 to include an additional standard for O_3 and to adopt a NAAQS for $PM_{2.5}$.

Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and NO_X. NO_X is a collective term that includes all forms of NO_X which are emitted as byproducts of the combustion process.

CALIFORNIA REGULATIONS

CARB

The CARB, which became part of the California EPA (CalEPA) in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. AB 2595 mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. The CARB established the California ambient air quality standards (CAAQS) for all pollutants for which the federal government has NAAQS and, in addition, establishes standards for SO_4, visibility, hydrogen sulfide (H_2S), and vinyl chloride (C_2H_3Cl). However, at this time, H_2S and C_2H_3Cl are not measured at any monitoring stations in the SCAB because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS (6) (7).

Local air quality management districts, such as the SCAQMD, regulate air emissions from stationary sources such as commercial and industrial facilities. All air pollution control districts have been formally designated as attainment or non-attainment for each CAAQS.

Serious non-attainment areas are required to prepare Air Quality Management Plans (AQMP) that include specified emission reduction strategies in an effort to meet clean air goals. These plans are required to include:

- Application of Best Available Retrofit Control Technology to existing sources;
- Developing control programs for area sources (e.g., architectural coatings and solvents) and indirect sources (e.g. motor vehicle use generated by residential and commercial development);
- A District permitting system designed to allow no net increase in emissions from any new or modified permitted sources of emissions;
- Implementing reasonably available transportation control measures and assuring a substantial reduction in growth rate of vehicle trips and miles traveled;
- Significant use of low emissions vehicles by fleet operators;
- Sufficient control strategies to achieve a 5% or more annual reduction in emissions or 15% or more in a period of three years for ROGs, NO_X, CO and PM_{10}. However, air basins may use alternative emission reduction strategy that achieves a reduction of less than 5% per year under certain circumstances.

AQMP

Currently, the NAAQS and CAAQS are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMP to meet the state and federal ambient air quality standards (8). AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

APPLICABLE REGULATORY REQUIREMENTS

SCAQMD Rules that are currently applicable during construction activity for this Project include but are not limited to Rule 403 (Fugitive Dust) and Rule 1113 (Architectural Coatings) (9) (10).

SCAQMD Rule 403

This rule is intended to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic (human-made) fugitive dust sources by requiring actions to prevent and reduce fugitive dust emissions. Rule 403 applies to any activity or human-made condition capable of generating fugitive dust and requires best available control measures to be applied to earth moving and grading activities. This rule is intended to reduce PM_{10} emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust. PM_{10} suppression techniques are summarized below.

- Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.
- All onsite roads will be paved as soon as feasible or watered periodically or chemically stabilized.
- All material transported offsite will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
- The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
- Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the workday to remove soil tracked onto the paved surface.

SCAQMD Rule 1113

This rule serves to limit the volatile organic compound (VOC) content of architectural coatings used on projects in the SCAQMD. Any person who supplies, sells, offers for sale, or manufactures any architectural coating for use on projects in the SCAQMD must comply with the current VOC standards set in this rule.

METHODOLOGY

In May 2022, the California Air Pollution Control Officers Association (CAPCOA) in conjunction with other California air districts, including SCAQMD, released the latest version of the CalEEMod Version 2022.1. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$) from direct and indirect sources; and quantify applicable air quality emissions reductions achieved from mitigation measures (11). Accordingly, the latest version of CalEEMod has been used for this Project to determine construction and operational air quality emissions.

Standards of Significance

The criteria used to determine the significance of potential Project-related air quality impacts are taken from the California Environmental Quality Act Guidelines (CEQA Guidelines) (14 CCR

§§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would (12):

- **Threshold 1**: Conflict with or obstruct implementation of the applicable air quality plan.
- **Threshold 2**: Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard.
- **Threshold 3**: Expose sensitive receptors to substantial pollutant concentrations.
- **Threshold 4**: Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

AIR QUALITY REGIONAL EMISSIONS THRESHOLDS

The SCAQMD has developed regional significance thresholds for criteria pollutants, as summarized at Table 1 (13). The SCAQMD's CEQA Air Quality Significance Thresholds (April 2019) indicate that any projects in the South Coast Air Basin (SCAB) with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

TABLE 1: MAXIMUM DAILY REGIONAL EMISSIONS THRESHOLDS

Pollutant	Construction	Operations
NO_X	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM_{10}	150 lbs/day	150 lbs/day
$PM_{2.5}$	55 lbs/day	55 lbs/day
SO_X	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day

lbs/day – Pounds Per Day

AIR QUALITY LOCALIZED EMISSIONS THRESHOLDS

For this Project, the appropriate Source Receptor Area (SRA) for the LST analysis is the SCAQMD Southwest San Bernardino Valley monitoring station (SRA 33). LSTs apply to CO, NO_2, PM_{10}, and $PM_{2.5}$. The SCAQMD produced look-up tables for projects less than or equal to 5 acres in size. The SCAQMD's screening look-up tables are utilized in determining localized impacts. It should be noted that since the look-up tables identify thresholds at only 1 acre, 2 acres, and 5 acres, linear regression has been utilized to determine localized significance thresholds. Consistent with SCAQMD guidance, the thresholds presented in Table 2 were calculated by interpolating the threshold values for the Project's disturbed acreage.

The acres disturbed is based on the equipment list and days in the demolition, site preparation, and grading phase according to the anticipated maximum number of acres a given piece of equipment can pass over in an 8-hour workday. The equipment-specific grading rates are summarized in the CalEEMod user's guide, Appendix A: Calculation Details for CalEEMod (14). It

should be noted that the disturbed area per day is representative of a piece of equipment making multiple passes over the same land area. In other words, one Rubber Tired Dozer can make multiple passes over the same land area totaling 0.5 acres in a given 8-hour day. Appendix A of the CalEEMod User Manual only identifies equipment-specific grading rates for Crawler Tractors, Graders, Rubber Tired Dozers, and Scrapers; therefore, Tractors/Loaders/Backhoes equipment that was included in the site preparation and grading phase was replaced with Crawler Tractors. For analytical purposes, emissions associated with peak site preparation and grading activities are considered for purposes of localized significance thresholds (LSTs) since this phase represents the maximum localized emissions that would occur. The Project's construction activities could disturb a maximum of approximately 1 acre per day for demolition, 5 acres per day for site preparation, and 4 acres per day for grading activities. Any other construction phases of development would result in lesser emissions and consequently lesser impacts than what is disclosed herein. As such, Table 2 presents thresholds for localized construction and operational emissions.

TABLE 2: MAXIMUM DAILY LOCALIZED EMISSIONS THRESHOLDS

Source	Activity	Emissions (lbs/day)			
		NO_X	CO	PM_{10}	$PM_{2.5}$
Construction	Demolition	118 lbs/day	863 lbs/day	5 lbs/day	4 lbs/day
	Site Preparation	270 lbs/day	2,193 lbs/day	16 lbs/day	9 lbs/day
	Grading	237 lbs/day	1,873 lbs/day	13 lbs/day	8 lbs/day

[1]Source of localized significance threshold (LSTs) is provided on page 8.

CONSTRUCTION ACTIVITIES

Construction activities associated with the Project would result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Construction related emissions are expected from the following construction activities:

- Demolition
- Site Preparation
- Grading (Import/Export)
- Building Construction
- Paving
- Architectural Coating

DEMOLITION ACTIVITIES

The site is currently developed with an existing 32,534 square foot warehouse and 300 square foot outhouse. This analysis assumes that demolition of 32,834 square feet of building structures which will be hauled off-site.

GRADING ACTIVITIES

Dust is typically a major concern during grading activities. Because such emissions are not amenable to collection and discharge through a controlled source, they are called "fugitive emissions". Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). CalEEMod was utilized to calculate fugitive dust emissions resulting from this phase of activity. Per client provided data, the Project is expected to balance, and import/export would not be required.

ON-ROAD TRIPS

Construction generates on-road vehicle emissions from vehicle usage for workers, vendors, and haul trucks commuting to and from the site. Worker and hauling trips are based on CalEEMod defaults. It should be noted that for vendor trips, specifically, CalEEMod only assigns vendor trips to the Building Construction phase. Vendor trips would likely occur during all phases of construction. As such, the CalEEMod defaults for vendor trips have been adjusted based on a ratio of the total vendor trips to the number of days of each subphase of activity.

CONSTRUCTION DURATION

For purposes of analysis, construction of Project is expected to commence in August 2024 and would last through June 2025. The construction schedule utilized in the analysis represents a "worst-case" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission regulations becoming more stringent[1]. The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per CEQA Guidelines (15).

REGIONAL CONSTRUCTION EMISSIONS SUMMARY

The estimated maximum daily construction emissions without mitigation are summarized in Table 3. Detailed construction model outputs are presented in Attachment A. Under the assumed scenarios, emissions resulting from the Project construction will not exceed thresholds established by the SCAQMD for emissions of any criteria pollutant and no mitigation is required. As noted above, all off-road equipment > 50 hp would meet a minimum CARB Tier 4-interim engine standard. The modeled emissions for the project include this enforceable project design feature.

[1] As shown in the CalEEMod User's Guide Version 2022.1, Section 4.3 "Off-Road Equipment" as the analysis year increases, emission factors for the same equipment pieces decrease due to the natural turnover of older equipment being replaced by newer less polluting equipment and new regulatory requirements.

TABLE 3: REGIONAL CONSTRUCTION EMISSIONS SUMMARY

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
2024	2.14	41.23	80.89	0.13	11.00	5.01

Threshold Exceeded?	NO	NO	NO	NO	NO	NO

[1]PM_{10} and $PM_{2.5}$ source emissions reflect 3x daily watering per SCAQMD Rule 403 for fugitive dust.

EXISTING OPERATIONAL EMISSIONS

As noted previously, the site is currently partially occupied by an existing warehouse that offers satellite storage and reloading services. As shown on Table 4, operational air quality impacts derive primarily from vehicle trips generated by the existing use. Trip characteristics available from the *1300 S. Campus Drive Trip Generation Assessment* were utilized in this analysis (16). Detailed operation model outputs are presented in Attachment B.

TABLE 4: EXISTING REGIONAL OPERATIONAL EMISSIONS

Source	Emissions (lbs/day)

Total Maximum Daily Emissions	**1.08**	**1.20**	**2.40**	**0.01**	**0.67**	**0.19**

REGIONAL OPERATIONAL EMISSIONS

Operational activities associated with the Project would result in emissions of VOCs, NO_X, CO, SO_X, PM_{10}, and $PM_{2.5}$. Operational related emissions are expected from the following primary sources: area source emissions, energy source emissions, and mobile source emissions.

The Project related operational air quality impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the *1300 S. Campus Drive Trip Generation Assessment* were utilized in this analysis (17).

To determine emissions from trucks for the proposed industrial uses, the analysis incorporated the SCAQMD recommended truck trip length 15.3 miles for 2-axle (LHDT1, LHDT2) trucks, 14.2 miles 3-axle (MHDT) trucks and 39.9 miles for 4+-axle (HHDT) trucks and weighting the average trip lengths using the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%. The trip length function for trucks in CalEEMod has been revised to 30.49 miles, with an assumption of 100% primary trips for the proposed industrial land uses.

It is common for warehouse buildings to require the operation of exterior yard trucks or cargo handling equipment (CHE) to move empty containers and empty chassis in the building's truck court areas. The cargo handling equipment is assumed to have a horsepower (hp) range of approximately 175 hp to 200 hp. Based on the latest available information from SCAQMD (18); for example, warehouse projects typically have 3.6-yard trucks/CHE per million square feet of building space. For this Project, on-site modeled operational equipment conservatively includes up to one (1) 200 horsepower (hp), compressed natural gas or gasoline-powered tractors/loaders/backhoes operating at 4 hours a day[2] for 365 days of the year.

The estimated operation-source emissions from the Project are summarized in Table 5. Detailed operation model outputs are presented in Attachment C.

TABLE 5: TOTAL PROJECT REGIONAL OPERATIONAL EMISSIONS

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
Mobile Source	1.18	12.90	15.90	0.12	5.53	1.58

PROJECT NET NEW OPERATIONAL EMISSIONS – COMPARISON TO EXISTING

As shown in Table 6, the proposed Project is anticipated to generate slightly more emissions per day for pollutants of VOC, NO_X, CO, SO_X, PM_{10}, and $PM_{2.5}$ as compared to emissions generated by the existing land use.

TABLE 6: PROJECT NET NEW REGIONAL OPERATIONAL EMISSIONS

Source	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer						
Existing	8.21	13.36	41.98	0.12	5.58	1.62
Proposed	1.33	1.16	4.19	0.01	0.67	0.19
Net Emissions (Existing – Proposed)	**6.88**	**12.20**	**37.79**	**0.11**	**4.91**	**1.43**
Winter						
Existing	6.57	13.88	30.84	0.12	5.56	1.61
Proposed	1.08	1.20	2.40	0.01	0.67	0.19
Net Emissions (Existing – Proposed)	**5.49**	**12.68**	**28.44**	**0.11**	**4.89**	**1.42**

SENSITIVE RECEPTORS

The analysis uses the methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology) (19). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs). The SCAQMD established LSTs in response to the

SCAQMD Governing Board's Environmental Justice Initiative I-43. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

The SCAQMD recommends that the nearest sensitive receptor be considered when determining the Project's potential to cause an individual or cumulatively significant impact. The nearest land use where an individual could remain for 24 hours to the Project site has been used to determine localized construction and operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and PM2.5 thresholds are based on a 24-hour averaging time). The nearest receptor used for evaluation of localized impacts of PM_{10} and $PM_{2.5}$ is location R5 represented by the existing residence at 1345 S Monterey Avenue, approximately 31 feet (9 meters) west of the Project site.

As previously stated, and consistent with LST Methodology, the nearest industrial/commercial use to the Project site is used to determine construction and operational LST air impacts for emissions of NO_X and CO as the averaging periods for these pollutants are shorter (8 hours or less) and it is reasonable to assume that an individual could be present at these sites for periods of one to 8 hours. Based on review of the Project area, construction activity surrounds the Project site. As such, it can be assumed that an individual can be present at these construction areas for a period of 8 hours. The nearest receptor used for evaluation of localized impacts of NO_X and CO is location R7 represented by the northernmost building of the PRC Composites facility located at 1400 S Campus Avenue, approximately 30 feet (9 meters) west of the Project site.

It should be noted that the *LST Methodology* explicitly states that "*It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters* (19)." As such, for evaluation of localized PM_{10}, $PM_{2.5}$, NO_X, and CO, a 25-meter distance will be used.

3 The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "…equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

EXHIBIT 2: SENSITIVE RECEPTOR LOCATIONS

LOCALIZED CONSTRUCTION EMISSIONS

Table 7 identifies the localized impacts at the nearest receptor location in the vicinity of the Project. Outputs from the model runs for construction LSTs are provided in Attachment A. For analytical purposes, emissions associated with peak demolition, site preparation, and grading activities are considered for purposes of LSTs since these phases represent the maximum localized emissions that would occur. Any other construction phases of development that overlap would result in less emissions and consequently less impacts than what is disclosed herein. As shown in Table 7, emissions resulting from the construction will not exceed the numerical thresholds of significance established by the SCAQMD for any criteria pollutant. Thus, a less than significant impact would occur for localized Project-related construction-source emissions and no mitigation is required.

TABLE 7: PROJECT LOCALIZED CONSTRUCTION IMPACTS

On-Site Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Demolition				
Maximum Daily Emissions	**10.80**	**18.36**	**1.19**	**0.33**

Threshold Exceeded?	NO	NO	NO	NO
Site Preparation				
Maximum Daily Emissions	**21.87**	**41.57**	**7.78**	**3.73**
SCAQMD Localized Threshold	270	2,193	16	9
Threshold Exceeded?	NO	NO	NO	NO
Grading				
Maximum Daily Emissions	**18.93**	**35.39**	**2.57**	**1.12**
SCAQMD Localized Threshold	237	1,873	13	8
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

LOCALIZED OPERATIONAL EMISSIONS

Table 8 identifies the localized impacts at the nearest receptor location in the vicinity of the Project. Outputs from the model runs for operational LSTs are provided in Attachment C. As shown in Table 8, emissions resulting from the operations will not exceed the numerical thresholds of significance established by the SCAQMD for any criteria pollutant. Thus, a less than significant impact would occur for localized Project-related operational-source emissions and no mitigation is required.

TABLE 8: PROJECT LOCALIZED OPERATIONAL IMPACTS

On-Site Emissions	Emissions (lbs/day)

Summer	2.04	28.97	0.14	0.07
Winter	2.03	19.58	0.12	0.06
Maximum Daily Emissions	**2.04**	**28.97**	**0.14**	**0.07**
SCAQMD Localized Threshold	270	2,193	4	2
Threshold Exceeded?	NO	NO	NO	NO

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 1

Would the Project conflict with or obstruct implementation of the applicable air quality plan?

The Project site is located within the SCAB, which is characterized by relatively poor air quality. The SCAQMD has jurisdiction over an approximately 10,743 square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions of what use to be referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the Southern California Association of Governments (SCAG), county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of AQMPs to meet the state and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

In December 2022, the SCAQMD released the *Final 2022 AQMP* (*2022 AQMP*). The *2022 AQMP* continues to evaluate current integrated strategies and control measures to meet the CAAQS, as well as explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (20). Similar to the 2016 AQMP, the *2022 AQMP* incorporates scientific and technological information and planning assumptions, including the *2020-2045 RTP/SCS*, a planning document that supports the integration of land use and transportation to help the region meet the federal CAA requirements (21). The Project's consistency with the AQMP will be determined using the *2022 AQMP* as discussed below.

Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the 1993 CEQA Handbook (22). These indicators are discussed below.

The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

The violations under this criterion refer to the CAAQS and NAAQS. CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded.

CAAQS and NAAQS violations would occur if regional or localized significance thresholds were exceeded. As evaluated, the Project's regional and localized construction and operational-source emissions would not exceed applicable regional significance thresholds. As such, a less than significant impact is expected.

On the basis of the preceding discussion, the Project is determined to be consistent with the first criterion.

The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

The 2022 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in City of Ontario General Plan is considered to be consistent with the AQMP.

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As such, when considering that no emissions thresholds will be exceeded, a less than significant impact would result.

The Project is currently designated for Industrial uses within the Ontario General Plan, which is consistent with the proposed Project land use. The Project consists of a single 221,658 square foot warehouse building.

The proposed Industrial designation allows for a variety of light industrial uses, including warehousing/distribution, assembly, light manufacturing, research and development, storage, repair facilities, and supporting retail and professional office uses. This designation also accommodates activities that could potentially generate impacts, such as noise, dust, and other nuisances. (23). The proposed warehouse use is consistent with use allowed under the proposed Industrial land use designation. Furthermore, the Project, as evaluated herein would not result in or cause exceedances of regional or localized air quality significance thresholds. Emissions generated by the Project are accurately represented in the AQMP emissions modeling, air pollution control strategies, and associated assumptions for emissions affecting the Basin.

As the proposed Project is consistent with site's land use designation, would not exceed any applicable regional or local thresholds, and would not result in or cause NAAQS or CAAQS violations, the Project is therefore considered to be consistent with the AQMP and a less than significant impact is expected.

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 2

Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?

The CAAQS designate the region in which the Project site is located as nonattainment for O_3, PM_{10}, and $PM_{2.5}$ while the NAAQS designates the Project site's region as nonattainment for O_3 and $PM_{2.5}$.

The SCAQMD has published a report on how to address cumulative impacts from air pollution: White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution (24). In this report the SCAQMD clearly states (Page D-3):

> *"…the SCAQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for TAC emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.*
>
> *Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."*

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which SCAB is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable.

Construction Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project construction-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, the proposed Project construction-source emissions would be considered less than significant on a project-specific and cumulative basis.

Operational Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that proposed Project operational-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, the proposed Project operational-source emissions would be considered less than significant on a project-specific and cumulative basis.

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 3

Would the expose sensitive receptors to substantial pollutant concentrations?

The potential impact of Project-generated air pollutant emissions at sensitive receptors has also been considered. Results of the LST analysis indicate that the Project will not exceed the SCAQMD localized significance thresholds during construction. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations during Project construction.

Additionally, the Project will not exceed the SCAQMD localized significance thresholds during operational activity. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations as the result of Project operations.

CO "HOT SPOT" ANALYSIS

As discussed below, the Project would not result in potentially adverse CO concentrations or "hot spots." Further, detailed modeling of Project-specific CO "hot spots" is not needed to reach this conclusion. An adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur.

It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last twenty years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SCAB is now designated as attainment. To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods. This "hot spot" analysis did not predict any violation of CO standards, as shown on Table 9.

TABLE 9: CO MODEL RESULTS

Intersection Location	CO Concentrations (ppm)		
	Morning 1-hour	Afternoon 1-hour	8-hour
Wilshire Boulevard/Veteran Avenue	4.6	3.5	3.7
Sunset Boulevard/Highland Avenue	4	4.5	3.5
La Cienega Boulevard/Century Boulevard	3.7	3.1	5.2
Long Beach Boulevard/Imperial Highway	3	3.1	8.4

Notes: Federal 1-hour standard is 35 ppm and the deferral 8-hour standard is 9.0 ppm.

Based on the SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan), peak carbon monoxide concentrations in the SCAB were a result of unusual meteorological and topographical conditions and not a result of traffic volumes and congestion at a particular intersection. As evidence of this, for example, 8.4 ppm 8-hr CO concentration

measured at the Long Beach Blvd. and Imperial Hwy. intersection (highest CO generating intersection within the "hot spot" analysis), only 0.7 ppm was attributable to the traffic volumes and congestion at this intersection; the remaining 7.7 ppm were due to the ambient air measurements at the time the 2003 AQMP was prepared (25). In contrast, an adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur.

Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD) concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour (vph)—or 24,000 vph where vertical and/or horizontal air does not mix—in order to generate a significant CO impact (26). Traffic volumes generating the CO concentrations for the "hot spot" analysis is shown on Table 10. The busiest intersection evaluated was that at Wilshire Boulevard and Veteran Avenue, which has a daily traffic volume of approximately 100,000 vph and AM/PM traffic volumes of 8,062 vph and 7,719 vph respectively (27). The 2003 AQMP estimated that the 1-hour concentration for this intersection was 4.6 ppm; this indicates that, should the daily traffic volume increase four times to 400,000 vehicles per day, CO concentrations (4.6 ppm x 4= 18.4 ppm) would still not likely exceed the most stringent 1-hour CO standard (20.0 ppm). Therefore, the Project would have less than significant impacts with respect to CO hotspots.

TABLE 10: CO MODEL RESULTS

Intersection Location	Peak Traffic Volumes (vph)				
	Eastbound (AM/PM)	Westbound (AM/PM)	Southbound (AM/PM)	Northbound (AM/PM)	Total (AM/PM)
Wilshire Boulevard/Veteran Avenue	4,954/2,069	1,830/3,317	721/1,400	560/933	8,062/7,719
Sunset Boulevard/Highland Avenue	1,417/1,764	1,342/1,540	2,304/1,832	1,551/2,238	6,614/5,374
La Cienega Boulevard/Century Boulevard	2,540/2,243	1,890/2,728	1,384/2,029	821/1,674	6,634/8,674
Long Beach Boulevard/Imperial Highway	1,217/2,020	1,760/1,400	479/944	756/1,150	4,212/5,514

AIR QUALITY IMPACTS – CONSISTENCY WITH THRESHOLD NO. 4

Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

The potential for the Project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting operations
- Refineries

- Landfills
- Dairies
- Fiberglass molding facilities

The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the solid waste regulations. The proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed Project construction and operations would be less than significant and no mitigation is required (28).

PROJECT ENERGY ANALYSIS

Standards of Significance

Appendix F of the State CEQA Guidelines (29), states that the means of achieving the goal of energy conservation includes the following:

- Decreasing overall per capita energy consumption;
- Decreasing reliance on fossil fuels such as coal, natural gas, and oil; and
- Increasing reliance on renewable energy sources.

According to Appendix F, the analysis should include a description of energy conservation measures included as part of the project and should consider whether a project would result in inefficient, wasteful and unnecessary consumption of energy. In compliance with Appendix F and Appendix G of the State CEQA Guidelines (30), this report analyzes the Project's anticipated energy use during construction and operations to determine if the Project would:

Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; or

- Conflict with or obstruct a state or local plan for renewable energy or energy efficiency

Emission Factors Model

Vehicle fuel efficiencies for light-duty-auto vehicles (LDA), light-duty-trucks (LDT1), and light-duty-trucks (LDT2) were estimated using information generated within the 2021 version of the EMFAC developed by the California Air Resources Board (CARB). EMFAC2021 is a mathematical model that was developed to calculate emission rates, fuel consumption, and VMT from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by CARB to project changes in future emissions from on-road mobile sources (31). EMFAC2021 was run

for the LDA, LDT1, and LDT2 vehicle class within the California Los Angeles South-Coast sub-area for the 2024 and 2025 calendar years. Data from EMFAC2021 is shown in Attachment D.

CONSTRUCTION ENERGY DEMANDS

CONSTRUCTION EQUIPMENT ELECTRICITY USAGE EMISSIONS

The *2023 National Construction Estimator* identifies a typical power cost per 1,000 sf of construction per month of $2.50, which was used to calculate the Project's total construction power cost (32).

Based on Table 11, the total power cost of the on-site electricity usage during the construction of the Project is estimated to be approximately $8,547.23. As shown on Table 12, the total electricity usage from on-site Project construction related activities is estimated to be approximately 64,889 kWh.

TABLE 11: PROJECT CONSTRUCTION POWER COST

Land Use	Power Cost (per 1,000 SF of building per month of construction)	Total Building Size (1,000 SF)	Construction Duration (months)	Project Construction Power Cost
Warehouse	$2.50	221.658	9	$4,987.31
Parking Lot	$2.50	39.051	9	$878.65
Other Asphalt Surfaces	$2.50	119.168	9	$2,681.28
			TOTAL PROJECT CONSTRUCTION POWER COST	***$8,547.23***

Other Asphalt Surfaces	$0.13	20,356
TOTAL PROJECT CONSTURCTION ELECTRICTY USAGE (kWh)		***64,889***

[1]Assumes the Project will be under the GS-1 General Service Rate under Southern California Edison

CONSTRUCTION EQUIPMENT FUEL ESTIMATES

As presented in Table 13, Project construction activities would consume an estimated 42,284 gallons of diesel fuel. Project construction would represent a "single-event" diesel fuel demand and would not require on-going or permanent commitment of diesel fuel resources for this purpose.

CONSTRUCTION WORKER FUEL ESTIMATES

With respect to estimated VMT, the construction worker trips would generate an estimated 250,324 VMT. Based on CalEEMod methodology, it is assumed that 50% of all vendor trips are from LDA, 25% are from LDT1, and 25% are from LDT2. Data regarding Project related construction worker trips were based on CalEEMod defaults for the land use type and project location which are also utilized within the air quality assessment and CalEEMod outputs contained herein.

As shown on Table 14, it is estimated that 8,947 gallons of fuel will be consumed related to construction worker trips during full construction of the proposed Project. Project construction worker trips would represent a "single-event" gasoline fuel demand and would not require on-going or permanent commitment of fuel resources for this purpose.

CONSTRUCTION VENDOR/HAULING FUEL ESTIMATES

With respect to estimated VMT, the construction vendor trips would generate an estimated 37,099 VMT. It is assumed that 50% of all vendor trips are from medium-heavy duty trucks (MHDT), 50% of vendor trips are from heavy-heavy duty trucks (HHDT), and 100% of hauling trips are from HHDTs. As shown on Table 15, it is estimated that 5,448 gallons of fuel will be consumed related to construction vendor trips (medium duty trucks) during full construction of the Project. Project construction vendor trips would represent a "single- event" diesel fuel demand and would not require on-going or permanent commitment of diesel fuel resources for this purpose.

CONSTRUCTION ENERGY DEMANDS SUMMARY

Construction equipment use of fuel would not be atypical for the type of construction proposed because there are no aspects of the Project's proposed construction process that are unusual or energy-intensive, and Project construction equipment would conform to the applicable CARB emissions standards, acting to promote equipment fuel efficiencies.

CCR Title 13, Title 13, Motor Vehicles, section 2449(d)(3) Idling, limits idling times of construction vehicles to no more than 5 minutes, thereby precluding unnecessary and wasteful consumption of fuel due to unproductive idling of construction equipment. Best Available Control Measures (BACMs) inform construction equipment operators of this requirement.

With regard to construction worker trips, the 2022 IEPR released by the CEC has shown that fuel efficiencies are getting better within on and off-road vehicle engines due to more stringent government requirements. As supported by the preceding discussions, Project construction energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary.

OPERATIONAL ENERGY DEMANDS

EXISTING TRANSPORTATION ENERGY DEMANDS

The estimated transportation energy demands associated with the existing use are summarized in Table 16.

TABLE 16: EXISTING USE-GENERATED VEHICLE TRAFFIC ANNUAL FUEL CONSUMPTION

Existing Use	Annual VMT	Estimated Annual Fuel Consumption (gallons)
(ALL VEHICLES)	***228,691***	***15,859***

TRANSPORTATION ENERGY DEMANDS

Energy that would be consumed by Project-generated traffic is a function of total VMT and estimated vehicle fuel economies of vehicles accessing the Project site. The VMT per vehicle class can be determined by the vehicle fleet mix and the total VMT. As with worker and vendors trips, operational vehicle fuel efficiencies were estimated using information generated within EMFAC2021 developed by CARB (31). As summarized on Table 17 the Project will result in a 1,753,090 annual VMT and an estimated annual fuel consumption of 173,608 gallons of fuel.

TABLE 17: PROJECT-GENERATED VEHICLE TRAFFIC ANNUAL FUEL CONSUMPTION

Vehicle Type	Average Vehicle Fuel Economy (mpg)	Annual VMT	Estimated Annual Fuel Consumption (gallons)
LDA	32.57	360,143	11,058

PROJECT NET NEW TRANSPORTATION ENERGY DEMANDS – COMPARISON TO EXISTING

Table 18 shows the Project is anticipated to require more transportation energy demands annually as compared to the existing land use.

TABLE 18: PROJECT NET NEW TRANSPORTATION ENERGY DEMANDS

Source	Estimated Annual Fuel Consumption (gallons)
Proposed	173,608
Existing	15,859
Net Transportation Energy Demands (Proposed – Existing)	**157,749**

OPERATIONAL ENERGY DEMANDS SUMMARY

The Project proposes conventional residential uses reflecting contemporary energy efficient/energy conserving designs and operational programs. The Project does not propose uses that are inherently energy intensive and the energy demands in total would be comparable to other residential land use projects of similar scale and configuration.

The Project would comply with the City's Climate Action Plan (CAP) Checklist and includes measures such as installation of photovoltaic solar power that would generate enough electricity to meet 100% of the electricity demand, building electrification, and urban cooling measures. The Project will comply with the applicable Title 24 standards which will ensure that the Project energy demands would not be inefficient, wasteful, or otherwise unnecessary.

The Project would not cause or result in the need for additional energy producing or transmission facilities. The Project would not engage in wasteful or inefficient uses of energy and aims to

achieve energy conservations goals within the State of California. As supported by the preceding analyses, Project operations would not result in the inefficient, wasteful, or unnecessary consumption of energy.

EXISTING USE ENERGY DEMANDS

The estimated energy demands associated with the existing use are summarized in Table 19.

TABLE 22: EXISTING USE ANNUAL OPERATIONAL ENERGY DEMAND SUMMARY

Existing Use	Natural Gas Demand (kBTU/year)	Electricity Demand (kWh/year)
EXISTING ENERGY DEMAND	***624,197***	***151,651***

PROJECT ENERGY DEMANDS

As shown in Table 20, the Project operational energy demands are estimated to result in 1,058,115 kWh/year of electricity which would be supplied by Southern California Edison. Based on information provided by the Project Applicant, the Project would not use natural gas for the building envelope. As such, natural gas consumption has not been analyzed in this study.

TABLE 20: PROJECT ANNUAL OPERATIONAL ENERGY DEMAND SUMMARY

Land Use	Natural Gas Demand (kBTU/year)	Electricity Demand (kWh/year)

PROJECT NET NEW ENERGY DEMANDS – COMPARISON TO EXISTING

Table 21 shows the Project is anticipated to generate less natural gas and more electricity annually as compared to the existing land use.

TABLE 21: PROJECT NET NEW ENERGY DEMANDS

Source	Natural Gas Demand (kBTU/year)	Electricity Demand (kWh/year)
Project	0	1,058,115
Existing	624,197	151,651
Net Emissions (Proposed – Existing)	**-624,197**	**906,465**

OPERATIONAL ENERGY DEMANDS SUMMARY

The Project proposes conventional industrial uses reflecting contemporary energy efficient/energy conserving designs and operational programs. The Project does not propose

uses that are inherently energy intensive and the energy demands in total would be comparable to other industrial land use projects of similar scale and configuration.

The Project will comply with the applicable Title 24 standards which will ensure that the Project energy demands would not be inefficient, wasteful, or otherwise unnecessary.

The Project would not cause or result in the need for additional energy producing or transmission facilities. The Project would not engage in wasteful or inefficient uses of energy and aims to achieve energy conservations goals within the State of California. As supported by the preceding analyses, Project operations would not result in the inefficient, wasteful, or unnecessary consumption of energy.

ENERGY IMPACT 1

Would the Project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

As supported by the preceding analyses, Project construction and operations would not result in the inefficient, wasteful, or unnecessary consumption of energy. In fact, the Project uses consistent with the land use designation and zoning identified for the project site. Electrical energy would be available for use during construction from existing power lines and connections, precluding the use of less-efficient generators. The Project would therefore not cause or result in the need for additional energy producing or transmission facilities. The Project would not engage in wasteful or inefficient uses of energy and aims to achieve energy conservations goals within the State of California.

ENERGY IMPACT 2

Would the Project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

The Project will not conflict with any applicable state or local plans. The Project proposes conventional industrial uses reflecting contemporary energy efficient/energy conserving designs and operational programs. The Project does not propose uses that are inherently energy intensive and the energy demands in total would be comparable to other industrial land use projects of similar scale and configuration.

The Project would comply with the City's Climate Action Plan (CAP) Checklist and includes measures such as installation of photovoltaic solar power that would generate enough electricity to meet 100% of the electricity demand, building electrification, and urban cooling measures. The Project will comply with the applicable Title 24 standards which will ensure that the Project energy demands will not be inefficient, wasteful, or otherwise unnecessary.

The existing building uses electricity for uses including heating, cooling, and ventilation of buildings; water heating; operation of electrical systems; lighting; and on-site equipment and appliances. The proposed project would comply with the most current Building Energy Efficiency Standards, including the California Code of Regulations (CCR) Title 24, Part 11: California Green Building Standards. The project would not result in wasteful, inefficient, or unnecessary

consumption of energy resources and would not conflict with or obstruct a State or local plan for energy efficiency. Impacts would be less than significant.

CONCLUSION

Results of the assessment indicate that the Project is not anticipated to result in any new impacts associated with air quality and energy.

1300 S. Campus (Construction) Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

3. Construction Emissions Details

3.1. Demolition (2024) - Unmitigated

3.3. Site Preparation (2024) - Unmitigated

3.5. Grading (2024) - Unmitigated

3.7. Building Construction (2024) - Unmitigated

3.9. Building Construction (2025) - Unmitigated

3.11. Paving (2025) - Unmitigated

3.13. Architectural Coating (2025) - Unmitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	1300 S. Campus (Construction)
Construction Start Date	8/1/2024
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	2.80
Precipitation (days)	20.8
Location	34.05052, -117.64268
County	San Bernardino-South Coast
City	Ontario
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	5253
EDFZ	10
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.18

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	222	1000sqft	6.79	221,658	73,943	—	—	—

Parking Lot	155	Space	0.90	0.00	0.00	—	—	—
Other Asphalt Surfaces	2.74	Acre	2.74	0.00	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	4.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	82.5
AQ-PM	97.4
AQ-DPM	83.1
Drinking Water	93.3
Lead Risk Housing	87.2
Pesticides	28.6
Toxic Releases	68.8
Traffic	31.4
Effect Indicators	—
CleanUp Sites	62.4
Groundwater	66.4

Haz Waste Facilities/Generators	79.2
Impaired Water Bodies	0.00
Solid Waste	55.5
Sensitive Population	—
Asthma	46.2
Cardio-vascular	61.7
Low Birth Weights	39.5
Socioeconomic Factor Indicators	—
Education	95.3
Housing	38.1
Linguistic	77.4
Poverty	87.9
Unemployment	66.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	8.212498396
Employed	22.03259335
Median HI	16.61747722
Education	—
Bachelor's or higher	8.27665854
High school enrollment	12.02361093
Preschool enrollment	8.648787373
Transportation	—
Auto Access	54.54895419

Active commuting	56.06313358
Social	—
2-parent households	59.66893366
Voting	6.159373797
Neighborhood	—
Alcohol availability	55.78082895
Park access	61.34992942
Retail density	38.05979725
Supermarket access	71.88502502
Tree canopy	42.26870268
Housing	—
Homeownership	29.11587322
Housing habitability	16.2068523
Low-inc homeowner severe housing cost burden	11.36917747
Low-inc renter severe housing cost burden	72.88592326
Uncrowded housing	4.59386629
Health Outcomes	—
Insured adults	4.157577313
Arthritis	67.1
Asthma ER Admissions	53.7
High Blood Pressure	76.3
Cancer (excluding skin)	93.3
Asthma	14.8
Coronary Heart Disease	54.4
Chronic Obstructive Pulmonary Disease	33.2
Diagnosed Diabetes	20.7
Life Expectancy at Birth	10.4

Cognitively Disabled	9.0
Physically Disabled	17.3
Heart Attack ER Admissions	13.0
Mental Health Not Good	10.1
Chronic Kidney Disease	27.1
Obesity	12.4

Other Decision Support	—
2016 Voting	30.8

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	88.0
Healthy Places Index Score for Project Location (b)	8.00
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Total Project area is 10.42 acres
Construction: Construction Phases	Construction schedule based on information provided by the Client
Construction: Off-Road Equipment	Pieces of equipment adjusted based on the changes made to the construction schedule Tier 4 Interim applied to equipment with greater than 50 HP

Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, Building Construction, Paving, and Architectural Coating
Construction: Architectural Coatings	Rule 1113

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	4.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	82.5
AQ-PM	97.4
AQ-DPM	83.1
Drinking Water	93.3
Lead Risk Housing	87.2
Pesticides	28.6
Toxic Releases	68.8
Traffic	31.4
Effect Indicators	—
CleanUp Sites	62.4
Groundwater	66.4

Haz Waste Facilities/Generators	79.2
Impaired Water Bodies	0.00
Solid Waste	55.5
Sensitive Population	—
Asthma	46.2
Cardio-vascular	61.7
Low Birth Weights	39.5
Socioeconomic Factor Indicators	—
Education	95.3
Housing	38.1
Linguistic	77.4
Poverty	87.9
Unemployment	66.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	8.212498396
Employed	22.03259335
Median HI	16.61747722
Education	—
Bachelor's or higher	8.27665854

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	88.0
Healthy Places Index Score for Project Location (b)	8.00
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Operations: Vehicle Data	Trip characteristics based on information provided in the Traffic analysis
Operations: Fleet Mix	Passenger Car Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, & MCY). Truck Mix based on information in the Traffic analysis
Operations: Energy Use	—

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat

Extreme Precipitation	4.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	82.5
AQ-PM	97.4
AQ-DPM	83.1
Drinking Water	93.3
Lead Risk Housing	87.2
Pesticides	28.6

Toxic Releases	68.8
Traffic	31.4
Effect Indicators	—
CleanUp Sites	62.4
Groundwater	66.4
Haz Waste Facilities/Generators	79.2

Healthy Places Index Score for Project Location (b)	8.00
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification

Land Use	Total Project area is 10.42 acres
Construction: Construction Phases	Construction schedule based on information provided by the Client
Construction: Off-Road Equipment	Pieces of equipment adjusted based on the changes made to the construction schedule
Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, Building Construction, Paving, and Architectural Coating
Construction: Architectural Coatings	Rule 1113
Operations: Vehicle Data	Trip characteristics based on information provided in the Traffic analysis
Operations: Fleet Mix	Passenger Car Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, & MCY). Truck Mix based on information in the Traffic analysis
Operations: Energy Use	Natural gas will not be used

APPENDIX B
SCREENING TABLE FOR IMPLEMENTING GHG PERFORMANCE STANDARDS

+29Table 5. Screening Table for Implementing GHG Performance Standards for Warehouse Non-residential Development, 2030 (Circle Applicable Project Points, 100 points minimum)

Description	Feature	Project Eligible Points	1300 S. Campus
Reduction Measure 1: Building Electrification			
Replacement of gas appliance with electric appliance (select all that apply)	Electric space heater	5	5
	Electric water heater	8	8
	Electric stove (if applicable)	2	
Lack of natural gas infrastructure	Project site does not have any natural gas infrastructure	8	8
	Total for measure	*23*	*21*
Reduction Measure 2: Solar Energy Systems for New Warehouse Development only *(solar energy system required for warehouse development)*			
Installation of rooftop solar energy systems at new warehouse/logistics facilities. (select one option)	Installation of rooftop solar energy system which generates enough electricity to meet 45% of annual warehouse electricity demand.	22	
	Installation of rooftop solar energy system which generates enough electricity to meet 90% of annual warehouse electricity demand.	44	
	Installation of rooftop solar energy system which generates enough electricity to meet 100% of annual warehouse electricity demand.	48	48
Installation of battery storage at new warehouse/logistics facilities (select one option)	Solar battery storage installation with a capacity of 200-599 kW (DC).	3	
	Solar battery storage installation with a capacity of 600-799 kW (DC).	6	
	Solar battery storage installation with a capacity of 800-1200 kW (DC).	11	
	Total for measure	*59*	*48*
Reduction Measure 3: Green Roofs			
Installation of a roof with a planted layer of vegetation over a waterproof surface for non-residential buildings (select one option)	Medium Green Roof – Total vegetated area makes up 50% of combined non-residential floor area (in square feet).	1	
	Large Green Roof – Total vegetated area makes up 100% or more of combined non-residential floor area (in square feet).	2	
	Total for measure	*2*	
Reduction Measure 4: Urban Cooling			
On-site tree planting	1 tree per each required on-site employee/visitor vehicle parking space.	4	4

	2 trees per each required on-site employee/visitor vehicle parking space.	8	

Description	Feature	Project Eligible Points	1300 S. Campus
(select one option)[13]	3 trees per each required on-site employee/visitor vehicle parking space.	15	
	Total for measure	*15*	*4*
Reduction Measure 5: Transit Oriented Communities (TOCs)			
New development is located in a transit-oriented community (TOC)	The development site is located within ½ mile radius of one or more of the following: a Bus Rapid Transit (BRT) stop, bus transit center, light rail station, the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods, and/or High-Quality Transit Corridor defined as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.[14]	7	
	Total for measure	*7*	
Reduction Measure 6: Increase Transit Ridership			
Provision of free transit passes in a quantity equivalent to the expected number of employees at the non-residential building. Transit passes shall be provided for a period of 5 years after completion of construction. [15]	One free annual transit pass for every employee.	6	

[13] This strategy specifies the ratio of additional trees per required employee/visitor vehicle parking spaces. Based upon total on-site vehicle parking spaces required per the City of Ontario Development Code for the project, the Applicant will calculate the number of trees required to meet this measure and obtain points. The landscape plan will show onsite trees and the tree matrix shall identify all trees associated with the Urban Cooling Measure compliance. The City code requires trees onsite and within paved areas to reduce the associated heat build-up from development. The Landscape Planning Division will consider these trees in the calculation to be counted toward the Urban Cooling Measure.

[14] A project shall be considered to be within one-half mile of a major transit stop or high-quality transit corridor if all parcels within the project have no more than 25 percent of their area farther than one-

half mile from the stop or corridor and if not more than 10 percent of the residential units or 100 units, whichever is less, in the project are farther than one-half mile from the stop or corridor.

[15] Provision for annual transit passes to be incorporated into CC&R's bylaws, as appropriate.

Description	Feature	Project Eligible Points	1300 S. Campus
	Total for measure	6	
Reduction Measure 7: Vehicle Electrification[16]			
Installation of EV charging stations for truck parking spaces (select one option)[17]	Installation of Level 2 or higher EV charging stations at a rate of 5-9% of planned truck parking spaces.	2	
	Installation of Level 2 or higher EV charging stations at a rate of 10-19% of planned truck parking spaces.	4	
	Installation of Level 2 or higher EV charging stations at a rate of 20-29% of planned truck parking spaces.	6	
	Installation of Level 2 or higher EV charging stations at a rate of 30-49% of planned truck parking spaces.	10	
	Installation of Level 2 or higher EV charging stations at a rate of 50% or more of planned truck parking spaces.	15	
	Total for measure	*15*	
Reduction Measure 8: Active Transportation			
Installation or improvement of bicycle facilities (select all that apply)	Bicycle parking facilities with 1:20 ratio of bicycle parking to employee vehicle parking space.	2	2
	Construct or improve a single bicycle lane facility (only Class I, II, or IV) that 1) connects to a larger existing bikeway network or 2) closes an existing bikeway network gap that is at least 0.5 miles long.	3	
Installation or improvement of pedestrian facilities (select one option)	Two or three pedestrian infrastructure improvements to street design on private streets, including, but not limited to curb extensions, raised crosswalks, speed humps/bumps, street tree plantings in parkways or street medians, and elevated pavement markings.	2	
	Four or more pedestrian infrastructure improvements to street design on private streets, including, but not limited to private property curb extensions, raised crosswalks, speed humps/bumps, elevated pavement markings, and public property street tree	4	

	plantings in parkways or street medians.		
	Total for measure	9	2

[16] EV charging station levels 1-3 are defined in the California Green Building Standards or CALGreen Code, accessed at https://www.dgs.ca.gov/BSC/CALGreen.

[17] Reduction Measure 7 refers to EV charging stations for two-axle trucks.

Description	Feature	Project Eligible Points	1300 S. Campus
Reduction Measure 9: Parking Policy			
Require that employee vehicle parking spaces be purchased at an additional cost. This does not include client/visitor vehicle parking spaces [18]	Unbundle, or separate, 100% of non-residential project's parking costs from property costs, requiring those who wish to purchase parking spaces to do so at an additional cost.	1	
	Total for measure	*1*	
Reduction Measure 10: Electric construction equipment[19]			
Use electric construction equipment for a portion of the construction project (select one option)	One-third (33%) of construction equipment used for construction (during building phase, not including grading phase), measured by number of hours of operation, is zero emission equipment.	3	
	Half (50%) of construction equipment used for construction (during the building phase, not including the grading phase), measured by the number of hours of operation, is zero emission equipment.	5	
	Two-thirds (66%) or more of construction equipment used for construction (during the building phase, not including the grading phase), measured by number of hours of operation, is zero emission equipment.	8	
	Total for measure	*8*	
Reduction Measure 11: Waste diversion			

Site design for non-residential warehouse development includes site(s) for green waste/ organics and recycling collection bins	Site design allocates sufficient space for storage and collection of green waste, organic waste, and recyclables.	20	20
	Total for measure	*20*	*20*
Reduction Measure 12: Water conservation			
Implement indoor water efficiency measures (select all	Install water-efficient faucets and showerheads.	1	1
	Install on-demand water circulators on commercial sinks or dishwashing equipment.[20]	2	2

[18] Provision for unbundling parking to be incorporated into CC&R's bylaws or separate parking agreement, as appropriate.

[19] Electric construction equipment includes electric compact excavators, electric motors, electric generators, and mobile charging equipment.

[20] According to CALGreen, a hot water recirculation system is one which includes "a thermostat that will automatically shut off the recirculation pump when the water temperature reaches a preset level at the point of use."

Description	Feature	Project Eligible Points	1300 S. Campus
that apply)			
Incorporate outdoor water efficiency measures	Design and plan outdoor landscapes planted with drought-tolerant, low maintenance plants with a 1) drip irrigation system or 2) sprinkler irrigation system with a weather-based irrigation controller.	4	4
	Total for measure	*7*	*7*
	Warehouse Total for measures	***172***	***102***
	Warehouse Project Points Subtotal		
Additional Recommended Measures			
AR-1: Charging stations for large trucks (select one option)	Installation of conduit for charging stations for zero emission trucks larger than two-axles (class 8 and 9, and semi-trucks) so that facilities are prepared for the transition to electric trucks.	4	4
	Installation of 1-4 charging stations for zero emission trucks larger than two-axles (class 8 and 9, and semi- trucks)	8	
	Installation of 5-9 charging stations for zero emission trucks larger than two-axles (class 8 and 9, and semi-trucks)	12	

	Installation of 10 or more charging stations zero emission trucks larger than two-axles (class 8 and 9, and semi-trucks)	24	
AR-2: Meet CalGreen voluntary tiers (select one option)	CalGreen Tier 1 compliance	5	
	CalGreen Tier 2 compliance	10	
AR-3: Installation of EV charging stations for employee vehicle parking spaces (select one option)	Installation of Level 2 or higher EV charging stations at a rate of 5-9% of planned employee vehicle parking spaces.	4	
	Installation of Level 2 or higher EV charging stations at a rate of 10-19% of planned employee vehicle parking spaces with Level 2 EV charging stations.	6	6
	Installation of Level 2 or higher EV charging stations at a rate of 20% or more of planned employee vehicle parking spaces Level 2 EV charging stations.	12	
AR-4: Recycled Water	Use recycled water for at least 80% of outdoor water needs.	2	
AR-5: Reflective Paving	Use high-reflectivity pavement for all hardscaped areas, including parking areas, walking paths, and patios.	4	4
AR-6: Zero Emission Cargo Equipment	Use of zero emission cargo handling equipment for a minimum of 50% of all operations.	4	
AR-7: Alternative Fueling	Installation of alternative fuel facilities, such as CNG, biofuels, or hydrogen fueling stations.	10

EXECUTIVE SUMMARY

This report evaluates the potential health risk impacts to sensitive receptors (which are residents) and adjacent workers associated with the development of the Project, more specifically, health risk impacts as a result of exposure to Toxic Air Contaminants (TACs) including diesel particulate matter (DPM) as a result of heavy-duty diesel trucks accessing the site. This section summarizes the significance criteria and Project health risks.

The results of the health risk assessment from Project-generated DPM emissions are provided in Table ES-1, ES-2, and ES-3 below for the Project.

CONSTRUCTION IMPACTS

The land use with the greatest potential exposure to Project construction-source DPM emissions is Location R3 which is located approximately 174 feet east of the Project site at an existing residence located at 705 Woodlawn Street. Since there are no private outdoor living areas (backyards) facing the Project site, R3 is placed at the building façade. At the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 1.61 in one million, which is less than the South Coast Air Quality Management District (SCAQMD) significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. Although Location R3 is not the nearest receptor to the Project site, due to meteorological conditions (wind speed and direction) at the site, it would experience the highest concentrations of DPM during Project construction. Because all other modeled receptors would experience lower concentrations of DPM during Project construction, all other receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIR identified herein. As such, the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project construction activity. All other receptors during construction activity would experience less risk than what is identified for this location. The modeled receptors are illustrated on Exhibit 2-D.

OPERATIONAL IMPACTS

Residential Exposure Scenario:

The residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R3 which is located approximately 174 feet east of the Project site at an existing residence located at 705 Woodlawn Street. Since there are no private outdoor living areas (backyards) facing the Project site, R3 is placed at the building façade. At the MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 0.98 in one million, which is less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Although Location R3 is not the nearest receptor to the Project site, due to meteorological conditions (wind speed and direction) at the site, it would experience the highest concentrations of DPM during Project operation. Because all other modeled receptors are located at a greater distance than the MEIR analyzed herein, and

DPM dissipates with distance from the source, all other receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIR identified herein. As such, the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project operational activity. All other receptors would experience less risk than what is identified for this location. The modeled receptors are illustrated on Exhibit 2-D.

Worker Exposure Scenario[1]*:*

The worker receptor land use with the greatest potential exposure to Project operational -source DPM emissions is Location R8, which represents the potential worker receptor located approximately 130 feet east of the Project site. At the maximally exposed individual worker (MEIW), the maximum incremental cancer risk impact is 0.12 in one million which is less than the SCAQMD's threshold of 10 in one million. Maximum non-cancer risks at this same location were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Location R8 is the worker receptor that would experience the highest concentrations of DPM during Project operation due to meteorological conditions at the site. All other worker receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIW identified herein. As such, the Project will not cause a significant human health or cancer risk to nearby workers. The modeled receptors are illustrated on Exhibit 2-D.

School Child Exposure Scenario:

The nearest school is De Anza Middle School, located approximately 875 feet southwest of the Project site and represented by Location R9. The maximally exposed individual school child (MEISC) is the school receptor that would experience the highest modeled concentrations of DPM, and thus the highest risk. At the MEISC, the maximum incremental cancer risk impact attributable to the Project is calculated to be 0.01 in one million, which is less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to the Project were calculated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Because all other modeled school receptors would be exposed to lower concentrations of DPM, all other school receptors in the vicinity of the of the Project would be exposed to less emissions and therefore less risk than the MEISC identified herein. As such, the Project will not cause a significant human health or cancer risk to nearby school children.

CONSTRUCTION AND OPERATIONAL IMPACTS

The land use with the greatest potential exposure to Project construction-source and operational-source DPM emissions is Location R3. At the MEIR, the maximum incremental cancer risk attributable to Project construction-source and operational-source DPM emissions is estimated at 2.38 in one million, which is less than the threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable

1 SCAQMD guidance does not require assessment of the potential health risk to on-site workers. Excerpts from the document OEHHA Air Toxics Hot Spots Program Risk Assessment Guidelines—The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2003), also indicate that it is not necessary to examine the health effects to on-site workers unless required by RCRA (Resource Conservation and Recovery Act) / CERCLA (Comprehensive Environmental Response, Compensation, and Liability Act) or the worker resides on-site.

threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk to nearby residences. The modeled receptors are illustrated on Exhibit 2-D.

TABLE ES-1: SUMMARY OF CONSTRUCTION CANCER AND NON-CANCER RISKS

Time Period	Location	Maximum Lifetime Cancer Risk (Risk per Million)	Significance Threshold (Risk per Million)	Exceeds Significance Threshold
0.83 Year Exposure	Maximum Exposed Sensitive Receptor	1.61	10	NO
Time Period	**Location**	**Maximum Hazard Index**	**Significance Threshold**	**Exceeds Significance Threshold**
Annual Average	Maximum Exposed Sensitive Receptor	<0.01	1.0	NO

Annual Average	Maximum Exposed Sensitive Receptor	<0.01	1.0	NO

1 INTRODUCTION

This HRA has been prepared in accordance with the document Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis (1) and is comprised of all relevant and appropriate procedures presented by the United States Environmental Protection Agency (U.S. EPA), California EPA and SCAQMD. Cancer risk is expressed in terms of expected incremental incidence per million population. The SCAQMD has established an incidence rate of ten (10) persons per million as the maximum acceptable incremental cancer risk due to TAC exposure from a project such as the proposed Project. This threshold serves to determine whether or not a given project has a potentially significant development-specific and cumulatively considerable impact.

The AQMD has published a report on how to address cumulative impacts from air pollution: *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution* (2). In this report the AQMD states (Page D-3):

"…the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for toxic air contaminant (TAC) emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.

Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."

The SCAQMD has also established non-carcinogenic risk parameters for use in HRAs. Non-carcinogenic risks are quantified by calculating a "hazard index," expressed as the ratio between the ambient pollutant concentration and its toxicity or Reference Exposure Level (REL). A REL is a concentration at or below which health effects are not likely to occur. A hazard index less of than one (1.0) means that adverse health effects are not expected. In this HRA, non-carcinogenic exposures of less than 1.0 are considered less-than-significant. Both the cancer risk and non-carcinogenic risk thresholds are applied to the nearest sensitive receptors below.

1.1 SITE LOCATION

The proposed Project is located west of Campus Avenue and south of Phillips Street in the City of Ontario as shown on Exhibit 1-A. The Project site is currently occupied by an existing warehouse that offers storage and reloading services. The Project is located approximately 1.1 miles southwest of the Ontario International Airport (ONT).

1.2 PROJECT DESCRIPTION

The proposed Project is to consist of a single 221,658 square foot warehouse building as shown on Exhibit 1-B. The proposed Project is anticipated to be constructed and fully operational by the year 2025. Although construction-related criteria air pollutants do not have the potential to exceed the South Coast Air Quality Management District's (SCAQMD's) criteria of significance (see TOP EIR Mitigation Measure 3-1), the Applicant will require construction contractors to comply with a voluntary condition of approval that requires all off-road construction equipment > 50 horsepower (hp) to meet a minimum California Air Resources Board (CARB) Tier 4-interim engine standard. The modeled emissions for the project include this enforceable project design feature.

Per the *1300 S. Campus Drive Trip Generation Assessment* prepared by Urban Crossroads, Inc., the Project is expected to generate a total of approximately 380 vehicular trips per day, which includes 134 truck trips per day (3).

EXHIBIT 1-A: LOCATION MAP

EXHIBIT 1-B: SITE PLAN

This page intentionally left blank

2 BACKGROUND

2.1 BACKGROUND ON RECOMMENDED METHODOLOGY

This HRA is based on applicable guidelines to produce conservative estimates of human health risk posed by exposure to DPM. The conservative nature of this analysis is due primarily to the following factors:

- The ARB-adopted diesel exhaust Unit Risk Factor (URF) of 300 in one million per µg/m3 is based upon the upper 95 percentile of estimated risk for each of the epidemiological studies utilized to develop the URF. Using the 95th percentile URF represents a very conservative (health-protective) risk posed by DPM because it represents breathing rates that are high for the human body.
- The emissions derived assume that every truck accessing the Project site will idle for 15 minutes under the unmitigated scenario, and this is an overestimation of actual idling times and thus conservative.[2] The California Air Resources Board (CARB's) anti-idling requirements impose a 5-minute maximum idling time and therefore the analysis conservatively overestimates DPM emissions from idling by a factor of 3.

2.2 CONSTRUCTION HEALTH RISK ASSESSMENT

2.2.1 EMISSIONS CALCULATIONS

The emissions calculations for the construction HRA component are based on an assumed mix of construction equipment and hauling activity as presented in the *1300 S. Campus Drive Air Quality and Energy Assessment* ("technical study") prepared by Urban Crossroads, Inc. (4)

Construction related DPM emissions are expected to occur primarily as a function of the operation of heavy-duty construction equipment. As noted above, all off-road equipment > 50 hp would meet a minimum CARB Tier 4-interim engine standard. The modeled emissions for the project include this enforceable project design feature.

As discussed in the technical study, the Project would result in approximately 217 total working-days of construction activity. The construction duration by phase is shown on Table 2-1. A detailed summary of construction equipment assumptions by phase is provided at Table 2-2. The CalEEMod emissions outputs are presented in Appendix 2.1. The modeled emission sources for construction activity are illustrated on Exhibit 2-A.

[2] Although the Project is required to comply with ARB's idling limit of 5 minutes, staff at SCAQMD recommends that the on-site idling emissions should be estimated for 15 minutes of truck idling (personal communication, in person, with Jillian Wong, December 22, 2016), which would take into account on-site idling which occurs while the trucks are waiting to pull up to the truck bays, idling at the bays, idling at check-in and check-out, etc.

TABLE 2-1: CONSTRUCTION DURATION

EXHIBIT 2-A: MODELED CONSTRUCTION EMISSION SOURCES

2.3 OPERATIONAL HEALTH RISK ASSESSMENT

2.3.1 ON-SITE AND OFF-SITE TRUCK ACTIVITY

Vehicle DPM emissions were calculated using emission factors for particulate matter less than 10µm in diameter (PM_{10}) generated with the 2021 version of the EMission FACtor model (EMFAC) developed by the CARB. EMFAC 2021 is a mathematical model that CARB developed to calculate emission rates from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by the ARB to project changes in future emissions from on-road mobile sources (5). The most recent version of this model, EMFAC 2021, incorporates regional motor vehicle data, information and estimates regarding the distribution of vehicle miles traveled (VMT) by speed, and number of starts per day.

Several distinct emission processes are included in EMFAC 2021. Emission factors calculated using EMFAC 2021 are expressed in units of grams per vehicle miles traveled (g/VMT) or grams per idle-hour (g/idle-hr), depending on the emission process. The emission processes and corresponding emission factor units associated with diesel particulate exhaust for this Project are presented below.

For this Project, annual average PM_{10} emission factors were generated by running EMFAC 2021 in EMFAC Mode for vehicles in the San Bernardino County jurisdiction. The EMFAC Mode generates emission factors in terms of grams of pollutant emitted per vehicle activity and can calculate a matrix of emission factors at specific values of temperature, relative humidity, and vehicle speed. The model was run for speeds traveled in the vicinity of the Project. The vehicle travel speeds for each segment modeled are summarized below.

- Idling – on-site loading/unloading and truck gate
- 5 miles per hour – on-site vehicle movement including driving and maneuvering
- 25 miles per hour – off-site vehicle movement including driving and maneuvering.

It is expected that minimal idling would occur at nearby intersections during truck travel on study area roadways (e.g., at an intersection during a red light, or yielding to make a turn). Notwithstanding, the analysis conservatively utilizes a reduced off-site average speed of 25 miles per hour (below the posted speed limit) for travel on study area roadways, use of a lower average speed for off-site travel results in a higher emission factor and therefore any negligible idling that would occur during truck travel along the study area is accounted for.

Calculated emission factors are shown at Table 2-3. As a conservative measure, a 2025 EMFAC 2021 run was conducted and a static 2025 emissions factor data set was used for the entire duration of analysis herein (e.g., 30 years). Use of 2025 emission factors would overstate potential impacts since this approach assumes that emission factors remain “static” and do not change over time due to fleet turnover or cleaner technology with lower emissions that would be incorporated into vehicles after 2025. Additionally, based on EMFAC 2021, Light-Heavy-Duty Trucks are comprised of 51.8% diesel, Medium-Heavy-Duty Trucks are comprised of 91.5% diesel, and Heavy-Heavy-Duty Trucks are comprised of 85.1% diesel. Trucks fueled by diesel are

accounted for by these percentages accordingly in the emissions factor generation. Appendix 2.2 includes additional details on the emissions estimates from EMFAC.

The vehicle DPM exhaust emissions were calculated for running exhaust emissions. The running exhaust emissions were calculated by applying the running exhaust PM_{10} emission factor (g/VMT) from EMFAC over the total distance traveled. The following equation was used to estimate off-site emissions for each of the different vehicle classes comprising the mobile sources (6):

$$Emissions_{Speed\ A} = EF_{Run\ Exhaust} \times Distance \times \frac{Number\ of\ Trips\ per\ Day}{Seconds\ per\ Day}$$

Where:

$Emissions_{Speed\ A}$ = Vehicle emissions at a given speed A (g/s)

$EF_{Run\ Exhaust}$ = EMFAC running exhaust PM_{10} emission factor at speed A (g/vmt)

$Distance$ = Total distance traveled per trip (miles)

Similar to off-site traffic, on-site vehicle running emissions were calculated by applying the running exhaust PM_{10} emission factor (g/VMT) from EMFAC and the total vehicle trip number over the length of the driving path using the same formula presented above for on-site emissions. In addition, on-site vehicle idling exhaust emissions were calculated by applying the idle exhaust PM_{10} emission factor (g/idle-hr) from EMFAC and the total truck trip over the total assumed idle time (15 minutes). The following equation was used to estimate the on-site vehicle idling emissions for each of the different vehicle classes (6):

$$Emissions_{Idle} = EF_{Idle} \times Number\ of\ Trips \times Idling\ Time \times \frac{60\ minutes\ per\ hour}{seconds\ per\ day}$$

Where:

$Emissions_{Idle}$ = Vehicle emissions during Idling (g/s)

EF_{Idle} = EMFAC idle exhaust PM_{10} emission factor (g/s)

$Number\ of\ Trips$ = Number of trips per day

$Idling\ Time$ = Idling time (minutes per trip)

TABLE 2-3: 2025 WEIGHTED AVERAGE DPM EMISSIONS FACTORS

Speed	Weighted Average
0 (idling)	0.07575 (g/idle-hr)
5	0.01904 (g/s)
25	0.00804 (g/s)

Each roadway was modeled as a line source (made up of multiple adjacent volume sources). Due to the large number of volume sources modeled for this analysis, the corresponding coordinates

of each volume source have not been included in this report but are included in Appendix 2.3. The DPM emission rate for each volume source was calculated by multiplying the emission factor (based on the average travel speed along the roadway) by the number of trips and the distance traveled along each roadway segment and dividing the result by the number of volume sources along that roadway, as illustrated on Table 2-4. The modeled emission sources are illustrated on Exhibit 2-B for on-site sources and Exhibit 2-C for off-site sources. The modeling domain is limited to the Project's primary truck route and includes off-site sources in the study area for more than ¾ mile. This modeling domain is more inclusive and conservative than using only a ¼ mile modeling domain which is the distance supported by several reputable studies which conclude that the greatest potential risks occur within a ¼ mile of the primary source of emissions (7) (in the case of the Project, the primary source of emissions is the on-site idling and on-site travel).

On-site truck idling was estimated to occur as trucks enter and travel through the Project site. Although the Project's diesel-fueled truck and equipment operators will be required by State law to comply with CARB's idling limit of 5 minutes, staff at SCAQMD recommends that the on-site idling emissions be calculated assuming 15 minutes of truck idling (8), which would take into account on-site idling which occurs while the trucks are waiting to pull up to the truck bays, idling at the bays, idling at check-in and check-out, etc. As such, this analysis calculates truck idling at 15 minutes, consistent with SCAQMD's recommendation.

As summarized in the *1300 S. Campus Drive Trip Generation Assessment* prepared by Urban Crossroads, Inc., the Project is expected to generate a total of approximately 380 actual vehicular trip-ends per day (190 vehicles inbound + 190 vehicles outbound) which includes 246 passenger vehicle trips (123 passenger vehicles inbound + 123 passenger vehicles outbound) and 134 two-way truck trips (67 trucks inbound per day + 67 trucks outbound) per day (3).

It should be noted that this analysis conservatively does not take credit for truck trips associated with the existing development at the site.

EXHIBIT 2-B: MODELED ON-SITE EMISSION SOURCES

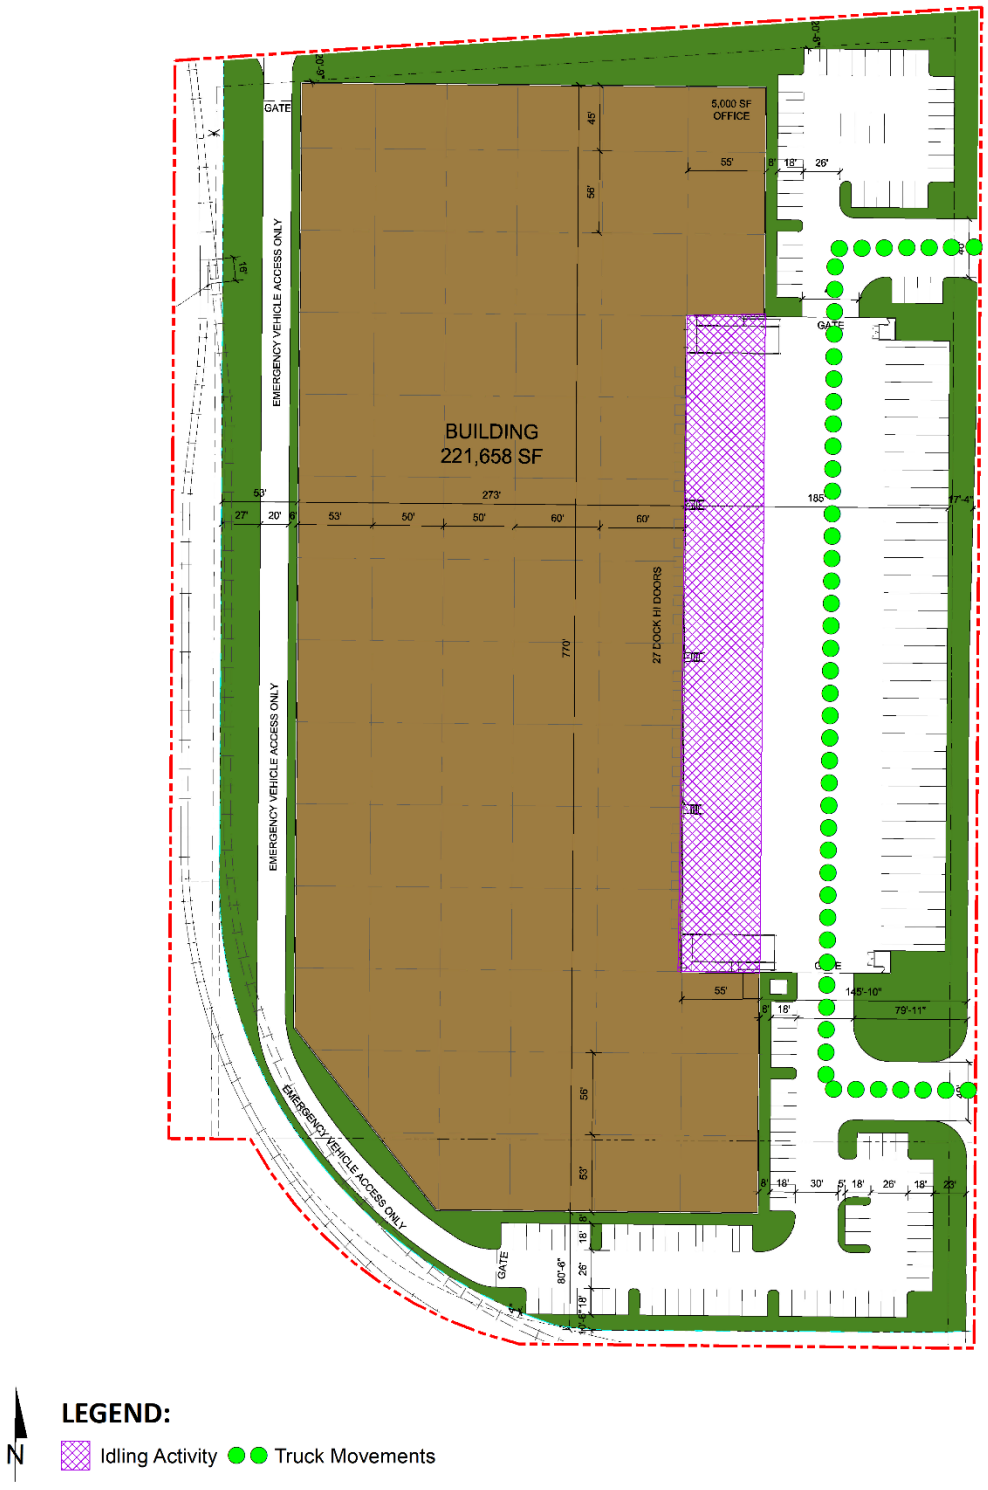

EXHIBIT 2-C: MODELED OFF-SITE EMISSION SOURCES

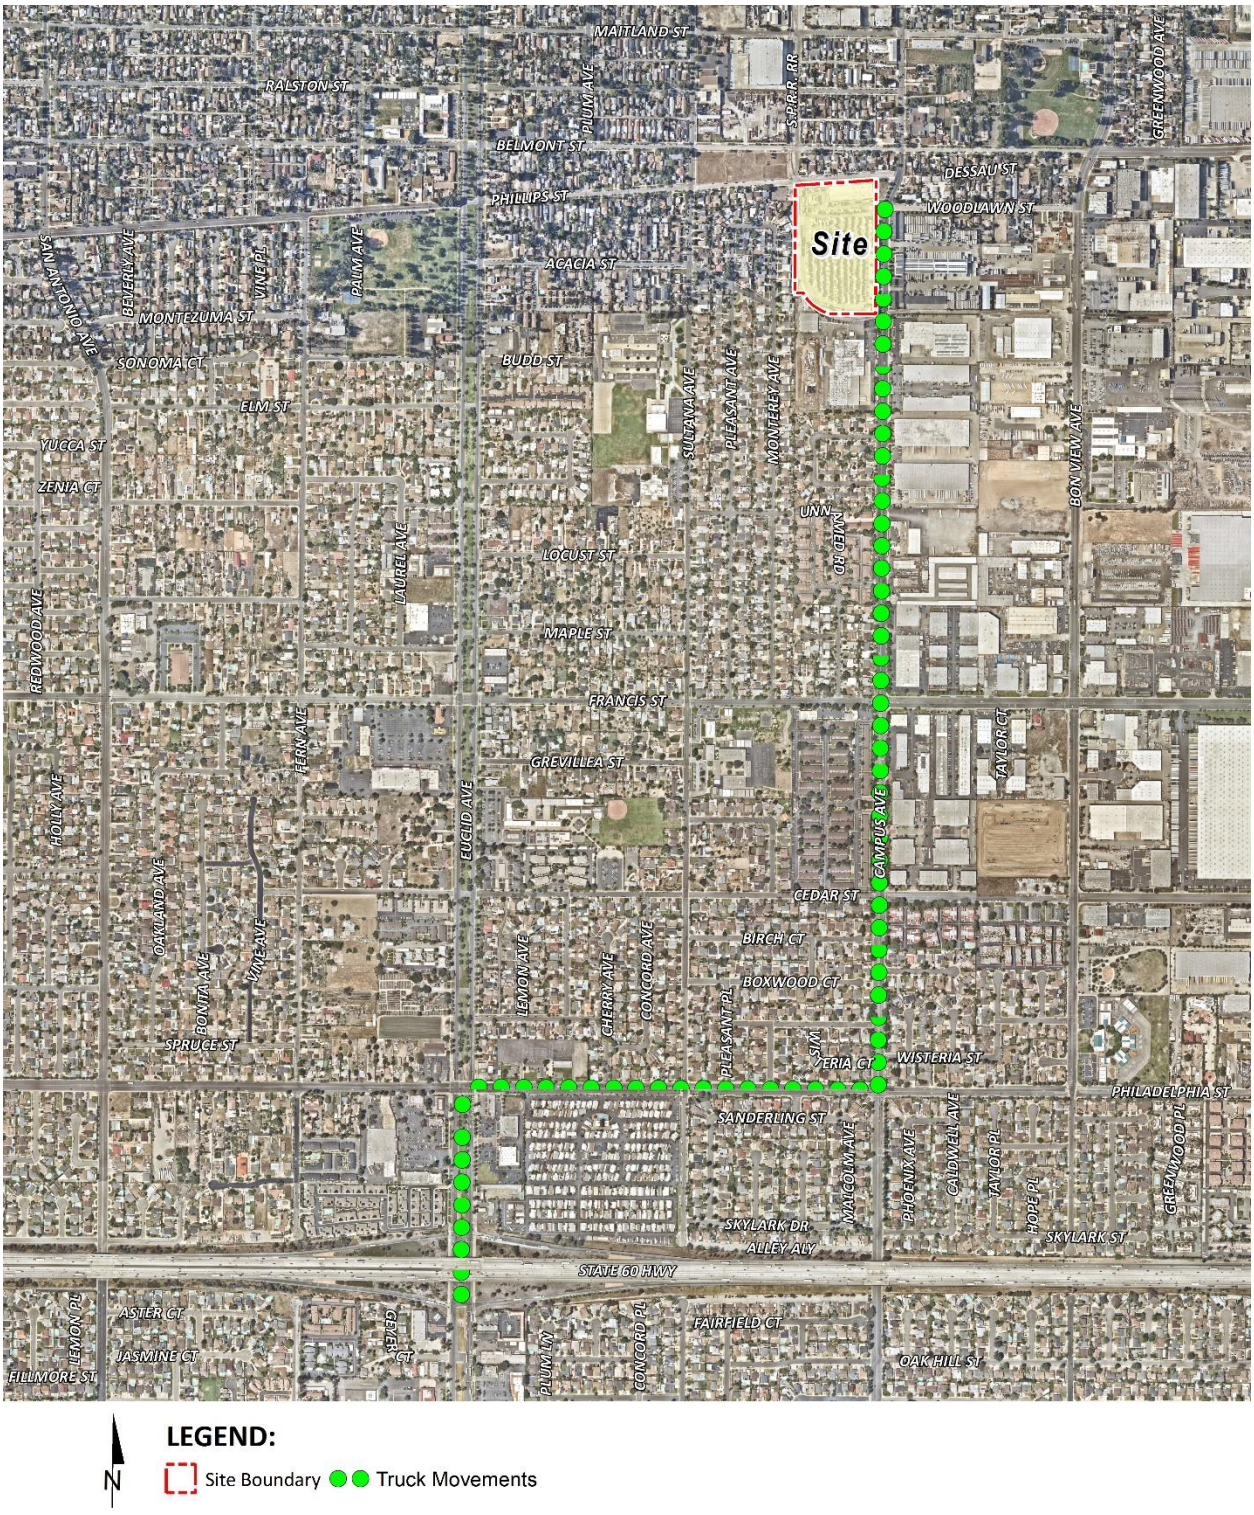

TABLE 2-4: DPM EMISSIONS FROM PROJECT TRUCKS (2025 ANALYSIS YEAR)

Truck Emission Rates						
Source	Trucks Per Day	VMT [a] (miles/day)	Truck Emission Rate [b] (grams/mile)	Truck Emission Rate [b] (grams/idle-hour)	Daily Truck Emissions [c] (grams/day)	Modeled Emission Rates (g/second)
On-Site Idling	67			0.0757	1.27	1.468E-05
On-Site Travel - 100%	134	21.43	0.0190		0.41	4.723E-06
Off-Site Travel - Campus 50%	67	7.35	0.0080		0.06	6.834E-07
Off-Site Travel - Campus 100%	134	248.21	0.0080		1.99	2.308E-05

[a] Vehicle miles traveled are for modeled truck route only.

[b] Emission rates determined using EMFAC 2021. Idle emission rates are expressed in grams per idle hour rather than grams per mile.

[c] This column includes the total truck travel and truck idle emissions. For idle emissions this column includes emissions based on the assumption that each truck idles for 15 minutes.

2.4 EXPOSURE QUANTIFICATION

The analysis herein has been conducted in accordance with the guidelines in SCAQMD's Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis (1) and OEHHA's Risk Assessment Guidelines Guidance Manual for Preparation of Health Risk Assessments (9). The Environmental Protection Agency's (U.S. EPA's) AERMOD model has been utilized. For purposes of this analysis, the Lakes AERMOD View (Version 11.2.0) was used to calculate annual average particulate concentrations associated with site operations. Lakes AERMOD View was utilized to incorporate the U.S. EPA's latest AERMOD Version 22112 (9).

The model offers additional flexibility by allowing the user to assign an initial release height and vertical dispersion parameters for mobile sources representative of a roadway. For this HRA, the roadways were modeled as adjacent volume sources. Roadways were modeled using the U.S. EPA's haul route methodology for modeling of on-site and off-site truck movement. More specifically, the Haul Road Volume Source Calculator in Lakes AERMOD View has been utilized to determine the release height parameters. Based on the US EPA methodology, the Project's modeled sources would result in a release height of 3.49 meters and an initial lateral dimension of 4.0 meters, and an initial vertical dimension of 3.25 meters.

Model parameters are presented in Table 2-5 (10). The model requires additional input parameters including emission data and local meteorology. Meteorological data from the SCAQMD's Ontario Airport monitoring station was used to represent local weather conditions and prevailing winds (11).

TABLE 2-5: AERMOD MODEL PARAMETERS

Dispersion Coefficient (Urban/Rural)	Urban (population 2,035,210)
Terrain (Flat/Elevated)	Elevated (Regulatory Default)
Averaging Time	1 year (5-year Meteorological Data Set)
Receptor Height	0 meters (Regulatory Default)

Universal Transverse Mercator (UTM) coordinates for World Geodetic System (WGS) 84 were used to locate the Project site boundaries, each volume source location, and receptor locations in the Project vicinity. The AERMOD dispersion model summary output files for the Project are presented in Appendix 2.3. Modeled sensitive receptors were placed at residential and non-residential locations.

Receptors may be placed at applicable structure locations for residential and worker property and not necessarily the boundaries of the properties containing these uses because the human receptors (residents and workers) spend a majority of their time at the residence or in the workplace's building, and not on the property line. It should be noted that the primary purpose of receptor placement is focused on long-term exposure. For example, the HRA evaluates the potential health risks to residents, workers, and school children over a period of 30, 25, or 9 years of exposure, respectively. Notwithstanding, as a conservative measure, receptors were placed at either the outdoor living area or the building façade, whichever is closer to the Project site.

For purposes of this HRA, receptors include both residential and non-residential (worker) land uses in the vicinity of the Project. These receptors are included in the HRA since residents, workers, and school children may be exposed at these locations over a long-term duration of 30, 25, and 9 years, respectively. This methodology is consistent with SCAQMD and OEHHA recommended guidance.

Any impacts to residents or workers located further away from the Project site than the modeled residential and workers would have a lesser impact than what has already been disclosed in the HRA at the MEIR and MEIW because concentrations dissipate with distance.

All receptors were set to existing elevation height so that only ground-level concentrations are analyzed. United States Geological Survey (USGS) Digital Elevation Model (DEM) terrain data based on a 7.5-minute topographic quadrangle map series using AERMAP was utilized in the HRA modeling to set elevations (12).

Discrete variants for daily breathing rates, exposure frequency, and exposure duration were obtained from relevant distribution profiles presented in the 2015 OEHHA Guidelines. Tables 2-6 through 2-9 summarize the Exposure Parameters for residents, workers, and school children based on 2015 OEHHA Guidelines. Appendix 2.4 includes the detailed risk calculation.

TABLE 2-6: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (CONSTRUCTION ACTIVITY)

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Fraction of Time at Home	Exposure Frequency (days/year)	Exposure Time (hours/day)
0 to 2	1,090	10	0.83	1.00	250	8

TABLE 2-7: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (30 YEAR RESIDENTIAL)

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Fraction of Time at Home	Exposure Frequency (days/year)	Exposure Time (hours/day)
-0.25 to 0	361	10	0.25	0.85	350	24
0 to 2	1,090	10	2	0.85	350	24
2 to 16	572	3	14	0.72	350	24
16 to 30	261	1	14	0.73	350	24

TABLE 2-8: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (25 YEAR WORKER)

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Exposure Frequency (days/year)	Exposure Time (hours/day)
16 to 41	230	1	25	250	12

TABLE 2-9: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (9 YEAR SCHOOL CHILD)

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Exposure Frequency (days/year) [a]	Exposure Time (hours/day)
4 to 13	631	3	9	180	12

[a] To represent the unique characteristics of the school-based population, the assessment employed the U.S. Environmental Protection Agency's guidance to develop viable dose estimates based on reasonable maximum exposures (RME). RME's are defined as the "highest exposure that is reasonably expected to occur" for a given receptor population. As a result, lifetime risk values for the student population were adjusted to account for an exposure duration of 180 days per year for nine (9) years. The 9 year exposure duration is also consistent with OEHHA Recommendations and consistent with the exposure duration utilized in school-based risk assessments for various schools within the Los Angeles County Unified School District (LAUSD) that have been accepted by the SCAQMD.

2.5 CARCINOGENIC CHEMICAL RISK

Excess cancer risks are estimated as the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to potential carcinogens over a specified exposure duration. The estimated risk is expressed as a unitless probability. The cancer risk attributed to a chemical is calculated by multiplying the chemical intake or dose at the human exchange boundaries (e.g., lungs) by the chemical-specific cancer potency factor (CPF). A risk level of 10 in one million implies a likelihood that up to 10 people, out of one million equally exposed people would contract cancer if exposed continuously (24 hours per day) to the levels of toxic air contaminants over a specified duration of time.

Guidance from CARB and the California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA) recommends a refinement to the standard point estimate approach when alternate human body weights and breathing rates are utilized to assess risk for susceptible subpopulations such as children. For the inhalation pathway, the procedure requires the incorporation of several discrete variates to effectively quantify dose. Once determined, contaminant dose is multiplied by the cancer potency factor (CPF) in units of inverse dose expressed in milligrams per kilogram per day $(mg/kg/day)^{-1}$ to derive the cancer risk estimate. Therefore, to assess exposures, the following dose algorithm was utilized.

$$DOSE_{AIR} = \left(C_{AIR} \times \frac{BR}{BW} \times A \times EF\right) \times (1 \times 10^{-6})$$

Where:

$DOSE_{AIR}$ = chronic daily intake (mg/kg/day)

C_{AIR} = concentration of contaminant in air (µg/m^3)

$\frac{BR}{BW}$ = daily breathing rate normalized to body weight (L/kg BW-day)

A	=	inhalation absorption factor
EF	=	exposure frequency (days/365 days)
BW	=	body weight (kg)
1×10^{-6}	=	conversion factors (µg to mg, L to m^3)

$$RISK_{AIR} = DOSE_{AIR} \times CPF \times ASF \times FAH \times \frac{ED}{AT}$$

Where:

$DOSE_{AIR}$	=	chronic daily intake (mg/kg/day)
CPF	=	cancer potency factor
ED	=	number of years within particular age group
AT	=	averaging time

2.6 NON-CARCINOGENIC EXPOSURES

An evaluation of the potential noncarcinogenic effects of chronic exposures was also conducted. Adverse health effects are evaluated by comparing a compound's annual concentration with its toxicity factor or Reference Exposure Level (REL). The REL for diesel particulates was obtained from OEHHA for this analysis. The chronic reference exposure level (REL) for DPM was established by OEHHA as 5 µg/m^3 (13).

Non-cancer health effects are expressed as a hazard index (HI), which is calculated using the following equation:

$$HI_{DPM} = \frac{C_{DPM}}{REL_{DPM}}$$

Where:

HI_{DPM}	=	Hazard index (unitless)
C_{DPM}	=	Annual average DPM concentration (µg/m^3)
REL_{DPM}	=	REL for DPM (the DPM concentration at which no adverse health effects are anticipated).

2.7 POTENTIAL PROJECT DPM-SOURCE CANCER AND NON-CANCER RISKS

CONSTRUCTION IMPACTS

The land use with the greatest potential exposure to Project construction-source DPM emissions is Location R3 which is located approximately 174 feet east of the Project site at an existing

residence located at 705 Woodlawn Street. Since there are no private outdoor living areas (backyards) facing the Project site, R3 is placed at the building façade. At the MEIR, the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 1.61 in one million, which is less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. Although Location R3 is not the nearest receptor to the Project site, due to meteorological conditions (wind speed and direction) at the site, it would experience the highest concentrations of DPM during Project construction. Because all other modeled receptors would experience lower concentrations of DPM during Project construction, all other receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIR identified herein. As such, the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project construction activity. All other receptors during construction activity would experience less risk than what is identified for this location. The modeled receptors are illustrated on Exhibit 2-D.

OPERATIONAL IMPACTS

Residential Exposure Scenario:

The residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R3 which is located approximately 174 feet east of the Project site at an existing residence located at 705 Woodlawn Street. Since there are no private outdoor living areas (backyards) facing the Project site, R3 is placed at the building façade. At the MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 0.98 in one million, which is less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Although Location R3 is not the nearest receptor to the Project site, due to meteorological conditions (wind speed and direction) at the site, it would experience the highest concentrations of DPM during Project operation. Because all other modeled receptors are located at a greater distance than the MEIR analyzed herein, and DPM dissipates with distance from the source, all other receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIR identified herein. As such, the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project operational activity. All other receptors would experience less risk than what is identified for this location. The modeled receptors are illustrated on Exhibit 2-D.

Worker Exposure Scenario[3]*:*

The worker receptor land use with the greatest potential exposure to Project operational -source DPM emissions is Location R8, which represents the potential worker receptor located approximately 130 feet east of the Project site. At the MEIW, the maximum incremental cancer

3 SCAQMD guidance does not require assessment of the potential health risk to on-site workers. Excerpts from the document OEHHA Air Toxics Hot Spots Program Risk Assessment Guidelines—The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2003), also indicate that it is not necessary to examine the health effects to on-site workers unless required by RCRA (Resource Conservation and Recovery Act) / CERCLA (Comprehensive Environmental Response, Compensation, and Liability Act) or the worker resides on-site.

risk impact is 0.12 in one million which is less than the SCAQMD's threshold of 10 in one million. Maximum non-cancer risks at this same location were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Location R8 is the worker receptor that would experience the highest concentrations of DPM during Project operation due to meteorological conditions at the site. All other worker receptors in the vicinity of the Project would be exposed to less emissions and therefore less risk than the MEIW identified herein. As such, the Project will not cause a significant human health or cancer risk to nearby workers. The modeled receptors are illustrated on Exhibit 2-D.

School Child Exposure Scenario:

The nearest school is De Anza Middle School, located approximately 875 feet southwest of the Project site and represented by Location R9. The MEISC is the school receptor that would experience the highest modeled concentrations of DPM, and thus the highest risk. At the MEISC, the maximum incremental cancer risk impact attributable to the Project is calculated to be 0.01 in one million, which is less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to the Project were calculated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Because all other modeled school receptors would be exposed to lower concentrations of DPM, all other school receptors in the vicinity of the of the Project would be exposed to less emissions and therefore less risk than the MEISC identified herein. As such, the Project will not cause a significant human health or cancer risk to nearby school children.

CONSTRUCTION AND OPERATIONAL IMPACTS

The land use with the greatest potential exposure to Project construction-source and operational-source DPM emissions is Location R3. At the MEIR, the maximum incremental cancer risk attributable to Project construction-source and operational-source DPM emissions is estimated at 2.38 in one million, which is less than the threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk to nearby residences. The modeled receptors are illustrated on Exhibit 2-D.

It should be noted that the receptors presented in Exhibit 2-D do not represent all modeled receptors.

Grading	—	—	78.0	0.00	—
Paving	0.00	0.00	0.00	0.00	3.64

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Unrefrigerated Warehouse-No Rail	0.00	0%
Parking Lot	0.90	100%
Other Asphalt Surfaces	2.74	100%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2024	0.00	532	0.03	< 0.005
2025	0.00	532	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	19.8	annual days of extreme heat
Extreme Precipitation	4.05	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	82.5
AQ-PM	97.4
AQ-DPM	83.1
Drinking Water	93.3
Lead Risk Housing	87.2
Pesticides	28.6
Toxic Releases	68.8
Traffic	31.4
Effect Indicators	—
CleanUp Sites	62.4
Groundwater	66.4

Haz Waste Facilities/Generators	79.2
Impaired Water Bodies	0.00
Solid Waste	55.5
Sensitive Population	—
Asthma	46.2
Cardio-vascular	61.7
Low Birth Weights	39.5
Socioeconomic Factor Indicators	—
Education	95.3
Housing	38.1
Linguistic	77.4
Poverty	87.9
Unemployment	66.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	8.212498396
Employed	22.03259335
Median HI	16.61747722

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	88.0
Healthy Places Index Score for Project Location (b)	8.00
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Total Project area is 10.42 acres
Construction: Construction Phases	Construction schedule based on information provided by the Client
Construction: Off-Road Equipment	Pieces of equipment adjusted based on the changes made to the construction schedule Tier 4 Interim applied to equipment with greater than 50 HP

Construction: Trips and VMT	Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Demolition, Site Preparation, Grading, Building Construction, Paving, and Architectural Coating
Construction: Architectural Coatings	Rule 1113

Off-Site Travel - Campus 100%	134	248.21	0.0080		1.99	2.308E-05

[a] Vehicle miles traveled are for modeled truck route only.

[b] Emission rates determined using EMFAC 2021. Idle emission rates are expressed in grams per idle hour rather than grams per mile.

[c] This column includes the total truck travel and truck idle emissions. For idle emissions this column includes emissions based on the assumption that each truck idles for 15 minutes.

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   230 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
```

```
     * The User Specified a Pollutant Type of: DPM

 **Model Calculates PERIOD Averages Only

 **This Run Includes:    230 Source(s);       1 Source Group(s); and      75 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    230 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
         Model Outputs Tables of PERIOD Averages by Receptor
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and Missing
                                                                 Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   289.00 ;  Decay Coef. =
 0.000     ;  Rot. Angle =     0.0
                 Emission Units = GRAMS/SEC                                ;  Emission Rate
                 Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.7 MB of RAM.

 - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   280 Source(s),
        for Total of    1 Urban Area(s):
   Urban Population =   2035210.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * CCVR_Sub - Meteorological data includes CCVR substitutions
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Assumes No FLAGPOLE Receptor Heights.
      * The User Specified a Pollutant Type of: DPM

 **Model Calculates PERIOD Averages Only

 **This Run Includes:    280 Source(s);       1 Source Group(s); and      75 Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    280 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
         Model Outputs Tables of PERIOD Averages by Receptor
```

Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 289.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ; Emission Rate
Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.6 MB of RAM.

**Input Runstream File:
aermod.inp
**Output Print File:
aermod.out

**Detailed Error/Message File: 15297
Ops.err
**File for Summary of Results: 15297

Attention: Ms. Angela Noah
Director, Development

Subject: Geotechnical Exploration
Proposed Warehouse Development
1300 South Campus Avenue
City of Ontario, San Bernardino County, California

In accordance with your authorization, Leighton Consulting, Inc. (Leighton) has conducted geotechnical exploration for the proposed warehouse development at the approximately 11.4-acre site located at 1300 South Campus Avenue in the City of Ontario, San Bernardino County, California. This site is currently developed with an outdoor storage yard operated by 32 Reload. The purpose of this study has been to collect subsurface geotechnical data at the site with respect to the proposed development, evaluate the proposed development with respect to the site geotechnical conditions, and provide geotechnical recommendations for design and construction of the development.

Based on this investigation, construction of the proposed warehouse building development is feasible from a geotechnical standpoint. The most significant geotechnical issues at the site are those related to the potential for strong seismic shaking and potentially compressible soils. Good planning and design of the project can limit the impact of these constraints. This report presents our findings, conclusions, and geotechnical recommendations for the project.

We appreciate the opportunity to work with you on the development of this project. If you have any questions regarding this report, please call us at your convenience.

Respectfully submitted,

LEIGHTON CONSULTING, INC.

Luis Perez-Milicua, PE 89389

1.0 INTRODUCTION

1.1 Site Location and Description

The property is approximately 11.4 acres in area and is located at 1300 South Campus Avenue in the City of Ontario, San Bernardino County, California. The site is bordered by railroad tracks to the west, railroad tracks and industrial buildings to the south, Philips Street to the north, and Campus Avenue to the east. The majority of the property is developed as a lumber storage yard, which includes parking areas and drive aisles between stacks of lumber throughout the majority of the site, with an existing one-story building at the northern side of the site. The existing building footprint is approximately 30,000 square feet (SF) in plan area. The site is predominantly paved with asphalt concrete with some landscaped areas on the northeastern side of the site. Based on review of historical aerial imagery, the site appeared to have been mostly undeveloped prior to 2002. The site has been used as a storage yard since 2002 and the existing building onsite was constructed sometime between 2005 and 2009.

Based on Google Earth data, ground elevations (El.) range roughly from El. 925 feet above mean sea level (msl) on the northwest corner to El. 910 feet msl on the southeast corner, with an overall descending gradient across the site from north to south.

1.2 Proposed Development

Our understanding of this project is based in part on our review of the *Conceptual Site Plan*, Scheme 5, dated February 28, 2023, prepared by Herdman Architecture and Design. Based on the conceptual Site Plan, the proposed development includes a 229,431-square-foot warehouse building with truck loading docks on the eastern side of the building. We anticipate that the proposed warehouse will be constructed with tilt-up walls. Office areas are proposed at the northeast and southeast corners of the building.

Based on the relatively level site grades, we anticipate that site earthwork will generally include cuts and fills of 5 feet or less.

1.3 Previous Work

We are not aware of any previous geotechnical explorations performed within this project site.

1.4 Purpose of Investigation

The purpose of this study has been to evaluate the geotechnical conditions with respect to the proposed development and to provide geotechnical recommendations for design and construction of the development.

1.5 Scope of Investigation

Our geotechnical exploration included hollow-stem auger soil borings, laboratory testing, and geotechnical analysis to evaluate existing geotechnical conditions and to develop the conclusions and recommendations contained in this report. The scope of our study has included the following tasks:

- Background Review: We reviewed available, relevant geotechnical and geologic maps and reports, and aerial photographs available from our in-house library, available online, or those provided by you.
- Utility Coordination: We contacted Dig Alert (811) prior to excavating borings so that utility companies could mark utilities onsite. We also subcontracted a private utility locator to further locate any near-surface underground private utilities in the area of our proposed borings. We coordinated our work with you and a site representative.
- Field Exploration: A total of eight (8) hollow-stem auger borings were logged and sampled onsite to evaluate subsurface conditions. The borings were drilled by a subcontracted rig to depths ranging from 6 to 51 feet below the existing ground surface (bgs). Relatively undisturbed soil samples were obtained at selected intervals within the borings using a Modified California split barrel sampler lined with rings. Standard Penetration Tests (SPT) were conducted at selected depths and samples were obtained. Representative bulk soil samples were also collected at shallow depths from the borings.

Infiltration tests were conducted within 2 borings (LI-1, LI-2), which were located in the southeastern portion of the site, to evaluate general infiltration rates of subsurface soils at the depths and locations tested. The infiltration tests were conducted in general accordance with the San Bernardino County guidelines. Testing was conducted at depths of approximately 5 to 10 feet bgs in LI-1 and 10 to 15 feet bgs in LI-2 to estimate infiltration characteristics of the soil at that interval.

Excavations were backfilled and tamped with soil cuttings and patched with cold asphalt patch. Logs of the geotechnical borings are presented in Appendix B. Approximate boring locations are shown on the accompanying Geotechnical Exploration Map, Figure 2.

- Geotechnical Laboratory Testing: Geotechnical laboratory tests were conducted on selected relatively undisturbed and bulk soil samples obtained during our field investigation. This laboratory testing program was designed to evaluate engineering characteristics of site soils. Laboratory tests conducted during this investigation include:

  - Maximum dry density and optimum moisture content
  - In situ moisture content and dry density
  - Sieve analysis for grain-size distribution
  - Expansion Index
  - Atterberg Limits
  - Collapse/ Swell-Settlement
  - Remolded Direct Shear
  - R-value
  - Water-soluble sulfate concentration in the soil
  - Resistivity, chloride content and pH

  In-situ moisture content and dry density are provided on the boring logs under Appendix B. Remaining tests are provided in Appendix C, Laboratory Test Results.

- Engineering Analysis: Data obtained from our background review, along with data from our field exploration and geotechnical laboratory testing was evaluated and analyzed to develop geotechnical conclusions and provide preliminary recommendations presented in this report.

- Report Preparation: Results of our geotechnical exploration have been summarized in this report, presenting our findings, conclusions and preliminary geotechnical recommendations for design and construction of the proposed development.

2.0 FINDINGS

2.1 Regional Geologic Conditions

The site is located within the northern part of the Peninsular Ranges physiographic province, on the south of the San Gabriel Mountains. It occupies a broad, flat plain within the Upper Santa Ana Valley known as the Chino Plain. This valley alluvial plain descends southward from the San Gabriel Mountains to the Santa Ana River.

Frontal faults of the San Gabriel Mountains have a predominantly dip-slip (reverse) component, typically northward at relatively shallow inclinations resulting in the uplift of the plutonic and metamorphic basement rock of the San Gabriel Mountains through the ground surface. This uplift has accommodated the erosion of confined channels within the San Gabriel Mountains, and sediment generated from these mountains has been transported and deposited onto the valley alluvial plain. Coalescing alluvial fans form a nearly continuous apron of sediments derived from the largely plutonic and metamorphic rocks of the adjacent San Gabriel Mountains about 7½ miles to the north. These sediments consist of up to approximately 1200-foot thickness of gravel, sand, silt, and clay overlying crystalline and sedimentary basement rock (Fife, et al., 1976).

In general, surface drainage in the Project region is directed towards the south. San Antonio, Cucamonga, Deer, and Day Creeks drain the San Gabriel Mountains to the north, locally flowing through reinforced-concrete flood-control channels, then onto the lower alluvial plain to the Santa Ana River, and ultimately draining into Prado Dam Flood Control Basin.

The ground surface in the Project region is underlain by middle Holocene young alluvial fan deposits (Qyf_3) as illustrated in Figure 3, *Regional Geology Map.* These fan deposits have been described as generally consisting of silt, sand, and coarse-grained sand to boulders (Morton and Miller, 2006).

Geologic structural features of the Project region are shown in Figure 4, *Regional Fault and Historical Seismicity Map*. Major geologic structures include the Cucamonga/ Sierra Madre fault zone and the San Gabriel Mountains to the north, the San Jacinto and San Andreas fault zones to the northeast and east, and the Elsinore fault zone and the Puente Hills to the southwest.

2.2 Subsurface Soil Conditions

Based upon our review of pertinent geotechnical literature and our subsurface exploration, the site is underlain by native young alluvial fan deposits mantled by artificial fill. Based on our field exploration, onsite artificial fill appeared to reach depths of 5 feet bgs. The fill generally consisted of loose silty sands and sands. This fill has been presumed to have been placed during grading relating to the existing development but is considered undocumented since compaction reports were not available to review. Subsurface soils were generally observed to become denser with depth.

Young alluvial fan deposit soils were observed beneath the fill across the site in the explored hollow-stem auger borings. The alluvial soils encountered onsite generally consisted of loose to very dense sands to silty sands with gravel observed to total depths reaching approximately 51 feet bgs. Firm to stiff sandy silts were encountered from 7.5 to 15 feet bgs within the western portion of the site in borings LB-1 and LB-4.

2.2.1 Compressible and Collapsible Soil

Soil compressibility refers to a soil's potential for settlement when subjected to increased loads as from a fill surcharge. Based on this study, undocumented artificial fill and the upper portion of native soils are considered moderately compressible. Complete removal of undocumented fill and partial removal of near surface alluvium is recommended to reduce the potential for adverse total and differential settlement of the proposed improvements.

Collapse potential refers to the potential settlement of a soil under existing stresses upon being wetted. Silty sands encountered in the upper 5 feet at the site is not expected to be collapsible due to the relatively high fines content. Furthermore, a laboratory swell and collapse test was performed on a representative granular soil sample at a depths of 10 feet and the results indicated low collapse potential.

2.2.2 Expansive Soils

Expansive soils contain significant amounts of clay particles that swell considerably when wetted and shrink when dried. Foundations constructed on these soils are subjected to large uplifting forces caused by the swelling. Without proper measures taken, heaving and cracking of building foundations and slabs-on-grade could result.

One expansion index (EI) test was performed on a shallow bulk sample yielding a measured EI of 0. Based on the granular nature of the encountered near-surface soils, the onsite soils are anticipated to have very low (negligible) expansion potential.

2.2.3 Sulfate Content

Water-soluble sulfates in soil can react adversely with concrete. However, concrete in contact with soil containing sulfate concentrations of less than 0.1 percent by weight is considered to have negligible sulfate exposure based on American Concrete Institute (ACI) provisions, adopted by the 2022 CBC (CBC, 2022, Chapter 19, and ACI 318, 2014).

A near-surface soil sample was tested during this investigation for soluble sulfate content, yielding a sulfate content of 0.01 percent by weight. Based on the laboratory test results, the sulfate content of onsite soils are anticipated to be negligible (Exposure Class S0). Recommendations for concrete in contact with the soil are provided in Section 3.11.

2.2.4 Resistivity, Chloride and pH

Soil corrosivity to ferrous metals can be estimated by the soil's electrical resistivity, chloride content and pH. In general, soil having a minimum resistivity less than 1,000 ohm-cm is considered severely corrosive. Soil with a chloride content of 500 parts-per-million (ppm) or more is considered corrosive to ferrous metals.

As a screening for potentially corrosive soil, a representative soil sample was tested during this investigation to determine minimum resistivity, chloride content, and pH. The tests indicated a minimum resistivity of 3,540 ohm-cm,

chloride content of 70 ppm, and pH of 6.48. Based on these results, the onsite soil is considered to be moderately corrosive.

2.3 Groundwater

Groundwater was not encountered in any of our borings drilled to a maximum depth of 51 feet bgs.

Review of groundwater level data from the California Department of Water Resources' State Wells 340590N1176293W001 and 340389N1176821W001 located approximately 1 mile northeast from the site and 2.3 miles southwest of the site, respectively, indicated historic groundwater highs of greater than 200 feet bgs from measurements from 1964 through 2022. (CDWR, 2022)

Based on our review of available groundwater data, we have considered a historic high groundwater level of 200 feet for our liquefaction and seismic settlement analyses.

2.3.1 Regional Subsidence

Regional ground subsidence generally occurs due to rapid and intensive removal of subterranean fluids, typically water or oil. It is generally attributed to the consolidation of sediments as the fluid in the sediment is removed. The total load of the soils in partially saturated or saturated deposits is born by their granular structure and the fluid. When the fluid is removed, the load is born by the sediment alone and it settles.

The project site has been mapped by the U.S. Geological Society (2023) to be within an area of land subsidence from intense groundwater pumping from the early 1900's through 1978. This resulted in as much as 3.9 feet of subsidence, which occurred from 1986 to 1993 (USGS, 2023 and Stewart et al, 1998; cited but not available). In 1978, the Chino Basin Watermaster was formed and in 1998, a new Watermaster Board was created independent of the Chino Basin Municipal Water District. The 1998 court order that installed this independent Watermaster Board indicated that that the Watermaster to control and regulate Stored Water and Basin Water in storage and the Safe Yield in Chino Basin (CBWM, 2023). Based on this,

the potential for ground subsidence are not expected to pose a significant impact in the future.

2.4 Faulting and Seismicity

In general, the primary seismic hazards for sites in the region include surface rupture along active faults and strong ground shaking. The potential for fault rupture and seismic shaking are discussed below.

2.4.1 Surface Faulting

Based on our research, no active faults appear to have been mapped through or trending towards the site. The closest mapped active or potentially active faults are presented in the following table.

Fault Name	Approximate Distance from Site
Red Hill - Etiwanda Avenue fault	3.6 miles to the north
Central Avenue fault	5.2 miles to the southwest
San Jose fault	5.5 miles to the northwest
Indian Hill fault	6.1 miles to the northeast

Based on our understanding of the current geologic framework, the potential for future surface rupture of active faults onsite is considered very low.

2.4.2 Seismic Design Parameters

Based on current understanding of local faulting, the principal seismic hazard that could affect the site is ground shaking resulting from an earthquake occurring along several major active or potentially active faults in southern California. The project should be designed in accordance with applicable current building codes and standards utilizing appropriate seismic design parameters intended to reduce seismic risk as defined by California Geological Survey (CGS) Chapter 2 of Special Publication 117A (CGS, 2008). The following are seismic design parameters for new structures based on the 2022 California Building Code (CBC). The map-based seismic parameters presented were obtained from United States

Geological Survey in accordance with American Society of Civil Engineers (ASCE) Publication ASCE 7-16 and the 2022 CBC, Chapter 16A.

Site Class D was selected based on evaluation of the average field Standard Penetration Resistance in accordance with field Standard Penetration Test blowcount data in accordance with ASCE 7-16 20.3 and 20.4.

The following parameters should be considered for design under the 2022 CBC:

2022 CBC Parameters (CBC or ASCE 7-16 reference)	Value 2022 CBC
Site Latitude and Longitude: 34.0497, -117.6425	
Site Class Definition (1613A.2.2, ASCE 7-16 Ch 20)	D**
Mapped Spectral Response Acceleration at 0.2s Period (1613.2.1), S_s	1.500 g
Mapped Spectral Response Acceleration at 1s Period (1613.2.1), S_1	0.575 g
Short Period Site Coefficient at 0.2s Period (T1613.2.3(1)), F_a	*1.000*
Long Period Site Coefficient at 1s Period (T1613.2.3(2)), F_v	*1.725**
Adjusted Spectral Response Acceleration at 0.2s Period (1613.2.3), S_{MS}	1.500 g
Adjusted Spectral Response Acceleration at 1s Period (1613.2.3), S_{M1}	0.992* g
Design Spectral Response Acceleration at 0.2s Period (1613.2.4), S_{DS}	1.000 g
Design Spectral Response Acceleration at 1s Period (1613.2.4), S_{D1}	0.661* g
Mapped MCE_G peak ground acceleration (11.8.3.2, Fig 22-9 to 13), *PGA*	0.541 g
Site Coefficient for Mapped MCE_G *PGA* (11.8.3.2), F_{PGA}	1.100
Peak Ground Acceleration, mod w/ site effects (1803A.5.12; 11.8.3.2), PGA_M	0.596 g

* See Section 11.4.8 of ASCE 7-16. A site-specific ground motion hazard analysis in accordance with Section 21.2 of ASCE 7-16 is required for this site. **Per Supplement 3 to ASCE 7-16, a site-specific ground motion hazard analysis is not required where the value of the parameters S_{M1} and S_{D1} in the table are increased by 50%.**

**Site Class D, and all of the resulting parameters in this table, may only be used for structures without seismic isolation or seismic damping systems.

The project structural engineer should review the seismic parameters. A site-specific seismic ground motion analysis can be performed upon request.

Based on ASCE 7-16 Equation 11.8-1, the FPGA is 1.1, the PGA is 0.541g, and the PGAM is 0.596g. As an added check, PGA and hazard deaggregation were also estimated using the United States Geological Survey's (USGS) 2008 Interactive Deaggregations utility. The results of this analysis indicate that the predominant modal earthquake has a PGA of 0.74g with a magnitude of approximately 6.7 (M_W) at a distance on the order of 9.3 kilometers for the Maximum Considered Earthquake (2% probability of exceedance in 50 years).

2.5 Secondary Seismic Hazards

In general, secondary seismic hazards for sites in the region could include soil liquefaction, earthquake-induced settlement, lateral displacement, landslides, and earthquake-induced flooding. The potential for secondary seismic hazards at the site is discussed below.

2.5.1 Liquefaction Potential

Liquefaction is the loss of soil strength due to a buildup of excess pore-water pressure during strong and long-duration ground shaking. Liquefaction is associated primarily with loose (low density), saturated, relatively uniform fine- to medium-grained, clean cohesionless soils. As shaking action of an earthquake progresses, soil granules are rearranged and the soil densifies within a short period. This rapid densification of soil results in a buildup of pore-water pressure. When the pore-water pressure approaches the total overburden pressure, soil shear strength reduces abruptly and temporarily behaves similar to a fluid. For liquefaction to occur there must be:

(1) loose, clean granular soils,
(2) shallow groundwater, and
(3) strong, long-duration ground shaking

The State of California has not evaluated the site for liquefaction hazards. The County has mapped the site to be outside of zone of liquefaction susceptibility (San Bernardino County, 2010). Historical groundwater high has been estimated to be deeper than 200 feet bgs. As such, the site is considered to not be susceptible to liquefaction.

2.5.2 Seismically Induced Settlement

Seismically induced settlement consists of dry dynamic settlement (above groundwater) and liquefaction-induced settlement (below groundwater). During a strong seismic event, seismically induced settlement can occur within loose to moderately dense sandy soil due to reduction in volume during and shortly after an earthquake event. Settlement caused by ground shaking is often nonuniformly distributed, which can result in differential settlement.

We have performed analyses to estimate the potential for seismically induced settlement, using the method of Tokimatsu and Seed, and based on Martin and Lew (1999) for the boring data. Based on our analysis, and after our recommendations for building overexcavation and recompaction is accomplished, up to approximately 0.7 inch of potential total seismic settlement is estimated within the building footprint based on data from our hollow-stem auger borings.

Potential differential settlement is estimated as half of the total seismic settlement over a horizontal distance of 30 feet, which is a maximum of approximately 0.4 inch in 30 feet, or angular distortion of 0.001L. This is within differential settlement threshold value of 0.0075L for single-story concrete buildings of Risk Category I or II, as listed in Table 12.13-3 of ASCE 7 16, and within the threshold of 0.005L for multi-story concrete buildings of Risk Category I or II. Risk category should be determined by the structural engineer. Results of our seismic settlement analysis is presented in Appendix D.

Seismic settlement and differential settlement are considerd to be within tolerable limits.

2.5.3 Lateral Spread

Lateral spread is liquefaction-induced lateral ground movement, and a consideration in lateral spread analysis is to evaluate whether laterally continuous liquefiable layers exist. This site is not considered susceptible to liquefaction (see Section 2.5.1) and is generally level without any significant slopes, therefore, lateral spreading is not an issue for this site.

2.6 Infiltration Testing

Two well permeameter tests (LI-1 and LI-2) were conducted to estimate the infiltration rate at specific locations of the site. Tests LI-1 and LI-2 were located towards the southeast corner of the site. The well permeameter tests were conducted at depths of 5 to 10 feet bgs (LI-1) and 10 to 15 feet bgs (LI-2). Test depths were selected based on the conditions encountered during drilling at relatively shallow depths within non-cohesive soils.

A well permeameter test is useful for field measurements of soil infiltration rates and is suited for testing when the design depth of the basin or chamber is deeper than current existing grades. The test consists of excavating a boring to the depth of the test. A layer of clean sand/gravel is placed in the boring bottom to support temporary perforated well casing pipe. In addition, sand/gravel is poured around the outside of the well casing within the test zone to prevent the boring from caving/collapsing or eroding when water is added. The volume of water percolated during timed intervals is converted into an incremental infiltration rate, which is defined as flow divided by infiltration surface area, in inches per hour. The test was conducted based on the USBR 7300-89 test method.

Small-scale infiltration rates as summarized in the table below. Results of the infiltration testing are provided in Appendix B.

Boring	Test Depth (ft)	Soil Classification	Raw Infiltration Rates (in./hr) [1]
LI-1	5 to 10	Silty Sand (20% fines) and Sand with Gravel (4% fines)	16
LI-2	10 to 15	Silty Sand (20-27% fines)	27

[1] Factor of Safety should be applied to raw rates

3.0 CONCLUSIONS AND RECOMMENDATIONS

Based on this study, construction of the proposed development is feasible from a geotechnical standpoint. No severe geologic or soils related issues were identified that would preclude development of the site for the proposed improvements. The most significant geotechnical issues at the site are those related to the potential for strong seismic shaking and potentially compressible soils. Good planning and design of the project can limit the impact of these constraints. Remedial recommendations for these and other geotechnical issues are provided in the following sections.

Compressible undocumented fill and loose/ dry native alluvium should be removed and properly compacted during earthwork construction. Localized exposures of encountered fill material can be evaluated during grading on a case-by-case basis and may be left in place if engineering and placement documentation of onsite fill becomes available and reviewed by Leighton.

3.1 General Earthwork and Grading

All grading should be performed in accordance with the General Earthwork and Grading Specifications presented in Appendix E, unless specifically revised or amended below or by future recommendations based on final development plans.

3.1.1 Site Preparation

Prior to construction, the site should be cleared of debris, which should be disposed of offsite. Any underground obstructions should be removed. Resulting cavities should be properly backfilled and compacted. Efforts should be made to locate existing utility lines. Those lines should be removed or rerouted if they interfere with the proposed construction, and the resulting cavities should be properly backfilled and compacted. Trees should be removed and grubbed out.

The site includes existing structures; existing foundation systems should be removed or cut below proposed overexcavation depths. Existing foundations and structures encountered during grading should be evaluated on a case-by-case basis.

3.1.2 Removal of Uncontrolled Artificial Fill

Prior to overexcavation and recompaction of the onsite alluvial soil, any clean uncontrolled artificial fill within proposed building pad areas should be removed and may be used as compacted fill for the project, provided any deleterious materials are removed from the site. Across most of the site, undocumented fill is anticipated to be up to 5 feet in thickness. The depth of undocumented fill may vary throughout the site.

3.1.3 Overexcavation and Recompaction

To reduce the potential for adverse total and differential settlement of the proposed structures, the underlying subgrade soil should be prepared in such a manner that a uniform response to the applied loads is achieved.

All undocumented artificial fill within the proposed building pad should be removed. In addition, we recommend that the onsite soils in structural areas be overexcavated to a minimum depth of 6 feet below the existing ground surface or 3 feet below the bottom of the proposed footings, whichever is deeper, across the building pad. Where possible, the removal bottom should extend horizontally a minimum of 5 feet from the outside edges of the building footprint and footings (including columns connected to the buildings), or a distance equal to the depth of overexcavation below the footings, whichever is farther.

During overexcavation, the soil conditions should be observed by Leighton to further evaluate these recommendations based on actual field conditions encountered. A firm removal bottom should be established across the building footprint to provide uniform foundation support for the proposed structure. Leighton should observe and test the removal bottom prior to placing fill. Deeper overexcavation and recompaction may be recommended locally until a firm removal bottom is achieved.

Areas outside of proposed structure and planned for new asphalt or concrete pavement (such as parking areas or fire lanes), flatwork (such as sidewalks), site walls up to 8 feet tall and retaining walls retaining up to 3 feet of soil (taller walls should be overexcavated per the recommendations for buildings), areas to receive fill, and other improvements, should be overexcavated to a

minimum depth of 18 inches below existing grade or 18 inches below proposed subgrade (including the footing subgrade for walls), whichever is deeper.

After completion of the overexcavation, and prior to fill placement, the exposed surfaces should be scarified to a minimum depth of 6 inches, moisture conditioned to or slightly above optimum moisture content, and recompacted to a minimum 90 percent relative compaction, relative to the ASTM D1557 laboratory maximum density.

3.1.4 Fill Placement and Compaction

Onsite soil to be used for compacted structural fill should also be free of organic material debris and oversized material (greater than 8 inches in largest dimension). Any soil to be placed as fill, whether onsite or imported material, should be reviewed and possibly tested by Leighton.

All fill soil should be placed in thin, loose lifts, moisture conditioned, as necessary to at least 2 percentage points above optimum moisture content, and compacted to a minimum 90 percent relative compaction. However, the upper 24 inches of fill under the building pads should be compacted to a minimum of 95 percent relative compaction. Relative compaction should be determined in accordance with ASTM Test Method D1557. Aggregate base for pavement should be compacted to a minimum of 95 percent relative compaction.

3.1.5 Import Fill Soil

Import soil to be placed as fill should be geotechnically accepted by Leighton. Preferably at least 3 working days prior to proposed import to the site, the contractor should provide Leighton pertinent information of the proposed import soil, such as location of the soil, whether stockpiled or native in place, and pertinent geotechnical reports if available. We recommend that a Leighton representative visit the proposed import site to observe the soil conditions and obtain representative soil samples. Potential issues may include soil that is more expansive than onsite soil, soil that is too wet, soil that is too rocky or too dissimilar to onsite soils, oversize material, organics, debris, etc.

3.1.6 Shrinkage and Subsidence

The change in volume of excavated and recompacted soil varies according to soil type and location. This volume change is represented as a percentage increase (bulking) or decrease (shrinkage) in volume of fill after removal and recompaction. This value does not factor in removal of debris or other materials. Subsidence occurs as in-place soil (e.g., natural ground) is moisture-conditioned and densified to receive fill, such as in processing an overexcavation bottom. Subsidence is in addition to shrinkage due to recompaction of fill soil. Field and laboratory data used in our calculations included laboratory-measured maximum dry densities for soil types encountered at the subject site, the measured in-place densities of soils encountered and our experience. We preliminarily estimate the following earth volume changes will occur during grading:

Shrinkage	Approximately 12 +/- 3 percent
Subsidence (overexcavation bottom processing)	Approximately 0.15 foot

The level of fill compaction, variations in the dry density of the existing soils and other factors influence the amount of volume change. Some adjustments to earthwork volume should be anticipated during grading of the site.

3.1.7 Rippability and Oversized Material

Oversized material (rock or rock fragments greater than 8 inches in dimension) was not observed during our investigation. Oversized material should not be placed within structural fill areas during grading.

3.2 Shallow Foundation Recommendations

Overexcavation and recompaction of the footing subgrade should be performed as detailed in Section 3.1. The following recommendations are based on the onsite soil conditions and soils with a very low expansion potential.

3.2.1 Minimum Embedment and Width

Based on our preliminary investigation, footings should have a minimum embedment per code requirements, with a minimum width of 24 and 12 inches for isolated and continuous footings, respectively.

3.2.2 Allowable Bearing

An allowable bearing pressure of 2,500 pounds-per-square-foot (psf) may be used, based on an assumed embedment depth of 18 inches and minimum width described above. This allowable bearing value may be increased by 250 psf per foot increase in depth or width to a maximum allowable bearing pressure of 4,000 psf. If higher bearing pressures are required, this should be reviewed on a case-by-case basis and may include additional overexcavation and/or soil reinforcement. These allowable bearing pressures are for total dead load and sustained live loads. Footing reinforcement should be designed by the structural engineer.

3.2.3 Lateral Load Resistance

Soil resistance available to withstand lateral loads on a shallow foundation is a function of the frictional resistance along the base of the footing and the passive resistance that may develop as the face of the structure tends to move into the soil. The frictional resistance between the base of the foundation and the subgrade soil may be computed using a coefficient of friction of 0.35. The passive resistance may be computed using an allowable equivalent fluid pressure of 270 pounds per cubic foot (pcf), assuming there is constant contact between the footing and undisturbed soil. The coefficient of friction and passive resistance may be combined without further reduction.

3.2.4 Increase in Bearing and Friction - Short Duration Loads

The allowable bearing pressure and coefficient of friction values may be increased by one-third when considering loads of short duration, such as those imposed by wind and seismic forces.

3.2.5 Settlement Estimates

The recommended allowable bearing pressure is generally based on a total allowable, post-construction static settlement of 1 inch. Differential settlement due to static loading is estimated at ½ inch over a horizontal distance of 30 feet. Since settlement is a function of footing sustained load, size and contact bearing pressure, differential settlement can be expected between adjacent columns or walls where a large differential loading condition exists.

Seismic differential settlement is assumed to be approximately 0.4 inches over a horizontal distance of 30 feet for the design-level earthquake (angular distortion of 0.001L).

3.3 Recommendations for Slabs-On-Grade

Concrete slabs-on-grade should be designed by the structural engineer in accordance with the current CBC for soil with a very low expansion potential and considering the potential for liquefaction and seismic settlement. Where conventional light floor loading conditions exist, the following minimum recommendations should be used. More stringent requirements may be required by local agencies, the structural engineer, the architect, or the CBC. Laboratory testing should be conducted at finish grade to evaluate the expansion index of near-surface subgrade soils. In addition, slabs-on-grade should have the following minimum recommended components:

- Subgrade Moisture Conditioning: The subgrade soil should be moisture conditioned to at least 2 percentage points above optimum moisture content to a minimum depth of 12 inches prior to placing the moisture vapor retarder, steel or concrete.

- Moisture Retarder: A minimum of 10-mil moisture retarder should be placed below slabs where moisture-sensitive floor coverings or equipment is planned. The structural engineer should specify pertinent concrete design parameters and moisture migration prevention measures, such as whether a capillary break should be placed under the vapor retarder and whether or not a sand blotter layer should be placed over the vapor retarder. The moisture barrier may be placed directly on subgrade provided gravel or other protruding objects that

could puncture the moisture retarder are removed from the subgrade prior to placement. A heavier vapor retarder (such as 15 mil Stego Wrap) placed directly on prepared subgrade may also be used. Moisture retarders can reduce, but not eliminate moisture vapor rise from the underlying soils up through the slab. Moisture retarders should be designed and constructed in accordance with applicable American Concrete Institute, Portland Cement Association, Post-Tensioning Institute, ASTM International, and California Building Code requirements and guidelines.

Leighton does not practice in the field of moisture vapor transmission evaluation, since this is not specifically a geotechnical issue. Therefore, we recommend that a qualified person, such as the flooring subcontractor and/or structural engineer, be consulted with to evaluate the general and specific moisture vapor transmission paths and any impact on the proposed construction. That person should provide recommendations for mitigation of potential adverse impact of moisture vapor transmission on various components of the structures as deemed appropriate.

- Concrete Thickness and Reinforcement in Warehouse/Industrial Areas: Warehouse/industrial slabs-on-grade should be designed by the structural engineer based on anticipated wheel, equipment, and storage loads. Considering the site conditions, we recommend a minimum slab thickness of 6 inches. Crack control joints should be provided at a maximum spacing of 15 feet on center.

  The structural engineer should consider the following parameters.

  Provided that the slab subgrade soils are compacted to a minimum of 95 percent relative compaction at 1 to 2 percentage points above optimum (as measured by ASTM D 1557), an average subgrade spring constant (modulus of subgrade reaction, k) of 200 pci (with linear deflections up to ¾ inch and a non-linear response for larger deflections) may be assumed for analysis of loading on slabs-on-grade. This value should not be used for estimation of actual settlements, but is intended to estimate shears, moments, and local distortions. An alternate check may be used by assuming an allowable bearing pressure of 1,100 psf (though the modulus of subgrade reaction method is the preferred method). If soils are allowed to dry out prior to placing concrete, the

upper 9 inches should be scarified, moisture conditioned to 1 to 2 percentage points above optimum moisture content, and recompacted to a minimum of 95 percent relative compaction (based on ASTM D1557) prior to placing steel or concrete.

- Concrete Thickness--Office Areas: Slabs-on-grade for office space should be at least 4 inches thick (this is referring to the actual minimum thickness, not the nominal thickness). Reinforcing steel should be designed by the structural engineer, but as a minimum (for conventionally reinforced, 4-inch-thick slabs) should be No. 4 rebar placed at 18 inches on center, each direction, mid-depth in the slab. Crack control joints should be provided at a maximum spacing of 15 feet on center for office areas.

Minor cracking of the concrete as it cures, due to drying and shrinkage, is normal and should be expected. However, cracking is often aggravated by a high water/cement ratio, high concrete temperature at the time of placement, small nominal aggregate size, and rapid moisture loss due to hot, dry, and/or windy weather conditions during placement and curing. Cracking due to temperature and moisture fluctuations can also be expected. Low slump concrete can reduce the potential for shrinkage cracking. Additionally, our experience indicates that reinforcement in slabs and foundations can generally reduce the potential for concrete cracking. The structural engineer should consider these components in slab design and specifications.

3.4 Seismic Design Parameters

Seismic parameters presented in this report should be considered during project design. In order to reduce the effects of ground shaking produced by regional seismic events, seismic design should be performed in accordance with the current CBC. The CBC seismic design parameters listed in Section 2.4.2 of this report should be considered for the seismic analysis of the subject site.

3.5 Retaining Walls

We recommend that retaining walls be backfilled with very low expansive soil and constructed with a backdrain in accordance with the recommendations provided on Figure 5 (rear of text). Using expansive soil as retaining wall backfill will result in higher lateral earth pressures exerted on the wall. Based on these

recommendations, the following parameters may be used for the design of conventional retaining walls:

Static Equivalent Fluid Weight (pcf)	
Condition	**Level Backfill**
Active	35 pcf
At-Rest	55 pcf
Passive	270 pcf (allowable) (Maximum of 3,000 psf)

The above values do not contain an appreciable factor of safety unless noted, so the structural engineer should apply the applicable factors of safety and/or load factors during design, as specified by the California Building Code.

Cantilever walls that are designed to yield at least 0.001H, where H is equal to the wall height, may be designed using the active condition. Rigid walls and walls braced at the top should be designed using the at-rest condition.

Passive pressure is used to compute soil resistance to lateral structural movement. In addition, for sliding resistance, a frictional resistance coefficient of 0.4 may be used at the concrete and soil interface. The lateral passive resistance should be taken into account only if it is ensured that the soil providing passive resistance, embedded against the foundation elements, will remain intact with time.

In addition to the above lateral forces due to retained earth, surcharge due to improvements, such as an adjacent structure or traffic loading, should be considered in the design of the retaining wall. Loads applied within a 1:1 projection from the surcharging structure on the stem of the wall should be considered in the design.

For retaining walls with a retained height of more than 6 feet, an incremental seismic load applied as a uniform additive pressure of 22 pcf should be considered for a cantilever (unrestrained) wall with level backfill, and 36 pcf for a basement wall (restrained) with level backfill. This pressure is in addition to the static active earth pressures presented above. Earthquake and at-rest earth pressures need not be combined for analyses. The seismic earth pressure analysis is based on the County of Los Angeles Directive S004.0 Seismic Lateral Earth Pressures on

Retaining Walls, with a site-modified Peak Ground Acceleration (PGA_M) of 0.59g. The point of application of the dynamic load increment is at 1/3H, where H is the retained height.

A soil unit weight of 120 pcf may be assumed for calculating the actual weight of the soil over the wall footing.

3.6 Pavement Design

Flexible Pavement: Based on the design procedures outlined in the current Caltrans Highway Design Manual, and using a design R-value of 50, flexible pavement sections may consist of the following for the Traffic Index indicated. Final pavement design should be based on the Traffic Index determined by the project civil engineer and R-value testing provided near the end of grading.

ASPHALT PAVEMENT SECTION THICKNESS		
Traffic Index	**Asphaltic Concrete (AC) Thickness (inches)**	**Class 2 Aggregate Base Thickness (inches)**
5 or less	3.0	4.0
6	3.5	4.0
7	4.0	4.5
8	5.0	5.0

If the pavement is to be constructed prior to construction of the structures, we recommend that the full depth of the pavement section be placed in order to support heavy construction traffic.

***Rigid Pavements*:** For onsite Portland Cement Concrete (PCC) pavement in truck drive aisles and parking areas, assuming an approximate Traffic Index of 8, we recommend a minimum of 7-inch-thick concrete with dowels at construction joints, placed on compacted fill subgrade, with the upper 8 inches compacted to a minimum of 95 percent relative compaction. In areas with car traffic only, we recommend a minimum of 5-inch-thick concrete, placed on compacted fill subgrade with the upper 8 inches compacted to a minimum of 95 percent relative compaction.

The PCC pavement sections should be provided with crack-control joints spaced no more than 15 feet on center each way. If sawcuts are used, they should have a minimum depth of ¼ of the slab thickness and made within 24 hours of concrete placement.

***Other Pavement Recommendations*:** Irrigation adjacent to pavements without a deep curb or other cutoff to separate landscaping from the paving may result in premature pavement failure.

All pavement construction should be performed in accordance with the Standard Specifications for Public Works Construction or Caltrans Specifications. Field observations and periodic testing, as needed during placement of the base course materials, should be undertaken to ensure that the requirements of the standard specifications are fulfilled.

Prior to placement of aggregate base, the subgrade soil should be processed to a minimum depth of 6 inches, moisture-conditioned, as necessary, and recompacted to a minimum of 95 percent relative compaction. Aggregate base should be moisture conditioned, as necessary, and compacted to a minimum of 95 percent relative compaction.

3.7 Infiltration Recommendations

We recommend that the onsite artificial fill not be relied upon for infiltration. Subsurface soils within the western portion of the site included a silt layer at approximately 10 feet below grade. However, other than this isolated layer within two borings in this area, the rest of the geotechnical exploration primarily encountered sandy soils.

Infiltration tests were performed towards the southeast portion of the site within the proposed southern parking lot. The bottom of the infiltration tests were 10 feet for LI-1 and 15 feet for LI-2 (see Figure 2). Infiltration tests yielded raw infiltration rates of 16 in./hr. within LI-1 and 27 in./hr. within LI-2. Granular sandy soils yielded high infiltration rates and are feasible for infiltration.

For underlying alluvial soils that are granular with a low fines content, we recommend an unfactored (small-scale) infiltration rate of 16 inches per hour. Soil conditions should be verified by Leighton during infiltration system excavation.

We recommend that a correction factor/safety factor be applied to the infiltration rate in conformance with San Bernardino County guidelines, since monitoring of actual facility performance has shown that actual infiltration rates are lower than measured in small-scale tests. Infiltration basins are subject to siltation, which can result in reduced infiltration rates. *This small-scale infiltration rate should be divided by a design factor of at least 3 for buried chambers and at least **3** for open basins; although the design/safety factor may be higher based on project-specific aspects.* It should be noted that during periods of prolonged precipitation, underlying soils tend to become saturated to greater depths/extent. Therefore, infiltration rates tend to decrease with prolonged rainfall.

Some design considerations are presented in the following paragraphs:

- **Adjacent Structure Impact**: As infiltrating water can seep within soil strata partially horizontally, it is important to consider impact that infiltration facilities can play on nearby subterranean structures, such as basement walls or open excavations, whether onsite or offsite, and whether existing or planned. Any such nearby features should be identified and evaluated as to whether infiltrating water can impact these facilities. Infiltration facilities should not be constructed adjacent to or under buildings. Setbacks should be discussed with Leighton during the planning process, but a building setback of at least 15 feet horizontally is initially suggested.

- **Infiltration Basins Type and Geometry**: Further testing may be required depending on final design of infiltration facilities. Infiltration rates are anticipated to vary based on location and depth. Infiltration concepts should be discussed with Leighton as infiltration plans are being developed. We should review all infiltration plans, including locations and depths of proposed facilities. Further testing may be required depending on infiltration facilities design details, particularly considering type, depth and location.

- **Siltation and Soil Changes**: These infiltration rates are for a clean, un-silted infiltration surface in native, sandy alluvial soil. These values may be reduced

over time as silting of the basin or chamber occurs. Furthermore, if the basin or chamber bottom is allowed to be compacted by heavy equipment, this value is expected to be reduced. Infiltration of water through soil is highly dependent on such factors as grain size distribution of soil particles, gradation (uniform versus well graded), particle shape, fines content and density. Small changes in soil conditions, including density, can cause large differences in observed infiltration rates. Infiltration is not suitable in compacted fill. For open basins and swales, vegetation within the basin bottoms and sides is expected to help reduce erosion and help maintain infiltration rates.

- **De-silting Weir/Facilities**: Periodic flow of water carrying sediments into the basin or chamber, plus deposition of fine wind-blown sediments and sediments from erosion of basin side walls, will eventually cause the basin bottom or chamber to accumulate a layer of silt, which has the potential to significantly reducing the overall infiltration rate of the basin or chamber. Therefore, we recommend that significant amounts of silt/sediment not be allowed to flow into the facility within stormwater, especially during construction of the project and prior to achieving a mature landscape onsite. We recommend that an easily maintained, robust silt/sediment removal system be installed to pretreat storm water before it enters the infiltration facility. Infiltration facilities should be constructed with spillways or other appropriate means that would prevent overfilling that could damage the facility or adjacent improvements.

- **Drainage/Infiltration Time Cycle**: In general, the rate of infiltration reduces as the head of water in the infiltration facility reduces, and it also reduces with prolonged periods of infiltration. As such, water typically infiltrates much faster near the beginning of and/or immediately after storm events than at times well after a storm when the water level in the facility has receded, since the infiltration rate is then slower due to both lower head and longer overall duration of infiltration. In open basins with compacted or silty bottoms, this could be problematic, in that even if the basin had already infiltrated significant amounts of storm water, the lower several inches or feet of water could remain in the basin for an extended period of time, creating prolonged open-water safety concern (such as potential for mosquitos and waterborne diseases, algae odor, etc.). In a buried/cover infiltration chamber, these conditions would be of less concern.

- **Maintenance**: Infiltration facilities should be routinely monitored, especially before and during the rainy season, and corrective measures should be implemented if and as needed. Things to check for include removal of trash or dumping, proper infiltration, absence of accumulated silt, and that de-silting filters/features are clean and functioning. Pretreatment desilting features should be cleaned and maintained as recommended by the manufacturer or designer. Even with measures to prevent silt from flowing into the infiltration facility, accumulated silt may need to be removed.

3.8 Temporary Excavations

All temporary excavations, including utility trenches, retaining wall excavations and other excavations should be performed in accordance with project plans, specifications and all OSHA requirements.

No surcharge loads should be permitted within a horizontal distance equal to the height of cut or 5 feet, whichever is greater from the top of the slope, unless the cut is shored appropriately. Excavations that extend below an imaginary plane inclined at 45 degrees or steeper below the edge of any adjacent existing site foundation should be properly shored to maintain support of the adjacent structures.

Cantilever shoring should be designed based on an active equivalent fluid pressure of 32 pcf. If excavations are braced at the top and at specific design intervals, the active pressure may then be approximated by a rectangular soil pressure distribution with the pressure per foot of width equal to 25H, where H is equal to the depth of the excavation being shored.

During construction, the soil conditions should be regularly evaluated to verify that conditions are as anticipated. The contractor should be responsible for providing the "competent person" required by OSHA, standards to evaluate soil conditions. Close coordination between the competent person and the geotechnical engineer should be maintained to facilitate construction while providing safe excavations.

3.9 Trench Backfill

Utility-type trenches onsite can be backfilled with the onsite material, provided it is free of debris, organic and oversized material. Prior to backfilling the trench, pipes

should be bedded and shaded in a granular material that has a sand equivalent of 30 or greater and will allow water to freely permeate. Gravel or rock should not be used for trench backfill without written approval by Leighton. If gravel or open-graded rock is approved and used as bedding or shading, it should be wrapped in Mirafi 140N filter fabric, or equivalent, to prevent surrounding soil from washing into the pore spaces in the gap-graded rock. Shading should extend at least 12 inches above the top of the pipe. The bedding/shading materials should be densified in-place by mechanical means, or in accordance with Greenbook specifications.

Subsequent to pipe bedding and shading, backfill soils should be placed in loose layers, moisture conditioned, as necessary, and mechanically compacted using a minimum standard of 90 percent relative compaction (ASTMS D1557). The thickness of layers should be based on the compaction equipment used in accordance with the Standard Specifications for Public Works Construction (Greenbook). The upper 6 inches in pavement areas should be compacted to 95 percent compaction.

3.10 Surface Drainage

Inadequate control of runoff water and/or poorly controlled irrigation can cause the onsite soils to expand and/or shrink, producing heaving and/or settlement of foundations, flatwork, walls, and other improvements. Maintaining adequate surface drainage, proper disposal of runoff water, and control of irrigation should help reduce the potential for future soil moisture problems.

Positive surface drainage should be designed to be directed away from foundations and toward approved drainage devices, such as gutters, paved drainage swales, or watertight area drains and collector pipes.

Surface drainage should be provided to prevent ponding of water adjacent to the structures. In general, the area around the buildings should slope away from the building. We recommend that unpaved landscaped areas adjacent to the buildings be avoided. Roof runoff should be carried to suitable drainage outlets by watertight drain pipes or over paved areas.

3.11 Sulfate Attack and Corrosion Protection

Based on the results of laboratory testing, concrete structures in contact with the onsite soil will have negligible exposure to water-soluble sulfates in the soil. Therefore, common Type II cement may be used for concrete construction. The concrete should be designed in accordance with Table 19.3.2.1 of the American Concrete Institute ACI 318-14 provisions (ACI, 2014).

The onsite soil is considered to be moderately corrosive to ferrous metals. It is recommended that any buried pipe be made of non-ferrous material, or that any ferrous pipe be protected by dielectric tape, polyethylene sleeves and/or other methods, with recommendations from a corrosion engineer. Corrosion information presented in this report should be provided to your underground utility subcontractors. Additional testing and evaluation by a corrosion engineer may be warranted if metallic utilities are planned.

3.12 Additional Geotechnical Services

The preliminary geotechnical recommendations presented in this report are based on subsurface conditions as interpreted from limited subsurface explorations and limited laboratory testing. Our supplemental geotechnical recommendations provided in this report are based on information available at the time the report was prepared and may change as plans are developed. Additional geotechnical investigation and analysis may be required based on final improvement plans. Leighton should review the site and grading plans when available and comment further on the geotechnical aspects of the project. Geotechnical observation and testing should be conducted during excavation and all phases of grading operations. Our conclusions and preliminary recommendations should be reviewed and verified by Leighton during construction and revised accordingly if geotechnical conditions encountered vary from our preliminary findings and interpretations.

Geotechnical observation and testing should be provided:

- After completion of site clearing.
- During overexcavation of compressible soil.
- During compaction of all fill materials.
- After excavation of all footings and prior to placement of concrete.
- During utility trench backfilling and compaction.
- During pavement subgrade and base preparation.
- When any unusual conditions are encountered.

4.0 LIMITATIONS

This report was based in part on data obtained from a limited number of observations, site visits, soil excavations, samples, and tests. Such information is, by necessity, incomplete. The nature of many sites is such that differing soil or geologic conditions can be present within small distances and under varying climatic conditions. Changes in subsurface conditions can and do occur over time. Therefore, our findings, conclusions, and recommendations presented in this report are based on the assumption that Leighton Consulting, Inc. will provide geotechnical observation and testing during construction.

This report was prepared for the sole use of California Acquisition, LLC for application to the design of the proposed warehouse building development in accordance with generally accepted geotechnical engineering practices at this time in California.

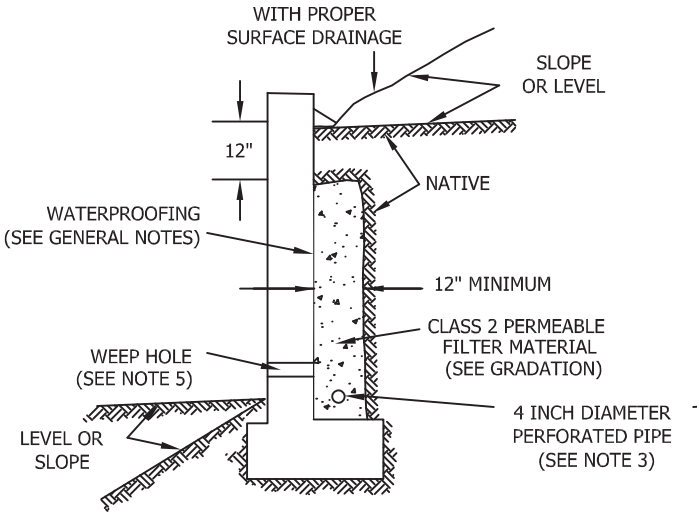
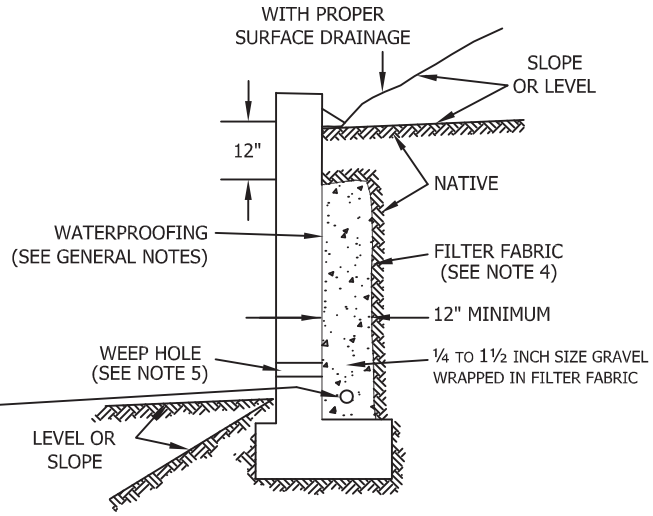
SUBDRAIN OPTIONS AND BACKFILL WHEN NATIVE MATERIAL HAS EXPANSION INDEX OF ≤50

OPTION 1: PIPE SURROUNDED WITH CLASS 2 PERMEABLE MATERIAL



OPTION 2: GRAVEL WRAPPED IN FILTER FABRIC



Class 2 Filter Permeable Material Gradation
Per Caltrans Specifications

Sieve Size	Percent Passing
1"	100
3/4"	90-100
3/8"	40-100
No. 4	25-40
No. 8	18-33
No. 30	5-15
No. 50	0-7
No. 200	0-3

GENERAL NOTES:

* Waterproofing should be provided where moisture nuisance problem through the wall is undesirable.
* Water proofing of the walls is not under purview of the geotechnical engineer
* All drains should have a gradient of 1 percent minimum
*Outlet portion of the subdrain should have a 4-inch diameter solid pipe discharged into a suitable disposal area designed by the project engineer. The subdrain pipe should be accessible for maintenance (rodding)
*Other subdrain backfill options are subject to the review by the geotechnical engineer and modification of design parameters.

Notes:
1) Sand should have a sand equivalent of 30 or greater and may be densified by water jetting.
2) 1 Cu. ft. per ft. of 1/4- to 1 1/2-inch size gravel wrapped in filter fabric
3) Pipe type should be ASTM D1527 Acrylonitrile Butadiene Styrene (ABS) SDR35 or ASTM D1785 Polyvinyl Chloride plastic (PVC), Schedule 40, Armco A2000 PVC, or approved equivalent. Pipe should be installed with perforations down. Perforations should be 3/8 inch in diameter placed at the ends of a 120-degree arc in two rows at 3-inch on center (staggered)
4) Filter fabric should be Mirafi 140NC or approved equivalent.
5) Weephole should be 3-inch minimum diameter and provided at 10-foot maximum intervals. If exposure is permitted, weepholes should be located 12 inches above finished grade. If exposure is not permitted such as for a wall adjacent to a sidewalk/curb, a pipe under the sidewalk to be discharged through the curb face or equivalent should be provided. For a basement-type wall, a proper subdrain outlet system should be provided.
6) Retaining wall plans should be reviewed and approved by the geotechnical engineer.
7) Walls over six feet in height are subject to a special review by the geotechnical engineer and modifications to the above requirements.

RETAINING WALL BACKFILL AND SUBDRAIN DETAIL FOR WALLS 6 FEET OR LESS IN HEIGHT

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, clients can benefit from a lowered exposure to the subsurface problems that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed below, contact your GBA-member geotechnical engineer. Active involvement in the Geoprofessional Business Association exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Geotechnical-Engineering Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical-engineering study conducted for a given civil engineer will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client. *Those who rely on a geotechnical-engineering report prepared for a different client can be seriously misled*. No one except authorized client representatives should rely on this geotechnical-engineering report without first conferring with the geotechnical engineer who prepared it. *And no one – not even you – should apply this report for any purpose or project except the one originally contemplated.*

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read it *in its entirety*. Do not rely on an executive summary. Do not read selected elements only. *Read this report in full.*

You Need to Inform Your Geotechnical Engineer about Change

Your geotechnical engineer considered unique, project-specific factors when designing the study behind this report and developing the confirmation-dependent recommendations the report conveys. A few typical factors include:

- the client's goals, objectives, budget, schedule, and risk-management preferences;
- the general nature of the structure involved, its size, configuration, and performance criteria;
- the structure's location and orientation on the site; and
- other planned or existing site improvements, such as retaining walls, access roads, parking lots, and underground utilities.

Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light-industrial plant to a refrigerated warehouse;
- the elevation, configuration, location, orientation, or weight of the proposed structure;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.*

This Report May Not Be Reliable

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, that it could be unwise to rely on a geotechnical-engineering report whose reliability may have been affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If your geotechnical engineer has not indicated an "apply-by" date on the report, ask what it should be*, and, in general, *if you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying it. A minor amount of additional testing or analysis – if any is required at all – could prevent major problems.

Most of the "Findings" Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site's subsurface through various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing were performed*. The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgment to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team from project start to project finish, so the individual can provide informed guidance quickly, whenever needed.

This Report's Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, *they are not final*, because the geotechnical engineer who developed them relied heavily on judgment and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* revealed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals' misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a full-time member of the design team, to:

- confer with other design-team members,
- help develop specifications,
- review pertinent elements of other design professionals' plans and specifications, and
- be on hand quickly whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction observation.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note conspicuously that you've included the material for informational purposes only*. To avoid misunderstanding, you may also want to note that "informational purposes" means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report, but they may rely on the factual data relative to the specific times, locations, and depths/elevations referenced. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely*. Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a "phase-one" or "phase-two" environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually relate any environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures*. If you have not yet obtained your own environmental information, ask your geotechnical consultant for risk-management guidance. As a general rule, *do not rely on an environmental report prepared for a different client, site, or project, or that is more than six months old.*

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, none of the engineer's services were designed, conducted, or intended to prevent uncontrolled migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, ***proper implementation of the geotechnical engineer's recommendations will not of itself be sufficient to prevent moisture infiltration.*** Confront the risk of moisture infiltration by including building-envelope or mold specialists on the design team. ***Geotechnical engineers are not building-envelope or mold specialists.***

APPENDIX B

GEOTECHNICAL LOGS

APPENDIX B

FIELD EXPLORATION

Our field investigation consisted of a surface reconnaissance and a subsurface exploration. Approximate exploration locations are shown on Figure 2, Geotechnical *Exploration Location Map*.

Borings: On April 3, 2023, 7 hollow-stem-auger borings (LB-1 through LI-2) and one hand-augered boring (LB-6) were drilled, logged and sampled to depths ranging from 6 feet to 51 feet below the ground surface. Encountered soils were logged in the field by our representative and described in accordance with the Unified Soil Classification System (ASTM D 2488). Relatively undisturbed soil samples were obtained at selected intervals within these borings using both a Modified California ring-lined and Standard Penetration Test (SPT) split-spoon sampler. Standard Penetration Test (SPT) resistance blow counts were obtained by dropping a 140-pound hammer through a 30-inch free fall. The 2-inch outside diameter split-spoon sampler was driven 18 inches and the number of blows was recorded for each 6 inches of penetration (ASTM D 1586). In addition, 2.4-inch inside diameter brass ring samples were obtained using a Modified California sampler driven into the soil with the 140-pound hammer. Near surface bulk soil samples were also collected from the borings. Representative earth-material samples obtained from these subsurface explorations were transported to our geotechnical laboratory for evaluation and appropriate testing.

Results of Well Permeameter, from USBR 7300-89 Method

Leighton 60th Anniversary

Project: 13871.001

Exploration #/Location: LI-1

Depth Boring drilled, bgs (ft): 10

Tested by: AA

USCS Soil Type in test zone: SP

Weather (start to finish): Sunny

Water Source/pH: H2O

Measured boring diameter: 8 in. 4 in. Well Radius

Depth to GW or aquitard, bgs: 100 ft

Well Prep: Drilled to 10', set 2" well pipe through hollow-stem auger, backfill with sand at test zone

Depth to bottom of well measured from top of auger (or ground surface): 10.2 ft 0. in. Total (in.) 122

Casing stickup measured above top of auger (or ground surface) (+): 0. ft 0. in. 0

Depth to top of sand from top of casing

Flow Meter ID: 2504 Meter Units: Gallons 0.05 gallons/pulse

Data logger ID:

Initial estimated Depth to Water Surface (in.): 85

Average depth of water in well, "h" (in.): 37

approx. h/r: 9.2

Tu (Fig. 8) (ft): 92.9

Tu>3h?: yes, OK

Depth of well bottom below top of casing (in): 122

Cross-sectional area for flow calcs based on Δh

Well pack sand porosity	0.4
Casing outer diameter, in.	2.3
Casing inner diameter, in.	2.1
Cross-sectional area, in.^2	21.9

Use of Barrels: No

Use of Flow Meter: Yes

Test Type: Constant Head

APPENDIX C

LABORATORY TEST RESULTS

APPENDIX C

GEOTECHNICAL LABORATORY TESTING

The geotechnical laboratory testing program was directed toward a quantitative and qualitative evaluation of the physical and mechanical properties of the soils underlying the site and to aid in verifying soil classification.

In-Situ Moisture and Density: The natural water content (ASTM D 2216) and in-situ dry density (ASTM D 2937) were determined for recovered relatively undisturbed ring-lined barrel drive samples, from our subsurface explorations. Results of these tests are shown on the logs at the appropriate sample depths, in Appendix B.

Expansion Index: An Expansion Index (EI) test was performed on a bulk sample of the site clays, in general accordance with the ASTM D 4829 Standard Test Method. Results of this test are presented on the "Expansion Index" sheet in this appendix.

Atterberg Limits: Atterberg limits were determined in accordance with ASTM Test Method D 4318 for Unified Soil Classification of fine grained materials. Results are presented on the Atterberg Limits sheet in this appendix.

Sieve Analysis: Sieve analyses (ASTM D 422) were performed on selected subsurface soil samples. These tests were performed to assist in the classification of the soil. Results of these tests are presented on the "*Particle Size Analysis of Soils*" figures.

Collapse Potential: Collapse potential tests were performed on selected soil samples in general accordance with ASTM Standard Test Method D 5333. Test results are presented on the "*One Dimensional Swell or Settlement*" figure.

Modified Proctor Compaction Curve: A laboratory modified Proctor compaction test (ASTM D 1557) was performed on a bulk soil sample to determine maximum laboratory dry density and optimum moisture content. Result of this test is presented on the following "*Modified Proctor Compaction Test*" plot in this appendix.

Direct Shear: A direct shear test was performed on a soil specimen remolded to 90% of the modified Proctor laboratory density. Three different rings were remolded from the bulk soil sample then inundated with water and sheared separately at three different normal loads to establish soil friction and cohesion parameters. Results of these tests are presented in this appendix on the Direct Shear Test Results sheets.

R-value Test: One R-value test was performed on collected bulk soil sample to evaluate pavement support characteristics of the near-surface soils. R-value test was performed

in accordance with Caltrans Standard Test Method 301. The test result is presented in this appendix.

Corrosivity Tests: To evaluate the corrosion potential of the subsurface soils at the site, we tested representative bulk samples collected during our subsurface investigation for pH, resistivity and soluble sulfate and chloride content testing. Results of these tests are presented at the end of this appendix.

MODIFIED PROCTOR COMPACTION TEST

ASTM D 1557

Project Name:	Bridge Ontario	Tested By:	O. Figueroa	Date:	04/14/23
Project No.:	13871.001	Checked By:	J. Ward	Date:	05/08/23
Boring No.:	LB-3	Depth (ft.):	0-5		
Sample No.:	B-1				
Soil Identification:	Olive brown silty sand (SM), asphalt noted				

Note: Corrected dry density calculation assumes specific gravity of 2.70 and moisture content of 1.0% for oversize particles

Furnace Temperature (°C)	860			
Time In / Time Out	7:30/8:15			
Duration of Combustion (min)	45			
Wt. of Crucible + Residue (g)	18.0383			
Wt. of Crucible (g)	18.0359			
Wt. of Residue (g) (A)	0.0024			
PPM of Sulfate (A) x 41150	98.76			
PPM of Sulfate, Dry Weight Basis	**99**			

CHLORIDE CONTENT, DOT California Test 422

ml of Extract For Titration (B)	30			
ml of AgNO3 Soln. Used in Titration (C)	0.9			
PPM of Chloride (C -0.2) * 100 * 30 / B	70			
PPM of Chloride, Dry Wt. Basis	**70**			

pH TEST, DOT California Test 643

pH Value	**6.48**			
Temperature °C	20.5			

SOIL RESISTIVITY TEST

DOT CA TEST 643

Project Name:	Bridge Ontario		Tested By :	G. Berdy	Date: 04/17/23
Project No. :	13871.001		Checked By:	J. Ward	Date: 05/08/23
Boring No.:	LB-3		Depth (ft.) :	0-5	
Sample No. :	B-1				

Soil Identification:* Olive brown SM, asphalt noted

*California Test 643 requires soil specimens to consist only of portions of samples passing through the No. 8 US Standard Sieve before resistivity testing. Therefore, this test method may not be representative for coarser materials.

Specimen No.	Water Added (ml) (Wa)	Adjusted Moisture Content (MC)	Resistance Reading (ohm)	Soil Resistivity (ohm-cm)
1	20	15.37	4700	4700
2	30	23.05	3600	3600
3	40	30.74	3700	3700
4				
5				

Moisture Content (%) (MCi)	0.00
Wet Wt. of Soil + Cont. (g)	0.00
Dry Wt. of Soil + Cont. (g)	0.00
Wt. of Container (g)	1.00
Container No.	
Initial Soil Wt. (g) (Wt)	130.14
Box Constant	1.000
MC =(((1+Mci/100)x(Wa/Wt+1))-1)x100

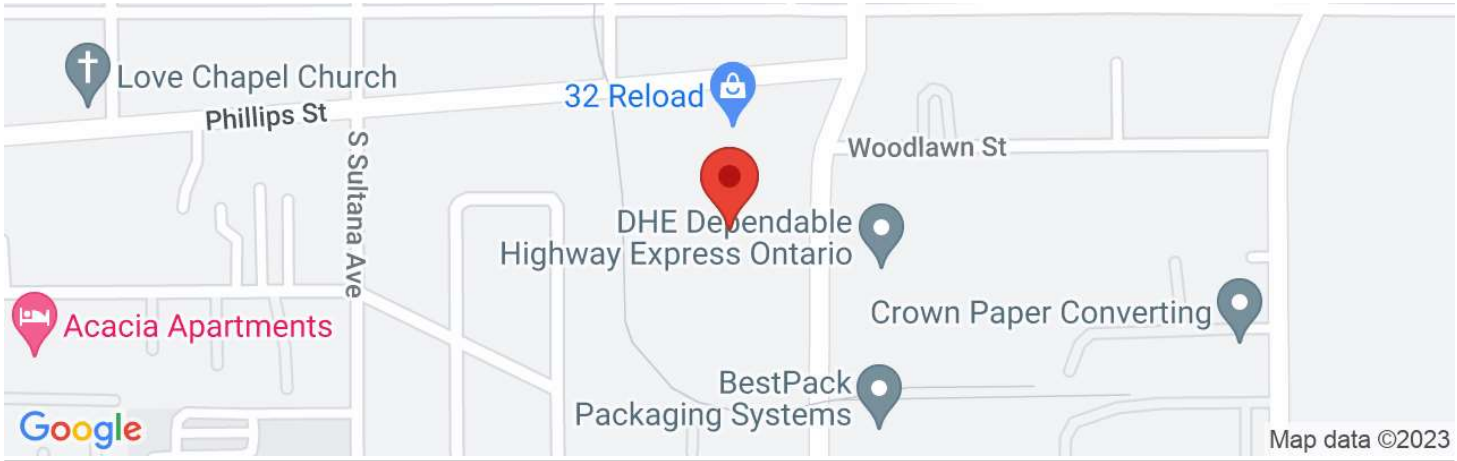
APPENDIX D

SUMMARY OF SEISMIC HAZARD ANALYSIS

Latitude, Longitude: 34.04973823, -117.64250718



Date	4/6/2023, 3:19:31 PM
Design Code Reference Document	ASCE7-16
Risk Category	II
Site Class	D - Stiff Soil

Type	Value	Description
S_S	1.5	MCE_R ground motion. (for 0.2 second period)
S_1	0.575	MCE_R ground motion. (for 1.0s period)
S_{MS}	1.5	Site-modified spectral acceleration value
S_{M1}	null -See Section 11.4.8	Site-modified spectral acceleration value
S_{DS}	1	Numeric seismic design value at 0.2 second SA
S_{D1}	null -See Section 11.4.8	Numeric seismic design value at 1.0 second SA

Type	Value	Description
SDC	null -See Section 11.4.8	Seismic design category
F_a	1	Site amplification factor at 0.2 second
F_v	null -See Section 11.4.8	Site amplification factor at 1.0 second
PGA	0.541	MCE_G peak ground acceleration
F_{PGA}	1.1	Site amplification factor at PGA
PGA_M	0.596	Site modified peak ground acceleration
T_L	8	Long-period transition period in seconds
SsRT	1.571	Probabilistic risk-targeted ground motion. (0.2 second)
SsUH	1.68	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration
SsD	1.5	Factored deterministic acceleration value. (0.2 second)
S1RT	0.575	Probabilistic risk-targeted ground motion. (1.0 second)
S1UH	0.629	Factored uniform-hazard (2% probability of exceedance in 50 years) spectral acceleration.
S1D	0.6	Factored deterministic acceleration value. (1.0 second)
PGAd	0.541	Factored deterministic acceleration value. (Peak Ground Acceleration)
PGA_{UH}	0.655	Uniform-hazard (2% probability of exceedance in 50 years) Peak Ground Acceleration
C_{RS}	0.935	Mapped value of the risk coefficient at short periods
C_{R1}	0.915	Mapped value of the risk coefficient at a period of 1 s
C_V	1.4	Vertical coefficient

DISCLAIMER

SEAOC / OSHPD do not intend that the use of this information replace the sound judgment of such competent professionals, having experience and knowledge in the field of practice, nor to substitute for the standard of care required of such professionals in interpreting and applying the results of the seismic data provided by this website. Users of the information from this website assume all liability arising from such use. Use of the output of this website does not imply approval by the governing building code bodies responsible for building code approval and interpretation for the building site described by latitude/longitude location in the search results of this website.

U.S. Geological Survey - Earthquake Hazards Program

Unified Hazard Tool

Please do not use this tool to obtain ground motion parameter values for the design code reference documents covered by the U.S. Seismic Design Maps web tools (e.g., the International Building Code and the ASCE 7 or 41 Standard). The values returned by the two applications are not identical.

Please also see the new USGS Earthquake Hazard Tool for access to the most recent NSHMs for the conterminous U.S. and Hawaii.

1.0 General

1.1 Intent: These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these more general Specifications. Observations of the earthwork by the project Geotechnical Consultant during the course of grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).

1.2 The Geotechnical Consultant of Record: Prior to commencement of work, the owner shall employ the Geotechnical Consultant of Record (Geotechnical Consultant). The Geotechnical Consultants shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of the grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During the grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required. Subsurface areas to be geotechnically observed, mapped, elevations recorded, and/or tested include natural ground after it has been cleared for receiving fill but before fill is placed, bottoms of all "remedial removal" areas, all key bottoms, and benches made on sloping ground to receive fill.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of the subgrade and fill materials and perform relative compaction testing of fill to determine the attained level of compaction. The Geotechnical Consultant shall provide the test results to the owner and the Contractor on a routine and frequent basis.

1.3 The Earthwork Contractor: The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The

Contractor shall be solely responsible for performing the grading in accordance with the plans and specifications.

The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of "spreads" of work and the estimated quantities of daily earthwork contemplated for the site prior to commencement of grading. The Contractor shall inform the owner and the Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate observations and tests can be planned and accomplished. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are rectified.

2.0 Preparation of Areas to be Filled

2.1 Clearing and Grubbing: Vegetation, such as brush, grass, roots, and other deleterious material shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant.

The Geotechnical Consultant shall evaluate the extent of these removals depending on specific site conditions. Earth fill material shall not contain more than 1 percent of organic materials (by volume). No fill lift shall contain more than 5 percent of organic matter. Nesting of the organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area.

As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, coolant, etc.) have chemical constituents that are considered to be hazardous waste. As such, the indiscriminate dumping or spillage of these fluids onto the ground may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed.

2.2 Processing: Existing ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Existing ground that is not satisfactory shall be overexcavated as specified in the following section. Scarification shall continue until soils are broken down and free of large clay lumps or clods and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction.

2.3 Overexcavation: In addition to removals and overexcavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured or otherwise unsuitable ground shall be overexcavated to competent ground as evaluated by the Geotechnical Consultant during grading.

2.4 Benching: Where fills are to be placed on ground with slopes steeper than 5:1 (horizontal to vertical units), the ground shall be stepped or benched. Please see the Standard Details for a graphic illustration. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise overexcavated to provide a flat subgrade for the fill.

2.5 Evaluation/Acceptance of Fill Areas: All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.

3.0 Fill Material

3.1 General: Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soils of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soils to achieve satisfactory fill material.

3.2 Oversize: Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 8 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or underground construction.

3.3 Import: If importing of fill material is required for grading, proposed import material shall meet the requirements of Section 3.1. The potential import source shall be given to the Geotechnical Consultant at least 48 hours (2 working days) before importing begins so that its suitability can be determined and appropriate tests performed.

4.0 Fill Placement and Compaction

4.1 Fill Layers: Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.

4.2 Fill Moisture Conditioning: Fill soils shall be watered, dried back, blended, and/or mixed, as necessary to attain a relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with the American Society of Testing and Materials (ASTM Test Method D1557-91).

4.3 Compaction of Fill: After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557-91). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction with uniformity.

4.4 Compaction of Fill Slopes: In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557-91.

4.5 Compaction Testing: Field tests for moisture content and relative compaction of the fill soils shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).

4.6 Frequency of Compaction Testing: Tests shall be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill soils embankment. In addition, as a guideline, at least one test shall be taken on slope faces for each 5,000 square feet of slope face and/or each 10 feet of vertical height of slope. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

4.7 Compaction Test Locations: The Geotechnical Consultant shall document the approximate elevation and horizontal coordinates of each test location. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so that the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two grade stakes within a horizontal distance of 100 feet and vertically less than 5 feet apart from potential test locations shall be provided.

5.0 Subdrain Installation

Subdrain systems shall be installed in accordance with the approved geotechnical report(s), the grading plan, and the Standard Details. The Geotechnical Consultant may recommend additional subdrains and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed by a land surveyor/civil engineer for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys.

6.0 Excavation

Excavations, as well as over-excavation for remedial purposes, shall be evaluated by the Geotechnical Consultant during grading. Remedial removal depths shown on geotechnical plans are estimates only. The actual extent of removal shall be determined by the Geotechnical Consultant based on the field evaluation of exposed conditions during grading. Where fill-over-cut slopes are to be graded, the cut portion of the slope shall be made, evaluated, and accepted by the Geotechnical Consultant prior to placement of materials for construction of the fill portion of the slope, unless otherwise recommended by the Geotechnical Consultant.

7.0 Trench Backfills

7.1 Safety: The Contractor shall follow all OHSA and Cal/OSHA requirements for safety of trench excavations.

7.2 Bedding and Backfill: All bedding and backfill of utility trenches shall be done in accordance with the applicable provisions of Standard Specifications of Public Works Construction. Bedding material shall have a Sand Equivalent greater than 30 (SE>30). The bedding shall be placed to 1 foot over the top of the conduit and densified by jetting. Backfill shall be placed and densified to a minimum of 90 percent of maximum from 1 foot above the top of the conduit to the surface.

The Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 300 feet of trench and 2 feet of fill.

7.3 Lift Thickness: Lift thickness of trench backfill shall not exceed those allowed in the Standard Specifications of Public Works Construction unless the Contractor can demonstrate to the Geotechnical Consultant that the fill lift can be compacted to the minimum relative compaction by his alternative equipment and method.

7.4 Observation and Testing: The jetting of the bedding around the conduits shall be observed by the Geotechnical Consultant.

APPENDIX E-1
PHASE I ESA

ENERCON

Excellence—Every project. Every day.

Phase I Environmental Site Assessment

1300 South Campus Avenue
Ontario, California

Subject: **Phase I Environmental Site Assessment**
1300 South Campus Avenue
Ontario, California

Dear Ms. Noah:

Enercon Services, Inc. (ENERCON) has performed a Phase I Environmental Site Assessment (ESA) of the property located at 1300 South Campus Avenue in the city of Ontario, California ("subject property"). Work was completed in general accordance with the proposal dated February 9, 2023, between ENERCON and California Acquisition, LLC. The attached report presents our methodology, findings, opinions, and conclusions regarding the environmental conditions at the subject property. We appreciate the opportunity to be of service to you on this project. If there are any questions, please feel free to call the undersigned at your convenience.

Sincerely,

Enercon Services, Inc.

Stephanie N. Jones, G.I.T.
Senior Geologist

Dennis Kawasaki

EXECUTIVE SUMMARY

Enercon Services, Inc. (ENERCON) was retained by California Acquisition, LLC ("the client") to perform a Phase I Environmental Site Assessment (ESA) for the property located at 1300 South Campus Avenue in the city of Ontario, California ("subject property"). The subject property is currently occupied by 32 Reload as a lumber storage yard and distribution facility. California Acquisition, LLC is considering purchasing the subject property and redeveloping the property for commercial warehousing purposes. Document review and site assessment activities for this report were conducted between March 23 and April 12, 2023.

In summary, the following items were noted:

- From at least 1933 through 1985, the subject property consisted of vacant and/or agricultural land with two dwellings located on the southeast corner. By at least 1966 the dwellings and southern portion of the subject property were used by an automobile wrecking business. Additionally, an on-site railroad spur was present along the western and southern boundaries of the subject property. In 1986, the dwellings were demolished. By 1989, the southern portion of the property was paved and used as a storage yard for lumber by Grove Lumber and expanded by 2002 to the central portion of the subject property. The present-day commercial warehouse building was constructed in the northern portion of the subject property in 2007. 32 Reload, an affiliate of Grove Lumber, has continued to occupy the subject property for lumber storage and distribution.
- Groundwater has been reported in the subject property vicinity at a depth of approximately 350 feet below ground surface level (bgs) with a south to southwesterly flow direction.
- Railroad spurs are known to be common sources of petroleum hydrocarbons in the subsurface due to releases from rail cars. They are also known to be common sources of metals due to leaching from treated wood planks and ballast rock. Based on the presence of a railroad spur along the western and southern boundaries of the subject property since at least 1966, the potential releases from the railroad spur represent a recognized environmental condition (REC).
- In 1992, a dual-compartment aboveground storage tank (AST) containing one 500-gallon gasoline compartment and one 1,500-gallon diesel compartment was installed in the southeast corner of the subject property for fueling distribution trucks. At the time of the site reconnaissance, only the diesel compartment was reportedly in use. Due to the use of the AST for refueling purposes for at least 30 years, the AST represents a REC.
- Building permits indicate that a septic tank and cesspool were historically used on the southern portion of the subject property associated with the former dwellings. These features were reportedly backfilled in 1985. For geotechnical purposes, these features should be removed during redevelopment activities.
- Based on the age of the subject property building (built in 2007), friable asbestos containing building materials (ACMs) and lead-based paint (LBP) are not likely present. However, non-friable materials such as mastics and roofing materials may be present. Prior to demolition, a comprehensive asbestos survey should be completed. If present, ACMs should be removed by a state-licensed abatement contractor prior to demolition.

- No other on- or off-site environmental concerns were noted.

CONCLUSIONS

ENERCON has performed this Phase I ESA in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) Practice E 1527-21, ASTM Standard E 2600-15, and the EPA Standards and Practices for All Appropriate Inquiries (AAI), Final Rule (40 CFR, Part 312), for the property located at 1300 South Campus Avenue in the city of Ontario, California. Any limitations or exceptions encountered during completion of this report are stated in Section 1.4. No evidence or indication of RECs, historical-RECs (HRECs), controlled-RECs (CRECs), or conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property has been revealed, except for the following:

RECs

- Based on the presence of a railroad spur along the western and southern boundaries of the subject property since at least 1966, the potential releases along the railroad spur represent a REC.
- Due to the vehicle fueling operations for at least 30 years, the AST represents a REC.

HRECs

- No HRECs were identified during this investigation.

CRECs

- No CRECs were identified during this investigation.

De-Minimis Conditions

Although not considered a REC per ASTM, non-friable materials such as mastics and roofing materials may be present. Prior to demolition, a comprehensive asbestos survey should be completed. If present, ACMs should be removed by a state-licensed abatement contractor prior to demolition.

Non-ASTM Conditions

During redevelopment activities, the former septic tank and cesspool should be removed for geotechnical purposes.

RECOMMENDATIONS

Based on the results of this Phase I ESA, ENERCON recommends completing a soil sampling investigation in the area of the AST and along the railroad spur to further investigate potential subsurface impacts from these features.

1. INTRODUCTION

Enercon Services, Inc. (ENERCON) was retained by California Acquisition, LLC to perform a Phase I Environmental Site Assessment (ESA) for the property located at 1300 South Campus Ave in the city of Ontario, California (subject property;" Figure 1). Work was completed in general accordance with the proposal dated February 9, 2023, between California Acquisition, LLC and ENERCON. The subject property is currently occupied by 32 Reload as a storage yard and distribution facility. It is our understanding that California Acquisition is considering purchasing the subject property and redeveloping it for commercial warehousing purposes. The purpose of this Phase I ESA is to determine whether environmental concerns might be present due to historical land use which might impact redevelopment activities or pose a potential human health risk through vapor intrusion. The following sections identify the purpose, the involved parties, the scope of work, and the limitations and exceptions associated with the Phase I ESA.

1.1. Purpose of Phase I ESA

In accordance with the American Society for Testing and Materials (ASTM) E1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Standard E1527-21), the objective of the Phase I ESA was to identify, to the extent feasible pursuant to ASTM Standard E1527-21, recognized environmental conditions (RECs), historical-RECs (HRECs), controlled-RECs (CRECs), or conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property (a de minimis condition).

According to ASTM, the term REC means "…(1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment."

ASTM defines HRECs as "…a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the

subject property to any controls (for example, activity and use limitations or other property use limitations)."

ASTM defines CRECs as a "…REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations.)"

ASTM defines a de minimis condition as "…a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."

Other environmental considerations include subject property features or conditions that may have an environmental component of interest but which do not meet the ASTM definition of a REC, CREC, or HREC. ASTM does not necessarily require any actions to address the presence or condition, but such conditions are identified for the sake of thoroughness and completeness.

The United States Environmental Protection Agency ("USEPA" or "EPA") has stated that ASTM Standard E1527-21, is consistent with the Standards and Practices for All Appropriate Inquiries (AAI), Final Rule (40 Code of Federal Regulations [CFR], Part 312) and is compliant with the statutory criteria for all appropriate inquiries. All appropriate inquiries, as defined in the AAI Final Rule, must be conducted by persons seeking the landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) prior to acquiring a property or seeking or receiving federal Brownfields grants under the authorities of CERCLA. The purpose of AAI, as defined in the AAI Final Rule, was to identify releases and threatened releases of hazardous substances which cause or threaten to cause the incurrence of response costs.

As part of this Phase I ESA, ENERCON also assessed whether a vapor encroachment condition (VEC) exists at the subject property. The VEC assessment was completed following the ASTM E2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM Standard E2600-15). The objective of this work was to evaluate the possibility that hazardous materials or other adverse

environmental conditions are present due to past or present use of the subject property and/or properties in the subject property vicinity.

1.2. Involved Parties

Mr. Kody Klein completed historical research, site reconnaissance, document review, and management. Ms. Kasia Anderson completed oversight, regulatory inquiries, and management. Ms. Anderson meets the definition of an environmental professional as set forth in the AAI Final Rule.

1.3. Scope of Work

ENERCON's scope of work for this Phase I ESA is consistent with ASTM Standard E1527-21. The scope of work included the activities listed below.

- **Review of User Provided Information** – Review of information regarding title and judicial records for environmental liens or activity and use limitations, recorded environmental liens, actual or specialized knowledge or commonly known information regarding environmental conditions at the subject property, the relationship of the purchase price of the property to the fair market value, readily available maps, environmental reports, and other environmental documents pertaining to the subject property, as available and obtained from the user/client.
- **Records Review** – Acquisition and review of records, including federal, state, tribal, and local regulatory agency databases, for the subject property and for properties located within a specified radius of the subject property; local regulatory agency files for the subject property and selected nearby properties of potential environmental concern; physical setting sources, including topographic maps, geologic maps, and geologic and hydrogeologic reference documents; and historic land use information including aerial photographs, historical fire insurance rate maps, building department records, and city directories, as necessary, that are reasonably ascertainable, publicly available, can be obtained within reasonable time and cost, and are practically reviewable.
- **Vapor Encroachment Condition (VEC)** – Review available regulatory and client provided data to assess Tier 1 non-numeric screening for the subject property. ENERCON evaluated whether contaminants were present in soil and/or groundwater in the subject property vicinity which might pose a VEC at the subject property.
- **Site Reconnaissance** – Performance of a site reconnaissance to visually observe the subject property and any structure(s) located on the subject property to the extent not obstructed by bodies of water, adjacent buildings, or other obstacles. The purpose of the site reconnaissance is to obtain information indicating the likelihood of identifying RECs in connection with the subject property, including the general subject property setting, subject property usage, use and storage of hazardous materials and petroleum products, disposal of waste products and materials, sources of polychlorinated biphenyls (PCBs), and evidence of releases and possible risks of contamination from activities at adjacent properties.
- **Interviews** – Interviews with subject property representatives, including owners, occupants, and subject property managers, regarding the environmental condition of the

subject property to the extent necessary and such persons are available. Interviews with state and/or local government officials, as necessary.

- **Report** – Evaluation of the information and data obtained by the Phase I ESA process outlined above and preparation of this Phase I ESA report documenting findings and providing opinions and conclusions regarding possible environmental impacts and RECs at the subject property.

1.4. Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. ENERCON should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

The findings, opinions, and conclusions are based on an analysis of the observed subject property conditions and the referenced literature. It should be understood that the conditions of a subject property could change with time as a result of natural processes or the activities of man at the subject property or nearby properties. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which ENERCON has no control. ENERCON cannot warrant or guarantee that not finding indicators of any particular hazardous material means that this particular hazardous material or any other hazardous materials do not exist on the subject property. Additional research, including invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether.

1.5. Special Terms and Conditions

As indicated in Section 13.1.5 of ASTM Standard E1527-21, the following, which is not intended to be all inclusive, represents out-of-scope items with respect to a Phase I ESA: asbestos-containing materials (ACMs), radon, lead-based paint (LBP), lead in drinking water, wetlands, regulatory compliance, cultural and historic risk, industrial hygiene, health and

safety, ecological resources, endangered species, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, biological agents, and mold. As part of our agreement with the client, ENERCON visually assessed subject property buildings (if present) for possible ACMs, LBP, and mold and researched the potential for radon exposure at the subject property. In addition, ASTM Standard E2600-15 supplements the ASTM Standard E1527-21 to include evaluation of VEC using Tier 1 screening.

This study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, ENERCON did not address interpretations of zoning regulations, building code requirements, or property title issues.

1.6. User Reliance

This report may be relied upon and is intended exclusively for use by the client, its partners, members, investors, affiliates, successors and assigns, and lenders. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than the foregoing parties is undertaken at said parties' sole risk.

1.7. Physical Limitations

No physical limitations were encountered during the completion of this Phase I ESA report.

1.8. Data Gaps

No significant data gaps were noted during the preparation of this Phase I ESA report.

2. GENERAL SITE CHARACTERISTICS

The following sections describe the location and the current uses of the subject property and adjacent properties. A subject property location map is presented as Figure 1 and a subject property vicinity map is presented as Figure 2. Selected photographs of the subject property and surrounding properties are provided in Appendix A.

2.1. Location and Legal Description

The subject property consists of approximately 11 acres across four parcels, The following provides the subject property addresses and associated San Bernardino County Tax Assessor's Parcel Numbers (APNs). A complete legal description is provided in the Title Report presented in Appendix B.

Address	APN
1300 South Campus Avenue	104-948-202
1351 South Campus Avenue	104-948-203
1386 South Campus Avenue	104-948-204
1344 South Bon View Avenue	104-948-201

It should be noted that the subject property address 1351 South Campus Avenue is also assigned to the east adjoining property. This address is associated with the central portion of the subject property.

The subject property is bounded to the north by Philips Street, to the east by South Campus Avenue, to the south by PRC Composites, and to the west by residential housing (Figure 2). Subject property boundary information was obtained during the site reconnaissance and information provided by the client.

2.2. Site Description and Current Site Uses/Operations

The following paragraphs present a description of the structures present at the subject property, the tenants currently occupying the subject property, the activities being conducted on-site, the heating and cooling systems utilized in the subject property building, the sewage disposal system, and the potable water provider for the subject property, if any.

2.2.1. Site Description

The northern portion of the subject property is improved with a warehouse building used for storage and office space (1300 South Campus Avenue). The remaining portions of the subject property are used primarily for the storage of lumber and some roofing materials. Railroad spurs run along the southern and western boundaries and are in use for off-loading shipments. The subject property address 1344 South Bon View Avenue is associated with the western-most parcel improved with a railroad spur. Parking and driveway areas exist along the eastern boundary.

2.2.2. Occupants

The subject property is currently occupied by 32 Reload as a storage and distribution facility for lumber.

2.2.3. Heating and Cooling Systems

Heating and cooling systems at the subject property building are powered by electricity and/or natural gas. The subject property maintains electricity and natural gas from the local purveyors.

2.2.4. Sewage Disposal/Septic Systems

Sewage disposal at the on-site building is reportedly connected to the municipal sewer system. As further discussed in Section 5.5, a septic tank and cesspool were historically used on the subject property associated with former dwellings. These features were reportedly backfilled and abandoned. No record of their removal was noted.

2.2.5. Potable Water

Potable water is provided to the subject property by the local water purveyor.

2.3. Adjacent Properties

In general, the subject property vicinity is used for commercial and residential purposes (Figure 2). The subject property is bounded to the north by Philips Street followed by residential housing. The subject property is bounded to the east by South Campus Avenue followed by DHE Dependable Highway Express for warehouse and distribution purposes. It should be noted that this facility has been assigned the address 1351 South Campus Avenue, which is also an address associated with the subject property. The subject property is bounded to the south by PRC Composites a composite container manufacturing facility and bounded to the west by residential housing (Figure 2).

No aboveground storage tanks (ASTs), evidence of underground storage tanks (USTs), or possible hazardous materials or wastes were noted being used or stored by off-site facilities along the property line with the subject property. These off-site properties would not be considered an environmental concern to the subject property.

3. USER PROVIDED INFORMATION

The following sections summarize information provided by the user to assist the environmental professional in identifying the possibility of RECs in connection with the subject property, and to fulfill the user's responsibilities in accordance with Section 6 of ASTM Standard E 1527-21. A

copy of the user questionnaire is presented in Appendix B. The questionnaire was completed by Ms. Angela Noah of California Acquisition, LLC.

3.1. Current Title Information

A Title Report was provided by the client and reviewed by ENERCON. The Title Report was prepared by the First American Title Insurance Company dated March 2, 2023. According to the Title Report, the current owner of the subject property is "JAR Commercial Investments, LLC." A copy of the Title Report is included in Appendix B.

3.2. Environmental Liens or Activity and Use Limitations

Based on our review of the Title Report, no records of environmental liens or activity and use limitations (AULs) were noted associated with the subject property. In addition, Ms. Noah was not aware of any environmental liens or AULs against the subject property that are filed or recorded under federal, state, or local law.

3.3. Specialized Knowledge

Ms. Noah indicated that, for the purposes of this assessment, the client has no specialized knowledge or experience pertaining to the subject property or the adjacent properties that is material to RECs in connection with the subject property.

3.4. Commonly Known or Reasonably Ascertainable Information

Ms. Noah indicated that the client was not aware of commonly known or reasonably ascertainable information pertaining to the subject property that could be material to RECs in connection with the subject property.

3.5. Valuation Reduction for Environmental Issues

In a transaction involving the purchase of a parcel of commercial real estate, the user shall consider the relationship of the purchase price of the property to fair market value of the property if the property was not affected by hazardous substances or petroleum products. Ms. Noah indicated that the purchase price reflects fair market value.

3.6. Reason for Performing Phase I ESA

ENERCON was retained to perform the Phase I ESA as part of its real estate due diligence activities prior to leasing the subject property.

3.7. Other User Provided Information

No other information was provided by the User.

4. PHYSICAL SETTING

The following sections include discussions of topographic, geologic, and hydrogeologic conditions in the vicinity of the subject property, based upon our document review and our visual reconnaissance of the subject property and adjacent areas.

4.1. Site Topography

Based on the review of the United States Geological Survey (USGS) 7.5-minute series, Ontario, California Topographic Quadrangle Map dated 2018, the subject property is approximately 921 feet above mean sea level (msl). The topography generally slopes to the south.

4.2. Geology

The subject property is located within the south-central to west portion of the Transverse Ranges in an area locally known as the Los Angeles Coastal Plain or the Los Angeles Basin. The subject property is underlain by alluvium deposits of Quaternary age. The alluvium consists of gravel, sand, sandy silt, silt, and clay with shale pebbles.

4.3. Oil and Gas Maps

Based on a review of the California Department of Conservation, Geologic Energy Management Division (CalGEM) online well finder, the subject property is not located within an oil field and no oil wells are located in the vicinity of the subject property.

4.4. Site Hydrology

The following sections discuss the subject property hydrology in terms of both surface waters and groundwater.

4.4.1. Surface Waters

No natural and/or artificial water bodies are currently located on or adjacent to the subject property.

4.4.2. Groundwater

Groundwater information was not available for the subject property. To obtain groundwater information, ENERCON reviewed the State Water Resources Control

Board (SWRCB) GeoTracker website for nearby properties with groundwater monitoring activities due to environmental investigations. Groundwater data was available for the property located at 717 South Taylor Street, approximately 0.6 miles northeast from the subject property, which reported groundwater at a depth of approximately 350 feet below ground surface (bgs) and flows in a southerly direction.

5. HISTORICAL LAND USE

ENERCON conducted a historical land use record search for both the subject property and surrounding areas. This included a review of one or more of the following sources that were found to be both reasonably ascertainable and useful for the purposes of this Phase I ESA: historical aerial photographs, historical fire insurance maps, historical city directories, building permits and plans, topographic maps, property tax records, zoning/land use records, and a review of prior environmental assessment reports regarding the subject property. Copies of historical data are provided in Appendix C.

5.1. Summary of Historical Land Use of the Property

From at least 1933 through 1985, the subject property consisted of vacant and/or agricultural land with two dwellings located on the southeast corner. By at least 1966 the dwellings and southern portion of the subject property were used by an automobile wrecking business. Additionally, an on-site railroad spur was present along the western and southern boundaries of the subject property. In 1986, the dwellings were demolished. By 1989, the southern portion of the property was paved and used as a storage yard for lumber by Grove Lumber and expanded by 2002 to the central portion of the subject property. The present-day commercial warehouse building was constructed in the northern portion of the subject property in 2007. 32 Reload, an affiliate of Grove Lumber, has continued to occupy the subject property for lumber storage and distribution.

5.2. Summary of Historical Land Use of Adjoining Properties

From at least 1938 through 1959, the subject property vicinity consisted of agricultural land with sparse residences. By 1966, an increase in residential land use was noted. By 1975, an increase in commercial use was noted. These land uses increased in later years.

5.3. Fire Insurance Rate Maps

Historical Sanborn Fire Insurance Rate Maps (Sanborn maps) were requested from Environmental Database Resources (EDR). According to EDR, Sanborn maps were not available for the subject property.

5.4. Historical Aerial Photographs

Historical aerial photographs for select years between 1938 and 2020 were provided by EDR. The following presents a summary of our review.

- **1938, 1946, 1953, 1959, 1966, 1975, 1985** – The subject property consisted of agricultural land with a dwelling located in the southeast corner of the property. By 1966, the southern portion of the subject property appeared to be used for storage purposes. Additionally, the existing railroad spur was present along the western and southern extent of the subject property. The adjoining properties consisted of agricultural land with sparse residences. The north adjoining Philips Street and east adjoining South Campus Avenue were present. By 1953, an increase in residential and commercial development was observed in the subject property vicinity.
- **1989, 1990, and 1994** – The dwelling was no longer present on the subject property. The southern portion of the property had been paved and was used as a storage yard. The subject property vicinity was becoming increasingly developed with residences and commercial buildings. The east adjoining property was used as a storage yard.
- **2002 and 2006** – By 2002, the subject property storage yard uses expanded to the central portion of the subject property. The vicinity was increasingly developed for commercial purposes.
- **2009, 2012, 2016, and 2020** – The subject property was developed with the existing warehouse building. The subject property vicinity was increasingly developed for commercial purposes. The east adjoining property was developed with the existing warehouse distribution building by 2016.

5.5. Building Records

The City of Ontario Building Department (OBD) maintains building permits for the subject property and properties in the subject property vicinity. ENERCON requested building records for the subject property using the subject property addresses. The following presents a summary of the building records provided by the OBD for each subject property address.

1300 South Campus Avenue

Building records for the subject property address 1300 South Campus Avenue included a building permit to construct the existing warehouse building, dated April 3, 2007, issued to Grove Lumber. Other records provided included various electrical, plumbing, certificate of occupancy, and building permits associated with the construction of the warehouse building

in 2007. These permits were issued to Grove Lumber. Based on ENERCON's review, these records would not be considered an environmental concern to the subject property.

Other permits included the installation of a storm drain in 2007. During ENERCON's site reconnaissance, this storm drain was not observed. Based on the use of the subject property, this would not be considered an environmental concern and would not represent a data gap.

1351 South Campus Avenue

As previously discussed, the subject property address 1351 South Campus Avenue has also been assigned to the east adjoining property, across South Campus Avenue. Based on information provided in other historical records (i.e. aerial photographs, city directories, and regulatory agency records), building records provided for this address were possibly associated with both the subject property and east adjoining property. Aerial photographs indicate the southern portion of the subject property was graded and paved by 1989 and the central portion was graded and paved by 2002 for use as a storage yard. The east adjoining property was graded and paved for use as a storage yard with a small office building by 1989.

Building records included a building permit to construct a 3,500-square-foot lumber sales office issued to Thomas A. Day in 1988. Other permits included grading, mechanical, electrical, and sewer permits issued to Thomas A. Day/Grove Lumber in 1988/1989; a building permit to construct a maintenance building issued in 1995 to "Croll." These records are likely associated with the east adjoining property. Other more recent permits from 2014 to the present were associated with the redevelopment of the east adjoining property with the existing warehouse building.

A permit to install an aboveground fuel tank was issued to Grove Lumber in 1992. It is unclear if this permit is associated with the existing diesel AST on the subject property. Based on the possible presence of the existing AST on the subject property for over 30 years, the AST represents a possible environmental concern.

1386 South Campus Avenue

Building records for the subject property address 1386 South Campus Avenue included a building permit for an addition to an existing dwelling in 1934, a bathroom addition to an

existing dwelling from 1948, a permit for a cesspool for the bathroom in 1949, a certificate of occupancy for Campus Towing was issued in 1978, a certificate of occupancy for Action Auto Wrecking, a automobile dismantling and used cars operation, was issued in 1979, and a permit to demolish four buildings in 1986, which notes that the septic tank and cesspool were backfilled. Based on ENERCON's review, these records do not represent an environmental concern to the subject property. During redevelopment, the former septic tank and cesspool should be removed for geotechnical purposes.

5.6. City Directories

City directory listings were obtained from EDR for the subject property and surrounding properties from 1922 through 2020. ENERCON reviewed city directory listings for the subject property addresses. The following listings were noted

- **1300 South Campus Avenue –** Sebastian Torta (residential, 1940); HB Baca and MM Copas (residential, 1951); E Tedford (residential, 1956, 1960, 1964, and 1975); Ted's Auto Wrecking (1964 and 1970); Big J's Guard Dog Service (1975); Anna Lella (residential, 1980 and 1985); Creative "Clrs" by Wyne (1980); Ontario Desk Manufacturing Co. (1985); and Grove Lumber (2010, 2014, and 2020).
- **1351 South Campus Avenue –** Grove Lumber (1992, 1995, 2005, 2010, 2014, and 2017); Eclypse International (2000); and Dependable Highway Express (2017 and 2020). As previously discussed, this address is also associated with the east adjoining property, across South Campus Avenue. Based on ENERCON's review of aerial photographs and building records, these listings are likely associated with the east adjoining property.
- **1386 South Campus Avenue –** Listings for this address were the same as 1300 South Campus Avenue.
- **1344 South Bon View Avenue –** California Division of Forestry (1970), Klein Products Inc. (1970, 1975, 1980, 1985, and 1990); HR Steel (1995), Raymond Croll (2003).

Based on ENERCON's review of the city directories, no environmental concerns were noted.

5.7. Historical Topographic Maps

Historical topographic maps were provided by EDR for review. The maps were dated 1897, 1900, 1903, 1933, 1941-1942, 1944, 1953-1954, 1966-1967, 1973, 1976, 1981, 2012, 2015, and 2018. Maps dated 1897, 1900, and 1903 depict the subject property as vacant land. Maps dated 1933, 1941, and 1942 depict the subject property with a small structure along the southern boundary. The map dated 1944 depicts the subject property as agricultural land. Multiple streets, including South Campus Avenue and Philips Street are depicted in this topographic map. Maps dated 1953 and 1954 depict multiple structures along the

southern boundary of the subject property. Much of the vicinity is depicted as agricultural lands. The maps dated 1966, 1967, 1973, 1976, and 1981 show no changes to the subject property. The site vicinity has increased in residential and commercial development. Maps dated 2012, 2015, and 2018 display no detailed map features.

5.8. Interviews

Interviews were conducted by ENERCON with key subject property personnel (e.g., past and present owners, operators, and/or occupants), with the objective of obtaining information indicating RECs in connection with the subject property. The following are the subject property personnel interviewed for purposes of this assessment, and a summary of their comments with regards to subject property conditions.

5.8.1. Interview with Owner

The owner was not available for interview.

5.8.2. Interview with Site Manager

ENERCON interviewed Mr. Sean Croll, the site manager of the subject property, on March 30, 2023. Mr. Croll indicated that the subject property is primarily used in the storage and distribution of lumber and occasional roofing materials. The materials are stored for varying amounts of time depending on customer needs. Mr. Croll informed ENERCON that maintenance, such as oil changes, are performed by a mobile maintenance company which stores and removes the changed oils from the subject property after maintenance. Other information obtained from this interview is presented throughout the report.

5.8.3. Interviews with Occupant

See section 5.8.2.

5.8.4. Interviews with Local Government Officials

ENERCON interviewed local regulatory representatives during completion of the agency file review. The results of these interviews are presented throughout the report.

5.8.5. Interviews with Others

No others were interviewed during the completion of this report.

5.9. Previous Reports and Documents

No previous reports were provided to ENERCON during the time of this report.

6. SITE RECONNAISSANCE

The subject property and vicinity reconnaissance was performed by ENERCON personnel on March 30, 2023. Access to the subject property was approved by Mr. Sean Croll, the site manager. The subject property reconnaissance involved a walking tour of the subject property and visual observations of adjoining properties. At the time of the site reconnaissance, the weather was sunny, with no weather-related obstructions noted. Selected photographs taken during these activities are included in Appendix A.

At the time of the site reconnaissance, the northern portion of the subject property was developed as a commercial building used for warehouse storage and office space. The remainder of the subject property was used for storage of lumber and occasional roofing materials and for off-loading train cars (along the southwestern portion of the subject property). ENERCON observed several freight train cars used for the transportation of lumber on the subject property. Two small shed-like structures, one along the southeastern corner and the other situated more central to the subject property were observed. Both structures appeared to have previously been used as a break area but were noticeably abandoned.

The following information is provided as per ASTM standards to summarize the current conditions at the subject property.

6.1. Use and Storage of Hazardous Substances and Petroleum Products

During ENERCON's site reconnaissance, ENERCON evaluated whether hazardous substances and/or petroleum products were being used and/or stored. This includes hazardous substances as defined by CERCLA, as well as substances that occur naturally or through biological digestion (e.g., methane gas), and substances about which human understanding is evolving such as "emerging contaminants."

ENERCON observed one 1,500-gallon AST along the southeastern portion of the subject property. Approximately seven 2-gallon containers of degreasers and oils and one 55-gallon drum of degreaser were observed in the warehouse building and reportedly used for forklift maintenance. The containers appeared in good condition with no evidence of spills or leaks observed.

6.2. Storage and Disposal of Hazardous Wastes

No hazardous wastes were noted during the site reconnaissance.

6.3. Unidentified Substance Containers

No unidentified substance containers were noted during the site reconnaissance.

6.4. Aboveground Storage Tanks (ASTs) and Underground Storage Tanks (USTs)

One 1,500-gallon AST was observed along the southeastern portion of the subject property. No evidence of spills or releases was observed on or near the AST. No USTs were noted during the site reconnaissance.

6.5. Evidence of Releases

No evidence of releases was noted.

6.6. Polychlorinated Biphenyls (PCBs)

Historically, PCBs (a group of hazardous substances and suspected human carcinogens) were widely used as an additive in cooling oils for electrical components. Typical sources of PCBs can include electrical transformers. No electrical transformers were observed on the subject property during the site reconnaissance. One electrical transformer was observed along the northern adjoining street. No evidence of leaks or contamination was observed.

6.7. Suspect Asbestos-Containing Building Materials (ACMs)

The manufacture of most ACMs was phased out in the 1970s, ending in 1980. Previously manufactured ACMs that were in stock continued to be used through approximately 1981. Some non-friable ACMs are still manufactured (e.g. roofing mastics). In general, buildings constructed after 1981 have a negligible potential to contain friable ACMs and a low potential for most non-friable ACMs, with the exception of roofing materials. Based on the age of the subject property building (built in 2007), ACMs are likely present.

6.8. Lead Based Paint (LBP)

The manufacture of LBP was phased out in approximately 1978. Based on the age of the subject property building (built in 2007), LBP is likely present.

6.9. Indications of Water Damage or Mold Growth

No indications of water damage or mold growth were observed at the subject property.

6.10. Wastewater Systems

No wastewater systems were observed at the subject property.

6.11. Stormwater Systems

No stormwater drains were observed at the subject property during the site reconnaissance.

6.12. Wells

No wells (i.e. production wells, groundwater monitoring wells, dry wells, etc.) were observed at the subject property.

6.13. Other Subsurface Structures

No other subsurface structures were identified at the subject property.

6.14. Other Issues

No other issues were noted during the site reconnaissance.

7. ENVIRONMENTAL DATABASE SEARCH

A computerized environmental information database search was performed by EDR for this Phase I ESA on March 27, 2023. The database search included federal, state, local, and tribal databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted facilities of environmental concern is presented in Appendix D. In addition, a description of the assumptions and approach to the database search is provided in Appendix D. The review was conducted to evaluate whether the subject property or properties within the vicinity of the subject property have been reported as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

Eight unmapped properties, due to poor or inadequate address information, were identified in the database report. Based on the distance, direction, and/or database, these listings do not represent a significant environmental concern to the subject property.

The following paragraphs describe the databases that contain noted properties of environmental concern and include a discussion of the regulatory status of the facilities and potential environmental impact to the subject property.

7.1. Federal National Priorities List (NPL): Distance Searched – 1 mile

The NPL is the USEPA's database of uncontrolled or abandoned hazardous waste properties identified for priority remedial actions under the Superfund program. This database includes proposed NPL listings.

Neither the subject property nor properties located within the search radius were listed on this database.

7.2. Federal Delisted NPL: Distance Searched – 1 mile

This database contains delisted NPL properties under the Superfund program. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the USEPA uses to delete properties from the NPL. In accordance with 40 Code of Federal Regulations (CFR) 300.425. (e), properties may be deleted from the NPL where no further response is appropriate.

Neither the subject property nor properties located within the search radius were listed on this database.

7.3. Federal Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List: Distance Searched – 0.5 mile

The CERCLIS database contains properties which are either proposed or on the NPL and properties which are in the screening and assessment phase for possible inclusion on the NPL. This database also includes properties listed as No Further Remedial Action Planned (NFRAP). These facilities are listed on either the Superfund Enterprise Management System (SEMS) or SEMS-Archive databases (SEMS-ARCHIVE).

The subject property was not listed on this database. Four facilities were listed between the SEMS and SEMS-Archive databases. The "Ontario Drums" located approximately 0.33 miles south-southeast of and downgradient from the subject property is listed on the SEMS database. The facility is listed as requiring removal only (no site assessment work needed). No further information is available. Based on distance and direction, this listing would not be considered an environmental concern to the subject property.

"Cohen Isaac & Son," "Alger Manufacturing Company, Inc.," and "Sunkist Growers" are listed within the SEMS-Archive database. These three facilities do not qualify for NPL status based on existing information. No additional information was available. Based on distance

and/or depth to groundwater, these facilities would not be considered an environmental concern to the subject property.

7.4. Federal Corrective Action Report (CORRACTS): Distance Searched – 1 mile

The USEPA maintains this database of Resource Conservation and Recovery Act (RCRA) facilities that are undergoing corrective action. A corrective action order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.

The subject property was not listed on this database. One facility, "General Electric Company," located approximately 0.7 miles northwest of and cross- to potentially upgradient from the subject property, was listed on this database with a corrective action response of "investigation workplan approved." The facility is listed for organic solids with halogens, liquids with halogenated organic compounds, tetrachloroethylene (PCE), and trichloroethene (TCE), and human exposures have been controlled. Based on distance and/or depth to groundwater this facility would not be considered an environmental concern to the subject property.

7.5. Federal Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal Facilities (TSDF) List: Distance Searched – 0.5 mile

The RCRA TSDF database (non-CORRACTS) is a compilation by the EPA of facilities that report generation, storage, transportation, treatment, or disposal of hazardous waste.

Neither the subject property nor properties located within the search radius were listed on this database.

7.6. Federal RCRA Generators List: Distance Searched – Site and Adjoining Properties

This list identifies sites that generate hazardous waste as defined by RCRA. Inclusion on this list is for permitting purposes and is not indicative of a release.

The subject property was not listed on these databases. The south adjoining property, 1400 South Campus Avenue, was listed for PRC Composites LLC was listed on these databases with a small-quantity generator (SQG) and a large-quantity generator (LQG) of hazardous waste including spent nonhalogenated solvents (xylene, acetone, ethyl acetate, etc.) and ignitable waste. No violations were noted.

7.7. Federal Institutional Control/Engineering Control Registries: Distance Searched – Site

These lists identify properties with engineering and/or institutional controls. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on the subject property. Deed restrictions are generally required as part of the institutional controls.

The subject property was not listed on this database.

7.8. Federal Emergency Response Notification System (ERNS) List: Distance Searched – Site

The ERNS database, maintained by the USEPA, contains information on reported releases of oil and hazardous substances.

The subject property was not listed on this database.

7.9. EnviroStor Database (EnviroStor) or State-Equivalent CERCLIS: Distance Searched – 1 mile

The Envirostor database, also known as the State-equivalent CERCLIS, is maintained by the Cal-EPA, DTSC. This database contains information on AWP and both known and potentially contaminated properties. Two-thirds of these properties have been classified, based on available information, as needing NFA by the DTSC. The remaining properties are in various stages of review and remediation to determine if a problem exists. These properties are presented by EDR on the Historical Cal-Sites database and the Envirostor databases.

The subject property was not listed on this database. Ten properties were listed on this database. One of these listings is “SoCal Gas/Ontario MGP,” located approximately 0.23 miles north of and upgradient from the subject property, was historically used as a manufactured gas plant and was listed with a voluntary cleanup status. Based on distance and/or depth to groundwater this facility would not be considered an environmental concern to the subject property.

"Isaac Cohen and Son Inc" and "Ontario Metal Recycling" located at 717 South Taylor Avenue, approximately 0.4 miles northeast of and crossgradient from the subject property, were listed on this database. Isaac Cohen and Son Inc was listed with a facility status of state response. According to the DTSC, the property was used for metal salvaging and battery dismantling. The property has received remediation and no further removal/remedial activities are necessary. The Isaac Cohen and Son Inc. case was combined with the Ontario Metal Recycling file and the facility has received a no further action letter. Based on the distance, depth to groundwater, and/or regulatory status, these facilities would not be considered an environmental concern to the subject property.

"Alger Manufacturing Company," located approximately 0.46 miles northeast of and crossgradient from the subject property was listed on this database with a status of "refer: other agency." The property appears to be a part of a historical cleanup for halogenated solvents, metals, and sludge. Based on distance, and/or depth to groundwater, this facility would not be considered an environmental concern to the subject property.

Two of the remaining facilities are located at least 0.27 miles east of and cross-gradient from the subject property. Based on distance, direction, and/or depth to groundwater, these facilities would not be considered an environmental concern to the subject property.

The remaining four listings are located at least 0.47 miles north of and potentially upgradient from the subject property. Based on distance and depth to groundwater, these facilities would not be considered an environmental concern to the subject property.

7.10. State Solid Waste Landfill Sites (SWLF): Distance Searched – 0.5 mile

The SWLF database consists of open and closed solid waste disposal facilities and transfer stations. The data comes from the Integrated Waste Management Board's Solid Waste Information System (SWIS) and the SWRCB Waste Management Unit Database (WMUD) database.

Neither the subject property nor properties within the search radius were listed on this database.

7.11. State Leaking Underground Storage Tank (LUST) Lists: Distance Searched – 0.5 mile

The LUST information system is obtained from the SWRCB and the SARWQCB.

The subject property was not listed on this database. Eleven facilities were listed on this database and located at least 0.21 miles from the subject property with closed case statuses. Based on the distance and status, these listings would not be considered an environmental concern to the subject property.

7.12. State Underground Storage Tank (UST) and Aboveground Storage Tank (AST) Registration List: Distance Searched – Site and Adjoining Properties

UST and AST databases are provided by the SWRCB. Inclusion on these lists is for permitting purposes and is not indicative of a release.

Neither the subject property nor adjoining properties were listed on these databases.

7.13. State Voluntary Cleanup Programs (VCPs): Distance Searched – 0.5 mile

The State VCP database lists low threat level properties with either confirmed or unconfirmed releases. Project proponents have requested that the DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

The subject property was not listed on this database. Three facilities, including the previously mentioned "SO Cal Gas/Ontario MGP" and "Ontario Metal Recycling" were listed on this database (See Section 7.9 for full details). As previously mentioned, these facilities would not be considered an environmental concern to the subject property. The remaining facility is located approximately 0.27 miles east of and cross-gradient from the subject property. Based on distance, direction, and/or depth to groundwater, this facility would not be considered an environmental concern to the subject property.

7.14. Indian Reservations: Distance Searched – 1 mile

This list depicts Indian administered lands of the United States that have an area equal to or greater than 640 acres. No Indian Reservations were listed within a 1-mile radius from the subject property. Due to the lack of Indian Reservations within 1 mile of the subject property, other tribal database listings required by ASTM and AAI were deemed not applicable. These listings would include tribal-equivalent NPL, CERCLIS, Landfill and/or Solid Waste Disposal, LUST, UST and AST Registrations, Institutional Control/Engineering Control Registries, VCPs, and Brownfields.

Neither the subject property nor properties located within the search radius were listed on this database.

7.15. Other Non-ASTM and AAI Database: Distance Searched – Site

Other databases were included in the EDR report but are not required by ASTM or AAI. The subject property was listed on the FINDS, ECHO, NPDES, CERS, HWTS, CERS TANKS, and San Bernardino County Permit databases as Grove Lumber & Building Supplies, Inc. No environmental concerns were noted from these databases.

8. VAPOR ENCROACHMENT CONDITION (VEC)

ENERCON completed a VEC study for the subject property using Tier 1 criteria as recommended by ASTM E2600-15. The Tier 1 screening identifies surrounding facilities that pose a possible vapor intrusion source to the subject property based on the results of the Phase I ESA investigations and certain criteria outlined by ASTM. These criteria include a certain distance from the target subject property (referred to by ASTM as within the “area of concern”); the types of chemicals used (referred to by ASTM as the “chemicals of concern”); and a plume test to determine if the plume associated with a source of contamination is close enough to the subject property to impact indoor air quality. A VEC is defined by ASTM as “…the presence or likely presence of chemicals of concern vapors in the vadose zone of the target property caused by the release of vapors from contaminated soil and/or groundwater either on or near the target property identified by the Phase I ESA.” Based on our review of information obtained during the completion of this Phase I ESA, a VEC does not exist at the subject property.

9. REGULATORY RECORDS REVIEW

The South Coast Air Quality Management District (SCAQMD), the Regional Water Quality Control Board (RWQCB), the Department of Toxic Substance Control (DTSC), San Bernardino County Fire Department (SBCFD), and San Bernardino County Department of Environmental Health (SBCDEH) are the lead regulatory agencies for permitting and regulating USTs, ASTs, LUST cases, and/or facilities that use, store, or generate hazardous waste or hazardous materials. Records were requested using the current subject property addresses or obtained from online sources.

9.1. South Coast Air Quality Management District (SCAQMD)

Records regarding the subject property addresses were obtained online from the SCAQMD FINDS database. Records for the subject property were issued for the address 1351 South Campus Avenue. As previously discussed, this address is also associated with the east adjoining property. Records included a permit to install a 500-gallon diesel AST and dispenser issued to Grove Lumber in 1991 and a permit to install a dual compartment AST

including a 500-gallon gasoline compartment and a 1,500-gallon diesel compartment with the associated dispensers issued to Grove Lumber in 1992. Based on the capacity of the existing AST (1,500 gallons), the permit issued in 1992 could be associated with the existing AST. A permit for a diesel generator was issued in 2018 and is associated with the east adjoining property.

9.2. Regional Water Quality Control Board (RWQCB)

ENERCON searched the SWRCB/RWQCB GeoTracker database for possible cases regarding the subject property. No case records regarding the subject property were listed.

9.3. Department of Toxic Substances Control (DTSC)

ENERCON searched the DTSC EnviroStor website for possible files regarding the subject property. No records regarding the subject property were listed.

9.4. San Bernardino County Department of Environmental Health (SCCDEH)

The SBCDEH indicated no records for the subject property.

9.5. San Bernardino County Fire Department (SCCFD)

The SBCFD maintains records for hazardous materials and tanks. ENERCON was provided records for the subject property address 1300 South Campus Avenue. Records included the California Environmental Reporting System (CERS) summary for Grove Lumber from 2021. This summary indicates a petroleum AST is present on-site. A consolidated emergency response was also included which reported the presence of the petroleum AST. No environmental concerns were noted from these records.

10. FINDINGS, OPINIONS AND CONCLUSIONS

Based upon the results of this Phase I ESA, the following findings, opinions and conclusions are provided.

10.1. Findings and Opinions

The following presents a summary of findings and opinions associated with this Phase I ESA performed for the subject property, including known or suspect RECs, HRECs, CRECs, and de minimis environmental conditions (i.e., conditions that generally do not present a material risk of harm to public health or the environment).

- From at least 1933 through 1985, the subject property consisted of vacant and/or agricultural land with two dwellings located on the southeast corner. By at least 1966

the dwellings and southern portion of the subject property were used by an automobile wrecking business. Additionally, an on-site railroad spur was present along the western and southern boundaries of the subject property. In 1986, the dwellings were demolished. By 1989, the southern portion of the property was paved and used as a storage yard for lumber by Grove Lumber and expanded by 2002 to the central portion of the subject property. The present-day commercial warehouse building was constructed in the northern portion of the subject property in 2007. 32 Reload, an affiliate of Grove Lumber, has continued to occupy the subject property for lumber storage and distribution.

- Groundwater has been reported in the subject property vicinity at a depth of approximately 350 feet bgs with a south to southwesterly flow direction.
- Railroad spurs are known to be common sources of petroleum hydrocarbons in the subsurface due to releases from rail cars. They are also known to be common sources of metals due to leaching from treated wood planks and ballast rock. Based on the presence of a railroad spur along the western and southern boundaries of the subject property since at least 1966, the potential releases from the railroad spur represent a REC.
- In 1992, a dual-compartment AST containing one 500-gallon gasoline compartment and one 1,500-gallon diesel compartment was installed in the southeast corner of the subject property for fueling distribution trucks. At the time of the site reconnaissance, only the diesel compartment was reportedly in use. Due to the use of the AST for refueling purposes for at least 30 years, the AST represents a REC.
- Building permits indicate that a septic tank and cesspool were historically used on the southern portion of the subject property associated with the former dwellings. These features were reportedly backfilled in 1985. For geotechnical purposes, these features should be removed during redevelopment activities.
- Based on the age of the subject property building (built in 2007), friable ACMs and LBP are not likely present. However, non-friable materials such as mastics and roofing materials may be present. Prior to demolition, a comprehensive asbestos survey should be completed. If present, ACMs should be removed by a state-licensed abatement contractor prior to demolition.
- No other on- or off-site environmental concerns were noted.

10.2. Conclusions

ENERCON has performed this Phase I ESA in general conformance with the scope and limitations of the American Society for Testing and Materials Practice E 1527-21, ASTM Standard E 2600-15, and the EPA Standards and Practices for All Appropriate Inquiries, Final Rule (40 CFR, Part 312), for the property located at 1300 South Campus Avenue in the city of Ontario, California. Any limitations or exceptions encountered during completion of this report are stated in Section 1.4. No evidence or indication of recognized environmental conditions (RECs), historical-RECs (HRECs), controlled-RECs (CRECs), or conditions indicative of

releases or threatened releases of hazardous substances on, at, in, or to the subject property has been revealed, except for the following:

RECs

- Based on the presence of a railroad spur along the western and southern boundaries of the subject property since at least 1966, the potential releases from the railroad spur represent a REC.
- Due to the noted staining and use of the AST for refueling purposes for at least 30 years, the AST represents a REC.

HRECs

- No HRECs were identified during this investigation.

CRECs

- No CRECs were identified during this investigation.

De-Minimis Conditions

Although not considered a REC per ASTM, non-friable materials such as mastics and roofing materials may be present. Prior to demolition, a comprehensive asbestos survey should be completed. If present, ACMs should be removed by a state-licensed abatement contractor prior to demolition.

Non-ASTM Conditions

During redevelopment activities, the former septic tank and cesspool should be removed for geotechnical purposes.

11. RECOMMENDATIONS

Based on the results of this Phase I ESA, ENERCON recommends completing a soil sampling investigation in the area of the AST and along the railroad spur to further investigate potential subsurface impacts from these features.

Environmental Data Resources, Inc. (EDR), 2023, Regulatory Database Report, dated March 27.

12. QUALIFICATIONS STATEMENT AND SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

Ms. Stephanie Jones states that the Phase I ESA was performed under her direct supervision, and that she has reviewed and approved the report, and the methods and procedures employed in the development of the report conform to the minimum industry standards. Ms. Jones certifies that ENERCON project personnel and subcontractors are properly licensed and/or certified to do the work described herein.

Pursuant to Paragraph 12.13 of the ASTM Standard E1527-21:

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

USER PROVIDED INFORMATION

First American Commitment	ALTA Commitment for Title Insurance ISSUED BY First American Title Insurance Company File No: NCS-1130719-ONT1

COMMITMENT FOR TITLE INSURANCE

Issued By

FIRST AMERICAN TITLE INSURANCE COMPANY

NOTICE

IMPORTANT-READ CAREFULLY: THIS COMMITMENT IS AN OFFER TO ISSUE ONE OR MORE TITLE INSURANCE POLICIES. ALL CLAIMS OR REMEDIES SOUGHT AGAINST THE COMPANY INVOLVING THE CONTENT OF THIS COMMITMENT OR THE POLICY MUST BE BASED SOLELY IN CONTRACT.

THIS COMMITMENT IS NOT AN ABSTRACT OF TITLE, REPORT OF THE CONDITION OF TITLE, LEGAL OPINION, OPINION OF TITLE, OR OTHER REPRESENTATION OF THE STATUS OF TITLE. THE PROCEDURES USED BY THE COMPANY TO DETERMINE INSURABILITY OF THE TITLE, INCLUDING ANY SEARCH AND EXAMINATION, ARE PROPRIETARY TO THE COMPANY, WERE PERFORMED SOLELY FOR THE BENEFIT OF THE COMPANY, AND CREATE NO EXTRACONTRACTUAL LIABILITY TO ANY PERSON, INCLUDING A PROPOSED INSURED.

THE COMPANY'S OBLIGATION UNDER THIS COMMITMENT IS TO ISSUE A POLICY TO A PROPOSED INSURED IDENTIFIED IN SCHEDULE A IN ACCORDANCE WITH THE TERMS AND PROVISIONS OF THIS COMMITMENT. THE COMPANY HAS NO LIABILITY OR OBLIGATION INVOLVING THE CONTENT OF THIS COMMITMENT TO ANY OTHER PERSON.

COMMITMENT TO ISSUE POLICY

Subject to the Notice; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and the Commitment Conditions, *First American Title Insurance Company*, a Nebraska Corporation (the "Company"), commits to issue the Policy according to the terms and provisions of this Commitment. This Commitment is effective as of the Commitment Date shown in Schedule A for each Policy described in Schedule A, only when the Company has entered in Schedule A both the specified dollar amount as the Proposed Policy Amount and the name of the Proposed Insured.

If all of the Schedule B, Part I-Requirements have not been met within six months after the Commitment Date, this Commitment terminates and the Company's liability and obligation end.

COMMITMENT CONDITIONS

1. DEFINITIONS
   (a) "Knowledge" or "Known": Actual or imputed knowledge, but not constructive notice imparted by the Public Records.
   (b) "Land": The land described in Schedule A and affixed improvements that by law constitute real property. The term "Land" does not include any property beyond the lines of the area described in Schedule A, nor any right, title, interest, estate, or easement in abutting streets, roads, avenues, alleys, lanes, ways, or waterways, but this does not modify or limit the extent that a right of access to and from the Land is to be insured by the Policy.
   (c) "Mortgage": A mortgage, deed of trust, or other security instrument, including one evidenced by electronic means authorized by law.
   (d) "Policy": Each contract of title insurance, in a form adopted by the American Land Title Association, issued or to be issued by the Company pursuant to this Commitment.
   (e) "Proposed Insured": Each person identified in Schedule A as the Proposed Insured of each Policy to be issued pursuant to this Commitment.
   (f) "Proposed Policy Amount": Each dollar amount specified in Schedule A as the Proposed Policy Amount of each Policy to be issued pursuant to this Commitment.
   (g) "Public Records": Records established under state statutes at the Commitment Date for the purpose of imparting constructive notice of matters relating to real property to purchasers for value and without Knowledge.
   (h) "Title": The estate or interest described in Schedule A.

2. If all of the Schedule B, Part I—Requirements have not been met within the time period specified in the Commitment to Issue Policy, this Commitment terminates and the Company's liability and obligation end.

3. The Company's liability and obligation is limited by and this Commitment is not valid without:
   (a) the Notice;
   (b) the Commitment to Issue Policy;
   (c) the Commitment Conditions;
   (d) Schedule A;
   (e) Schedule B, Part I—Requirements; and
   (f) Schedule B, Part II—Exceptions.

4. **COMPANY'S RIGHT TO AMEND**
   The Company may amend this Commitment at any time. If the Company amends this Commitment to add a defect, lien, encumbrance, adverse claim, or other matter recorded in the Public Records prior to the Commitment Date, any liability of the Company is limited by Commitment Condition 5. The Company shall not be liable for any other amendment to this Commitment.

5. LIMITATIONS OF LIABILITY
   (a) The Company's liability under Commitment Condition 4 is limited to the Proposed Insured's actual expense incurred in the interval between the Company's delivery to the Proposed Insured of the Commitment and the delivery of the amended Commitment, resulting from the Proposed Insured's good faith reliance to:
      (i) comply with the Schedule B, Part I—Requirements;
      (ii) eliminate, with the Company's written consent, any Schedule B, Part II—Exceptions; or
      (iii) acquire the Title or create the Mortgage covered by this Commitment.
   (b) The Company shall not be liable under Commitment Condition 5(a) if the Proposed Insured requested the amendment or had Knowledge of the matter and did not notify the Company about it in writing.
   (c) The Company will only have liability under Commitment Condition 4 if the Proposed Insured would not have incurred the expense had the Commitment included the added matter when the Commitment was first delivered to the Proposed Insured.
   (d) The Company's liability shall not exceed the lesser of the Proposed Insured's actual expense incurred in good faith and described in Commitment Conditions 5(a)(i) through 5(a)(iii) or the Proposed Policy Amount.
   (e) The Company shall not be liable for the content of the Transaction Identification Data, if any.
   (f) In no event shall the Company be obligated to issue the Policy referred to in this Commitment unless all of the Schedule B, Part I—Requirements have been met to the satisfaction of the Company.
   (g) In any event, the Company's liability is limited by the terms and provisions of the Policy.

Copyright 2006-2016 American Land Title Association. All rights reserved.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

6. LIABILITY OF THE COMPANY MUST BE BASED ON THIS COMMITMENT
   (a) Only a Proposed Insured identified in Schedule A, and no other person, may make a claim under this Commitment.
   (b) Any claim must be based in contract and must be restricted solely to the terms and provisions of this Commitment.
   (c) Until the Policy is issued, this Commitment, as last revised, is the exclusive and entire agreement between the parties with respect to the subject matter of this Commitment and supersedes all prior commitment negotiations, representations, and proposals of any kind, whether written or oral, express or implied, relating to the subject matter of this Commitment.
   (d) The deletion or modification of any Schedule B, Part II—Exception does not constitute an agreement or obligation to provide coverage beyond the terms and provisions of this Commitment or the Policy.
   (e) Any amendment or endorsement to this Commitment must be in writing and authenticated by a person authorized by the Company.
   (f) When the Policy is issued, all liability and obligation under this Commitment will end and the Company's only liability will be under the Policy.

7. IF THIS COMMITMENT HAS BEEN ISSUED BY AN ISSUING AGENT
   The issuing agent is the Company's agent only for the limited purpose of issuing title insurance commitments and policies. The issuing agent is not the Company's agent for the purpose of providing closing or settlement services.

8. PRO-FORMA POLICY
   The Company may provide, at the request of a Proposed Insured, a pro-forma policy illustrating the coverage that the Company may provide. A pro-forma policy neither reflects the status of Title at the time that the pro-forma policy is delivered to a Proposed Insured, nor is it a commitment to insure.

9. ARBITRATION
   Arbitration provision intentionally removed.

Commitment No.: NCS-1130719-ONT1

SCHEDULE B, PART I

Requirements

All of the following Requirements must be met:

A. The Proposed Insured must notify the Company in writing of the name of any party not referred to in this Commitment who will obtain an interest in the Land or who will make a loan on the Land. The Company may then make additional Requirements or Exceptions.

B. Pay the agreed amount for the estate or interest to be insured.

C. Pay the premiums, fees, and charges for the Policy to the Company.

D. Documents satisfactory to the Company that convey the Title or create the Mortgage to be insured, or both, must be properly authorized, executed, delivered, and recorded in the Public Records.

E. Releases(s) or Reconveyance(s) of Item(s): 15

F. Other: None

G. You must give us the following information:
   a. Any off record leases, surveys, etc.
   b. Statement(s) of Identity, all parties.
   c. Other: None

The following additional requirements, as indicated by "X", must be met:

[X] H. Provide information regarding any off-record matters, which may include, but are not limited to: leases, recent works of improvement, or commitment statements in effect under the Environmental Responsibility Acceptance Act, Civil Code Section 850, et seq.

The Company's Owner's Affidavit form (as provided by the company) must be completed and submitted prior to close in order to satisfy this requirement. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.

[] I. An ALTA/NSPS survey of recent date, which complies with the current minimum standard detail requirements for ALTA/NSPS land title surveys, must be submitted to the Company for review. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by First American Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

[X] J. The following LLC documentation is required from:

(i) a copy of the Articles of Organization
(ii) a copy of the Operating Agreement, if applicable
(iii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
(iv) express Company Consent to the current transaction

[] K. The following partnership documentation is required :

(i) a copy of the partnership agreement, including all applicable amendments thereto
(ii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
(iii) express Partnership Consent to the current transaction

[] L. The following corporation documentation is required:

(i) a copy of the Articles of Incorporation
(ii) a copy of the Bylaws, including all applicable Amendments thereto
(iii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
(iv) express Corporate Resolution consenting to the current transaction

[X] M. Based upon the Company's review of that certain partnership/operating agreement dated Not disclosed for the proposed insured herein, the following requirements must be met:
Any further amendments to said agreement must be submitted to the Company, together with an affidavit from one of the general partners or members stating that it is a true copy, that said partnership or limited liability company is in full force and effect, and that there have been no further amendments to the agreement. This Commitment will then be subject to such further requirements as may be deemed necessary.

[] N. A copy of the complete lease, as referenced in Schedule A, #3 herein, together with any amendments and/or assignments thereto, must be submitted to the Company for review, along with an affidavit executed by the present lessee stating that it is a true copy, that the lease is in full force and effect, and that there have been no further amendments to the lease. This Commitment will then be subject to such further requirements as may be deemed necessary.

[X] O. Approval from the Company's Underwriting Department must be obtained for issuance of the policy contemplated herein and any endorsements requested thereunder. This Commitment will then be subject to such further requirements as may be required to obtain such approval.

[] P. Potential additional requirements, if ALTA Extended coverage is contemplated hereunder, and work on the land has commenced prior to close, some or all of the following requirements, and any other requirements which may be deemed necessary, may need to be met:

[] Q. The Company's "Indemnity Agreement I" must be executed by the appropriate parties.

Commitment No.: NCS-1130719-ONT1

SCHEDULE B, PART II

Exceptions

THIS COMMITMENT DOES NOT REPUBLISH ANY COVENANT, CONDITION, RESTRICTION, OR LIMITATION CONTAINED IN ANY DOCUMENT REFERRED TO IN THIS COMMITMENT TO THE EXTENT THAT THE SPECIFIC COVENANT, CONDITION, RESTRICTION, OR LIMITATION VIOLATES STATE OR FEDERAL LAW BASED ON RACE, COLOR, RELIGION, SEX, SEXUAL ORIENTATION, GENDER IDENTITY, HANDICAP, FAMILIAL STATUS, OR NATIONAL ORIGIN.

The Policy will not insure against loss or damage resulting from the terms and provisions of any lease or easement identified in Schedule A, and will include the following Exceptions unless cleared to the satisfaction of the Company:

1. Any defect, lien, encumbrance, adverse claim, or other matter that appears for the first time in the Public Records or is created, attaches, or is disclosed between the Commitment Date and the date on which all of the Schedule B, Part I-Requirements are met.

2. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.

3. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.

4. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.

5. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.

6. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.

7. General and special taxes and assessments for the fiscal year 2023-2024, a lien not yet due or payable.

7A. General and special taxes and assessments for the fiscal year 2022-2023.

USER ENVIRONMENTAL QUESTIONNAIRE

INTRODUCTION

As noted in ASTM E1527-13 (and E1527-21) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process the following questions are required "*In order to qualify for one of the Landowner Liability Protections (LLPs)* [187] *offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"),* [188] *the user must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete."*

NAME: Angela Noah

BUSINESS TITLE: Bridge Industrial

RELATIONSHIP TO SUBJECT PROPERTY: Perspective Buyer

SUBJECT PROPERTY ADDRESS: 1300 S Campus Ave, Ontario, CA

APN and LOT SIZE: 1049-482-01, 1049-482-02, 1049-482-03, 1049-482-04 and 10.79 acres

DATE OF PURCHASE/OCCUPANCY:

SUBJECT PROPERTY DESCRIPTION (ie. number buildings, date constructed, use, building sizes, utilities):

one building, approximately 30,000 SF

1.) Environmental liens that are filed or recorded against the property (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? not to my knowledge

NOTE 1 — In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

2.) Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)).

Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?

not to my knowledge

3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? no

4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Purchase price reasonably reflects the fair market value of the property

5.) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?

For example,

(a.) Do you know the past uses of the property?

no specific knowledge

(b.) Do you know of specific chemicals that are present or once were present at the property?

no specific knowledge

(c.) Do you know of spills or other chemical releases that have taken place at the property?

no specific knowledge

(d.) Do you know of any environmental cleanups that have taken place at the property?

no specific knowledge

6.) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?

no specific knowledge

To the best of my knowledge and belief, all information contained herein is true and complete.

SIGNATURE: Angela Noah

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Enercon Services, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

CERTIFICATE OF OCCUPANCY

Building Permit Number: B200700182

Date Permit Issued: 04/03/2007

Building Address: 1300 S CAMPUS AV

Owner: GROVE LUMBER

Address: 1300 S CAMPUS AVE
ONTARIO, CA
91761

Description of Work: WAREHOUSE, 15,115 SF, OFFICE, 3,938 SF, RETAIL, 12,716 SF, VN, SPK

The improvements at the subject address in the City of Ontario have been constructed with inspections by the Building Department personnel for compliance with the approved plans and applicable City codes.

Final inspection on these improvements was performed on 08/29/2008 .

Certificate of Occupancy was approved on 09/08/2008 after all City agencies granted their respective clearances.

Issuance of this Certificate of Occupancy shall not be construed as an approval of a violation of the provisions of this code or of other ordinances of the City of Ontario. Certificates presuming to give authority to violate or cancel the provisions of this code or other ordinances of the City shall not be valid.

Sincerely,

Kevin Shear

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason: I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code).

I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business an Professions Code).

Date _____ Signature of Owner _____

WORKER'S COMPENSATION DECLARATION

I hereby affirm under Penalty of Perjury one of the following:

( ) I have and will maintain a Certificate of Consent of self-insure for worker's compensation.

( ) I have and will maintain Worker's Compensation Insurance.

Policy No.: W6734372 Carrier: REDWOOD FIRE & CASUALTY

( ) I certify that, in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to Worker's Compensation Laws of California.

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Worker's Compensation provision of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

I certify that I have read this application and state that the above information is correct. I agree to comply with all City and State laws relating to the building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason: I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code).

I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business an Professions Code).

Date 7-17-08 Signature of Owner_____

WORKER'S COMPENSATION DECLARATION

I hereby affirm under Penalty of Perjury one of the following:

( ) I have and will maintain a Certificate of Consent of self-insure for worker's compensation.

( ) I have and will maintain Worker's Compensation Insurance.

Policy No.:_____ Carrier:_____

( ) I certify that, in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to Worker's Compensation Laws of California.

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Worker's Compensation provision of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

I certify that I have read this application and state that the above information is correct. I agree to comply with all City and State laws relating to the building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Sec. _____ B & P.C. for this reason _____

Date 7-11-69 Owner Mayet d. Hahn

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof (Sec. 3800, Labor Code).

OWNER – BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason: (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

SIGNATURE | DATE

OWNER – BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code): Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

☐ I am exempt under Sec. ____ B & P.C. for this reason: ____

Date 8/1/88 Owner

WORKER'S COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof. (Sec. 3800, Labor Code)

Policy No. 4005145884 Company USF 5-1-88

☐ Copy is filed with the City. ☐ Certified copy is hereby furnished.

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

(This section need not be completed if the permit is for one hundred dollars ($100) valuation or less.)

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued. (Sec. 3097, Civil Code)

LICENSED CONTRACTOR'S DECLARATION
I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.
SIGNATURE: | DATE:

OWNER – BUILDER DECLARATION
I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Prof. Code): Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law, Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).
☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)
☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project. (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)
☐ I am exempt under Sec. _____ B.& P.C. for this reason: _____
Date: _____ Owner: Wajid Habib

WORKER'S COMPENSATION DECLARATION
I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof. (Sec. 3800, Labor Code.) Policy No. 4802513560 US Fidelity 3-31-89
☐ Copy is filed with the City. ☐ Certified copy is hereby furnished.
CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE
(This section need not be completed if the permit is for one hundred dollars ($100) valuation or less.)
☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.
NOTICE TO APPLICANT: If, after making this Certificate of Exemption you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY
I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued. (Sec. 3097, Civil Code)
Lender's Name: _____
Lender's Address: _____

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

LICENSED CONTRACTORS DECLARATION

I hereby affirm under penalty of perjury that I am licensed under provisions of Chapter 9 commencing with Section 7000 of Division 3 of the Business and Professions Code and my license is in full force and effect.

License Class _____ License No _____

Expiration Date _____ Contractor Signature _____

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors License Law for the following reason: Sec. 7031.5 Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. However, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

☐ I am exempt under Sec. _____ Business and Professions Code for this reason: _____

Date 4/24/95 Owner [signature]

WORKERS' COMPENSATION DECLARATION

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent to self-insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☐ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier _____ Policy Number _____ Expiration Date _____

This section need not be completed if the permit is for one hundred dollars ($100) or less.

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that, if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

Date _____ Applicant _____

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____

Lender's Address _____

DIVISION OF INDUSTRIAL SAFETY PERMIT CERTIFICATION

The Labor Code, Health and Safety Code requires a Division of Industrial Safety Permit as a prerequisite to certain excavations unless the applicant signs one of the certificates below.

☐ I certify that no excavation 5 feet or more feet in depth, nor which a person is required to descend, will be made in connection with work authorized by this permit, and that no building, structure, scaffolding, falsework, or demolition or dismantling thereof will be more than 36 feet high.

☐ As owner-builder, I will not employ anyone to do work which is of such nature as to require a permit from the Division of Industrial Safety, as noted above, unless such person has a permit from that Division.

My Industrial Safety Permit Number _____

I hereby affirm that this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above mentioned property for inspection purposes.
