Cleanup sites include those where soil or groundwater has been affected or is suspected to be affected by a chemical release from past or present land uses (referred to as “environmental cases”) and are identified on federal, state, and local regulatory agency lists. These lists are developed to document and record disturbance activities on identified sites.

The status of each environmental case varies and can be either active (with ongoing investigations or remediation), closed (remediation or clean-up completed and approved by the regulatory agency), or unresolved (usually indicating that efforts toward remediation have stalled or been suspended).

This exhibit shows cleanup sites with open cases in Ontario which include sites with an active or unresolved status.
