

March 25, 2015

SUBJECT: .....U @ # o h ° =k° U k

Based on comments received from the South Coast Air Quality Management District (SCAQMD) the Project Health Risk Assessment (HRA) modeling has been updated. The updates to the modeling include use of the Upland Monitoring Station Meteorological Data and the disabling of the FASTALL and FLAT model options in AERMOD. The HRA model runs were re-run with meteorological data from the Upland Monitoring station (for years 2008-2012). All non-regulatory model options were disabled consistent with SCAQMD guidance. The revised AERMOD modeling files are provided herein.

Under the revised modeling, the worst-case incremental TAC-source carcinogenic risk (risk) at the maximally exposed residential receptor (MEIR) would be 9.85 in one million; the risk at the maximally exposed worker (MEIW) would be 1.28 in one million; and the risk at the maximally exposed school child receptor (MEISC) would be 0.54 in one million; none of which would exceed the applicable risk threshold of 10 in one million.

Impacts would remain less-than-significant as currently disclosed in the Project DEIR.

## AERMOD MODLING INPUT SUMMARY
